The whole theory of the universe is directed unerringly to one single individual—namely to You . . .

I am for those that have never been master'd
For men and women whose tempers have never been master'd,
For those whom laws, theories, conventions, can never master.

I am for those who walk abreast with the whole earth,
Who inaugurate one to inaugurate all.

I will not be outfaced by irrational things,
I will penetrate what it is in them that is sarcastic upon me,
I will make cities and civilizations defer to me,
This is what I have learnt from America—it is the amount, and it I teach again.

—*Whitman,* By Blue Ontario's Shore.

Of Freedom

One can not repeat it too often: There is nothing so fertile in marvels as the art of being free.—*De Tocqueville.*

We have too petty a notion of freedom. We are bound to, since freedom is so great and growing. And yet our understanding of it need not be so petty.

We talk as if freedom of trade were simply a problem for the legislator and economist, a matter of freeing trade from this or that tariff or other legal or theoretical barrier. We talk as if neither the steamship that freed man from the accident of wind and the accident of calm, nor the express train that freed the producers of perishable foods from the tyranny of time and northern tables from the monotony of winter, had done anything to free trade. We forget the air-driven drill and the dynamite that enables us, when a mountain bars our road, to take a short cut through it. We forget a host of things that free us from the limitations of tongue and ear and eye, and let seller and buyer find each other swiftly anywhere on earth. Yet trade can lose its statutory freedom and be encumbered by politicians and economic experts with all sorts of man-made barriers, and still grow greater because other men have been freeing it from more stifling natural barriers.

As it is with trade, so it is with everything. The story of the freedom of man, of the freeing of man by man, is the whole story of man. It is the story of the invention of language, of the freeing of man's tongue to tell his thoughts to his neighbor and of the freeing of his ear to understand his neighbor's thoughts, of the freeing of his thoughts from space and time and the tricks of memory and death by the invention of writing. It is the story of the freeing of his tongue, ear, eye, mind by the invention of grammar, and still more by the invention of paper, and still more by the invention of printing, and still more by the discovery of America and of electricity and rubber, and by such political inventions as the freedom of the press and democracy and Union and such mechanical inventions as the steam engine and the locomotive and the high speed newspaper press, and the telegraph, photograph, phonograph, and the tele-

phone, airplane, moving picture, wireless, talking picture and television.

This is not even a meagre outline of the freeing of man (insofar as he is free) in respect of his mind and thoughts and tongue and ear and eye. There is no word in this about the freeing of the eye to peer into the worlds of microbes and of stars, nor the freeing of the ear to the harmonies of music, nor the freeing of the mind from error thanks to logic and from terror thanks to the accumulated experience of generations, nor the freeing of the mind to think honestly about anything regardless of the taboos of society or the self-interest of the body. And when we have outlined this vast field we have only begun.

We have still to tell of the freeing of the power in the arm of man from the time he extended it with a club or rock on through to where he extends it with a bullet or electric button, the freeing of his lungs until he can cross the ocean in a submarine, the freeing of his skin from cold and heat, of his stomach from famine, of his body and mind from disease,—and when we have told all this our tale of the freeing of man by man remains a fragment. It is a tale that can never be told. This is not only because of its vast range and the intricate inter-relation of every detail to the others and to the whole. It can never be told because in the telling it is growing; somewhere, wittingly, unwittingly, some of the two billion of men and women are at work freeing man, adding to a glorious tale new glories that men will not be free enough to recognize or use, perhaps, for a hundred years to come.

It is a myriad-sided, never-ending task and tale and joy, the freeing of man by man; and it is the myriad-sided, never-ending variety among individual men and women, the rich resources given mankind by the fact that no two individuals are precisely the same, that each forms a distinct combination of character, talent, knowledge, skill, tastes, curiosity, heredity, environment and physical, moral and mental strength,—it is this that allows the task to be advanced and the tale to be faintly imagined and the joy enjoyed. It is because the democratic principle of the equality and rights of man allows mankind to free all this power it has in men, and to let men enjoy themselves freeing mankind still more, that it is the most fertile and powerful political,

economic, social, and philosophical principle that men have ever discovered.

The power in this principle lies in its guarantee by society to the individual of the right to do freely that which most interests him, and its guarantee to all other men of their right to judge freely his work.

Government of gasoline and electricity by the people does not consist in every man being able to build an automobile or dynamo, any more than the government of microbes by men consists in every one of us having a thorough medical and scientific knowledge. Hardly more does government of the people by the people consist in every man interesting himself deeply in political problems and trying to work them out himself.

We govern the power in gasoline, first, by insuring any man who is interested in the problem of governing that power the freedom to tackle it as hard as he pleases, and, secondly, by remaining free to pass judgment broadly on his solutions.

One of these engineer-minded men has it clear in his mind that gasoline can be so governed as to run a wagon, but he can not make it clear to the rest of us who are not so engineer-minded. And so to make it clear he makes us the first automobile. When we see it running we then see clearly that he was right. But it still is not at all clear to most of us that his automobile is safer than a horse, or cheaper, simpler, better. The more engineer-minded men, however, see that all this is true, too; in a widening circle they become interested in the problem of man governing gasoline. They fight out among themselves the technical questions, and when and as long as they all agree, we readily follow them. No buyer demands solid tires on a pleasure car, now when all engineers favor pneumatic ones.

But when these men of technical sense disagree they come to us, the men of common sense, and ask us, not to solve their problems, but to pass judgment on their different solutions. And through purchase we accord our highest prize in the long run to the engineer who has solved the problem most clearly—for that means he has solved it in a way that those of us who are least mechanically endowed can understand is the best solution.

The government of gasoline by man began with a contraption so simple in its structure that one could see or hear its every

organ, but so complicated in its operation that even the genius who contrived it could never be sure of getting home without a horse. Then by the democratic process of freedom mankind developed a machine so amazing that it makes the gasoline not only drive it far faster than a mile a minute but light its way at night, herald its arrival, and stop it shortly,—a machine so complicated structurally that no one genius could ever have developed it and so simple to run that a child can run it. Gasoline is being governed by the people when any man without engineering knowledge can make it take him where he wants to go with a touch of the finger, a touch of the foot, and a few simple rules.

The thing to note is that the human freedom that government of gasoline by the people brings is achieved, first, by freeing all engineer-minded men to tackle this problem, and second, by keeping the rest of mankind free to pass judgment on their work. This system discourages the engineer from turning to the best engineer as his supreme judge. It forces the best engineer to make himself so clear that a moron can see his solution is the best. It insures him that the greater his technical achievement is, the more he will gain the votes of the simplest laymen.

This is noteworthy because this system is the one through which government by the people for the people has been established, insofar as it is established, over everything they govern, whether it be gasoline, electricity, microbes, animals, music, fire, water, wind, earth or light. It is, too, the system whereby government of the people by the people for the people has been or is being established. This last is the most difficult and the most productive of man's problems in government. It means the government of the most powerful of the elements by the most marvelous and unaccountable among them, the government of man himself by man himself for man himself.

The way to solve this problem of self-government is to follow these free principles, while carefully avoiding an error, tricked out as truth, on which despotism, benevolent or malevolent, is based.

So well hidden is this trap that Plato himself fell victim to it. In his argument for government of all men by the wisest men, Plato seems to base his reasoning on the government of sheep by men. The statesman, he said, is the shepherd of the

human flock, and since it would be absurd to reason that the sheep should elect and direct the shepherd, the conclusion seems to follow that the democratic theory is absurd. And so Plato divided his ideal state into three specialized classes,—rulers, fighters and farmers. He thought out elaborate machinery to make sure that the human shepherds shall never be responsible to the human sheep but only to other shepherds,—that the philosophers need answer only to the philosophers. And so men less wise and generous defend the principle of government through dictatorship by a single autocrat, or by an hereditary despot, or by some single class of men, whether the propertied or the proletariat, the oldest families or the *giovinezza*, the chosen Aryans or the chosen Jews.

The error in all this is the same. There is a difference between the shepherd and the statesman, a fundamental difference. The shepherd is a man governing, for men, a different animal, the sheep. The statesman is a man governing, for men, these same men.

The fact that in all cases, except that of man himself, the government by man of whatever he seeks to govern, whether sheep or gasoline, is invariably marked by his refusal to obey the governed, does not make this refusal the *sine qua non* or cause of success; it makes it simply a worse trap for human reason. It is not this negative detail that the shepherd and engineer are not answerable to the sheep and gasoline that is essential, but the positive principle that the shepherds and engineers are answerable to other men,—in last analysis to all other men, and not simply to shepherds and sheep-owners, or to engineers and owners of oil wells. Under this principle the supreme judges of the specialists are not the best of specialized minds but the commonest of lay minds. It results that the specialists must bring the government of sheep and gasoline by men to that point of perfection where a child can govern them. Thus does this principle lead to success.

The way, then, to solve the great central problem of freedom,—that of government of the people by the people for the people,—is neither to depend on the bulk of men to work out the solution, nor to make those who are the best political engineers or philosophers, or statesmen or rulers, answerable only

to themselves, but to insure man, alone and in society, equally the rights of man. This means allowing any one who is politically-minded to devote himself freely to political problems, while allowing the rest of men,—the engineer-minded, farmer-minded, artistic-, financial-, economic-, business-, doctor-, research-, artisan-, manual-, and other-minded men, the right of passing judgment freely and frequently on his work.

These men do not want to think out their political problems for themselves any more than the man with a bent for governing men wants to work out for himself the problem of the automobile. The man who delights in making the soil grow two ears of corn where one grew before does not want to stop and fumble with the problem of how to distribute the extra ear, or of how to make his own body cease growing a cancer. The cry for leadership in politics is simply the demand by us all that our political inventors and explorers invent and discover for us as all our other inventors and explorers are doing—as each of us who is following his natural bent is doing. We are tired of seeing politicians blame our stupidity when we reject their truths, we want them to get down to their business of making their political truths so clear that a child can understand them.

They need not worry then about our verdict. They need only fear that we will vote so overwhelmingly for their truth as either to handicap by our gratitude their further search for truth, or to cause us to overreach their truth and fall again into error. When our vote is expressed by purchase we vote so readily for the man who makes his truth most clear in automobiles, or oil, or steel, or other things, that we load him now with a tremendous fortune liable to give him a diseased idea of his own importance, or dull his children's enterprise. Or we force him to leave the thing he can best do and try to solve a problem for which he may have no aptitude,—the problem of the distribution of wealth, of making the most of it to bring more freedom to himself and children and everyone by encouraging art, scholarship, medicine, industry, men. When the vote is by applause instead of purchase we give our Lindberghs so much applause that we deprive them of that freedom to live and act as simple folk which allowed them to do their greatest work.

When a Washington's firm grasp of truth liberates us our

gratitude is such that, to show our pious respect, we make it heresy to follow his example and meet the problems of our time so boldly as to rebel against the "thus far and no farther" of the past. When a Lincoln makes the equality and rights of man clearer, we are so grateful that we make a myth of a man who was proud of being common; we forget that in so doing we fall into the very fault from which he sought to save us—that of disprizing or dishonoring members of our own species. What Jesus rebuked the Jews for doing to Abraham, the Christians soon were doing to Jesus, and for the same reason, to show their gratitude.

We are so ready to admit any man's truth if it is only made clear enough, so grateful to those who make it clear and so cursed with an inferiority complex about our species, that great teachers and liberators who seek to bring men to a truer concept of the equal dignity and rights of man need to guard against our deifying them more or less, or otherwise emotionally clouding over their central truth,—that Man, as Paine said, is Man's "high and only title, and a higher cannot be given him."

There is no more effective way than this democratic way for each of us to free ourselves from the tyranny of poverty, and disease, and ignorance, and matter, and time. There is no simpler, safer, cheaper way. No elaborate machinery is required: This is simply a question of freeing men so that their nature can most naturally take its own course. Everyone wants to do what gives him joy, and everyone is doing best his share in society when he is doing that which gives him the most joy.

The profit motive? True, it exists, and it is a mistake to rail at it or try to remove it. Whether he measures it in money, power, or whatnot, man will seek profit, and he should, for it is the fuel that moves perhaps the greatest force on earth, individual enterprise. Profit is but the surplus difference between what one puts into a thing and what he gets out of it, and nothing living grows except by getting back all it expends and something more. It is not profit we need weed out but the three evils, too much profit, too little profit, and dead loss,—for each of these dulls or kills individual enterprise. Provide a condition of freedom and security for the individual to develop his natural talent, and let him profit enough materially from his work

to live fairly well, and usually he needs little or no further encouragement to bring us the best he has. When he is really bringing us his best, he is not working for money beyond what he needs to live comfortably and do his work.

The proof is that when he finds some way of further freeing us we cannot keep him silent with bribes or even with comforts. He will do without comfort, spend all his money, borrow all he can, slave through day and night, wear himself out, risk his life; he will do anything he needs to do simply to solve a problem he has freely set for himself and force us by our common sense to agree that he is right,—that we *can* free ourselves from malaria by killing a certain mosquito, that we *can* free ourselves from earth and fly. We do not need to encourage with millions in money men who are doing what they can do best; we can not contrive to discourage the men who are doing what they were made to do.

Every revolution, every great human crisis invariably shows that there is far more talent scattered through our species, and in the most unexpected places, than we imagine. There seems to be no limit to the power of individual enterprise, and there is no resource in which we are richer than individual men and women, and none we use less or waste so appallingly.

All manner of means for freeing men are to be found widespread among men. We had no way of divining that the man who would give us paper would be born in China, that an Arab would bring it to us, an Englishwoman would give us a Turk's idea of vaccinating against smallpox, an Italian would give us wireless, a German Jew would find the cure of syphilis with the help of a Japanese, and that negroes instead of white men would be the first slaves to establish an enduring republic of self-freed slaves. No one could have predicted that a Pole would be the writer who would bring the salt of the sea best in English to the English, or that a Dutch dry-goods merchant would be the man to make the lens that freed our eyes to discover the microscopic world. We can no more tell today what bargeman on what river will rise to steer our freedom through a dangerous conflict than our great-grandfathers could tell that a lanky Mississippi raftsman would be the man to save the first great union of the free.

We have no way of telling from what family, nation, race or class our future liberators will come, or from what farm, village, city, country, empire. We have no way of knowing that our cook will never change one day into a poet, our miller into a chemist, our farmer into a flier.

Yet there are some things we know, for they have been proved a million times. We know that men will not stay put, that great changes are continually happening in them, that the liberating genius of man is concentrated in no family or place but is scattered generously through the whole species. We know a ray of it was here yesterday, there today. We can divine only that it may be somewhere else tomorrow. We know that not even one beam of it is the monopoly of any man.

We know that our greatest liberators are those who make their liberating truth most clear to all of us. Their greatness is in proportion to the speed with which they can get us voluntarily to absorb and assimilate their truth as fully as they have themselves. The sooner they can free us from the need of their expert services, the more they allow us to build further on the top brick they have laid, until that top brick becomes indistinguishable from all the bricks above and below and around it.

We are beholden the least to those who seek to maintain themselves longest in a position of superiority to us and convert a truth they have found into a permanent source of tribute to themselves. Our true benefactors never seek to impose themselves or their children on us, never seek in any field, political or other, to be answerable to us only once for all time, or to alienate in the slightest those inalienable rights of man that allowed them to do themselves whatever they have done. The mark of the spurious liberator, of the autocrat in every field, is the desire to make oneself more indispensable to mankind. We know that our true liberator frees us more and more from dependence on him and seeks only to enable others to outstrip him,—he is a man of the great, proud line of Whitman:

> I am the teacher of athletes;
> He that by me spreads a wider breast than my own proves the width of my own;
> He most honors my style who learns under it to destroy the teacher.

We know all this, and in our hearts we know, too, that for each of us to gain the most freedom we must all keep all the doors to life forever freely open to every man and woman.

At the heart of our freedom, then, lies the democratic principle of the equality and rights of man, the freedom of the individual to follow his natural bent and to bring his findings to mankind for judgment, and to pass judgment on the findings of his fellows. And at the heart of the rights of man lies the freedom of speech and of the press. Do you still think that freedom of speech and of the press is concerned simply with politics and words? Read then this letter written by the School Board of Lancaster, Ohio, in 1826 and unearthed in 1920 by the *Cleveland Press*:

> You are welcome to use the schoolhouse to debate all proper questions in, but such things as railroads are impossibilities and rank infidelity. There is nothing in the Word of God about them. If God designed that His intelligent creatures should travel at the frightful speed of 15 miles an hour by steam, He would have clearly foretold it through His holy prophets. It is a device to lead immortal souls down to hell.

The glory of Elizabethan England to me is Peter Wentworth. He was the one who reminded the House of the rumors of what the Queen would do to those who opposed certain bills, and of her messages commanding Parliament not to consider certain measures, and who then spoke out: "I would to God, Mr. Speaker, that these two were buried in hell, I mean rumors and messages." For this the House itself sent him to the Tower. When he came back a year later he spoke again for the right to speak freely in at least the House of Speech, and again he was sent to the Tower.

The glory of Elizabethan England is likewise John Stubbs and his printer, and those who stood with them. John Stubbs wrote a pamphlet protesting against Elizabeth's proposed marriage with Alençon, and for this he and his printer were condemned to have their right hands cut off. The lawyers and judges who protested were put in the Tower, and the right hands of John Stubbs and his printer were cut off at the wrist by a knife driven through with a mallet. With his left hand John Stubbs

then waved his hat and cried, "God save the Queen!" And though her Star Chamber might a little while continue to assert the need of limiting "the excessive multitude of printers," her cruelty shocked and his fortitude encouraged the people, and their children rose up in one hundred years and made the first king subject to the first Bill of the Rights of Man.

And now their chilren's children and all of us may go freely to the National Portrait Gallery in London and find one small room on the top floor big enough not only for Elizabeth and the great men of her time (not Wentworth, not Stubbs), but also for Henry VIII and the greater of those whose heads he had cut off. But as we go on down chronologically through the rooms and centuries, and the crude absolutist method of men governing men by cutting off their heads and hands gradually gives way to men governing men by the free speech principles of the Wentworths, and by the free press principles of the Stubbses, and by the other rights of man they led to, the scene changes.

Where there were only a few portraits for each reign, and these, mainly of rulers, generals, priests, the number and the variety of portraits grows more and more, until on the ground floor we find the nineteenth century needing room after room to house the great of England. There the rulers, generals and priests become a minority amid the Shelleys and Jane Austens and Butlers, the Disraelis and Gladstones, the Benthams and Mills, the Stephensons and Faradays and Listers and Huxleys and Darwins.

Such is the great flowering of the genius of man that every people has enjoyed and is enjoying as they have enjoyed and are enjoying equally the rights of man.

In another gallery I looked at Leonardo's works after coming up through the centuries at the Italian Art Exposition in Paris in 1935, and it dawned on me that before his century the best eyes in Italy had been blind to the beauty in the play of light, blind to shadow. I walked back then through the centuries seeking shadow: Cimabue, Giotto, blind to shadow; Uccello discovering perspective but ignoring shadow; then here and there a painting with here and there a shadow,—the shell in Botticelli's *Birth of Venus* casting a shadow, but not Venus nor any of the figures nor the trees, no real perception of shadow there.

Shadow always everywhere, and everyone blind to it until somehow one man saw shadow clearly, and then everyone thereafter seeing shadow.

Why did we need so long to make the simple, invaluable wheel? Could man ever help but see the circular? Nature is all curves. It would seem that man must have made the wheel long before achieving that miracle of abstract reason, the brick. For men could not see so easily the square, cube, or straight line in Nature. These man created. Yet America knew the square before Columbus came, but not the wheel. Ages before mentioning the wheel, the Bible celebrates in the tale of Babel not only the confusion of tongues but the discovery of how to "make brick" and all it meant to men. To understand what a marvel the common brick is, one needs to read the Bible afresh: Since "this they begin to do . . . now nothing will be restrained from them" while "the people is one" and "have all one language,"—not even the achievement of the great ideal that mankind then at once magnificently set out for: The building of "a city and a tower whose top may reach unto heaven."

The wheel, despite all Nature's hints, also required a miracle of pure reason. To turn the first natural disk into the first wheel one had to see something that was there no more and no less than the straight line. Something invisible, abstract, yet so tangibly there that one needed only to put finger and thumb on it to make all men see—the axis, and wheels everywhere.

The marvelous thing about us is not simply that it took so many men for one to see the axis. It is perhaps even more marvelous that it took only one to see it and demonstrate it clearly for each of us to see it at once, and for all of us to keep it forever after. It is this marvelous power in our species that democracy harnesses through its equal interest in and equal freedom for every individual.

Underlying alike the brick and the wheel is a greater miracle—Man's creation of the straight line. How could it have taken us eras to see a truth so simple and precious as the straight line? How many simple things of truth, of beauty, of priceless value, lie today around us all, unseen, awaiting the marvel of sight by some one becoming sight by all?

Surely in such a world we can not fail to keep building on

the simple truth of which we have had such proof: That Man's vast future lies in the democratic philosophy that would give every one an equal chance, an equal freedom to tell us all whatever truth he alone has seen or believes that he has seen, an equal obligation to express his truth with that clarity and simplicity that makes us all see it and thereby proves it true, and an equal right to refuse to accept whatever one alone still doubts is true, an equal veto against whatever one alone believes is false.

Of Cain and Abel, Socrates, Jesus and Mohammed

To understand is what is hard. Once one understands, action is easy.—*Sun Yat Sen.*

We learn to understand the new by studying the old.—*Confucius.*

We shall now combine our individual power into one great power which is this confederacy and we shall therefore symbolize the union of these powers by each nation contributing one arrow, which we shall tie up together in a bundle which, when it is made and completely bound together, no one can bend or break . . . This bundle of arrows signifies that all the lords and all the warriors and all the women of the Confederacy have become united as one person.—*Laws of the Confederacy of the Five Nations, or Iroquois Indians.*

Man's freedom began with men uniting. Both love of kin and love of country have served our species as a means of freeing man by uniting men. Blood patriotism built the family into the nomad tribe and allowed man, through the taming of the horse, sheep and cow, to free himself from some of his natural limitations. As he freed himself from subjection to the accidents of the hunt, he settled down and land patriotism rose to free him and his beasts from Winter's hunger and cold and from the accidents to which the hunter and nomad herdsman are prey. It grew through blood barriers, brought tribes together, tied the nomads not only to the land but packed them together and built the City. It grew through centuries of warfare between nomad and husbandman, which (as I learned from George Cram Cook one day in the ruined temple of the Delphic oracle) are compressed in the tale of Cain and Abel.

Cain was the first man known to love his country. Before his

time there was no fatherland. There was only father. The nomad patriot abhorred the thought of being bound to the land where he happened to be born. He roamed the earth. Love of a common father and common aversion to the land held together the nomad tribe. Then came Cain.

Cain settled down. "Cain was a tiller of the ground." He brought to the Lord Judge the fruits of the soil as his offering. But Abel remained "a keeper of sheep," and "brought of the firstlings of his flock and of the fat thereof. And the Lord had respect unto Abel and to his offering: But unto Cain and to his offering he had not respect. And Cain was very wroth." Neither the Judge who in favoring the conservative had promised the innovator, "If thou doest well, shalt thou not be accepted? and . . . thou shalt rule over him," nor the tribal bond of blood could prevent the conflict. "Cain rose up against his brother, and slew him . . . and builded a city."

The city united more men in a closer compass than the flock or farm, and with it rose great empires, Nineveh, Babylon, spreading through mankind the fruits of the city's work in freeing man from his limitations. So it was that human wisdom grew strong and brave enough in Athens to take "Know thyself" for motto and to begin to think and talk in terms of individual freedom and universal union. It looked upon the slaves tilling the earth and revolted against the dogma that man's freedom must remain bound to the soil. It questioned the love of country on which the city's civilization was based, and asked, as did the philosophers whose horrified countrymen called them Cynics, dogs, "Why should I be proud of belonging to the soil of Attica with the worms and slugs?" And it realized primitively, as Plutarch said of Alexander, "the Cynic ideal on its political side by the foundation of universal empire."

"The Cynics," says Professor Barker, "were descended from Socrates; and the Cynics were cosmopolitans, who found their own reason and knowledge sufficient for their needs, and, craving no guidance or instruction from any city, took the world to be their home." With them, as he points out, "two new ideas are entering the world, both destined to a long history—the idea that all men are naturally equal, and the idea that they are all by nature brothers in a single human society."

Then came Jesus teaching men to render unto Caesar the things that are Caesar's and unto God the things that are God's,—to decide each in his own conscience which things are Caesar's and which things are God's, to decide each for himself what he owes to the gods of other men and what he owes to the god within himself.

> Jesus went unto the mount of Olives . . . saying, I am the light of the world: he that followeth me shall not walk in darkness, but shall have the light of life.
>
> The Pharisees therefore said unto him, Thou bearest record of thyself; thy record is not true.
>
> Jesus answered . . . Though I bear record of myself, yet my record is true . . . And ye shall know the truth, and the truth shall make you free.
>
> They answered him, We be Abraham's seed, and were never in bondage to any man: how sayest thou, Ye shall be made free?
>
> Jesus answered them, . . . I speak that which I have seen with my Father: and ye do that which ye have seen with your father.
>
> They answered . . . Abraham is our father.
>
> Jesus saith unto them, If ye were Abraham's children, ye would do the works of Abraham. But now ye seek to kill me, a man that hath told you the truth, which I have heard of God: this did not Abraham . . . Your father Abraham rejoiced to see my day.
>
> Then said the Jews . . . Thou art not yet fifty years old, and hast thou seen Abraham?
>
> Jesus said unto them, Verily, verily, I say unto you, Before Abraham was, I am.

Then came Mohammed to be hailed too as a liberator, and first by the slaves, and first of all by woman. He came into a society where a man inherited his mother as part of his father's property, wore sackcloth and ashes when a girl-child was born, and buried alive in the sand the sex that brought poverty-ridden men more mouths to feed. Mohammed stood out against that society "in the name of the Compassionate, the Merciful, the most Beneficent, who hath taught the use of the pen." He freed the girl-child from burial alive, and her mother from slavery, and through him tens of millions of women received economic rights that Christendom did not allow until modern times. He

freed not only man from the myth that he was made of earth but woman from the myth that she was made of man. Mohammed rationally taught, "He hath created the sexes, male and female, from the diffused germs of life," and he preached a single standard of morality for man and woman.

The truth that Jesus brought to make men free was so misunderstood that his followers soon converted one of the most liberating of doctrines into an authoritarian institution and a dogma that has kept many men and women from striving after and enjoying truer and freer lives by promising them paradise when they die if only they suffer till then the evils of this world. The freedom Mohammed brought was corrupted until Mohammedan came to connote the seclusion of woman, and Islam, which means "to make peace," came to connote Holy War.

Yet the teaching of Jesus with its appeal to the individual and to all mankind, instead of to the rulers of men, or to this or that tribe or nation of men, survived to do great service to human freedom. So, too, with the teachings of Mohammed: They led to the wisdom of many of the Cynic and other Greek philosophers being saved from the Christians, and to the printed Bible being made possible by the bringing of paper from China to the West, and to Voltaire pointing to the Turks, when he wrote his *Essay on Tolerance,* as an example for the world to follow.

Like the means of uniting men that preceded it the modern dogma of nationalism is but an idea of men, no more, no less. It is a combination of the patriotism of blood and the patriotism of land, of the ideas of *jus sanguinis* and *jus soli* as the lawyers who try to separate them say,—a confused and confusing mixture of our throwback to the nomad bound to his beasts and to the peasant bound to the soil.

It is historically a *parvenu.* It was not known in the time of Jesus nor during the long centuries when what a European believed about God mattered more than his blood or land. As for the Moslem world, until the Turkish Republic was established Islam asked the traveller for his religious belief rather than his nationality; it organized men politically in its empires by religions and not by nations. There was so little nationalist patriotism in the great century of discovery that scarce an im-

portant explorer sailed under the flag of his birth, and a Portuguese captain, Magellan, angry when refused an increase in pay in Portugal, went over to Charles V of Spain, and, to prove to him that the Spice Islands were not in the zone the Pope had given Portugal, set out on the voyage that proved the world is round.

Nationalism really began to flourish only in the nineteenth century when it did for freedom the great service of uniting the numerous petty states of Italy and Germany into two great peoples. It rose as a means of securing those wider and stronger political organizations which the steam engine and other inventions were making more and more necessary. It rose too as a democratic offshoot, as a lever for supplanting absolute royal sovereignty with popular sovereignty, and alien rule with home rule.

Nationalism reached its crest early in our century when the major nations were united to the point where further application of this principle was bound, because of the multiplicity of small nations in such states as Austria, Russia and Turkey, to begin dividing the world more into small compartments than integrating it on the greater scale that the gasoline engine and electrical and other inventions were making increasingly necessary. Since nationalism united men by making all-important, not Man's need of union, but things separating one group from others, it could not possibly unite into one state the groups it had united as nations, except by the imperialist methods to which the greater nations turned. Its stress on points of difference between nations, once this stress had brought most of their nationals together, could only keep mankind divided and make for greater misunderstandings, quarrels and wars.

Nationalism's main positive, constructive, integrating work being done, all the human force and sentiment and gratitude which its liberating work had gathered behind it could only pour into and operate the negative, destructive, disintegrating principles inherent in it from the start. And so we had the World War of Nations, for the place in the sun of big nations, for the rights of small nations to independence and self-determination, and, as the need of organizing the world to prevent a return of this nationalist inferno grew more imperious, for a league of nations.

This period of transition was marked, as all such periods must be, by both the forces involved, by the one ending and by the one beginning. The constructive, liberating side of nationalism in its death agony served human freedom by creating in the League and International Labor Organization and Court and Bank the first such world institutions to live, and by thus preparing the way for The Union of free men.

It served human freedom in other ways too. It replaced the remaining hereditary autocracies in the West—Russian, German, Austrian and Turkish—with more democratic governments. It restored to the human equality and dignity that all men crave such peoples as the Poles and Czechs, whose position became intolerably inferior once the theory of nationalism succeeded religion and dynasty as the basis of politics and the popular criterion of liberty. It gave new life to other peoples such as the Chinese and Turks and made them a better medium for their own westernization than imperialism could possibly have been.

But when all is said, it remains true that in our generation nationalism reached its logical limits, its constructive elements began to wane and its destructive ones to wax, until its spiral definitely turned downward. It is operating less and less to bring men together and more and more to keep men apart. It has turned against both society and the individual, it has changed masters and quit serving the freedom of man to serve the freedom of the state—as was shown so strikingly when 3,000,000 Sudetens were deprived of their individual freedom and delivered to autocracy in the name of democratic self-determination. Like everything that has outlived its usefulness nationalism has changed from a beneficent into a maleficent force.

The political theories which the tribesman and the countryman and the nationalist represent have the same motive and method. They seek to free men from the tyranny of accident by uniting them, and they try to unite men by subjecting them to the accident of how or where they happened to be born. They make this accident the all-determining tyrant for each individual by circling it with magic or mysticism.

Nationalism was saved for a while from its basic irrationalism by its early connections with democratic rationalism. Its rapid degeneration now may be seen from the way it is galloping

back behind Guide Hitler to the nomad's belief in the superiority of the tribal blood and tribal gods. Such priestcraft may still be necessary among the more backward peoples—and it is for each people to say for itself through its institutions and its leaders how politically backward it is.

But while nationalism was growing, there was also growing up another means of uniting men, democratic Union. It stemmed from Socrates and Jesus rather than from Cain and Abel. It grew out of the Renaissance of that democratic appeal to reason that produced Greek philosophy and made Athens great in the days when Pericles said, "These things are made for men, not men for them." It rose too from the Reformation that sent the individual back from authority to the Word itself, to its doctrine that "the sabbath was made for man, and not man for the sabbath," and its insistence on the equality of the soul of man and the importance of the humblest person.

It came up with the English and the American and the French Revolutions to unite men for their *Bill of Rights*, for the principle that *all men are created equal*, for the ideals of *Liberté, Egalité, Fraternité*. The men it has freed no longer need mysticism to keep them together. They need only Union now to bring them all together to free mankind still more. They have now enough experience behind them and intelligence in them to understand that freedom lies in free men freely uniting, trusting in each other and depending on each other. They are mature enough to understand that the way to man's freedom can not possibly lie in worshiping the accident of birth. They know that freedom for each can lie only in men freeing all the billion possibilities that the billions of men can alone supply for the billion-sided task of freeing man from accident's arbitrary rule. They know that to free man from the accident of death they must begin by freeing his mind from the accident of birth.

Of Union

Liberty and Union, now and forever, one and inseparable.—*Webster.*

There never was an independent man, or nation, or empire, and there never will be. To think these possible is foolish. It is

worse to believe that one has achieved them, to glory proudly in one's independence or his nation's. It is shameful.

There is no shame in admitting one's dependence on his fellows, and the dependence of one's nation on one's species—dependence not only on the living but on the billions and billions of men who have brought us painfully up. We need not blush to remember that in the sweat of arms like ours was paved the path on which we stroll, that through a human patience perhaps surpassing ours our enemy the wolf was made our friend the dog, that we owe much to the boldness of Xerxes in defying the gods by throwing the first bridge across the Hellespont, and to the courage of the Spartans at Thermopylae, and to the wisdom that Socrates by his way of dying carried far beyond the grave.

We need not hang our heads in recognizing that minds and hands like ours are somewhere in nearly everything we see, and are protectingly around us wherever we may be, that they discovered the microbes that cling to fingers and made the waxed paper and invented the machines to put it round the food we announce "no human hand has touched." There is no shame in being mindful of our dependence on the men who today are tapping the rubber tree in the tropics, braving the explosive gas of the coal mine, feeding the hungry silkworm, watching the whirring spindles, cleaning the streets and the surgeons' lances, tracking storm to its Arctic lair and fever to its African marsh, guarding the thoroughfare we crowd and the lonely reef that lies in ambush for us.

The shame lies instead in forgetting all we owe our species, exaggerating what little mankind owes to us, combining ingratitude, conceit and usurpation to make a patriotic virtue and profess that we are self-made and independent. The shameful thing is for a man to think that mankind is in his debt when the balance is struck between what mankind has done and is doing every day for him, and what he has done to make his species freer and happier. It is still more shameful to act as if mankind were so much in his debt as to justify his receiving, and his children and his children's children receiving, millions more than other men, or political, social or other title and position whose possession needs no further justification—no matter how

many other benefactions other men confer thereafter on society. The shame is not lessened when such delusions of grandeur are enjoyed by masses of men instead of by individuals, when a whole nation assumes that it has given more than it has received, that there is something naturally superior and peculiarly sacred in it, that it is the Elect of God or the Chosen People, that it was meant to be the lord of others. These are the things that are shameful in men, and they are shameful because they are so tawdry and false and unworthy of a species whose name gives us the adjective, *manly*.

The freedom of man goes hand in hand with the interdependence of men, whether organized or tacit. This is true in every field, it has always been true, and the more our freedom and self-reliance have grown, the more interdependent we have become, and the more we have needed union with more men.

It is a common thing to find a man who treats all the rest of us as stupid, as obstacles in his path from which he longs to be free. Each of us has sometimes felt that way about some, or all, of the rest of us. It is natural that each man should always be ready to indict the mass of mankind as stupid. We are all ignorant and awkward and stupid in far more ways than we are skilled and wise. That makes us esteem more our own wisdom where we have it. The fewer the things in which we are wise, the more value we set, of course, on our wisdom, and the more irritating becomes the stupidity of our fellows in the field where we are wise.

But the interesting side of this is the other side of the medal, for it is the positive side. Though a man may be stupid in no matter how many things, he is almost certainly more skilled or wiser than most of us in some few things, or at least in some one thing. "In every god there is something divine," Anatole France remarked, and we can add that in every man there is some of Man. I once had a cook who I thought was a hopeless moron until one day she made an apple pie. It was the one thing she knew how to do, it was her specialty, but she could do it so succulently well that one forgave her a heap of other things.

The man who was no good at pie-making would be a fool not to depend on her for apple pies, and the one who could make pies, but not so well, would be a fool not to depend on her for

instruction. This example being typical, we can smile while minorities of different experts nearly 2,000,000,000 strong accuse our (and their) species of a hundred million stupidities. We can be sure our species will survive and each of us will grow richer, wiser, freer, so long as we enjoy this wealth in minorities of experts—and are not so stupid as to try to be independent of any of them.

Put in other terms, the wildest reactionary is never 100 per cent conservative, and the wildest revolutionary is never 100 per cent rebel. Our Neville Chamberlains are the first to rebel at the cut-and-dried methods of diplomacy, our Lenins are conservative not only in their habit of dress but in a host of other things. Conservatism and radicalism partly result from men differing in the velocity of their adaptability to change, and from this standpoint the most hide-bound among us would appear a flighty revolutionist to his own great-grandfather. Some of course in every generation welcome change in general relatively more than others, but usually we are each conservative about many things and actively rebellious against only a few.

But the result of our division into conservatives and rebels is that we each can depend absolutely on our species never lacking plenty of men either to rebel against every conceivable obstacle to the freedom of man, or to conserve every bit of the freedom won by yesterday's rebels until those of today prove the new bit of freedom that they bring is really worthy of acceptance. This may not conduce to our independence, but can we have a better way than this to free ourselves?

It is not our greatest men who think it beneath them to acknowledge their dependence on others. They teach us not to depend on ourselves alone if we would free what is individual in us, but to study diligently other men who are masters, for, as Sir Joshua Reynolds said, "The more extensive your acquaintance with the works of those who have excelled, the more extensive will be your powers of invention . . . and what may appear still more like a paradox, the more original will be your conceptions."

As it is with those lonely venturers, our great men in every field, so it is with those who are pioneers in the narrower sense of the word. If any man can be called independent it is the

pioneer who goes out into the wilderness and carves out his home, the man of the type of Mr. Bulow, the Connecticut farmer who took Brillat-Savarin on a turkey hunt in 1794 in the forest near Hartford, and who, the great epicure narrates, thus described himself:

"You see in me, Sir, a happy man, if there is one under Heaven: Everything around you and everything you have seen in my home come from my own property. These stockings, my daughters knitted them; my shoes and my clothes came from my flocks, which contribute, too, with my garden and poultry-yard, to supply me with plain and substantial food."

Yet in the next breath Mr. Bulow (with Shays's Rebellion and the hard times of the Confederation only seven years gone and the American Union only five years old) attributes his happy lot to union with and trust in his fellows, saying, "All we have comes from the freedom we have won and founded on good laws."

These pioneers of Connecticut were among the first to sacrifice the sovereignty of the state and ratify the Constitution of the United States. Their forebears, the first men to pioneer in Connecticut, Lord Acton notes, "possessed so finished a system of self-government in the towns, that it served as a model for the federal Constitution."

It was precisely in these conditions, when in the American wilderness civilized man was thrown most upon his own resources, that his dependence on his fellows was most driven home to him, and men came to realize that their freedom lay in trusting in each other, in uniting freely on the basis of the equal rights and dignity of each of them. It was in these pioneering conditions that the men of these American colonies, before they constituted their Union, united under state constitutions that form the first written constitutions in history superior to and limiting the government and alterable only by the people themselves.

As the pioneers moved westward for 200 years men had to depend on women to do not only a woman's work but a man's work too,—to seize the reins and drive the covered wagon while the man stood off the Indians, to take his rifle and defend the children when he fell or was away. Pioneering conditions made

so clear the dependence of men and women on each other that there finally began in the Rocky Mountains the liberation of half the human race. There never were men more independent than the cowmen and prospectors and homesteaders of Wyoming in 1868, and they were the first to recognize and extend their dependence on women by giving them the vote.

Our freedom has always been inseparably bound to our faith in our fellows, and the more of them we have trusted, and the more implicitly, blindly, we have depended on each of our fellowmen—no matter what race, nation, class or sex—the more we have been rewarded with freedom. Truly of the stuff of dreams is our species made.

Men talk excitedly of crime waves. We are so good at heart that for every house built as a prison there are a hundred thousand homes where live law-abiding men. No country needs more than a tiny fraction of its population for police, and the freer the people the fewer the police. There were 160 crimes for which men were put to death in England when Blackstone wrote and George III reigned. In that century, when England grew such men as Paine and Burke, a man guilty of high treason was cut down when half hung, disembowelled and his bowels burned before him, and his body then was quartered. Down to 1790 Englishwomen who murdered their husbands were publicly burned to death. There is no such ferocity now in England, and though the population is far greater there is much less crime and only one prisoner to 4,000 people. There is also now far more freedom and trust by Englishmen in each other.

Two hundred, one hundred, fifty years ago one finds everywhere in every field far less dependence of men upon each other, and far less freedom. Then perhaps ten or a dozen men entrusted themselves for fifty miles to a stage-coach driver with four or six horses, after making inquiry, and scrutinizing their man. Now a thousand men rush into a train and are whisked off sixty miles in an hour. They may do it twice a day through every year or they may cross a continent without ever going up to the locomotive to see what manner of man is there with his hand on the reins of hundreds of horses, with his eye now

on his watch and soon searching vigilantly through the mist for the signal lamps.

They may do this all year without it once occurring to them that they are all trusting their lives to a man at the throttle, and to the unknown men who made his watch, and to the man at the throttle of the train hurtling toward them, and to the maker of his watch, and to distant train dispatchers and their watches and clocks, and to the signal men, and to the brakemen, and to the long line of men who made the brakes and the wheels and the cars and the locomotives, and to the men who made and inspected and laid the rails, and to the section hands, and track-walkers, the bridge-builders, the tunnelmakers. We can not enjoy the freedom from the horse's limitations that a train gives without trusting our lives blindly to the good faith of thousands of unknown men.

And they, in turn, have to trust in millions of passengers having faith enough in the railway to use it. The *Great Eastern*, that forerunner of our Atlantic liners, failed not from lack of room for passengers,—she was longer than nearly all the ocean greyhounds afloat sixty years later,—but because she lacked passengers. She failed because ocean travellers in 1857 lacked faith in steamships, in their makers and their crews and in men generally.

The train and the ocean liner are two of many wonders that are possible only through the willingness of men to depend utterly on their fellow-men. Wherever we go, whatever we do, we need but keep our eyes open to see the same phenomenon of freedom for each man through faith in every man.

It is in every item in our newspaper as it is in every bed in our hospital. Our newspapers, now that they reach to the ends of the earth for men who are interested in and need to know everything on earth, require for their functioning far more confidence all round than ever before, far more faith in unknown men. The statesman, the banker, the businessman who closes his door on the press, who impatiently tries to dodge when the newsmen surround him may not realize, when he suppresses or distorts or falsifies to them the news of what he has been doing, that he is hurting most himself. Yet, however important he may be, he has only a few items of news

to give compared to all those he needs to get, and the more he handicaps the newsmen in their work of accurately and quickly reporting the essentials in every field to everyone, the more he contributes to a condition that poisons the air which he himself must breathe.

The newsman who jazzes a story to sell himself to the editor and public, or who is not alert for the true interest and essential in everything, or who fails to do his best to put himself in the shoes of those whose actions or words he is reporting so as to understand the gist of what they are trying to tell the world,—the newsman may not realize it either, but the worse he does his job the more he hurts himself, if only because he too must depend on the newspapers for his facts.

Our great-grandfathers rarely trusted their lives to men they did not know, our grandfathers did so only sparingly, but we are doing it all the time, many of us nonchalantly many times a day. Yet it is now, and especially among the more trusting peoples, which is to say the freer peoples, that the death rate is far lower and the span of life is growing. We eat and drink almost anywhere on earth without the fear that man once had that strangers might poison him. We pile into elevators and go dizzily down, we dodge through streets crowded with cars more powerful than the monsters of antiquity, we jump into taxicabs without worrying whether the driver may possibly be drunk—and we never suffer half the qualms that grandfather did.

In his time there were never on the roads nearly so many horse-drawn vehicles as there are now horseless ones. When he was out driving in the buggy he did not need to trust that the men driving the few buggies he met would keep to their side of the road and not run into him and kill him. He could depend on the other man's horse and his own horse not colliding even if both drivers went to sleep, and he could be reasonably sure that an accident would not be fatal.

Paradoxically, the more that men depend upon machines, the more they must depend on men, and on more men. The number of slaves who labored up the Great Pyramid is small compared to the world-scattered, ungeneralled army of free men who

now help bring each tourist to see that work of autocrats and slaves.

The doing of a book may seem an independent enterprise, one requiring few hands compared to those needed to bridge the Golden Gate. Yet I would sooner try to count the hairs of my head than the men and women who have lent a hand merely on the mechanical side of the writing of this book: The men who felled the trees, who brought them to the paper mill, and mined and smelted its minerals and provided it with chemicals and fuel and grease, who loaned the money to build the mill and provide the machinery for it, who ran the mill and distributed the sheet of paper on which these words are now being written by a typewriter,—and all the world-scattered men who put that typewriter on this desk, among them far away natives who helped bring it bits of rubber and provided its inked ribbon (we must count in, too, the cotton-pickers).

And then there is the host of men behind this desk, this chair, this house, this fountain pen, this ink, and behind the universal postal system that carries this "manuscript," and the machines that set in type every letter in it, and the presses that print that type,—and the tale is neither finished nor complete as far as it goes.

And when we have finished with the mechanical side there would remain the substance of the book. That seems to be something independent, personal, but the book is studded with allusions to only some of those who have lent me a hand. If I sought merely to list all the men and women, great and obscure, known and unknown to me, whom I thank for encouraging me and helping give this book what substance it has, there would be no space left in it. Even to express my thanks I must depend on Lincoln who solved the problem so well when he wrote in his letter to Conkling and the "unconditional Union men" of 1863:

Thanks to all—for the great Republic, for the principle it lives by and keeps alive, for man's vast future,—thanks to all.

I can not even number the individuals, living and dead, upon whom I have had to depend, and upon whom I am glad to depend to bring before your eyes these words:

Let us then all keep clearly in our minds and tightly in our hearts that in Union there is freedom, and that each shall be the freer and happier the more we all recognize our dependence on the individual, on each other and on all our species. We are all the losers when one of us is not doing the work that is joy for him. We are all the gainers when he is doing what he loves to do, for he is then doing his share best. The more deliberately and fully and trustingly we unite with each other and depend upon each other for our freedom, the more we shall solve the problem of so arranging our society that each lives in it more happily and freely. For freedom is like love, the more of it we give, the more of it we can enjoy, and love is like union, too. True love can not do without union, nor can there be full union without love, nor freedom without either, nor either without freedom.

We have too long forgot that freedom and love were born together, and we have yet to learn that they can not live and grow without each other. As a child sometimes sees deeper than a man, so Man, when he was making words for those ethereal solid things that he has never touched and always reached for, saw into them more deeply than we do, and he made his word for *love* his word for *free*. We have too long forgot that we began *to free* with the Gothic *frijon* and the Sanskrit *pri*, which means, *to love;* we have yet to learn that not simply through the Gothic *frijonds* up from the Sanskrit *priyon* for *beloved* but from the very nature of things stem together *friend* and *freedom*.

Man has on earth no one but Man to help him, and what a mighty, what a generous, what a kindly and abiding and dependable friend and liberator is Man to Man. Man has already wrought miracles of Man by Man for Man. These are great, and they are but a hint of those that will be done when our Union opens Man's vast future as each Man pledges each.

Thy freedom is my freedom as is my freedom thine.

Man

Here in a thimble
seed of Man
enough to fill every womb in the land
womb within womb
seed within seed
all in a thimble
Say
what shall we say
of Man?

Myriad myriad
seed of Man
born and dead and back in the land
myriad myriad
still to be sown
and then one day Man shall be grown
Man who shall be
finally free
Then he shall say
who he is
why he is
all he is
Man.

Federal Union, Inc.

The membership association, Federal Union, Inc., was formed in July, 1939, to further the basic "Union Now" proposal and to enable individual supporters to make their influence felt through a permanent, nation-wide organization. Prominent leaders of public opinion in many fields are represented on its National Committee and Council of Advisors.

Activities include the organization of local chapters from coast to coast; publication of pamphlets, leaflets and other popular literature for distribution by mail or at public meetings; publication of the *Federal Union World*, a monthly magazine giving news of the federal union movement in all countries; press and radio publicity; and a Speakers Bureau which is both a clearing center for volunteer speakers and a professional booking agency.

Inquiries regarding membership or other information should be addressed to Federal Union, Inc., Union House, 10 E. 40th Street, New York, N. Y.

House Set for August Vote on Atlantic Convention—Senate & All Presidential Candidates Approve It—(P. 37)

Adlai for "Economic Union," Rockefeller for "Confederation" of Atlantica (P. 6)

What are Soviet intentions?

by Elliot R. Goodman
With a Foreword by Philip E. Mosley

Drawing on a broad sampling of significant Communist writing, Professor Goodman describes what the Communist world order would be like if the Kremlin achieved its long-range goals. He shows that despite declarations of "socialism in one country," "peaceful coexistence," and "economic competition," the ultimate aim of communism is conquest. "He has tramped through the jungles of Kremlinese in hundreds of Russian documents and has attempted to assess what the longterm Soviet goals are and how those goals will take shape . . . A eminently worthwhile book." —*Washington Post* $6.75

Portions of this book are appearing in FREEDOM AND UNION

Truman Speaks

by Harry S. Truman. Three lectures on government given at Columbia University in 1959. Especially edited for publication, they retain all their original humor, wisdom, and plain common sense. Illustrated. $3.00

International Politics in The Atomic Age

by John H. Herz. An incisive analysis of the effects of nuclear power and bipolarity on power balance, collective security, and limited war. Professor Herz also describes the measures that must be taken to restrict the spheres of aggression. $6.00

Controls for Outer Space

by Philip C. Jessup and Howard J. Taubenfeld. This timely, authoritative volume defines the strategic, political, and economic issues that will arise as technical advances make possible the conquest of space. $6.00

Pattern for Soviet Youth

by Ralph Talcott Fisher, Jr. A documentary investigation of the objective of the *Komsomol*, the organizer, leader, guardian, and chief instrument for the indoctrination of Soviet Youth. $6.75

Yearbook of the United Nations

A comprehensive record of the activities of the UN and its specialized agencies. Among the subjects included are: race conflict, population problems, the Palestine refugee question, narcotic drugs, and other timely and crucial topics. 1958 YEARBOOK now available; 1959 YEARBOOK coming in December. $12.50 each

Soviet Conduct in World Affairs

a selection of Readings compiled **by Alexander Dallin.** Key problems in the study of Soviet behavior, explored perceptively in articles and book excerpts by George F. Kennan, Bertram D. Wolfe, Nathan Leites, and others. $4.50

Introduction to Space

by Lee A. DuBridge. A compact, informative review showing how a satellite works, what it can do, and what skills are needed to make it work, as well as what we know about our "neighbors" in the solar system. Illustrated. $2.50

Cover: Recently Erwin O. Christensen, Curator, Decorative Arts and Index of American Design, of the National Gallery of Art in Washington, D. C., requested permission to reproduce the black and white drawing of Independence Hall, which Iris Beatty Johnson did for the July 1947 cover of Freedom & Union. He wished to use it as an illusttration in Volume II of *The History of American Art,* a college text published by The New American Library of World Literature. Permission was granted. No more fitting cover could be given our Special Student Debaters Issue this month than this honored work of art by Mrs. Johnson. It is the more appropriate since this issue reports the history-making decisions in Congress—173 years after it was constituted by the Federal Convention in Independence Hall—toward calling another Convention, patterned on the 1787 one, to explore Atlantic unification.

[*On Second Thought*]

Dedicated to Student Debaters-- What Youth & Age Can Do

WE DEDICATE THIS ISSUE — the greatest we have yet published—to the high school debaters, 50,000 to 80,000 strong, who will be tackling the question of Atlantic Federal Union in 10,000 schools all over the U.S.A. in the scholastic year that begins in September. Thanks to the vision and generosity of a subscriber who prefers to be anonymous, a copy of it will be presented free to each of the 10,000 debate squads.

We have tried to make this issue of special value to them, as well as to our older subscribers. Nothing, I think, could help do this more than to give the extensive reports and texts we print in it of major recent news events that make it highly probable that Atlantic unification will also be debated this Winter by experienced leaders in a Convention of NATO Nations patterned on the one that wrote the Federal Constitution.

The "Academic" Myth. Of the obstacles facing Atlantic Union, perhaps the toughest is the assumption that it is too remote" to be practical politics"—or even a subject for academic debate. The High School Debate Leagues in 46 States that decide what their topic will be, brushed this objection aside last February. They had then to pick one of three topics. They repected two that none would call academic: "How may television best serve the public interest?" and "How can the U.S. best use water resources?" They chose instead: "How can the security of the free world best be maintained?" This topic, too, was, and is in the news—but not the No. proposition for debate under it—"Resolved: That the North Atlantic Treaty Organization be transformed into a federal government."*

Singular Foresight. Dr. Bower Aly, Executive Secretary of the National Committee on Debate, who proposed the Atlantic Union question, and the members of the Committee who back in December voted to include it on the ballot, merit congratulation for their singular foresight. So, too, do the State Leagues who voted six months ago to make free world security the coming debate topic. Since February, events—U-2, Tokyo, Cuba—have made it the No. 1 election issue. Meanwhile the long-pending proposal that the U. S. call a convention of NATO nations to explore how they might best unite, has reached the point where, approved by Administration and Senate, it lacks only House approval—and the outlook is bright that this will be given when the House returns in August.

6 Battles Won in 6 Months. We summarize on page 37 the six battles this proposal had to win since February—in each of which defeat meant death—to reach now the doorsill of success.

Newspaper Curtain? The daily and weekly U. S. press—with a few notable exceptions which, bafflingly, do not include *The New York Times*—has reported none of these six battles. By ignoring all the contrary evidence, it has continued to keep alive the myth that Atlantic Union is "remote." We give

*There are two other propostions under this topic which debaters can choose to uphold: "Resolved: That the U. N. should be significantly strengthened" and "Resolved: That the U. S. should initiate a federal world government." Debate teams taking the negative against the above two could uphold Atlantic Union as a better alternative.

not merely the fullest report of these battles that has appeared in the press but, starting on page 40, nine pages of the text of the Senate debate June 15 that ended with 51-44 approval of the Atlantic Convention resolution—and with all candidates for the Presidential nomination voting for or endorsing it.

Politicians Lead, Press Lags. June also brought speeches from Governor Nelson Rockefeller and Adlai Stevenson that went far beyond mere endorsement of a convention to explore greater Atlantic unity. The former called for a "North Atlantic Confederation" or "Community" to "tighten all political, economic, military and cultural bonds linking Great Britain, Western Europe and North America." The latter urged "a permanent economic and social union in the Atlantic world." The press, led by *The New York Times*, omitted these creative proposals from the headlines—and thus many remain unaware that the once "academic idea" is now openly favored by leading politicians. We report this news fully on pages 6-7.

New Yorker "Letter from West." Almost simultaneously, *The New Yorker* ran June 18 a long, beautifully written "Letter from the West" by E.B. White which advanced with powerful argument "the vision of a federal union of free democratic capitalist states." Although Mr. White still cautiously called it "the distant shore," he made clear that he would welcome "political union with the United Kingdom, with France, with Scandinavia, with all the Western European nations—with any nation, in fact, that could show a long and successful record of government by consent of the governed." We deeply regret it proved impossible for us to reprint his article in full and warmly recommend it.

By November What New Disaster? Events will keep on making Atlantic Union increasingly imperative. Until November the election will absorb the U. S.—which invites communism to deal it a surprise. In our 1956 July-August issue I wrote apropos to U. S. election-year vulnerability: "The Kremlin can be counted on to exploit to the fullest in the coming weeks the present weakness of Washington. It will certainly consider the advantages of striking in this period of uncertainty to stop the flow of oil through Suez. Three weeks before the Canal was seized July 26, I sent this to Secretary Dulles. No heed was paid, Congress deferred the Atlantic Convention — and before November Atlantica was split . . . just when Hungary revolted. Such was the tragedy disunion brought in the last election summer. This one has begun worse.

Will Cuba Be 1960 Suez? Where will the next surprise come? Possibly in Space. Or the Mideast. More likely the Far East. Most dangerous of all seems the Caribbean—Cuba in particular. Suez began July 26; on that day this year Havana opens a huge conference of youth from all Latin America—a field day for communism. Mr. K must be tempted to seek a triumphal entry in Cuba, after the Eisenhower fiasco in Tokyo. The lure of winning a base at Uncle Sam's doorstep is heady vodka for Moscow. It knows the dangers that beset U. S. intervention in Cuba. It recalls that Suez failed to bring Europe down because the Caribbean replaced its lost oil. But what if this source, too, were cut? The stage is set for explosion—but the worst may come alsewhere in the Caribbean, in Venezuela, Panama. For the Atlantic Convention to fail in such conditions to clear its last hurdle must invite worse disaster than that which its postponement in 1956 produced.

Providential Debate. If the House approves the proposed Convention, it means that while Atlantic Union is being debated by 50,000 politically—talented boys and girls who have no memory of World War or depression, Atlantic unification will also be debated by 100 leaders from all round its ocean who *have* experienced two World Wars and the Great Depression—debated with a view to producing a plan that can save tomorrow's leaedrs from such calamities, and let them open wider"Man's vast future." It is providential indeed that so great a debate may take place simultaneously on both levels . . . among those at the threshold of leadership who have never known a non-atomic world, and those at the summit of their lives who can remember when men could not fly . . . youth's boldness and age's experience stimulating and balancing each other dynamically.

What Youth & Age United Can Create. The U. S. Federal Constitution proves how creative this interplay can be. That "miracle" (as men rightly called it hen) could never have been achieved by youth—wise though Hamilton and Madison were beyond their years—nor alone by Washington with his authority and Franklin with his wide and long experience. The problem had baffled the wisest philosophers and statesmen ever since the failure of such men as Solon, Pericles, Aristotle, to unite their city states ended Greek democracy . . . for 2,000 years. Such was the problem the Federating Fathers solved in 1787 —by the light which the sunrise and the sunset generations *together* threw upon it then.

Whether life is in its morn, at its noon, or near a glorious sunset, could one ask for more inspiring opportunity than now lies in each one's grasp?—Clarence Streit

FREEDOM & UNION'S POLICY

To think, write and act always in terms of all the democratic world, and not of any one country in it.

To mean by "we" (except editorially) the citizens of the coming Atlantic Union or Federation of All the Free, not merely those of any existing democracy.

To speed its coming by helping its people understand better the principles of individual freedom and federal union, and their importance to peace, production, higher living standards and greater spiritual growth and happiness.

To advance it also by helping the people of this Free Atlantic Community to see that they do form a community which they need to govern democratically.

To provide a forum for all views in the vast field of freedom and federation.

To bring out the facts in this field by objective, imaginative research.

***Freedom & Union* regularly combines its July and August issues; with this exception, it appears monthly.**

FREEDOM & UNION is published monthly except August by Federal Union, Inc. Offices: 2700 Ontario Rd., N. W., Washington 9, D. C. Officers: *President*, Clarence K. Streit; *Chairman*, Melvin Ryder; *Secretary*, Edgar G. Shelton, Jr.; *Treasurer*, Leo H. McCormick.

Authors' opinions do not necessarily reflect the views held by the editors.

FOR THE PAST HALF CENTURY Sir Norman Angell has campaigned tirelessly for peace through reason. He has written 40 books and countless articles for the cause of freedom. *The Great Illusion*, his most famous and pioneering work, published at his own expense in 1908 "spread through the world," said Max Eastman, "as though a dam had burst." A year before World War II began, this same book in a re-edition sold over a quarter million copies. "Few men," expressed Radio-TV Commentator H. V. Kaltenborn, "do so much for so great a cause." Sir Norman's year-in year-out efforts brought him a knighthood in 1930 and the Nobel Peace Prize in 1933. Two years ago Norman Angell celebrated his 85th anniversary, and on this occasion *Freedom & Union* published the best of his thought, as chosen by himself, together with other commemorating articles. (See November and December 58, and January 59 issues). There follows an article written especially for U. S. high school debaters.

What the Youngsters Have to Face

By SIR NORMAN ANGELL

WE OLDER PEOPLE cannot too often remind ourselves that the youngsters in the high school debates face a situation the like of which was unimaginable in our own school days. Its like, indeed, has never before confronted mankind in all its history, written or unwritten.

Heretofore men have fought wars endlessly—as tribes, as clans, as nations, as adherents of rival kingly dynasties, or rival religious beliefs, rival political doctrines. But through it all mankind survived. We of this twentieth century have survived two world wars, fought with all the weapons we could command. But we know now that we of the urbanised West, living in closely packed communities, in vast cities of skyscrapers and chronic traffic jams, would not survive a third world war fought with the weapons we now possess; that survivors, if any, would be limited to the Arctic wastes, the Asian deserts or the African jungles.

Furthermore, destruction on that scale could be brought about by a good deal less than world war. It is now possible for a single government, a single dictator—European, Asian, African—to wipe out much, if not all, of the human race. The instruments by which it could be done are being made increasingly available to all and sundry by the physicists, chemists and technicians which many nations are training.

Russia—whose capacity for industry and technology was yesterday regarded as a joke—possesses them already; China will possess them tomorrow and new African nations very shortly. And we may note in passing that half a dozen H Bombs dropped as the result of orders given by some little dictator in some small African state who had managed to get his hands on those toys, would be just as annihilating as if dropped by some really big boss—a Hitler, a Stalin, a Mao.

Which is part of the reason why even deep-dyed conservatives are coming round to the view that in the new nuclear age the most elementary security of all—security for continued existence—demands some world authority, world government with police powers of inspection and control directing an international police force.

It was well before the second world war and before the coming of nuclear weapons that Clarence Streit first pointed out, not merely the necessity of some such world authority, but the road

which must be followed if we are to attain it. The counsel he then gave is more important, more vital, than ever; has indeed, for all the reasons above indicated, a life and death urgency it did not possess in the pre-nuclear age.

More than a quarter of a century ago Streit pointed out that any world government able to ensure freedom as well as peace should begin by a union of those democracies which accepted the principle that the state was made for man not man for the state; that the union so founded was not to be regarded as a final alternative to a larger internationalism but as the road thereto; and as assurance that world government, when it came, would not be dominated by the totalitarian powers and totalitarian methods; that peace would not be bought at the cost of allowing freedom to founder in a world police state.

He recognized even then the struggle going on between the democracies and the dictatorships and also the fact that "the democratic peoples are tending more and more to engage in a disruptive nationalism which is the precise antithesis of the democratic principle . . . that the athletic and organised dictatorships will steadily outstrip the chaotic democratic countries unless some effective union is achieved."

His forecast in this respect has been verified by the event. He pointed out the way of escape but the generation he then addressed did not recognise it as the way of escape, and rejected it. That rejection raises the whole question of the quality of public judgment in the mass electorates of our democracies (who by their power to unseat one government and set up another, have the final word in the direction of policy); the question of how far our culture as transmitted by our educational apparatus really equips the masses to understand the nature of the society which as voters they are called upon to manage or direct.

No statesman, no politician, no diplomat, no Foreign Office, no State Department belonging to those countries can carry through a policy which runs counter to the mood of the voters, to what the politician is apt to call "the climate of opinion." The record in that respect is disturbing and should be examined for just that reason.

Western disunity is rooted largely in the internal political instability of the nations who should compose the union.

The most important nation of Continental Western Europe, France, provided the spectacle about three years ago of nearly a dozen separate parties within the state at such odds with each other that they could not agree on any government at all; a condition of instability finally ended by resort to an adaptation of the Napoleonic method. Just as the conditions produced by the eighteenth century revolution produced Napoleon, so the twentieth century conditions following upon two world wars and endless constitutional changes, produced de Gaulle. But what happens after de Gaulle?

The largest single party in France yesterday was the Communist party. That may prove to be the case after de Gaulle. In Italy, also, the largest party has been that of the Communists. Even in Britain small groups of fanatical, active, persistent Communists are able to dominate several of the largest Trade Unions of the country, occupying strategic positions, so that a tiny minority of the workers in for instance, selected power stations, are able to paralyse the whole industry of the country.

Warning of the Last War

The same Communist minority have helped bring about the disintegration of the Labor Party as a prelude to a Left Wing domination. The most anti-communist of the Western European nations, those in which no Communism is permitted, are Spain and Portugal. And one would hardly cite them as patterns of democracy.

The situation hinted at above, in which it would be possible for one man —seized, it might be, with a sudden fit of hate or madness—who happened to be the head of some totalitarian government, to destroy a great part of the human race, seems, at first glance so fantastic that we refuse to take it seriously. "That sort of thing simply does not happen." Yet the last war gave us warning. We know now that if Hitler had possessed the hydrogen bomb he would have used it in that moment when he had decided upon his own suicide, and Hitler came near to possessing the bomb. He had already got as far as the pilotless self-guided plane carrying buzz-bombs. And the man who was able to make sure that his orders to massacre six million Jews would be carried out, was certainly in a position to ensure this larger massacre.

African Case Against the Whites

But the lesson of the Hitlerian episode does not end there. The people who chose Hitler for their master, and composed the bureaucratic machine which carried out the abominations we associate with the names of Belsen and Buchenwald, were highly cultured, thoroughly educated Europeans, a nation which had produced great music, deep philosophies, efficient technicians. If such a people could be guilty of crimes, the very memory of which still makes the blood run cold, why should we deem it unlikely for dictators of equal recklessness and equal wickedness to arise in one of these new states of Africa or Asia, the background of which is not deep culture and education, but, as in some of the African cases, one of very recent cannibalism and human sacrifice.

And we can hardly forget what the African peoples have suffered at the hands of the Whites—those centuries of slavery, of mass deportation to strange lands, of deprivation of elementary human rights. No such wrongs had been suffered by Germans at the hands of Jews. The fact did not save the Jews from wholesale massacre at the hands of Germans. The African will have a better case against the Whites.

During the two wars it was common for Englishmen to explain German behavior as arising from the special qualities attaching to the German "race," thus disregarding the fact that we English are not "British" in any racial sense, but are so largely German or Germanic, that the commonest words we use—*man* and *God*, *flesh* and *blood*, *father* and *mother*—are German words; that we are invaders who drove the "natives" into the Welsh mountains.

Surely very recent events should have made it clear that the forces which explain the failure of Western unity, the manifest defects in democracy, the tendency to war and dictatorship, are not special to any one people but are universal attributes of human nature. After all, Hitler was preceded by Mus-

solini, Mussolini by Lenin; Stalin's slave camps were hardly less horrifying than Belsen and Buchenwald, and, in sheer number of victims, Mao may outdo Stalin and Hitler.

The quality of electoral judgment shown by the three great Western democracies is indicated by certain features of the twentieth century record.

When the U. S. A. entered the first world war, President Wilson in his speech to Congress on April 2nd, 1917, indicated the conditions of stable peace. Henceforth neutrality was impossible for a power like the U. S. when major aggression occurred. It must co-operate with others in some system of collective defense, so that the potential aggressor could not apply the method of picking off his victims one by one. The case was simple, clear, unanswerable. And when the President outlined the project of a world League, he received support of world opinion, including that of the U. S. A.

But after the war it all changed. Far from American neutrality, isolationism being abandoned, it was made ironclad by a series of Neutrality Acts. Britain and France asserted their isolationism by appeasement. Note the further changes. The internationalism warmly supported in 1917, rejected in 1920, was re-adopted 25 years later in the form of the United Nations. If the three democracies had done early what they did late it is extremely unlikely that there would have been a second war. And not what followed that second war. Because the U. S. A. and Britain could not agree on the political purposes of the war and on the strategic situation which should follow it, Stalin was able to turn Hitler's defeat into the means of a stupendous expansion of the Communist Empire. All the new national states—the famous sanitary cordon—created by the Western Allies at the end of the first world war became Communist satellites at the end of the second. As did East Germany. One of the main purposes of both wars was the destruction of German militarism. The Western Allies are now engaged, at considerable cost to their tax payers, in rearming Germany as a condition of their own security.

One further point: both wars throw light on the assumption, so widespread at the moment, that a prime condition of peace is the ending of all colonialism, the assurance of national independence for all peoples. But the *two world wars are complete proof that national independence, however desirable on other grounds, does not ensure peace.* All the major combatants in both wars were completely independent. None of them was suffering from colonial status. Both wars came precisely because the combatants were independent and sovereign. Their passionate refusal to qualify their independence or sovereignty made it impossible to achieve any secure union, any dependable collective defense which might have deterred the aggressor.

Issue Confronting the Younger Generation

The climate of opinion which makes any international society so difficult, is sustained by slogans having the quality of martial music which, without precise meaning, can nevertheless deeply stir emotion. If the current demands for unqualified freedom and independence are to be taken at their face value, they are either meaningless or falsehood. There can be no freedom for men or states, unless freedom is restricted. If each were free to drive his automobile as he saw fit, there would not be more freedom on the road; there would be none, for all would go in constant danger of sudden death.

I would emphasize three points. First, the emotions which explain our political errors are very ancient, very deeply rooted in human nature. Second, experience proves that they can be profoundly changed. Third, our culture, as transmitted by schools, has played little part in the change, higher learning even less. How small the part of learning, erudition, a glance at history reveals. Greece could produce an immortal political history we still study. But it could not maintain peace between its own city states.

In the modern world, as already noted, the most intensely schooled nation of all chose Hitler for its master. The churches of Christendom could proclaim the message of the Prince of Peace, a message of mercy, pity, compassion, brotherhood. The message was explained, elaborated, by learned theologians in a mountainous theological literature, added to century after century. But the learned theologians fought each other, using the weapons of torture and death, the rack, the burning alive, prolonged religious war. Earlier centuries showed other aspects of the human spirit. For thousands of years men believed that God, or the gods, would be pleased if little children were cut to pieces with stone knives on Holy Altars.

All that has gone, at least in the West. Human sacrifice is no more; religious wars have ceased, the torture chambers are closed. It is an immense change. What was once right has become wrong; what wrong, right. Religion has not been destroyed and religious differences remain. But the ordinary, unlearned man in Main Street now knows that true religion cannot be promoted by one army defeating another; he knows that the real defense of religious truth is not military but psychological. How has a change so profound taken place in the minds of the multitude?

The question is vital because the means which have brought peace between rival religious groups are the only means now left to us in the nuclear age for bringing about peace between rival political groups, between one kind of society and another.

Without better understanding of the psychological forces which explain the immense changes already achieved in human behaviour—and human feeling—the constitutional plans, however good in themselves, are almost certain to fail. How we may so modify our culture as to discipline the emotions of the short-sighted savage which exists in all of us, is the fundamental issue confronting the younger generation—the generation shortly destined to take over the direction of our rapidly changing society.

Reprints of this article, and of the three by Sir Norman we ran in marking his 85th anniversary, are available from *Freedom & Union*, 10c each, postpaid.—Editors.

Rockefeller for "North Atlantic Confederation;" Stevenson for Atlantic "Economic Union"

GOVERNOR NELSON ROCKEFELLER and Adlai Stevenson—the boldest "presidential timber" on Atlantic unification—set a new high level in bold leadership toward this goal in late June. The New York Republican Governor called for "a North Atlantic Confederation to tighten all political, economic, military and cultural bonds linking Great Britain, Western Europe and North America," in speaking to the Binghamton (N.Y.) Rotary Club June 21. On June 23, Mr. Stevenson, twice Democratic presidential candidate, urged the "creation of a permanent economic and social union in the Atlantic world," in addressing the Illinois State Bar Association in Waukegan, without going into such detail as did Mr. Rockefeller.

Gov. Rockefeller reaffirmed his proposal on July 1 in testifying at the Senate hearing in Washington on "national political machinery." The *Washington Post*, after giving almost a column to what it deadlined—his "Prescription for Alert and Creative Executive"—added this on his Atlantic proposal:

"Globally, the U. S. must assume" said Rockefeller, "a much more permanent political association with the free peoples of the world, in a much more intimate relationship than is conceived of today.

"Whether it is through 'confederation' or an 'Atlantic Community,' he said, the U.S. must decide whether it is going to enter a system that can give a 'more compelling' answer to what the Soviet Union is offering—'a system of world organization.'* This nation, said Rockefeller, could well consider associating with such developing forces as the six-nation European Common Market."

The text of what Rockefeller said at Binghamton on confederation follows:

I am deeply disturbed by the present state and strength of freedom in the world, as well as the security of our own country. I know these matters and their true appraisal must concern you, as individual citizens and thoughtful Americans, and as members of a great international organization [Rotary] dedicated to fostering world understanding in no less than 116 nations.

Governor Nelson Rockefeller of New York

The facts before us permit no one to be either serene or complacent. For the fate of our freedom—yours and mine and America's—is decisively affected by the fate of freedom in the world at large.

If freedom is really to become a dynamic and irresistible force in the world, free men and free nations must join together in a truly great design—a design to assure that our deepest spiritual and political values shall live and thrive. Two great and explicit challenges and needs are involvde:

First, we must give to the Government of the U.S. a structure so cohesive, so efficient, so strong that it can both inspire and execute the policies and programs necessary in a world of revolutionary change.

Second, we must lead and encourage the free nations to develop and deepen their bonds with one another so that regional alliances can grow into working confederations.

I have spoken of developing confederations out of regional alliances. This is neither a dream nor an abstraction. It simply suggests the logical and inevitable next step in the history of free nations.

We must face the fact that we have reached a point in history at which the nation-state, standing alone, is becoming as obsolete as the city-state of ancient Greece or Medieval Europe.

No nation today, large or small, can meet the needs of its people or insure their security from within its own borders alone. We have already seen the peril of allowing Communist imperialism to pick off, one by one, the free nations standing in its path of aggression. We can see that the pattern of relationship between America and these other free nations must be something deeper and broader than a series of military alliances and bilateral treaties. There must be more lasting and rational political structure to these relationships.

Furthermore, we know in the economic realm that we cannot indefinitely treat or support the many needy free nations as dependents upon America. Rather must we help them to evolve political and economic structures that sustain their own unity, cooperation, prosperity and strength.

Our great task, then, is to help build these structures, so that the forces of democracy throughout the world can be strong and purposeful, dynamic and confident. We must be concerned primarily with political associations. As the political structures are sound—and only thus—the strength needed for common effort and common defense will follow.

We are not and cannot be striving merely to meet crises on a sporadic basis—but striving to serve the needs and aspirations of free peoples everywhere on a continuing basis.

We are not trying merely to baffle enemies of freedom. We are trying to build freedom itself—by building the structures in which it can live and thrive. These are the ideas and purposes beneath the regional concept of confederation.

The outlines of confederation are already present throughout the world. They exist in the Organization of American States, in the North Atlantic Treaty Organization, in the "Inner Six" and "Outer Seven" of European trade, and other like

STEVENSON CALLS FOR "ECONOMIC AND SOCIAL UNION IN ATLANTIC"

Adlai Stevenson, according to a *New York Times* report from Waukegan, Ill., in addressing the State Bar Association there on June 23, "called for 'grounding our real strength in the creation of a permanent economic and social union in the Atlantic world.

"Such a union, he said, might undertake with the U. N. 'a revolution of economic modernization in the decisive under-developed areas of the world where the Communists are working so hard.'

"Such a move would insure greater unity in the non-Communist world, he asserted. On this 'fundamental basis of strength,' he said, renewed efforts could be made to achieve complete disarmament under international control.

*For more on the communist plan see Prof. Goodman's article, "The 'Gospel' of Red World Government' According to Marx, Engels, Lenin, Stalin, and Mr. K," on page 26.—*Editors.*

associations. These can be starting points for the work ahead of us.

This work of moving toward confederation does not involve any super-states. Nor does it substract from or conflict with the authority of the U. N. Quite the contrary: Article 51 of the U. N. Charter specifically makes provision for regional associations and the growth of these associations would, in fact, add immeasurably to the strength of the U. N.

The whole spirit and concept of confederation would be gradual and evolutionary. It provides occasion for firmer bonds between nations, joined in common effort on any level of national life—whether it be social, economic, or monetary; juridical, cultural, or military. Thus the principles of confederation can be applied at whatever level the parties agree to be in their mutual interest.

Let me try to put the idea of confederation into clear focus by proposing specific confederations and the great tasks they would accomplish: 1. *A North Atlantic Confederation to tighten all political, economic, military and cultural bonds linking Great Britain, Western Europe and North America.* It would offer in the economic area a larger framework within which to work toward resolving present conflict between the "Inner Six" and the "Outer Seven."

It would be dedicated to the ultimate achievement of free competition and free trade throughout its area. It would work toward greater unity of armed forces—a unity that, as it grew, America could recognize by placing nuclear weapons under the command of NATO.

It would share among the prosperous Western nations the burden, now falling largely upon America, to bring economic assistance and technical training to underdeveloped areas—and it would inspire this essential help to be given as a joint undertaking.

It would work toward a single Western plan for enforceable programs of disarmament to be negotiated with the Soviet Union—rather than allow the Soviets to confront and exploit a variety of divergent Western programs as they do today.

Finally, it would be a confederation so strong and so confident as to be ever ready to enlarge its numbers to include any of the Soviet-controlled satellites wanting to break away from the Soviet system and to join a union of free nations clearly capable of defending themselves.

2. *A Western Hemisphere Confederation.* This would give hope and help to the peoples of Latin America who today are the world's most rapidly growing population. It would make possible a kind of Marshall Plan for Latin America that would work toward long-range industrial development and a Hemisphere free-trade area, allowing a free flow of men and goods and money from Point Barrow to Tierra del Fuego. In my opinion, only action of this scope can check anti-democratic forces, spurred on by Communist influences from abroad, as are so evident in Cuba today.

It would join efforts everywhere to make the land serve the people, by supporting land reform wherever necessary and by fostering so great a joint project as an East Andes Development Authority. Such an authority could open up the fertile soils and abundant power along this great frontier reaching from Caribbean shores 3,000 miles southward through the heart of the continent.

It would inspire progressive social action on a broad front. It would quicken the growth of universities. It would encourage scientific research development. And it would tackle such urgent social problems as the need to finance, through a hemispheric credit mechanism akin to F.H.A., a massive program of low-cost housing in the fast-growing metropolitan centers of the Hemisphere.

3. *An African Confederation.* To begin with, this would respect and echo the spirit of African unity already voiced by African leaders who are themselves impatient with old forms of nationalism that have no real roots in Africa.

With the cooperation of the North Atlantic Confederation, it would then begin with the most urgent task before the newly free African peoples, that of providing skills and training to millions just learning to govern themselves and to direct their own economies.

It would establish specific institutes of training in these subjects, from civil administration and auditing to telephone communication and road-building. These institutes could largely be financed by the combined resources from public and private sources.

* * *

These, then, are some concrete examples of work to be done. The challenges are no less great in the Middle East and the Far East. Here, too, the rewards of working confederations can be enormous—for the cause of freedom. Ultimately, effective confederation can mean the proving that freedom can work—and that the needs and aspirations of free peoples everywhere can be met by bold and imaginative leadership of the free world.

This is a cause to challenge the greatness of America—to stir its peoples—to inspire its leaders.

This is a time in history when the skeptics and the cynics must not be allowed to make us shy from great endeavor, boldly conceived and bravely executed. Nor can we be turned aside by over-simplified warnings in terms of costs and expenses—warnings that, while seeming to be realistic, take little account of the facts.

We must remember the basic truth that only as the free nations of the world share in growth and strength can they share cost. Only as world productivity expands can the free peoples find a more sound and just source of help than the income of the individual American taxpayer. Only as the American economy grows in size and strength can it fulfill the opportunities of freedom and meet the challenge of communism. And this growth of ours can come only in a world whose productivity is speeding and whose economy is expanding.

[Statements to House Foreign Affairs Committee]

ATLANTIC CONVENTION "URGENTLY NEEDED"—HENRY FORD II

I am in thorough accord with provisions of Senate Concurrent Resolution No. 17 which you later introduced in House of Representatives. I believe that prompt and favorable action by the Congress will make possible a more determined and more effective effort to unify and strengthen the free world nations against growing stresses. Such effort is needed and needed urgently.—HENRY FORD II.

"GREAT VALUES" IN CITIZENS MEETING—ERWIN CANHAM

I am delighted to join all those who are supporting the resolutions for a convention of citizens of NATO nations. I only regret that I have to be on the Pacific coast, and will be unable to testify personally. I was a delegate to the Atlantic Congress, and recognized there the great values of this kind of citizen participation. If we are to intensify the bonds of community within the Atlantic area, we will do so through the activity of citizens quite as much as we will through governmental action.—ERWIN D. CANHAM, Editor, *Christian Science Monitor.* (Mr. Canham was President of the U.S. Chamber of Commerce the past year.—Editors.)

Note—The above statements appear in the printed report of the hearing which the House Committee on Foreign Affairs held May 17 on the Atlantic Convention resolution. For oral testimony then see June FREEDOM & UNION.

MAURICE ALLAIS EXPLAINS WHY

An Atlantic Common Market Would Be More Realistic And Advantageous Than a European One

THE GENERALLY ACCEPTED OPINION is that a European common market is both possible and desirable, but that the differences in structure between Europe and the U. S. are such that the Atlantic common market must be considered a dream. Is this opinion correct?

The following discussion aims to show briefly the essential elements that must be considered to give a correct answer.

In our opinion, the realization of an Altantic common market would raise very great difficulties, but those difficulties would be exactly the same as those of a freeing of trade in Europe; and one should in no way assume that these difficulties would be greater. They would probably be less.

The basis of the argument that follows is founded on the fact that on the average, disparities of real wages and productivities are compensated by exchange rates; that the only difficulties arise from residual relative differences; and that the orders of magnitude of these residual relative differences are altogether comparable, whether between the U. S. and a European country or between two European countries.

Common Market and Competition

A perfect great market supposes the triple liberation of the movements of capital, goods, and persons. The freeing of the movement of people (freedom of establishment) has essential advantages *of a political nature*, but it should in no way be considered indispensable to obtain most of the economic advantages of a great market. We will then limit ourselves to an examination of the liberation of the movements of goods and capital.

Two contradictory these confront us, which, if taken literally, are equally false.

Some maintain that the economy of poor countries with low productivity of labor could not effectively resist the competition of economies of high productivity and that for lack of sufficient protection for former would be unavoidably ruined and their workers unemployed.

Others insist that countries with high standards could not resist the competition of countries with high standards could not resist the competition of countries with low living standards. The former are, they say, "artificially" handicapped by high costs of production corresponding to the payment of high real wages.

The countries of high productivity being precisely those where the standard of living is the highest, it is immediately obvious that one, at least, of the two theses is necessarily false, but, in fact, as we are going to show, they both are.

In fact, if country A has an average productivity three times as great as country B, the rate of exchange in a free market will tend to set itself at a level such that an hour of work in country A exchanges for three hours of work in country B. On the whole, taking account of this rate of exchange which imposes a handicap on the high-productivity country in price competition, country B will be in no way ruined by country A.

By the same token, if it is true that the producers of country B have to pay, at the going rate of exchange, lower real wages than the producers of country A, the latter are not at all disadvantaged in competition; for if the producers of country B pay real wages only one-third as great, their productivity is one-third as great; and, on the whole, the advantage gained from the lower real wages is exactly compensated by the handicap of a lower productivity.

Relative Disparities of Prices

On the whole, if the *relative* prices of the different products in the two countries were exactly the same, the complete freeing of trade would bring about no difficulty, for the exchange rate would set itself at such a level that the average level of prices would be equal. Then the prices of all goods in the two countries would be the same.

But, in reality, the relative prices of the different products are not the same in the two countries, so that while the rate of exchange equalizes the average levels of price, *this compensation takes place only on the average.*

In every country certain industries tend to be systematically favored and others systematically disfavored. For example: Suppose that the average ratio of productivities is 3 but that the productivity in the refrigerator industry is 6 times as great in country A as in country B. The exchange rate that becomes established and at which one hour of labor in country A exchanges for 3 hours in country B compensates for

ABOUT THE AUTHOR

This is the first in a series of articles drawn from the latest book by Maurice Allais, "L'Europe Unie"—United Europe —published early this year by Calmann-Lévy in Paris, where it won the Grand Prix de la Communauté Atlantique.

The author, who is Professor of Political Economy at the famous School of Mines in Paris, was visiting professor at the Thomas Jefferson Center for Studies in Political Economy at the University of Virginia last year; he is now lecturing in Japan. Widely known throughout Europe for his books, he has been a frequent contributor to Freedom & Union.

only half of the difference of productivity, which is 1 to 6. The result is that the refrigerator industry in B country cannot, if the conditions remain identical, fight against the competition of country A.

Similarly, if in the clothing industry the productivity of country A is only one and a half times that of country B, the clothing industry of country B will benefit by comparative advantage, since the exchange rate penalizes A's industry in the ratio of 1 to 3, while the ratio of productivities is only 1 to 1.5. Taking account of the exchange rate, the prices of B will thus be, in the clothing industry, half those of country A.

This is the essential reason why two countries in competition are led to protect their economies in different sectors, each one protecting its own economy wherever the ratio of productivities differs from the average ratio of productivities in an unfavorable direction.

If no obstacle were opposed to trade, each of the two countries would tend to specialize in the sector in which it is relatively most capable, that would be to the greatest advantage of each. This is the well-known mechanism of Ricardo's law of comparative cost.

But the advantage of specialization which emerges exists only if the difference between the costs arises from permanent and natural causes. It does not exist if the causes have only an *artificial and temporary* character.

The Play of Distortions in International Competition

In order to see things clearly, it is essential to distinguish general distortions from specific distortions. *General distortions, which derive from average differences of productivity and real wages, can be corrected by exchange rates. The distortions special to each industry cannot be removed this way.*

The distortions particular to each industry can themselves be classified into natural, market, and institutional distortions.

Natural distortions derive from more or less important natural advantages of which the enterprises benefit; for example because of the proximity of natural resources and energy.

Market distortions come from the greater or lesser abundance of a temporary character of certain factors of production in different countries, such as capital or skilled labor.

Institutional distortions derive from different institutional frameworks: For example women's wages in relation to men's wages may be relatively lower in country A than in country B. Country A will then find itself more favored than country B for those of its industries which employ relatively more female labor. As far as we can judge, this is true of Italy and France in the textile industry, female labor being relatively less well payed than male labor in Italy than in France.

Influence and Correction of Distortions

Taking account of their extreme practical importance, let us consider these different aspects in some detail.

As we have indicated, on the average the differences of productivities, of standards of living, and of social charges* cannot be considered as a factor artifically falsifying the competition between the different economies, systematically and dangerously disfavoring the countries with high living standards to the benefit of countries with low living standards, or crushing the industries of the nations of lesser productivity under the competition of the industries of countries of high productivity.

From the standpoint of international competition, the richest countries are handicapped by their high real wages, but, on the average, they are favored in equal measure by their higher productivities; similarly the poorest countries are handicapped by their lower productivities, but, on the average they are favored in equal measure by their lower real wages.

Practically speaking this compensation is effected by the exchange rate, this rate being fixed at a level so that the national hours of work are exchanged on the international market in a ratio whose order of magnitude is precisely equal to the average ratio of their productivities.

But this compensation is only an average compensation, which prevails only on the whole for the whole range of industries of a given country. Because of specific distortions, it does not work for each industry considered alone.

Taking account of the fact that, as a result of specific distortions, the differences of productivities between each two countries vary quite considerably according to the industry considered, there is no doubt that an immediate abolition of restrictions (quota and customs duties) on the movement of goods could suddenly put certain industries in very great difficulties, even insurmountable ones, which would make extremely difficult, where it is necessary, their reconversion in the right direction.

Where the differences in productivities are greater than the average difference compensated by the rate of exchange, international competion would in fact favor the countries whose average productivity is higher; where the differences in productivity are less great than the average difference of productivity, it would favor the countries whose average productivity is less high.

If the divergence between the ratio of productivities in a certain industry and the average ratio depends on permanent structural conditions, such as the greater or lesser abundance of different natural resources in the different countries, the new specialization provoked by the liberation of international competition, however painful they may be, must be considered as eminently useful for all. In other words, there is no ground for trying to compensate in any way for the natural distortions, and it would be certainly a great error to try to compensate away the advantages caused by geographic protection.

—20 Siecle Federaliste

'The Markets of the European "Six" (Marché Commun — Common Market) and "Seven" (Libre Echange—Free Trade Association) are not ready to meet yet," the cartoonist believes, but Maurice Allais is confident that it would be less difficult to create a larger Atlantic common Market.

*This means "cost of fringe benefits of social security."

If, on the contrary, this difference depends on specific market distortions, conditions that must be considered as temporary, such as the greater or lesser wealth in capital, the brutal play of a complete and immediate liberation of commodity movements would be liable to provoke adjustments in the wrong direction and thus to entail disorders and suffering (disappearance of whole industries, unemployment, etc.) *which would finally turn out to be useless and costly*. But this incontestable danger could not exist if the transition period were sufficiently long.

If, finally, this divergence depends on institutions, one may consider that the enterprises of the different countries find themselves in discriminatory conditions that must be made to disappear. This is notably true of women's wages and differences of fiscal systems.

In fact, specific distortions are incontestably extremely numerous. They create conditions of discriminatory competition, and their abolition presents difficulties which should not be underrated.

However, one should not unduly exaggerate the importance of this abolition, for this type of distortion occurs, in fact, only on a secondary level, the first level being compensated by exchange rates. Only a few specific institutional distortions can be considered as very important, and it suffices in practice to abolish them partially.

Atlantic and European Common Markets Compared

The obvious result of the preceding is that the obstacles to the liberalization of trade do not come from the average absolute difference in productivities (general distortions) but from differences in various productivity ratios relative to the average ratio (specific distortions). These differences can be caused either by natural conditions (specific natural distortions) or by market conditions (specific market distortions) or by institutional conditions (specific institutional distortions).

So, these relative differences are exactly of the same order, whether it be a question of France and Germany, for example, or of France and the U. S. Similarly, the relative differences existing among fiscal systems are quite comparable.

If then, we state the problem of the liberalization of trade on the Atlantic scale, the difficulties to be expected are therefore no greater than those to be expected in the European case. They are quite comparable, which does not mean that they are negligible.

The problems faced here are of the same nature as those created in Europe by the elimination of customs barriers, tariffs and quotas. They are posed on a larger scale, but the benefits to be derived are also much greater. The thorough studies made in the past 15 years as regards European Union show that these problems are technically capable of solution and that, in reality, they would even be easier to solve within the wider framework of an Atlantic union than within the more restricted one of the European community.

U.S. and European Fears

Whether one considers the problems resulting from dollar or other monetary shortages, or from the extension of the preferential system of the Commonwealth to Western Europe (which is incompatible with the most-favored-nation clause) there seems to be no solution outside an Atlantic framework.

The liberation of exchange regulations between countries separated by customs barriers on the one hand, and rapid technical progress on the other, raise identical problems. They bring a much higher standard of living, but they require the various economies to adapt themselves to new conditions; the drawbacks in doing this are only temporary, but the advantages are permanent.

Europeans fear they cannot compete with the greater economic productivity of the U.S., but the Americans have no less a fear of being submerged by European goods produced by relatively cheaper labor. Both fears would be partly justified if one sought an immediate liberalization of trade, but not if it were effected gradually.

The solution of the problem of creating an Atlantic Economic Community lies in the gradual elimination — say within a period of 20 years—of the obstacles of all kinds which now hinder the free movement of goods, capital and men among the Atlantic nations.

The economic advantages to be expected from an Atlantic common market are very much greater than those that can be obtained from a European common market, for the scale of the liberation is greater. The advantages are self evident. The prospects are on the same scale as the market of more than 400 million people that would be created by Atlantic Union. This project is not in contradiction with the plan for economic integration of the European Six. It is its natural and necessary corollary—and is much more realistic.

The realization of such a common market would offer no more difficulties than the realization of a European common market. It would indeed offer even fewer problems. Certainly the difficulties corresponding to the specific distortions would be comparable; but in two respects the operation would be easier. First, the vaster the scale of liberalization, the easier it is to find compensations. Second, and on the monetary plane, it is, in our opinion, easier to make an Atlantic international monetary system function than a purely European monetary system.

One could not over-estimate the advantages to be expected of a liberalization of trade on an Atlantic scale, whether in the U. S. or in Europe.

Politically, we may affirm that the prodigious prosperity which would result for the Atlantic world from this liberation would alone suffice to undo the Soviet totalitarian empire of slavery, which its own very system condemns to permanent and considerable difficulties.

Is the creation of some form of political community on an Atlantic scale a utopia? I do not think so. It is true that, on the whole, public opinion in the U. S. at present would be opposed to such a union, which would bring about the free movement of goods, capital and men; but experience has shown that American public opinion can change rapidly. It seems to me that if Europe proved its ability to overcome its own ideological and nationalistic differences, the resulting shock would be strong enough to change public opinion in the U. S. and to make some form of Atlantic political community possible.

It should be pointed out that, once embarked on this road, Europe would not need fear eventual U. S. domination. In fact, the 175 million Americans would face 250 million Europeans.

If in face of its catastrophic decline during the past few years, the Atlantic world does not want to continue down the road which leads to the disappearance of its civilization and to its servitude, it should make the creation of an Atlantic community of free men, based on a common cultural ideal and a truly common economic market, the major objective of its policy.

The Rule of Law--What It Truly Means

By ROBERT N. WILKIN
U.S. Federal Judge (Retired)

THE GREATEST OBSTACLE to peace is the general want of understanding of Law—its history, its purpose, its function.

That law is the only practical substitute for war is generally understood. The President's proposal to substitute "The rule of law for the rule of force" has had a cordial response.

But there is no constructive action to accomplish such a proposal, and no public demand for such action. Our nation fails to insist on a convention to amend the Charter of the U. N. Our government has declined to call a convention to consider the creation of an Atlantic Union or Federation of Free States. The Senate refused (by the Connally Reservation) to concede unqualified jurisdiction to the International Court of Justice over international disputes.

We sentimentalize over peace, but refuse to do the only thing that will insure peace. We acquiesce in the need for lawful order in the world, but obstinately refuse to proclaim that in world affairs we will hold our sovereignty subject to Law. We boast of a government of law for national and interstate affairs, but refuse to accept government of law for international affairs.

The chief cause of such inconsistency is a very general misconception of law. Law is thought of as command, as the assertion of will. Most people think of law as being all those arbitrary rules and regulations imposed by government for the maintenance of civil order. Such rules and orders are phases or detailed expressions of law, but they are not The Law.

The Law that is needed for international relations is the Law of laws. It is not arbitrary will or capricious command. It is the universal and eternal principles of right and justice. It was not proclaimed by government, but is the natural restraint on government. It was established by the providence that created the universe and made it subject to law. Like the laws of chemistry and physics, it can not be violated with impunity.

Man is endowed with free will. He is also endowed with reason which enables him to learn the law, and should enable him to exercise his will according to the law of his individual — social nature. Dean Pound defines the Law as "Experience developed by reason and reason tested by experience." Now the will of a nation is generally referred to as sovereignty; but the will of a nation is no more exempt from the law than is the will of an individual. As C. H. McIlwain has said, "the problem of law *versus* will remains the most important of all practical problems." Since the world has become one community, the problem is world-wide, and since the munitions of war are totally destructive, the issue is life or death.

To gain an understanding of the Law, it must be considered in historic perspective. As we study human evolution through the ages, with failures and accomplishments, we perceive what Rudolf von Ihering referred to as "The struggle for law." Peace and prosperity followed in the wake of established law, as shown by the Pax Romana and Pax Britannica. Just as the physical sciences

advanced by the discovery and application of the laws of physical nature, so political science advanced by the observance of the laws of human nature, in spite of the differences between physical and human nature.

Greek philosophers of classical antiquity expounded the theory of universal principles of law that ruled all nature. This became a basic tenet of Stoic philosophy. The Stoics taught that there were standards of righteousness and justice which were revealed to man through reason according to nature, and which, if strictly heeded, were manifest and clear—almost as evident as things perceived by the external senses. They taught therefore that law in its very essence rests not upon the arbitrary will of a ruler or upon the emotional decree of a multitude, but upon nature and the innate ideas of man's moral and social nature.

Stoicism made a strong appeal to educated Romans, and this was important at the time of the dissolution of the city-states. In place of a law embodied in the closely unified political tradition of a single city, it was necessary to conceive of law for the whole civilized world.

When Rome became the supreme political power, it also became the commercial center of the world. A large body of alien residents settled in the city. The magistrates and lawyers of Rome were compelled to recognize the differences of customs and local rules among these aliens and the provinces and countries from which they came. In the process it was discovered that underlying the differences of formalities and procedure, there were principles of honesty, fair dealing, and good business practice. The Roman administrators and lawyers called this *ius gentium*, law common to all peoples.

The great lawyers and magistrates of the second and third centuries B.C. saw in *ius gentium* an exemplification of the Stoic principle of universal law, and, they, with the aid of the juris-consults, made it a basic tenet of Roman jurisprudence. They spoke of it as *vera lex*, true law.

The Romans not only rationalized true law, they also gave it practical application. They demonstrated that where true law was honestly and fairly administered the people prospered and were satisfied. The accomplishments of Scaevola, Cato, Sulpicius, and Cicero, serving as pro-praetor or colonial governors, enabled Cicero to inform the Senate that there were provinces and foreign countries where the Roman rule of law was preferred to the despotic rule of native kings.

The Church Fathers found the ethics of Stoicism and the jurisprudence of Rome consonant with their religious teaching. They became expositors of true law, and preserved it after the disintegration of the Roman Empire. Offi-

cers of the Church were educated in Latin and studied Roman jurisprudence. As administrators and justiciars they gave the impress of Roman law to all Europe. Throughout the Middle Ages and well down into modern times the existence and validity of true law were taken for granted. Its central idea, as Sir Frederick Pollock has said, "was an ultimate principle of fitness with regard to the nature of man as a rational and social being, which is or ought to be, the justification of every form of positive law." It embraced such conceptions as equality before the law, faithfulness to engagements, equity and fair dealing.

For hundreds of years the judges of England were officers of the Church. By the end of the thirteenth century the Common Law had become more Roman than Anglo-Saxon. One of its basic principles was "the supremacy of law" Chief Justice Coke quoted Bracton, a judge and a priest, when he told King James that he was "under God and the law." It was these conceptions of true law that led to the Bill of Rights.

It was true law that prompted the establishment in his counry of "government not of men but of law." Through colonization, Roman Law and Common Law, with their central idea of true law, were carried to all parts of the world, and when colonies established their independence they retained the law of the colonists. So true law has strong roots extended throughout the world today.

When the Roman Empire disintegrated and Europe separated into many different states, nationalism became strong, sovereignty was emphasized and universal law was neglected or opposed. Will prevailed over law. When the national kings and feudal rulers asserted their sovereignty as against other states or the papacy, the people generally, prompted by an inherited clan instinct, supported their monarch. In time, however, the movement for freedom opposed the claim of absolute sovereignty at home. The evolution of popular government suppressed the "divine right of kings," but then absolute sovereignty was assumed by the legistlative agents of the people, and finally the popular movement, in its tendency to draw all power into its "impetuous vortex," vested absolute sovereignty in the people.

Democracy, like nationalism, has a strong tendency to exalt the will above the law. Pandering politicians and demagogues acclaim the "sovereign people" and the "popular will," and legislative agents, instead of exercising their own best judgment, are motivated by what they assume to be the will of their constituents. The assumption that the majority should rule, creates the impression that the majority is always right. But often the instant, emotional opinion of the majority is not right.

The problems of government require learning, study, discussion and deliberation. That is why wise Founders established here a representative republic. The truth is revealed first, not to the majority, but to the saints, scientists, savants and patriots who discipline themselves to receive it, and evolution follows in their wake.

The ultimate, informed and considered judgment of the people can be trusted, because they are imbued with the principles of the true law of human nature. But their arbitrary will is no more sovereign than the will of a king or parliament.

In recent times true law has been opposed by another influence. The modern revolt against traditional standards of morals, taste and decorum (most evident in modern art, music and literature) was also directed against the objective standards of true law. Truth, justice, right were to the modern sophisticates only subjective standards, at best mere principles of ethics; and law to them was only the commands which government had the power to enforce. Such "positivist" philosophy of law was soon found to be at one with the idiologies of the dictatorships of recent years. The willful and inhuman conduct of the dictatorships has caused legal scholars and statemen to appreciate the inter-relations of law and value, and now almost everywhere there is a revival of interest and faith in the higher law—true law.

Thus the history of law repeats. When the city-states failed to meet the needs of expanding Mediterranean civilization, universal law supplied the needs of that time; and now when the nation-states fail to meet the needs of expanding world-civilization, universal law again comes to the fare.

Next to the history of true law the most urgent need is an understanding of its purpose. The basic purpose of law is to maintain civil order—to restrain crime and violence and keep the peace. Its aim is the commonwealth, and the just settlement of disputes by impartial tribunals.

It is not the purpose of true law to control or regulate the economic or social affairs or other details of the life of individuals, local communities or nations. Under true law humanity would be free to enjoy and profit by the interesting variations in life, and evolution would continue without interruption from arbitrary will.

It is also important to understand the function of true law, its method of operation. Law requires implementation. As a great Roman lawyer said 2,000 years ago, "The law is a voiceless magistrate; the magistrate is the voice of the law." In order to accomplish its purpose thet law must have a sustaining organization with three departments: one to promulgate, one to adjudicate, and one to enforce.

Since true law exists in universal, general principles, political life requires from time to time more specific directions for control of details; and experience indicates that this need is best met by some representative agency empowered to enact statutes, ordinances and orders. Dean Pound distinguishes such enactments and commandments from Law by designating them "rules of law." They help to serve the purpose of law so long as they do not contravene the principles of true law. Such legislative agencies as town councils, state assemblies and congress would conserve local self government while true law, if properly implimented, would preserve world peace.

The most essential and important function of true law is the function as to which there is the greatest misunderstanding and reluctance. It is in the judicial court that law finally prevails over will. That is why the most wilful (gangsters, unions and nations) most bitterly oppose the judicial functions.

When a dispute arises that cannot be settled by negotiations or arbitration, the only way it can be settled peacefully is by "third party judgment." Any dispute that threatens the peace or commonweal of the community must be justiciable because the community welfare transcends other interests. So today the welfare of the world community has become supreme.

As law was the gift of Rome to the world, the best way of administering it

was the gift of England. In England the judicial function was separated from other branches of government and judges were given independence and security of tenure so that they might be wholly devoted to the law. The U. S. Constitution made strict provision for an independent judiciary.

Judicial history is a record of commendable accomplishment. It shows that when men are given a fair chance they prove worthy of trust and confidence. History has dealth generally with dynasties, wars and political campaigns. The devotion of judges to the law has advanced and stabilized civilization, and their moral courage has equalled the physical courage of military and political patriots. When men of character and learning in law have been chosen for judicial office their service has been uniformly free from racial, religious, national or other bias.

The judicial function affords the means of restraining the action of local, state, national and international agencies and officers within the legal limits of their respective jurisdictions. It acts only, however, on what it submitted; it cannot initiate action; and with final judgment its power ends. Another limitation on the judicial function is the requirement that its procedure be in accordance with what has come to be known as "due process of law," a term that includes such concepts as impartial tribunal, fair trial, due notice to interested parties, right to call and examine witnesses and right of counsel. The judgment must be, not the arbitrary will of the court, but "the voice of the law."

The administration of law requires that some agency be empowered to protect the lawful from the lawless. Cities, states and nations maintain police and law enforcement officers who are authorized to restrain violations of the law and to arrest and suppress law violators. The possession and use of fire-arms and dangerous weapons are restricted to law enforcement officers. Similiar provisions should now be made for the protection of the world community. The munitions of war have become so devastating that they dare not be entrusted to the arbitrary will of nations. The welfare of humanity requires that such munitions and armament must be under lawful control.

President Eisenhower in his New Delhi address said: "What is now needed is to infuse into international law the finest traditions of all the great legal systems of the world."

Six of the great legal systems are:

1. The Law of the Sea, or Admiralty
2. The Torah, or Talmudic Jurisprudence
3. Roman Law
4. Canon Law, or Law of the Church
5. Code Napoleon
6. Anglo-American Common Law.

The Law of the Sea is the oldest system. It had its origin in custom and is administered today in all lands bordering on navigable waters. U. S. Courts were vested with jurisdiction over this law by the Constitution. Lawyers are now attempting to formulate a similar system of law to regulate navigation of the air and outer space.

The Talmudic Law had its origin in the theism of the Hebrew people. It was based on a belief in a divine creation and conduct of the Universe. It is still observed by Orthodox Jews.

Roman Law has based on Greek philosophy and Roman jurisprudence. Its principle of universal order led to what Cicero described as True Law. His definition is accepted today as "one of the finest expressions in all political literature."

Canon Law, while the law of the Church of Rome, contains both spiritual and temporal provisions. Its temporal rules resulted from the temporal power exercised by the papacy after the decline of the Roman Empire. It is still the universal law of Catholicism and respected by devout Catholics everywhere.

The Code Napoleon was the work of the great jurists of the Napoleonic period. It was founded on Roman jurisprudence and became the basic law of all the countries of Continental Europe. It is frequently referred to as The Civil Law to distinguish it from the Common Law. It is the basic law of most of the countries of Central and South America, one of the provinces of Canada and the state of Louisiana.

How to Promote True Law

Anglo-American Common Law had its origin in the customs of the Anglo-Saxon tribes and in feudal polity. After the Norman Conquest it became predominantly Roman in principle. It is the prevailing law of the British Commonwealth of Nations. It is also the law of the U. S., Canada, Australia, New Zealand, and India.

The predominant characteristic of all these great systems of law is that they recognize and embody the principles of true law. When the United Nations Organization adopted the Statute of The International Court of Justice, it recognized the established sources of international law, but it also authorized such world tribunal to decide cases *ex aequo et bono,* according to equity and good conscience. That provision definitely impressed the principles of true law on International Law.

The recommendation of President Eisenhower that the rule of law be substituted for the rule of force, and that international law be impressed with the fine traditions of the great systems of law is sound, logical, and practicable. The recommendation, however, will not be accomplished unless it is supported by public opinion. There will be no such support until the people of character and intelligence who create and express public opinion become informed as to the history, purpose, and function of law.

People who obey the law learn to love the law and are blessed by the law. It manifests itself unto them and abides with them, and they find in it the source of their freedom, the protection of their rights, and the greatest possible assurance of peace. All nations that believe in true law must now unite to maintain it in the world, and all people will in time join that union. They will believe "for the very work's sake."

King Nation or King Citizen?

By CLARENCE K. STREIT

CONFUSION has been rife ever since the American Revolution established the U.S. on a new concept—one that reversed the Old World dogma of sovereignty.

In the international field where the sovereignty issue most imperils life and liberty, there is such fog now that some who pride themselves most on being Sons or Daughters of the American Revolution are fighting today against the very principle of sovereignty that the Founding Fathers fought to establish. In the misguided belief that they are upholding the work of the Founders, they uphold instead the notion of sovereignty that George III fought for. Some veterans, and many other worthy citizens, have fallen into the same confusion. It has become, indeed, so widespread that some Senators and Representatives either suffer from this confusion themselves, or fear to help remove it.

"A frequent recurrence to fundamental principles . . . [is] absolutely necessary to preserve the blessings of liberty, and keep a government free," Pennsylvania's Declaration of the Rights of Man asserted in 1776. It is high time we did this in regard to sovereignty.

Sovereignty Before 1776. The concept of sovereignty which the American Revolution challenged ruled the world then even more than it does now. This concept held the State supreme, and reduced man to the role of subject, made him a mere cell in the body politic. Nearly everywhere the State then meant in reality one man, the Sovereign—otherwise known as King, Emperor, Kaiser, Czar. This Sovereign was alleged to have a divine right to rule absolutely, to be a law unto himself, as regards not only all foreign national Sovereigns, or Kings, but all the people of his own nation. In practice the Sovereign had to make some concessions, but in principle he accepted no diminution of his supreme or absolute power, his freedom to do as he pleased with all other men, both in domestic and foreign affairs. This concept of sovereignty was summed up most brutally and briefly by the Bourbon Louis XIV who said, "*L'état, c'est moi*"—"I am the State."

True, the English Revolution in the 17th Century temporarily overthrew one divine right sovereign. But "about the year 1770," as Lord Acton says in his *History of Freedom*, "things had been brought back . . . nearly to the condition which the Revolution had been designed to remedy forever. Europe seemed incapable of becoming the home of free States. It was from America that the plain ideas that men ought to mind their own business . . . burst forth like a conqueror upon the world they were destined to transform, under the title of the Rights of Man."

1776's Revolutionary Idea. Against the Old World dogma that Man is made for the Sovereign State, the American Revolution raised the principle that the State is made for Man—that sovereignty is lodged equally in every man, that the citizen is the supreme Sovereign. This new concept reduced the State from a sacred end in itself—a deity to which men should sacrifice their own lives and liberties—to the role of a mere means to serve Man.

In sweeping terms, the Declaration of Independence proclaimed its revolutionary principle of sovereignty—"that all men are created equal; that they are endowed by their creator with certain inalienable rights; that among these are life, liberty and the pursuit of happiness; that to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed; that whenever any form of government becomes destructive of these ends it is the right of the people to alter or to abolish it, and to institute new government. . ."

The Daughters and Sons of the American Revolution—and the far larger number of citizens who, like Lincoln, feel a spiritual rather than a blood relationship with the Founding Fathers—may be excused for the confusion that tricks them into fighting for George III's concept of sovereignty in the fond belief that they are upholding the Declaration of Independence. There is this extenuating circumstance they can plead today: The majority of the Founding Fathers themselves fell for a while into the same confusion, and some of them, such as Patrick Henry, never thought their way out of it.

How Confusion Arose. Through confusion, the Founding Fathers abolished at first only half of the George III concept of sovereignty. As regards their domestic affairs, the people of each of the 13 States made State government subordinate to them. But as regards the foreign affairs they had in common with the citizens of the other 12, they clung in each State to George III's idea. Taking the State instead of citizen as sovereign——as we have done in the Atlantic Alliance—they formed the alliance of the Articles of Confederation.

In their confused Confederation, the Americans operated simultaneously on two opposing principles: The citizens governed their common affairs within each State on the principle that the citizen was sovereign and the State was made equally for the people in it, but they governed their common affairs with other States on the principle that the State was sovereign and the people were made for the State. In other words, they sought to preserve their citizen sovereignty, as the supreme purpose of government, by a system whose supreme purpose was, instead, to preserve the State's sovereignty.

It is understandable that the Founding Fathers should have become confused over sovereignty. The concept of citizen sovereignty was then so new they had no name for it. Moreover, they had to deal not merely with States that shared this concept but also with nations that upheld the opposite idea—the dogma that the Royal Sovereign was a law unto himself.

The people of the 13 States obviously could not govern their affairs with their ally, the King of France, on the basis that the people were sovereigns there. They had to base their relations with such nations on the Old World concept of sovereignty. The people in each of the 13 States unthinkingly slid from this necessity into the notion that they must

The Confusion Over Sovereignty

deal with the other 12 States too on the same principle which they had to apply to States whose people were not its Kings.

How Confusion Continues. The same confusing situation that befuddled the American people in the 18th Century exists for the people of each of the Atlantic democracies now. The sovereign people of the U.S., Britain, France and other States of Atlantica obviously cannot govern their relations with the Soviet Dictatorship by the theory that the citizen is the real sovereign in the Communist Empire. They must deal with Moscow on the basis of the Kremlin's concept of national sovereignty. But the people of these Atlantic democratic States are now upholding this concept against each other, too, even in their joint efforts to preserve their citizen sovereignty from being overthrown by this Kremlin concept which makes Man the slave of the State. This confusion makes no more sense now than it did when the 13 States fell into it. It divides freedom against itself no less dangerously now.

Sovereignty in Federal Union. The Founding Fathers came to their senses before the confusion over sovereignty had led to anything like the massive dangers which it has already produced for the people of the Atlantic Community in our day. They sent delegates to the Federal Convention in Philadelphia in 1787 to explore how to reorganize the relations of the 13 States on a basis that would make the government of their common affairs serve the lives and liberties of their people, instead of the sovereignty of their States at the expense of the citizens. The result was the U.S. Federal Constitution.

By Federal Union, the American people doubly maintained the principle of the sovereignty of the citizens of each State. First, they effectively placed the united power of all the 13 States behind the right of each State to govern its domestic affairs independently. At the same time they established the sovereignty of the people of the U.S. as a whole, so that the citizens could govern their inter-State affairs by the same principles they used for governing their domestic affairs. As an adjoining box reminds us, this simple but revolutionary change was achieved only after such clear-headed, courageous leaders as Washington, Hamilton, and Madison had tackled head-on the false Old World concept of sovereignty which had slunk like a wolf in sheep's clothing into the 13 States, much as it is fooling the people of the free Atlantic Community now.

Creating U.S. Sovereigns. When the people of the 13 States applied the principles of the Declaration of Independence to establish their Federal State, they surrendered none of their sovereignty as citizens. To set up their State governments, they had delegated certain portions of their citizen sovereignty to the representatives they elected to its government. In setting up their Federal Government, they simply transferred to the men they chose to represent them in it, certain powers which they had previously delegated to their State Government. They merely shifted some jobs from one set of agents to another, while remaining boss of both.

When the citizens of Pennsylvania agreed to transfer power over defense from the State to Federal Government, their representatives in the State Government lost power. But the people lost none, since the citizen retained exactly the same sovereign vote in choosing those to whom he delegated his power, whether in the Federal or the State Government. Thus the Founding Fathers made the citizen of every State a U.S. sovereign, too, and sacrificed none of the revolutionary American concept of sovereignty in establishing their Federal Union. But the present American generation has been sacrificing this sovereignty tragically, increasingly—by refusing to go forward with it.

Sacrificing U.S. Sovereigns. If you agree that U.S. sovereignty is not vested in the President or the Government but equally in all the citizens, then every citizen who is burdened with excessive taxation is sacrificing that much of his share of the national sovereignty. Every citizen who is drafted into the armed services is sacrificing another big portion of his share of the national sovereignty. And every citizen who is slain in war is sacrificing all the rest of his share of U.S. national sovereignty.

Look at the way we Americans are

Washington, Hamilton, Madison on Sovereignty

"A THIRST FOR POWER, and *the bantling, I had liked to have said monster* [his emphasis] for sovereignty, which have taken such fast hold of the States individually will . . . form a strong phalanx against it [the proposed Federal Government]. . . . Yet I would fain try what the wisdom of the proposed Convention will suggest. . . . It may be the last peaceable mode. . . . My name is in the delegation to this Convention."—*Washington, March 10, 1787.*

"As States are a collection of individual men, which ought we to respect the most, the rights of the people composing them, or of the artificial beings resulting from the composition? Nothing could be more preposterous or absurd than to sacrifice the former to the latter."—*Alexander Hamilton, in the Federal Convention, June 29, 1787.*

"Was then the American Revolution effected . . . was the blood of thousands spilt, and the hard-earned substance of millions lavished, not that the people of America should enjoy peace, liberty and safety, but that the government of the individual States . . . might enjoy a certain extent of power, and be arrayed with certain dignities and attributes of sovereignty? We have heard of the impious doctrine in the Old World, that the people were made for kings, not kings for the people. Is the same doctrine to be revived in the New in another shape—that the solid happiness of the people is to be sacrificed to . . . political institutions of a different form? . . . As far as the sovereignty of the States cannot be reconciled to the happiness of the people, the voice of every good citizen must be, Let the former be sacrificed to the latter."—*James Madison, No. 45 of* The Federalist, *1788.*

now sacrificing the citizen's sovereignty.

In 1938 the bill for U.S. defense amounted to only $16 a citizen. Now it is $256 for every man, woman and child—16 times as much as it was before the worst war in history. In 1938 no American citizen was subject to draft. Now millions are drafted and subject to draft. In World War I, the U.S. called into the services 4,609,190 men, of whom 53,403 were killed in battle. In World War II, 15,513,657 U.S. citizens were called into the armed services and 293,105 sacrificed in battle their entire share of the nation's sovereignty. All this adds up to an appalling sacrifice of U.S. sovereignty.

How much more of U.S. sovereignty will be sacrificed by the cost of a third World War, with taxation already so high, and the dollar's value already halved by war?

How much more of the citizen's sovereignty will be sacrificed in military service by World War III, with so many drafted now?

How many, many more Americans will sacrifice all their share of the national sovereignty in the third World War toward which we are steadily moving, despite all this taxing and drafting —a war in which millions can be killed by a single H-bomb?

We Atlantic Federal Unionists are anxious to prevent more fearful, flesh-and-blood sacrifice of national sovereignty than our nation has already suffered. We want to save the real sovereigns of this republic, and of every democratic nation. We are not pacifists; we realize that some sacrifice of liberty and even of life is necessary to preserve freedom. We want to save the citizens from *unnecessary* sacrifice and make them stronger sovereigns. We believe this can be done by extending U.S. federal principles around the North Atlantic.

Washington Warned. To keep from sacrificing needlessly the sovereign citizens, Americans, in particular, should be ready to sacrifice the power of those who now govern them: The Founding Fathers set the example. They sacrificed the sovereignty of King George III when they set up their independent State Governments. Then they sacrificed some of the sovereign powers of those State Governments when they set up the Federal Constitution. George Washington foresaw that this second move would be opposed by those who lost power by it, just as the revolution before it angered the British Sovereign. Referring to the proposal to federate the 13 States, Washington wrote in a letter to Henry Knox dated Feb. 3, 1787.

> "I believe that the political machine will yet be much tumbled and tossed, and possibly be wrecked altogether, before such a system as you have defined will be adopted. The darling Sovereignties of the States individually, the Governors . . . the Legislators . . . whose political consequence will be lessened, if not annihilated, would give their weight of opposition to such a revolution."

Some of the Governors and legislators of the 13 States tried hard to make the people believe that their loss of power was a loss to the citizens. But the people were not fooled. They saw that the Federal Constitution simply transferred some powers which they themselves had given their State officers, to Federal officers whom they retained the same right to elect. They didn't mind lessening the "political consequence" of their State representatives so long as they, the people, gained in the process.

The establishment of an Atlantic Federal Union, it must be said, would lessen the political importance of the President of the U.S. and of U.S. Senators and Congressmen. Certain powers they now have over the citizens would be transferred to the Executive and Senators of the Atlantic Union Government. But the citizens would remain the sovereigns who elected them all.

It is natural that Senators should not want to lose any of the power the citizens have given them. It is understandable that they should be more concerned with the government's sovereignty than with that of the citizen. Senators and Representatives who favor Atlantic Union are therefore indeed unselfish statesmen.

Present Pioneers. Members of Congress who favor Atlantic federation represent not only the people who elect them, but the pioneering American spirit and its concept of national sovereignty. Each is willing to sacrifice some of the present official power he has if his constituents find this will help secure their own life and liberty, prevent further sacrifice of their sovereignty as citizens, give them each more power individually.

Such Senators and Representatives would have you explore carefully whether you might not reduce your tax burden, lessen military service, and save your family and freedom from extinction by sacrificing instead some of their official power and giving it to some other representative you elect to an Atlantic Federal Union. It is evident from what George Washington wrote to Knox in 1787 that, were the Father of this Country alive today, he would warmly applaud this self-sacrificing stand—not the view of sovereignty taken so selfishly, or thoughtlessly, by other Members of Congress.

To Gain Sovereignty. You would not only sacrifice none of your sovereignty as a citizen but would gain sovereignty through an Atlantic Union. Let Americans remember this: When the sovereign citizens of your State approved the Federal Constitution, they remained not merely the sovereigns of their State but gained citizen sovereignty in another State, a much greater State—the United States—where before they had no vote, no sovereign rights.

Similarly, when you help constitute an Atlantic Federal Union, you retain your sovereign right to govern your State affairs as you please, and your national U.S. affairs as you please, without the interference of anyone in England, France or any other member of the Atlantic Union. But you gain another, greater sovereignty: You become one of the equal sovereigns of the United States of the Atlantic. You gain as much direct voice in handling all Atlantic world affairs as you gained in American national affairs through the U. S. Federal Constitution, and in your State affairs through the establishment of your democratic State Constitution.

Far from surrendering any of your sovereignty as a citizen by constituting this Greater Atlantic Union, you gain sovereignty, power, rights; you gain a vote where you personally have none whatever now—and you gain this citizen sovereignty in the very fields where you need it most, the fields on which peace and war depend.

What Powers? What are the fields you would begin to help govern through your representatives in an Atlantic

The "Constitution" was named for the world's first Federal Union

FREEDOM & UNION'S POLICY

To think, write and act always in terms of all the democratic world, and not of any one country in it.

To mean by "we" (except editorially) the citizens of the coming Atlantic Union or Federation of All the Free, not merely those of any existing democracy.

To speed its coming by helping its people understand better the principles of individual freedom and federal union, and their importance to peace, production, higher living standards and greater spiritual growth and happiness.

To advance it also by helping the people of this Free Atlantic Community to see that they do form a community which they need to govern democratically.

To provide a forum for all views in the vast field of freedom and federation.

To bring out the facts in this field by objective, imaginative research.

To favor calling now a federal constitutional convention, representing the experienced civil liberty democracies, to work out and submit to their people a plan for uniting them in a Federal Union of the Free, or United States of the Atlantic, under a Constitution that would: 1) guarantee their Bill of Rights; 2) give them a free government in those fields where they agreed this would best advance individual freedom; 3) provide that this government shall be elected by, be responsible to, and operate on, the citizens and be federally balanced in its representation of them; 4) secure the right of each nation in the Union to continue to govern all its national affairs in complete independence.

To seek to extend the Union's free federal relationship to other nations peacefully and as rapidly as this will advance liberty and peace until eventually it grows into a free federal world republic.

To assure that, pending universality, this union shall be a loyal member of the United Nations.

Union Government? Its creation would involve no change whatever in the structure or powers of any State Government. Nor would it involve any change in the basic structure of the U.S. Government. It would involve only the transfer of certain powers from the U.S. Government to the Atlantic Union Government. Which powers? *At most*, only those powers which the people of the 13 Original States transferred from their State Governments to their Federal representatives when they replaced the Confederation with the Constitution.

By this transfer they created not only a common citizenship, but a common defense force, a common foreign policy, a common currency and the great common free market which has been the making of American prosperity.

How Citizens Win by Union. The citizens of all the 13 States gained in sovereignty not only by becoming sovereign citizens of the U.S., but by all the other transfers of their delegated power from the State to the Union.

Consider how much the people have gained in all the 50 States by having a common U.S. force to defend their individual liberties and their State rights. What if each State had to uphold the liberty and State rights of its citizens all by itself, be prepared to fight not only Old World dictators but neighboring States? Before the 13 federated, the troops of New York and of Massachusetts were massing on their frontier, threatening war over Vermont. What taxes, military service and war we would suffer now if each of our 50 States had to defend its rights alone!

Consider the gain to all the citizens of all the 50 States from having a common foreign policy. Let any American ask himself: What if my State could have a tough policy toward Soviet Russia, while neighboring States could appease Moscow? Before the 13 federated, when Massachusetts closed its ports to British ships, Connecticut welcomed them, made the most of this chance to get business—much as the British recognized Red China when the U.S. refused to . . . while the master of the Kremlin chuckled scornfully, and attacked the divided democracies, first in Korea, then in Indo-China.

Consider the gain to all the citizens of the 13 States when federation freed them from the vexation and cost of doing business with 13 currencies. Think of the enormous advantages we Americans now have from having one currency throughout the 50 States. . . .

Consider how much American citizens everywhere gained when federation removed the tariffs between their States, and allowed every American to sell whatever he had to sell in the highest market in the U.S. and buy whatever he needed in its cheapest market—all without any State Government interfering with his trade. How our American standard of living would be cut down if our States regained the "sovereign right" to vex the citizens with trade barriers as do the States of Europe. . . .

By every one of the U. S. transfers of power from the State to the Federal Government, the citizens in every State gained immensely, became much stronger, freer sovereigns.

How Far Now? How far should we follow now the U.S. example in constituting a great Atlantic Union with the other democracies? In my *personal* view, we should transfer to it the same powers that the 13 States originally transferred to the Federal Government. We know from experience that this combination creates prodigious power and freedom. We had better take no chances these days in having too little of either power or freedom if we wish to risk the lives of no more of our sons, sacrifice no more of our sovereign rights, and lives. That is my personal conviction. Others believe a Union as regards only defense and foreign policy would suffice for the present.

How far we should, and can, go depends of course not only on agreement among Americans but on agreement with the other democracies. The best way to reach agreement on this, and on other obvious problems that Atlantic Union involves, is to send delegates to a convention to thresh these things out with delegates from the other democracies, and have them report whatever agreement they reach back to the people for action by them. That is the way the U. S. Constitution was created through the Federal Convention that met in Philadelphia in 1787. And that is how the proposed Atlantic Exploratory Convention would tackle the problem.

√The Sovereignty Battle in the 1787 Convention

"We are met here as the deputies of 13 independent sovereign States, for federal purposes. Can we consolidate their sovereignty and form one nation, and annihilate the sovereignties of our States who have sent us here for other purposes?"—*William Patterson of New Jersey, June 9, 1787.*

"Had the legislature of the State of New York apprehended that their powers [those of the delegates] would have been construed to extend to the formation of a national government, to the extinguishment of their independency, no delegates would have appeared on the part of that State."—*John Lansing, Jr., New York, June 16.*

"I cannot support the General Government at the expense of the State Governments, but will contend for the Safety and Happiness of the particular States at the expense of the U.S."—*Luther Martin, Maryland, June 18.*

"It will be said that if the people are averse to parting with power, why is it hoped that they will part with it to a National Legislature? The proper answer is, that in this case they do not part with power; they only transfer it from one set of immediate Representatives to another set."—*George Mason, Virginia, June 20.*

"As the separation from the British Empire, the people of America preferred the establishment of themselves into 13 separate sovereignties instead of incorporating themselves into one. . . . They are afraid of granting powers unnecessarily . . . lest the powers should prove dangerous to the sovereignties of the particular States."—*Luther Martin, Maryland, June 20, 1787.*

"Can we forget for whom we are forming a Government? Is it for *men*, or for the imaginary beings called States?"—*James Wilson, Pennsylvania, June 30, 1787.*

"This Magistrate [the U.S. President] is not the King. . . . The people are the King."—*Gouverneur Morris, Pennsylvania, July 19,1787.*

Principles of Federal Institutions

By MICHEL MOUSKHELY

Michel Mouskhely is professor of International Law and International Relations at the University of Strasbourg. He is also Director of the Soviet Russia Research Center at the same university.

FEDERAL INSTITUTIONS tend to vary in the forms they assume. The flexibility of the principle involved is such that each federal union has its own individual aspect because this system seeks to respect individual situations. However, above and beyond these individual situations, certain common characteristics may be discerned which cause some of these unions to resemble each other and which set them apart from the others. To define the federal structure, it is appropriate to concentrate on these common characteristics, even to the point of overemphasis, so as to single out a few general types. This purely scientific classification will enable us to find our way through the labyrinth of positive achievements and to pass reasonable judgments upon them.

Principal Types of Federal Associations

Past and present experience shows us two types of association of States both of which are sometimes loosely called federal in Europe:

A. The *international* association or league, or alliance, sometimes called *Confederation*. Examples: the GERMANIC CONFEDERATION in 1815; the UNITED NATIONS, the ARAB LEAGUE, the COUNCIL OF EUROPE, NATO.

B. The true *federal* association, called a Federal Union, Federation or Federal State. Examples: the UNITED STATES, SWITZERLAND, WEST GERMANY.

The above classification encounters nowadays rather harsh criticisms as artificial and rigid. In support of this criticism, frequent references are made to such specialized communities as the European Coal and Steel Community, the European Economic Community, (Common Market), Euratom, etc., which do not belong either to the group of international associations nor to the group of federal associations, but which represent an intermediate form: the supranational Community.

These criticisms are without foundation: the principle of supranationality already belongs to the past. The Iron, Coal and Steel Community, the only one with power to make decisions, has used its authority with extreme caution. It has preferred the classic method of negotiation with the delegates of its member governments. The coal crisis of 1958-1959 and the inability of the High Authority to break the resistance of these governments show undeniably that the real power is concentrated in the hands of the member States. The High Authority was not able to impose the necessary measures. As for the European Economic Community and EURATOM, they are a reversion to the classic type of inter-governmental association, for the ministers, as representatives of the States, keep the real power in their own hands.

Indeed, the problem is to know where the real power lies. Experience teaches us that power eventually settles somewhere. The vital distinction between an association of States and a Federal State lies in the different location of the seat of power. Last preliminary remark: It is important, before approaching the heart of the subject, to make a few general observations which can serve as a guide in the choices to be made.

Component Elements of the Federal Principle

The principle of federalism has been summed up in such succinct formulas as "unity in diversity," or "liberty with order;" this implies a sort of equilibrium between the rights of the Union and those of its individual members. The autonomy of the associated States is as necessary as the authority of the Federation.

This presupposes a genuine democracy, which implies the active participation of the people in the organization. A bond must be established between the several States and their peoples on the one hand, the Union and the federal population on the other. In simpler terms, each individual must feel a twofold allegiance: on one hand, to the entire Union, on the other, to the smaller collectivity of which he is a member.

The principle of federalism must be accompanied by the supremacy of the Law, by the rule of law, by legal institutions. The tension, which is unavoidable in a federation, may give rise to conflicts. Certainly, a peaceful means of settling disputes must be found; but tensions must be preserved as a source of life and progress. The Law alone is in a position to solve differences of opinion without completely suppressing them.

The differences between a league, alliance or Confederation of states and a Federal State may be observed in the three following respects; as regards—

1. Their basis; 2. Their structure; 3. Their powers.

Let us examine these three in turn.

I. The Basis of the Association

A Confederation of States, league or alliance—hereafter called a "league" for brevity—is based on a *treaty*, a Federal Union on a *constitution*. Each constitutes a new society: a society composed of pre-existing societies. But they do not evolve in the same institutional and juridical framework: a League is under the jurisdiction of international public law; a Federal State is under that of internal or domestic public law.

A League operates within an international framework, or more precisely, an interstate framework. It is a group of States, not a people. The individual never makes a direct appearance. Between him and the association there intervenes the massive bloc of state col-

lectivities. His individual will is hidden behind that of the State to which he belongs. In this way a League is an aristocratic society, perhaps even an oligarchic one; it disregards the principle of democracy.

A League pact is, of course, subject to amendment. Since it is based exclusively on the will of the States, to revise it requires their unanimous consent and the slow procedure in order to conclude international treaties: Negotiation, signature, and above all, ratification. All of which means that a pact worked out by a League is rarely modified and never amended, thereby crystallizing for an indefinite period of political situation and a balance of forces which are basically temporary. A League of States therefore does not take at all into account social dynamics.

That is why it suffers from congenital weakness and cannot create an indissoluble bond between its members. The latter have the right to secede from the association whenever they see fit. It is not necessary that the right of secession be spelled out in the pact: It is tacitly included. Like any permanent treaty or long-range commitment, the league, alliance or confederate pact is accompanied by the famous clause *"rebus sic stantibus"*: the commitment cannot outlast the situation which brought it into being.

A League is more responsive to political factor than to the rule of law. The former always involves arbitrariness, instability and struggle for power. The associated States, masters of their own fate, carry on within the association the same struggle in which they were engaged before its creation. To realize this, it is sufficient to take a look at the difficulties within the Arab League, the U.N or NATO.

The situation is quite different within a federal union.

A Federation is placed within a constitutional framework, which is to say an intra-state framework. It is a group made up not only of States, but also of peoples. It is therefore both a society of States and a society of individuals. Its strength comes from these two sources: by appealing to the people, it can dominate the States; by appealing to the latter, it can stem popular pressure. In this way, it stands at the juncture where the collective and individual wills meet; whence come its flexibility and its firmness. It establishes a federal democracy half way between the anarchy of international associations and the authoritarianism of centralized democracies.

This is why a federation does not consider its constitution as unchangeable, nor insist on unanimous agreement of the federated States in order to revise it. Any modification is carried through according to the procedure which it itself defines. This procedure generally involves the agreement of a certain number of States: in the U.S.A., three-fourths of the states, two-thirds of Congress; in Switzerland, a majority of the cantons as well as the approval of a

majority of the citizens by means of a referendum. Thus the constitution, without too many jolts or violent shocks, can follow the evolution of the political situation and of the balance of forces.

For the same reason, a federation creates an indissoluble association safeguarded against the fluctuations of the selfish interests of the States. There is no question of the right to secede nor of the clause *"rebus sic stantibus."*

If by chance, as was the case in the U.S. in 1861, certain states seek to secede, to separate, this is rebellion and not the legitimate exercising of a right.

The fact is that the rule of Law is dominant in the life of a federal union. It follows that the various States, by joining in a federation, thereby renounce the use of force. The guarantee of legal procedure is substituted for arbitrary diplomatic procedures. Internal struggles do not automatically cease, of course, but they occur within a legal framework and are settled by recourse to Pascal's "neutral third party," that is to say, a judge.

II. The Institutions

On the institutional level the differences between a league, confederation or alliance of States and a federal State appear to be just as profound. As an interstate association the former type of association is comprised only of intergovernmental institutions and diplomatic machinery.

In the first place, the internal organization of the associated states is kept intact. The existence of the league has no effect whatsoever on the internal structure of their component parts. Although the league possesses an organization distinct of that of its members, this organization, however, is very rudimentary.

In the past, the member States were content to endow it with a single agency of government called a Congress or a Diet. As it was made up of their plenipotentiaries, this agency was nothing more than a permanent diplomatic conference.* Modern leagues such as the various European communities possess a more evolved organization: An assembly of the representative type, a council of ministers, an executive and an administration. However, there is no essential difference. In both cases the will of the individual States prevails over the common authority and the personnel of the home governments yield more influence than the representatives in the Community organizations.

League Depends on Diplomacy

No doubt the collective will of the association cannot be reduced to the sum of the individual will of the various States. The principle of unanimity is not strictly applied. Moreover, it is often substantially a compromise agreed to by the States, but this compromise is nearly always established along the line of greatest resistance, in other words, upon the will power of the most unyielding State. Nor should one be deceived by the multiplicity and variety of the common agencies. In all essential aspects, these agencies preserve their representative national character, with power concentrated in the hands of the Council of Ministers whose character is the most exclusively national of them all.

So it is that, in the traditional as well as in the modern structures of a confederation or alliance, its interstate character remains predominant. Such associations have, properly speaking, neither legislative power, nor executive power, nor judicial power. Usually its decisions assume the character of simple recommendations addressed to the member

*This is true of the NATO Council now.—*Editor.*

States. In order to breathe life into them and to make sure that they are carried out, the league must resort to diplomatic procedures. Either these deliberations are incorporated in a convention signed and ratified by the States, or, after their adoption by the latter, they are incorporated into internal statutes which each State enacts into law. In any case, except in rare cases, they are never applied directly and immediately to individuals.

The same thing holds true in the settling of disputes which may arise within the association. To deal with them the preferred method is to have recourse to International Law: negotiation, good offices, mediations, conciliation, arbitration. The creation of a Federal Court which would impose its jurisdiction on the allied or confederated States is carefully avoided.

Why Federation is More Effective Than Confederation

As distinct from such associations, a federation is endowed with an infinitely more effective organization.

It compromises two kinds of government institutions: federal and national.[1] The individual States possess their legislative bodies, their administrations and their law courts. Each has a constitution which serves as its base and regulates its affairs. In this way federal union preserves their individuality as States. In its turn, the federal constitution institutes the various governing bodies of the Federation. Some of these are in keeping with the double nature of the federation and guarantee the representation of the States as well as of the people. The same is true in the case of the legislative power which comprises two Houses: the body representing the States (the American Senate, the Swiss Council of States), and the body elected by universal suffrage (House of Representatives in the United States, the Federal Assembly in Switzerland).

It is important to note, however, that although each American State, large or small—New York with around 16,000,000 population and Alaska with 160,000— has two Senators, these Senators represent the people, not the government of their State. Unlike diplomatic representatives, they are elected by its people, hold office for six years, are paid by the Federal Treasury, are not subject to instructions by nor responsible in any sense to their State government. Often the Senators from a State belong to one party, while the other party controls the State government. Often the Senators are of opposing parties. Even when they are of the same party they can differ as radically in policy as did the two Republican Senators from Wisconsin in the early 50s—Senators Joseph McCarthy and Senator Alexander Wiley. Thus, in a very real sense, neither the government of a State or even the people (in the sense of a unit) are represented in the U. S. Senate.[2]

Other Federal organs are purely Federal: this is the case of an Executive including the Administration, and the judicial system, headed by a Federal Supreme Court. The organization of a Federation is thus complete as is that of any of the States composing it.

The superiority of a federation is still more marked from another point of view: Its will is not, as that of a league, reduced to a haphazard combination of the wills of its various members; a federal union's will is entirely its own, and is a result of a meeting of wills between the States and the people. It has no need to seek lame compromises; it can take decisions in the light of the general interest, for the common good, showing as much respect for the rights of the States as for the rights of individuals.

This is why, in order to achieve its purpose, a federation follows institutional methods rather than diplomatic means. In this way its decisions take the form of laws with their ordinary attributes: their compulsory aspect and their enforceable character. It is immaterial whether the laws are enforced by the State administration—a system which takes effect immediately and directly; they will be enforced in any case under the direction and control of the federal government.

The settlement of any conflicts likely to arise within the federation will also find a solution through federal institutions. Whether it is a case of disagreements among states, or between the federation and one of the States, or else between one State and the nationals of another State, these litigations will all have to be submitted to the courts, either national or federal, or both in succession.

"Compacts" Within a Union

In this way, the entire political life of a federation becomes institutionalized; in other words, ordered and peaceful. However, this same institutionalization does not preclude recourse to more flexible methods suited to interstate relations. In fact, the Federation often resorts to persuasive methods, encouraging the States to come to terms with each other and to cooperate in such and such a field. It often happens that, before taking any decision, the Federation consults the individual States unofficially. These methods of cooperation which are ineffective when applied to sovereign States, prove rewarding when they are supported by an institutional apparatus.

This is also true of the many "compacts" that in recent years have been made in the U.S.A. between States in the same region or with a particular joint interest. These compacts are made as directly between the State governments as are treaties between sovereign nations. One such compact between the States of New York and New Jersey established the "Port of New York Authority," which administers the harbor both States share. Other interstate compacts govern fishing waters shared by two or more States, or the control and use of rivers that traverse several States. These compacts can be brought before the Federal Courts for interpretation and enforcement—which has no doubt contributed greatly to the fact that these treaties have not suffered the infractions and violations that are common to those between sovereign States not linked by Federal Union.*

(To be concluded in next issue.)

[1] In the U.S.A., federal and state; in Switzerland, federal and cantonal.—*Editor.*

[2] According to Clarence Streit, this does not handicap the Senate in carrying out one of its main purposes in the U.S., namely, to help preserve the division of power between the Union and the State governments which is basic to the federal system. Mr. Streit points out that the fact that the two Senators from a state may have opposing views on any measure, and that each has an equal vote and an equal right to speak for the people of his State (who are always divided in their views, too), gives the people of each State double the opportunity to curb the majority that they would have if both Senators voted as a unit according to the instructions of their State government.

As a representative of the people of a sovereign State, each U. S. Senator (unlike Members of the House) has the right to hold the Floor as long as he can keep speaking. This right—called filibustering when misused—has more than once permitted a single Senator, Mr. Streit notes, to delay or block the whole Congress and Federal Government. "Without the Senate," Mr. Streit writes in *The New Federalist* (p. 54), "there would be little to check the tendency of the central government to encroach on the local government, which can lead to tyranny such as Hitler's. One of his early steps . . . was to abolish state's rights in Germany."

*For a full discussion of these interstate compacts which provide an obvious solution to the purely regional problems of Western Europe and of North America in an Atlantic Federation, see "Interstate Compacts in the U.S.," by F. L. Zimmermann & M. Wendel, in the December, 1951, *Freedom & Union.*

ANNOUNCING

The 1960 Debaters Edition of World Famed

UNION NOW

With Fresh Chapters Added on the Present Situation of the World and of Atlantic Federation

By CLARENCE K. STREIT

The 1949 Postwar paperback edition of UNION NOW is out of print, although Harper & Bros. still have a small number of their clothbound copies of it ($3). In view of the urgent demand by high school debaters and others for this book — which sets forth the original proposal and philosophy of Atlantic Federal Union — we have arranged with Harper & Bros. and with Bantam Books for the latter to print for *Freedom & Union* another edition of this "classic . . . with a life of its own"—to quote the *New York Herald-Tribune*.

UNION NOW has already had seven distinct American editions — with many more printings, and a sale of more than 250,000 copies in U. S., British, French and Swedish editions, since it was first privately printed by the author in 1938 when no publisher would bring it out.

The Library of Congress in December 1958 exhibited UNION NOW in a group of books named for Phi Beta Kappa's *American Scholar* by a distinguished panel it asked to select "the most undeservedly neglected book of the past quarter-century." Erwin Canham, editor of the *Christian Science Monitor* and Past President of the U. S. Chamber of Commerce wrote for that occasion of UNION NOW: "This book may be one of the turning points in history . . . the clearest and most compelling statement of the urgent need of Western unity if civilization is to survive."

"BEST BOOK" FOR DEBATERS TODAY

A few months ago Bower Aly, Executive Secretary of the National Committee on Debate Materials for the current interscholastic debate question, wrote: "I wish I knew some man with money and enough perception to supply a copy of UNION NOW to every high school debate squad in the U.S. It is the best single book for our purposes."

The coming edition which aims to meet this need will include the text of the concise 1939 Harper edition of the book unchanged — so that each may judge for himself how this book has stood the test of time — plus several new chapters which the author is now writing. The new edition is expected to be available early in September. It will be paperbacked, and priced 87¢ for single copies, and 50¢ each in orders of 10 or more. Student debaters and teachers may purchase single copis for 50¢ and orders of 10 or more for 40¢ each

Freedom & Union Press

Reprint Service:

SELECT PACKAGE: 33 titles by 20 authorities—French Prime Minister Debré, Donald Dennis, Allen Dulles, Elliot Goodman, Livingston Hartley, Mrs. Chase Osborn, Lithgow Osborne, Wm. Rappard, Lord Shawcross, Pacl-Henri Spaak, Clarence Streit, etc.—including *Atlantica's Pooled Scientific Resources, Daniel Defoe: Crusader for British Union, De Gaulle Urged Federal Union on Churchill, Essence of UNION NOW, General Marshall's Atlantic Vision, High Cost of Atlantic Disunion, International Atlantic Union Movement Constituted, Moscow's Grand Design & Washington's Inapt Answer, New Frontiers in International Law, Proving Ground for Federalism-Switzerland, To Cure Worst Killer-War, Unexplored Way to Disarmament-Recriprocal Plebiscite Pact, Why Canada Federated, etc.*

Total list price of 33 titles, $3.30 yours for only $1.98.

PATRIOT'S PACKET: 20 titles dealing with U. S. Federal Union Experiment by 14 authorities—Hamilton, Madison, Washington, Agar, Aly, Beveridge, Streit, etc.—including *Federal Union A-Borning, 1787, How Virginia Came to Vote for Federal Union, If Lincoln Spoke Now, Pen Pictures of Founding Fathers, When Patrick Henry Fought the Federal Constitution, etc.*

Total list price $2.85 plus one "collector's item" back issue of *Freedom & Union*, $1—grand total $3.85 value for only $2.27.

NOTE: In both *Select Package* and *Patriot's Packet*, we reserve right to replace titles when exhausted with others of equivalent value.

The Little Dog Laughed

Army With a Field Night

Large posters in London advertise for a motion picture promoting the Women Corps of the British Army. The slogans read: "Soldiers by Day—Women by Night."

Fooling the Horses

Quite puzzled, an American tourist, visiting a Soviet collective-farm near Kiev, listened to an elderly man shouting at his horse. The horse wore a huge pair of blinders and was attempting to pull a heavily laden wagon, while the driver shouted: "Davai, Fyodor! Quicker, Lisaveta! Get going, Pyotr! Davai, davai, you miserable pack!" and swung his whip in the air above the horse's head. "Why do you call out all those names? There's only one horse pulling the wagon," queried the stranger. "I do it like the Soviet press, comrade," admitted the old man, "so that the horse thinks that there are others helping him!"

The Pleasure of Having His Say

A group of repatriates to Poland from the U.S.S.R. were being processed at the border. At first they were rather shy of talking to the Polish officials, but finally one of them started a conversation. An official asked him how things were in the Soviet Union?

"Not too bad. I couldn't complain," he said.

"How were wages there?" asked the Polish official.

"Well, we couldn't complain."

"But didn't you have to do forced labor for a while?"

"Yes, sort of, but I really couldn't complain."

"But I thought there wasn't much to eat, and when you got something it was pretty lousy?"

The repatriate shrugged. "I couldn't complain," he said.

"Then what the devil did you come back for?" demanded the official.

"What a question! Here at least I can complain."

Rule of Law

The latest book by Juliet Lowell is "Dear Justice," a collection of unusual letters received by lawyers and jurists. Some samples follow:

Dear Mr. Sedgwick:

When you appeal for reversal of my death sentence, please do the best you can as this means a lot to me. . . .

—*Jack T.*

Dear Mr. Buckman:

I have just looked over the papers you sent me. Don't you think it's a little long for a brief?—*Conrad L.*

Dear Mr. Meyers:

In answer to your query, yes, I was at the American Legion Hall on the night of the raid, but I can't identify the girls. They will be wearing clothes in court.

—*Lawrence K.*

Dear Mr. Josefburg:

Thank you for your offer to represent me but I do not need a lawyer. I am going to tell the truth. . . . —*Laird Y.*

Dear Mr. Geisler:

I am happy to be able to inform you that my husband who was reported missing is now dead. . . .

—*Mrs. Myra O.*

Dear Mr. Riegel:

I understand you are making out a will for Martin Thurstand. He had no children or any living survivor as far as I know. If you can't find a beneficiary, please feel free to use my name. . . .

—*Christian R.*

Dear Mr. Vienot:

The prosecutor still has the carving knife with which my mother-in-law was killed. Will you please get it back for us if you can as it is good and sharp and belongs to a set. . . . —*Mrs. Frank S.*

Natural Lesson in Geography

The Atlantic Federal Union Answer

How to keep both peace and freedom—to keep them securely and be done with this lifelong nightmare . . . and enjoy a greater individual liberty and higher standards, spiritual and material?

That is The Question. The answer is to do now between democracies on an oceanic scale what our Fathers did on a continental scale when they established the United States Constitution—form a Federal Union of the Free. We should start by uniting the democracies of the North Atlantic (those of NATO) in a great Federal Republic built of, by and for the thing they all hold dearest and have most in common—the principle of government for the sake of individual life and liberty. This Union of the Free would be designed (a) to provide the free with effective common government in those fields where they agree that such government will clearly serve freedom and peace better than separate governments, and (b) to guarantee the continuance of their independent national governments in all the other fields where such separate governments will serve freedom and peace better than a common government.

An exploratory Convention of Delegates, representing the participating peoples (rather than their governments) would work out a Constitution embodying this division of fields of power, the Union's Executive, Legislative and Judicial Departments, its Bill of Rights, etc. This would then be submitted to the people of each country concerned for full discussion and decision. A commission of 20 U.S. citizens named by the President of the Senate and the Speaker of the House to organize and participate in a convention with similar delegations from other NATO nations to explore how to unite their peoples more effectively was approved by the Senate June 15 (S. J. Res. 170) and now awaits final approval by the House.

This convention is modelled on the Federal Convention of 1787. Its unique procedure enabled it to reach mankind's first successful answer to this age-old issue—the U. S. Constitution, the original Federal Union of the Free. Although this has proved to be the most astonishing and enduring answer to the problem in all history, the American people have never yet sought to explore its possibilities in this jet-atomic age, nor tried to tackle any international question by the 1787 Convention method which produced the greatest success ever achieved at a conference of sovereign State.

The Federal Union of the Free we advocate is—like the United States itself—an interstate government so constituted as to keep *you,* the citizen, free and sovereign. It puts the accent on the sovereignty of the citizen, rather than on national sovereignty; it keeps the latter the servant of the former, and aims to save the citizen from having his life and liberty sacrificed merely to serve the sovereignty of his nation. It holds that supreme sovereignty in the United States—and in any true democracy—is vested equally in its citizens, rather than in the national government, that so-called national sovereignty is really merely a means to serve the citizen, not something more sacred than the people who made it.

In a Federal Union of the Free, as in your nation or state, you elect the lawmakers, and their laws are enforced on you individually. Power is divided between the Union and your national government. A Federal Union's major powers normally are limited to the right to conduct foreign relations, maintain armed forces, issue currency, regulate interstate commerce and communications between member nations, and grant Union citizenship.

Far from "abolishing the nation," Federal Union would guarantee the right of each nation to govern as independently as it does now all its purely national affairs—namely, every field except the few which it agreed itself were common Atlantic affairs. Each nation would remain free to practice democracy at home in its own language, according to its own customs and in its own way, so long as it did not infringe the Union's Bill of Rights for the citizens.

The proposed Union would be designed to grow gradually by federating with other nations as this became practicable, much as the United States grew from 13 to 50 States. Pending its growth into an eventual government of, by and for all mankind, which is far distant, it would belong to the U. N.

Because the Federal Union Answer would begin federation with the more experienced and like-minded democracies, and because nearly all of these are situated in the North Atlantic Community—the United States, Canada, Britain, France, the Netherlands, Belgium, Denmark, Norway, etc.—and are already allies in NATO, our answer is often called Atlantic Union. And because of the title of the book that first gave this answer, and the stress we lay on action in time to prevent another world war or depression, Federal Union is often known as Union Now.

We cordially invite those to whom this answer makes sense to join in giving it as a member of

—*Drawing from* Het Europese Volk

Europe says: "Common Market . . . Free Trade Area . . . that's not all that I need."

EUROPEAN UNION ALONE IS NOT ENOUGH

By MRS. CHASE S. OSBORN

FEDERATION OF THE SIX NATIONS of the European Common Market, if it goes through, would mean that the citizens of each of the six countries will see their individual sovereignty extended through the five other countries. Every Frenchman, whose country has so often suffered from German invasion, will thenceforward have a voice in *that* affair in West Germany though not, of course, in purely German affairs. For every citizen of West Germany such a union would mean that henceforward he and his country will be equal in the military councils and in the economic and political destiny of Western Europe.

If the armies of France and Germany become indivisible under the same European government, by consent of both peoples, it would mean that they will have gone very far toward wiping out the possibility of another war between them.

European federation would mean for the people of The Netherlands, Belgium and Luxembourg that they would never again be trapped between large, warring neighbors.

Italians in a European federation would never cease to be as proud of Italy as Virginians in the U.S. federation are proud of Virginia. By ceding something of their national sovereignty to the larger and stronger framework of a United Europe, the sadder and wiser peoples of six Western European nations would have invested happily in peace among themselves.

We all see that this would be true and advantageous for Europeans; does it not apply as much—if not even more—to us and them, if we all federate in an Atlantic Union? The bad habits of many wars between the French and Germans would surely be ended sooner and more surely if, instead of facing each other as the two main peoples (and potential rivals) in a European federation, they were federal partners at the same time with the Americans, British and Canadians in an Atlantic Union.

However much a European federation may make for peace between the peoples who create it, there would still remain grave dangers in the relationships of their larger government with the world around it. There are, indeed, already heated problems of trade between the European Six and the European Seven—which are sharpening the threat from Moscow, particularly the sword that hangs over Berlin.

Might not European political Union divide and weaken the West even more, at an hour when the free need to be strongly united?

With its fresh developing armed might, and its prosperous trade lines already laid in the new nations around the world where it is unembarrassed by a recent imperial past, might not West Germany soon dominate a United Europe? Might not West Germany split off from the infant Union, become, if not an enemy, a third force, bargaining for its own peace and betterment alternately with both sides? To bring Germany within the larger, stronger framework of an Atlantic Union would surely be a far better safeguard for peace.

The regional peace of a United Europe would be no guarantee of security for us Americans or for any of the West

ABOUT THE AUTHOR

Stellanova Osborn, widow of the distinguished Governor Chase S. Osborn of Michigan, was educated in public schools in Hamilton, Canada, and at the University of Michigan, where she became a Phi Beta Kappa and earned a master's degree in medieval English.

She has pioneered for Atlantic federation in a number of European countries—notably in Germany, the Netherlands, Iceland—as a member of the Board of Governors of the Atlantic Union Committee and as North American Secretary of the International Movement for Atlantic Union.

not in the European Union. A European Union could even aggravate the German problem with Russia. Let us not forget how a wrong settlement of the German problem after World War I contributed to World War II.

Russia, calling the situation in Berlin abnormal, is pushing for its own kind of settlement there. Its inflexible terms are the withdrawal of Western protection from the Western sector of the city, leaving it helpless.

There are those, in both East and West, who propose withdrawal of military forces from all of Germany, leaving all of Germany a neutral zone. One objection to this is that it would let the Russians withdraw a few hundred miles to firm footing on the Eurasian mainland, while the West would have to withdraw to North America, or to a narrow fringe of Europe that would offer no foothold against a surprise Soviet return—like the infamous one in Hungary.

Union Must Be Atlantic in Scale

Small wonder that the people in West Germany and West Berlin oppose this solution. Their voice must surely weigh, and it is for strong unity with the West. Even most Socialists, who often look askance at NATO and West Germany's military build-up, want West Germany to stay with the West. It is also safe to say that the West German people want a tie with the West that will be permanent. Some of them wish to wait a while to see if East Germany cannot first be regained, but many more wish to go ahead quickly into a permanent Atlantic union and wait for that union to attract the East Germans back to them at some time in the future. West German leaders, realizing that European Union is not big enough, increasingly believe that the Union must be Atlantic in scale.

It is time the American people became aware of the tremendous opportunity that is ours to discuss this possibility with them. The people of West Berlin and West Germany cannot express their opinion about the desirability of federating with us, as well as the European Six, until we express our willingness to discuss such a relationship with them. The initiative is ours.

We cannot otherwise escape the Berlin-German danger. To retreat before the threats of Moscow would be weak. It would be weak also to agree to a withdrawal, "compensated" by Russian withdrawal from East Germany. (Moscow wishes to "buy" our withdrawal with the withdrawal they refused to make at the time England, France, and the U. S. gave up their zones in occupied Germany.)

To Restore German Morale

Without any belligerency, we can give the strongest possible answer—based both on defense good sense and moral principle—by exploring with the West German people and our other NATO allies the proposition: "That the North Atlantic Treaty Organization should be transformed into a federal government."

If, in that non-academic debate, the affirmative should win—which seems fairly certain, so far as the West Germans are concerned—a number of good things would happen at once. First, it would advance the settlement of the German problem. It would provide the soundest possible legal foundation for West Berlin's claim that it is a part of the West. It would give the West German people the inner satisfaction of gaining full citizenship and full partnership in the West—the restoration of German morale which has been in bad order ever since the Treaty of Versailles.

While facilitating German contributions to the military strength of Atlantica, it would remove the danger of a renewal of national German military power. It would thus erase the fear of the latter that haunts Eastern Europe, many NATO countries, and many of the West German people themselves.

What would such an Atlantic Union mean for us Americans? It would mean a sound approach to many dangerous problems—in particular, the German one; the stirring gain of secure partners of great and varied powers; the tremendous augmentation of our industrial capacity; and the better preservation and growth of all the treasures of our common Atlantic culture. Strength instead of weakness, great hope instead of fear, great progressive purpose instead of paralyzed confusion—all this we can gain by Atlantic Federal Union. Western Europeans have shown they have the vision and courage to move toward federation. Have not we Americans—who invented Federal Union?

It is worth noting that, whereas Communism approaches the problem of "consolidation for peace" by getting students to riot, American students are approaching it by discussion and debate.

—Ficklen, The Dallas News

European federal shield is too little to bar the Russian "b'ar."

The "Gospel" of Red World Government, According to Marx, Engels, Lenin, Stalin, & Mr. K

By ELLIOT R. GOODMAN

This is the first in a series of eight articles drawn from *The Soviet Design for a World State* and condensed for *Freedom & Union* by its author, Dr. Goodman. He is associate professor of political science at Brown University in Providence, R. I.

We are privileged to run this series exclusively by special permission of the Columbia University Press, which published his book last Spring. In February we ran an article, "Moscow's Grand Design . . . and Washington's Inapt Answer," drawn from its concluding chapter; reprints of it are available from us for 10c each.

In a foreword to the book, Philip Mosely, head of Columbia's Russian Intitute under whom Dr. Goodman studied, says that he is "able to assure his readers that Professor Goodman approached his subject without predetermined conclusions, that he has built up his findings piecemeal through a conscientious examination of both ideology and action, and that the powerful structure of his analysis stands firmly on the bedrock of evidence."

This article is a digest of chapters 1 and 2. The book, clothbound, 512 pp., can be had for $6.75 from us, or the publisher, or at bookstores.—*Editors.*

MARX LIVED IN A WORLD of nation-states, and yet it was not the struggle between nations but the class struggle that held his attention. He believed that the tangible economic interests that unite social classes are stronger and more important than the more intangible complex of interests and emotions called nationalism.

Since Marx viewed society as a dynamic, constantly changing organism, nations would have an end, just as they had had a beginning. Once international class warfare had engulfed all nations, the loyalties that bound men to nations would be readily dissolved and absorbed by the higher interests of an international class.

In *The Communist Manifesto* in 1848 Marx and Engels raised the battle cry, "the workers have no country," but it would be a mistake to take this at face value. The *Manifesto* explains, "we cannot take from them what they have not got. Since the proletariat must first of all acquire political supremacy, must rise to be the leading class of the nation, must constitute itself *the* nation, it is, so far, itself, national, though not in the bourgeois sense of the word." Apparently Marx and Engels meant that no worker could rightfully call his country his own until the exploiting bourgeoisie had first been overthrown.

Engels even doubted that an isolated national revolution would be possible. In his *Principles of Communism*, written in 1847, Engels asked: "Can this [proletarian] revolution take place in merely one country?

The answer is no. Large-scale industry, by creating the world market, has established so close a connection among all the peoples of the globe, especially in the case of the civilized peoples, that each of them depends on what happens to the other. Then, too, large-scale industry has so levelled the social development in all civilized countries that everywhere the bourgeoisie and the proletariat have become the two determining social classes, and the struggle between them is the chief struggle of our time. The Communist revolution, therefore, will not be merely national, but will take place simultaneously in all civilized countries; that is, at least in England, America, France and Germany. . . . It is a world revolution and will, therefore, have the whole world as its arena.

It is clear that he and Marx did not expect the revolution to start in Russia. but in the advanced industrial nations of the world. But when Marx began to study conditions in Russia in his later years, he discerned so great a potential for revolution there that he had to reconsider the order in which revolutions might occur. Any shock to the Tsarist autocracy, he wrote hopefully at the time of the Russo-Turkish War of 1877, might permit the East to be more revolutionary than the West.

When the world had become unified under socialism, Marx and Engels believed, all tensions between nations would be so diminished that all hateful differences, rivalries, national exploitation, and wars would be utterly erased from the face of the earth. While international socialism was not expected to produce a universal cultural uniformity, at least not at first, Marx and Engels apparently believed that all harmful differences between nations would soon be doomed to oblivion.

Their *Communist Manifesto* said: The national differences and antagonisms between people are daily more and more vanishing, owing to the development of the bourgeoisie, to freedom of commerce, to the world market, to the uniformity in the mode of production and in the corresponding conditions of life. The supremacy of the proletariat will cause them to vanish still faster. . . . In proportion as the exploitation of one individual by another is put to an end, the exploitation of one nation by another will also be put to an end. In proportion as the antagonism between classes within the nation vanishes, so will

Marx favored a highly centralized world dictatorship.

the hostility of one nation to another come to an end.

This reduces all the causes that might lead to war to one phenomenon: the economic exploitation of man by man. Marx could not conceive of man being oppressed and exploited by the exercise of *political* power in a state that had socialized all forms of property, since, for him, political power did not exist as a force in its own right, capable of exploitation regardless of the economic base upon which it rested. He would not concede that the love of power might be more dangerous than the love of money, or that the two might ever be separated.

Engels expressed the corollary of this idea, namely, that so long as capitalism existed, neither a just world order nor a lasting peace could be attained. He blamed the liberal, bourgeois democratic leaders of the Revolution of 1848 for dangling before the people a vision of world order which, he insisted, could only issue from a world proletarian revolution. "We have often enough called attention to the fact that the gentle dreams . . . such as the sentimental fantasies of a universal brotherhood of peoples, of a European Federative Republic and eternal world peace, were basically nothing more than the disguises for the boundless perplexity and inactivity of the spokesmen of the time."

Engels alluded to the state form of this future brotherhood of nations as a "World Republic." During the lifetime of Marx and Engels, the abortive and scattered attempts of the proletariat to seize and organize state power in the Revolution of 1848 were crowned with the momentary success of the Paris Commune of 1871. The Paris Commune foreshadowed the coming of a proletarian world state, and for this reason Engels hailed the motto of the Communards that "the flag of the Commune is the flag of the World Republic." Marx characterized the state form of this World Republic as a "revolutionary dictatorship of the proletariat," designed to endure for a transitional interim, "a period of revolutionary transformation" lying "between capitalist and Communist society."

When the proletariat had established its revolutionary dictatorship throughout the world, would each nation have its own dictatorship of the proletariat, with the various nations loosely bound by some sort of confederate or federal tie in a World Republic, or would there be one highly centralized dictatorship of the proletariat for the entire world? If we were to frame an answer based solely on economic considerations, it would seem undeniable that Marx would have preferred centralization to federation. Capitalism had already made the existing national state obsolete, and national seclusion and self sufficiency were becoming more and more impossible. Marx criticized Proudhon, who advocated a loose federalist structure, on the grounds that only a thoroughly integrated, centralized society could provide that highly productive economy upon which socialism was to be based. In *The Civil War in France* Marx praised the Commune of 1871 for its alleged rejection of federalism. Engels in his 1891 introduction to this work concluded that "the proletariat can only use the form of the one and indivisible republic."

Though Marx and Engels rejected federalism on economic grounds, it seems that in certain exceptional cases involving difficulties among ethnic groups Marx did condone federation as a second-best. But when Marx considered federation, it always seemed to come as an afterthought. Neither he nor Engels paid much attention to the possibilities of federalism as a serious political principle which could be used to ease the national problem within a multi-national union.

They had no theory for the self-determination of nations which might point the way to the evolution of a higher unity of nations, no consistent policy for the liberation of subject nations to bring them to a status of independence, and no program for their further integration, as nations, into a world society.

Certainly nationality would have no special claim in their world proletarian state, since Marx and Engels specifically stated in 1846 in *German Ideology* that "the Communist revolution . . . is in itself the expression of the dissolution of all classes, nationalities, etc., within present society."

Once the world proletarian revolution had succeeded, it would seem that Marx favored a highly centralized world dictatorship of the proletariat, modified by the federal principle only if necessary, and then only as a transitory measure to complete centralism. . . . As the world state withered away, nations would fuse, and the ultimate world community would evolve from an international into a cosmopolitan world society.

How have the Soviet leaders developed their Marxist heritage? First, let us see if they have made the world state an explicit Soviet goal.

The World State as an Explicit Soviet Goal

The Bolsheviks inherited the Marxist belief that the age of nationalism was but a momentary stage in history, and that the capitalist nation-state system was destined to be transformed into a socialist world state. This led the Bolshevik theoreticians to make a number of explicit pronouncements on their goal.

The early writings of Lenin and Stalin on the nationality problem were concerned primarily with the difficulty of organizing the proletariat on an international scale, and though the objective of a proletarian world state could be implied throughout, it was not Lenin or Stalin, but Trotsky who first began to articulate the goal of a world state.

In October, 1913, Lenin supplied an important insight into the complex development of national states, by emphasizing the dual and contradictory processes in their growth.

Developing capitalism knows two historical tendencies in the national question. First, the awakening of national life and national movements, the struggle against all national oppression, and the creation of national states. Second, the development and acceleration of all kinds of intercourse between nations, the breakdown of national barriers, the creation of the international unity of capital, of economic life in general, of politics, science, etc. Both tendencies are a world-wide law of capitalism. The first predominates at the beginning of its development, the second characterizes mature capitalism that is moving towards

its transformation into socialist society.

This formula, like others before it, assumed that the nation-state was the highest political authority that the bourgeoisie was capable of producing and that the transformation of a world capitalist society into a world socialist society would elevate the level of highest political authority from nation-states to a world state. But Lenin went beyond this by drawing a distinction between an incipient and a mature nationalism under the bourgeoisie, indicating that a nation-state could be a progressive or a reactionary symbol, depending upon its stage of development. This subtlety was overlooked by some of Lenin's associates, who took little notice of the uneven rate at which different nations had developed. Their tendency to attribute virtue only to the proletarian world state, and evil to all bourgeois nation-states, led them into a violent conflict with him.

—Lewis, Milwaukee Journal

"The Russian Soviet Republic," said Steklov when introducing the Constitution before the 5th All-Russian Congress of Soviets in 1918, "sooner or later will be surrounded by daughter and sister Republics, which uniting will lay the basis for a federation, first of Europe, and then of the entire world."

At the outbreak of World War I, Lenin and Trotsky attacked the Social Democrats of the Second International who came to the defense of their bourgeois fatherlands, first, because it was a bourgeois fatherland that they were defending, and second, because these fatherlands were too small to encompass the forces of a world socialist revolution. "The proletariat can have no interest in defending the outlived and antiquated national 'fatherland,'" Trotsky asserted. "The task of the proletariat is to create a far more powerful fatherland . . . the republican United States of Europe, as the foundation of the United States of the World.

Similarly, Lenin insisted that "the proletariat must not participate in the defense of the old framework of bourgeois states, but must create a new framework of socialist republics."

The socialist movement cannot be victorious within the old framework of the fatherland. It creates new, higher forms of human life under which the best demands and progressive tendencies of the laboring masses of all nationalities will be fully satisfied in an international unity while the present national partitions are destroyed.

By August, 1915, Lenin was declaring that "the United States of the World . . . coincides with socialism." "The United States of the World (and not just of Europe) is that state form for the unification and freedom of nations which we identify with socialism." However, he cautioned against using "the United States of the World" as an immediate tactical slogan, since it might cause some socialists to ignore the uneven rate at which different capitalist nations had developed, as well as the possible necessity for achieving socialist world state only through a series of stages.

What was objectively necessary was also supremely desirable. The creation of this world state was considered part of a preordained process of man's salvation. This was a secular vision of human redemption, since its appearance was to symbolize the end of all forms of human oppression and exploitation. It was this vision that infused the Bolshevik Revolution with its dynamic and universal character, and it was under the spell of this image that all sacrifices could be justified.

"Union of the Oppressed"

The Bolsheviks assumed that their coup d'état in Russia was only the first step toward the creation of a Soviet world state. On Nov. 8, 1917, Trotsky announced to the Second Congress of Soviets: "The union of the oppressed everywhere. That is our course." Lenin appealed to the proletariat of all countries to fight for a Soviet world state, since it alone could produce the millennium of world peace.

By the time the Third Congress of Soviets had convened in January, 1918, Lenin was predicting confidently that "a new era in the history of the world" had begun. He told the Congress that the state power that the proletariat had seized in Russia "pointed the way toward the future socialist structure of the whole world, for the toilers of all countries." It was Lenin's expectation that "the time was not far distant when the toilers of all countries will unite in a single world state."

The Soviet leaders looked upon the Constitution of the newly formed Russian Soviet Federated Socalist Republic as a tangible symbol of their future world state. Steklov, who introduced the Constitution before the Fifth All-Russian Congress of Soviets in July, 1918, made it clear that this new state was to be more than a nucleus for reuniting those territories that had been torn away from Russia: "The Russian Soviet Republic sooner or later will be surrounded by daughter and sister Republics, which uniting will lay the basis for a federation, first of Europe, and then of the entire world."

Lenin felt certain that the task before the Russian workers was to "maintain the power of the Soviets till the working class of all countries revolts and raises aloft the banner of a World Socialist Republic!"

Bukharin, in his widely distributed

pamphlet of 1918, *Program of the Communists*, also called upon the proletariat of the world to revolt and create a world state: "Overthrow of the imperialist governments by armed uprisings and the organization of the International Republic of Soviets—that is the way to the international dictatorship of the working class." He particularly directed the messianic appeal of this world state to the backward and oppressed areas of the world.

At the founding of the Communist International (Comintern) in March, 1919, its Executive Committee plainly stated its purpose of overthrowing the bourgeoisie and of laying the foundations for an International Soviet Republic. The Platform proclaimed that the proletariat must "wipe out boundaries between states, transform the whole world into one cooperative commonwealth, and realize the freedom and brotherhood of nations."

All through 1919 there was hardly a public statement that Lenin made on any topic which did not include some reference to the world state, even the expectation of its imminent realization.

On March 31, 1919, for example, he declared: "It will not be long and we shall see the victory of communism in the entire world; we shall see the founding of a World-wide Federal Republic of Soviets." This outcome was inevitable for Lenin. In the short-lived Soviet Republics of Hungary and Bavaria that spring Lenin saw the beginning of a rapid-fire chain reaction. "Every day brings news that the red flag of liberation has been raised first in one place and then in another. . . . You will soon see how the World Federal Republic of Soviets will come into being."

That summer Lenin even set a date by which it would be created. "We say with conviction . . . that by next July, we shall greet the victory of the International Soviet Republic, and that this victory will be complete and irreversible." This probably marked the high point of Lenin's hopes.

Despite later reverses, he maintained that "this struggle will end in the victory of a World-wide Soviet Republic," adding somewhat apologetically, "it is only a question of time."

At the end of 1919 Lenin addressed an appeal to the Ukraine, which was then a separate republic, urging it to prepare for a union with the RSFSR as an example for "the creation of a World Federated Soviet Republic," because

> We are opponents of national hostility, national antagonisms, and of national particularism. We are internationalists. We aim at the firm union and full fusion of the workers and peasants of all nations of the world into one World-wide Soviet Republic.

When the Second Comintern Congress opened in July, 1920, and Lenin's prophecy of the previous July had proven false, Soviet leaders began lengthening the time span required for the birth of the world state. Zinoviev, its President, admitted that "perhaps we were carried away by our enthusiasm, perhaps it is true that not one year, but two or three years will be necessary before all Europe becomes Soviet."

Red World State Held "Inevitable"

The end of 1922 witnessed the formation of the U.S.S.R. One theme ran through all the speeches and declarations: The U.S.S.R. is not an end in itself, but rather the embryo of a Soviet world state. In his speech of Dec. 26, 1922, to the Tenth All-Russian Congress of Soviets, Stalin reiterated the proposition that the collective ownership of property facilitates the collection of nations into a higher unity. Soviet power, based on collective property, "is so constructed that being international by its intrinsic nature, it systematically fosters the idea of unity among the masses and impels them toward amalgamation." The unification of nations in a world state was depicted as the unraveling of the inexorable forces of history.

On Dec. 30, the Congress of Soviets approved a treaty creating the U.S.S.R. The same day its First Congress of Soviets was convoked. Before this gathering Stalin repeated his view of the meaning of the act of union. Stalin then read to the Congress the Declaration of Union, which was subsequently incorporated as Part I of the Constitution. The Constitution received final approval at the Second Congress of Soviets of the USSR on Jan. 31, 1924. The Declaration of Union anticipated the growth of the USSR into a world state by including the specific provision "that admission to the union is open to all Socialist Soviet Republics, both those now in existence and those which will arise in the future." The Declaration added that "the new union state is . . . a new decisive advance toward the amalgamation of the toilers of all countries into a World Socialist Soviet Republic."

Stalin used the occasion of Lenin's death in January, 1924,, to intone the solemn vow to expand the Soviet Union into a world state.

> In departing from us, Comrade Lenin bequeathed to us the duty of strengthening and expanding the Union of Republics. We vow to you, Comrade Lenin, that we will honorably fulfill this, your bequest. . . . Lenin never regarded the Republic of Soviets as an end in itself. He always regarded it as a necessary link for . . . facilitating the victory of the toilers of the whole world over capital. Lenin knew that only such an interpretation is the correct one, not only from the international point of view, but also from the point of view of preserving the Republic of Soviets itself.

Lenin bequeathed to us the duty of remaining loyal to the principles of the Communist International. We vow to you, Comrade Lenin, that we will not spare our lives to strengthen and expand the union of the toilers of the whole world.

When the Comintern Program was presented to the Sixth Comintern Congress, in August, 1928, Stalin commended its formula for expanding the Soviet federation: "The draft puts in place of the slogan of the United States of Europe, the slogan of a federation of Soviet Republics of advanced countries and colonies that have fallen away or are falling away from the imperialist system." The Program accordingly devoted special attention to the prospect of joining the colonial areas to the Soviet Union. Ultimately the time will come when "the federation of these Republics has finally been transformed into a *World Union of Soviet Socialist Republics*, uniting the whole of mankind under the hegemony of the international proletariat organized as a state."

In the meantime the workers of all nations must look to the USSR which "is the prototype of those fraternal relations among nationalities of all countries which will exist in the World Union of Soviet Socialist Republics, the prototype of that economic unity of the toilers of all countries operating within a single world socialist economy, which the world proletariat must establish, once it has conquered state power."

In March, 1929, Stalin wrote an essay on *The National Question and Leninism,* published for the first time only in 1949. Looking forward to "the period of the victory of socialism on a world-wide scale," Stalin said that this period would be distinguished by the fact that "nations will unite in one world socialist economic system and will thereby create the real conditions necessary for the gradual fusion of all nations into one whole.

Because of the failure of the Soviet regime to fulfill its early expectations and to create a world state in short order, a gradual, but decided, change took place, however, in Soviet thinking. Starting with the theory of "socialism in one country," Stalin gave priority to building up a strong, highly industrialized state which, competing for survival in a world of nation-states, itself took on some of the familiar features of other nation-states. Part of the transformation involved a rebirth of Russian nationalism.

This shift in tactics had the effect of sharply reducing the number of forthright and explicit statements on the objective of a Soviet world state, since it led to an increasing reliance upon the traditional weapons and terminology of national diplomacy.

Can this policy of retreat be equated with abandonment of the fundamental, long-range objective of a world state? It would seem prudent to recall some of Stalin's prior theoretical pronouncements, such as, for example, his warning of 1924 that it was not enough to know how to attack. Citing a passage from Lenin, Stalin said that the proletariat "must understand that it is necessary to supplement this knowledge with the knowledge of how to retreat properly." Only by learning to use and to alternate both of these techniques will victory be possible. Stalin was very clear about the purpose of a period of retreat. It was "to gain time, to disintegrate the enemy, and to accumulate forces in order to assure the offensive later on."

The Seventh Comintern Congress, meeting in July and August, 1935, epitomized the height of this conciliatory period. Its speeches were cast in the phraseology of nationalism, but a careful reading makes it apparent that nationalism was interpreted in the Soviet lexicon in a manner that made it entirely consistent with an abiding design for a Soviet world state. Dimitrov as head of the Comintern said:

"The wheel of history is turning forward and will continue to turn forward toward a World-wide Union of Soviet Socialist Republics."

The new 1936 Constitution for the USSR likewise reflected the period of retreat in which it was written. Gone was the open assertion of the 1924 Constitution that the USSR was the nucleus of a world state. The closest this idea came to receiving open expression in the 1936 version was article 143, which provided that the official motto of the USSR remain, "Workers of All Countries, Unite!" However, Stalin continued to nurture the messianic image of the USSR as a model union of nations, as the fulfillment of what "millions of honest people in imperialist countries have dreamed of and still dream of."

Hails "Indefinite Expansion"

With the signing the Nazi-Soviet Pact in August, 1939, the period of retreat was transformed into a period of advance. Within a year the Soviet Union had swallowed a piece of Finland, the three Baltic States, the western Ukraine, western Belorussia, northern Bukovina and Bessarabia, and was set for bigger stakes. An editorial in *The Communist International* of September, 1940, represented this expansion of the USSR as "an outstanding example of a genuine solution of the national question, making possible the peaceful and fraternal collaboration of numerous peoples within a multinational socialist state. The increase in the number of Soviet Constituent Republics from 11 to 16 . . . is a brilliant confirmation of the correctness of the national policy of Lenin and Stalin." But these limited accretions were considered merely the beginning of a process of indefinite expansion, according to another 1940 editorial in *The Communist International.*

Upon Hitler's attack in 1941, the Soviet regime was forced into a new period of retreat. The aggressive goal of a world state disappeared from Soviet writings. On May 15, 1943, Stalin dissolved the Comintern, a move most likely designed as a further encouragement to the Allies to give all-out aid in the common fight against the Axis. Again, as in the mid-1930s, many non-Soviet observers declared that the Soviet Union was really just another national state, with no desire, either apparent or latent, to transform itself into a world state.

Yet it would be dangerous to assume that the goal of a world state is no longer of any importance to the Soviet leaders. It is more likely that this goal is now regarded as the object of achievement of a number of generations of future Soviet citizens. Though there has been a decided lowering in the level of expectation as to its immediate attainment, the goal itself remains as the polestar of Soviet policy.

The years since the Second World War have been marked once more by a flurry of direct statements about a Soviet world state. On the occasion of Stalin's seventieth birthday in 1949 several works on the nationality problem were published by members of the Soviet Academy of Sciences, some of which were given a wide distribution both in the Soviet Union and in foreign languages, including English. One of these, by M. D. Kammari, stated that "Stalin appraised the creation of the U.S.S.R. . . . as a new and decisive step towards the amalgamation of the working peoples of all countries into a single World Socialist Republic, as the prototype of such an amalgamation."

The subsequent denigration of Stalin in no way affected the theme that the U.S.S.R. is the model for the future organization of all mankind. In July, 1956, for example, *Pravda* pointed to "Lenin's concern about implementing a correct nationality policy, about the need to strengthen untiringly the Union of Soviet Socialist Republics . . . in the interests of all mankind. The relations among the peoples of the Soviet Union, based on equality and friendship, Lenin noted, will have enormous significance as the model for the peoples of the whole world.

Similarly, in 1958 a Soviet ideologue, E. Modrzhianskaia, reiterated the validity of Lenin's vision for the future of mankind.

Lenin repeatedly emphasized that Communists are confirmed opponents of national enmity, of national separation, of national isolation. "We are internationalists. We aim at the close union and full fusion

of the workers and peasants of all nations of the world." . . . The fusion of nations remains the aim of Communists. . . . The unification of peoples in a single world economy is conceivable only on the basis of the destruction of the entire imperialist system and the victory of socialism. . . . There can be no other basis for the future merger and union of nations.

Finally, on March 27, 1959, Khrushchev speculated upon the nature of the future world Communist society in which nations would no longer be partitioned off from each other as sovereign independent units in a nation-state system:

With the victory of communism on a world-wide scale, borders between states will disappear, as Marxism-Leninism teaches. In all likelihood only ethnic borders will survive for a time. . . . They will simply demarcate the historically formed location of a given people or nationality in a given territory. That this will be so is shown by the process going on in the Soviet Union, which is a multinational state.

Khrushchev looked forward to the amalgamation of nations in a single Communist family. The question of borders as it is presently conceived will gradually cease to exist. No sovereign socialist country can shut itself up within its own borders and rely solely upon its own forces and its own wealth. If this were the case, we would not be Communist internationalists but would become national socialists.

Reiterating the familiar image of the future fusion of all nations into a single world economic unit, Khrushchev continued:

It seems to me that the further development of the socialist countries will in all probability proceed along the lines of the consolidation of a single world socialist economic system. The economic barriers that divided countries under capitalism will fall one after another. The common economic foundation of world socialism will grow stronger, eventually rendering pointless the question of borders.

Thus, direct and open avowals on the objective of a Soviet world state have continued to appear in official Soviet sources. This has been true despite the strong trend in recent years to disguise these intentions by the heavy use of national symbols and by reference to the theories of "socialism in one country" and "peaceful coexistence" with the non-Soviet world. To a discussion of these hidden and indirect methods of stating the goal of a Soviet world state we shall turn later. (*To be continued.*)

Young Soldier Advises Student Debater

NOTE: This is an excerpt from a letter I wrote, as a former inter-scholastic and inter-collegiate debater, to my sister, Helen, on July 21, 1918. I was then 22, and serving in France as a sergeant in the American Expeditionary Force.—CLARENCE K. STREIT

You wanted the sum of my knowledge of debating . . . I am pleased to see the interest you are taking in public speaking and debating. The latter is good training if you don't let it get the best of you and become merely an arguer. You know, in all school contests, so much emphasis is placed on winning the contest that the vote of the judges has come to assume far more importance than it should. A debate should be a search for the truth by means of placing in contrasting relief the arguments on both sides of a question. It is a strong temptation in the heat of a debate to employ arguments and facts which one knows are not true in the hope that the opponent will not know his subject well enough to detect the falsity. And especially is that temptation strong for the last speaker, for he knows the other side has no chance to answer him.

For my part, Helen, I don't think the personal or school glory of victory is worth such a price. If you don't believe in your side of the question, after you have studied it thoroughly, I wouldn't argue for it. And if I did argue its good points I would never employ arguments which could not stand up against my own reason. Sincerity is a far better ally for the debater than clever sophism. Train yourself, by debating, not to express merely *an* opinion, but *your* opinion . . . to express clearly your ideas on whatever questions may come up.

"Use Your Own Style" but "Be Simple"

As for the manner of expression, use your own style. Don't follow any stiff form too much. Study your question first—go to Poole's index, etc., search for references, read them, both sides of the question, noting down points that strike you as important and copy short quotations of opinion by men who have studied the question enough to be considered as authorities. But use these opinions sparingly, merely as re-forcements for the facts in the case. (In quoting any one, mention where and when he made the statement and why his opinion is entitled to special consideration in the question concerned. Thus the author, Sir Gilbert Parker's opinion would be perhaps of value on a literary question, but as a recommendation for a medicine, it is of no more value than that of any man who has not studied medicine or dietetics.)

When you have got the broad outlines of the subject arranged in your head, you can sketch out an outline. In it arrange your material so that it will drive home with the force of cumulated fact, logic and clearness. Arrange your material so that your argument keeps getting stronger and stronger, leading up to your trump cards for climax. Reiteration is often useful for emphasis but don't use it in a rubber-stamp way. Put some life into it. Always try to be persuasive. Don't try to cover too much. Better take two or three of the main arguments, show why they are the more important (do this in a few words) and treat them as thoroughly as possible.

And in time of refutation, don't permit your opponent to befuddle the debate with petty details. If he doesn't answer the main arguments you put out, point this out and do it strongly. Then take up his big arguments and answer them, or point out that, if true, they aren't important enough to uphold his side.

Be simple in your language and use short sentences. Remember the audience—talk to it, not the judges—does not know as much about the subject as you, and it is up to you to acquaint them in 10 or 15 minutes' talk with the results of several months of work.

Answering Questions on Atlantic Union

Wouldn't the British, Canadians, French and others fear that they would be outvoted by us in an Atlantic Union Congress, since there would be more American members than theirs, with representation on a population basis?

No doubt some of them will object on this ground, but the objection is easy to answer. If this isn't a fair basis, then Ontario should give Alberta an equal voice with it in the Canadian Parliament, and England should give an equal voice to Scotland.

As a matter of fact, we borrowed from the English the idea of representation on a population basis when we drafted our Federal Constitution. There was a very sharp fight in the Convention on this question of putting representation in the Union government on a population basis, for the small states were afraid they would then be dominated by the larger ones. Benjamin Franklin then helped save the day by pointing to the example of the United Kingdom. He said (Madison noted):

"I do not at present clearly see what advantage the greater States could propose to themselves by swallowing the smaller, and therefore do not apprehend they would attempt it. I recollect that in the beginning of this Century, when the Union was proposed of the two Kingdoms, England & Scotland, the Scotch Patriots were full of fears, that unless they had an equal number of representatives in Parliament, they should be ruined by the superiority of the English. They finally agreed however that the different proportions of importance in the Union of the two Nations should be attended to, whereby they were to have only forty members in the House of Commons, and only sixteen in the House of Lords; A very great inferiority of numbers! And yet to this day I do not recollect that any thing has been done in the Parliament of Great Britain to the prejudice of Scotland; and whoever looks over the lists of public officers, Civil & military of that nation will find I believe that the North Britons enjoy at least their full proportion of emolument."

The American contribution to this problem was to safeguard the position of the small states much more than England did with Scotland; this was done by giving each state two Senators, while putting representation in the House on a population basis. Since experience proves that no small state has suffered under the Federal Union system, there is no cause now for the British or others to fear we would "swallow" them.

Granted, our small states do not feel in an inferior position. Yet you would think there might be some danger to them in this inequality. Why isn't there any?

Because there is no real inequality between the people of the large and small states in a Federal Union. In the division of powers between the Union and the state governments, all the state governments, large and small, get exactly the same powers. Pennsylvania has no more rights than Delaware, and the whole Union guarantees every small state from encroachment by its larger neighbors. Moreover, as regards the powers given the Union government, the citizen of the small state is at no disadvantage; he has the same voice as the voter in the large state in exercising these powers because the Union representatives are apportioned according to the number of citizens. And so in an Atlantic Union a Canadian would gain no greater power by moving here, and Americans moving to Canada would lose no power.

Would the party system help remove the fear of one state dominating another in an Atlantic Union?

Of course, it would be a great help. Once power is based on the citizen, as in a Federal Union, the party system can operate, whereas it cannot work in a league or alliance, where each state has only one vote, which is cast by the party governing it. Once the Atlantic Union is formed, the divisions in the Union government would be along party lines, and no longer between British and Americans, French and Germans, etc. American, British, French, German and other conservatives would be voting together against American, British, French, German and other liberals. The lines of capital and labor would divide Union citizens in the different member nations as they now divide New Yorkers and Pennsylvanians. The Americans and Canadians who came to the Union Congress from the wheat belt in their countries would vote together where wheat was concerned, just as the representatives from the Dakotas, Nebraska, Kansas and other wheat states now make common cause in Washington.

No doubt one of the first party divisions in an Atlantic Union would be between those now working in each democracy for the establishment of the Union and those opposing it—between the Federal Unionists and the nationalists. Curiously enough, establishment of the Union would serve to bring together in one party the extreme American, British, French and other nationalists who now criticize each other so—just as the creation of the American Union brought the nationalists of that time together to defend state's rights.

Could not Russia unite the other nations against an Atlantic Union?

How? It could not gain new satellites by force, for that would be challenging the Union, and risking atomic war. Because of its relative weakness in sea power, Russia could hardly hope to unite any nations with it, except those on its borders. These have the least motive to join it voluntarily. The Atlantic Union would be no threat to them. Rather, it would be their best guarantee against absorption by Russia, and their best hope for recovery. Any serious attempt at Russian expansionism would encourage the Union to admit more countries to it. It could do this far more easily than Russia could unite them against it.

Would not creation of an Atlantic Federation divide the world dangerously into two camps?

No. It would remove the *danger* from the existing division. The danger of war in such division is in direct ratio to the strength of dictatorship compared to the free. The greater the possibility of the dictator's conquering the free, the more willing they both are to fight; remove this possibility and you practically remove the danger of war. Whereas many fear war between the U.S. and Russia now, no one feared was between the U.S. and the Soviet dictatorship in the 20s and 30s, when Russia was relatively much weaker.

Isn't this power politics?

Not unless the U.N. and all plans to change it into a world government are power politics. They all seek to put such preponderant power behind peace that no aggressor will attack. The difference in this respect between the Atlantic Federal Union plan and all others is that it does this effectively, and they do not. World government plans are based, like the U.N. itself, on the assumption that the greater the number of nations in an organization—no matter how diverse they are—the greater the power behind peace. But the greater the number and the diversity of the founders, the looser and more unreliable their organization is bound to be. And so this

Debaters—Send your questions about Atlantic Federal Union to us and our Mr. Unifedat (created with little cost and without any electronics) will try to answer them. Each month during the debating season we shall publish answers to the questions of widest interest. This month Clarence Streit is Mr. Unifedat.—Editors.

method fails to put preponderant power behind peace—or world development. The Atlantic Federal Union plan proceeds on the opposite principle.

How would Atlantic Union affect the atomic bomb problem?

The U.S., the British, and the French Atomic Authorities would become the Union Atomic Authority; thenceforth it would be under the Union government. It would internationalize the atomic authority, as far as the members of the Union are concerned. All the people in the Union, through their elected representatives in its Congress, would have a voice in atomic policy. But their national governments would have nothing to do with it, just as the government of the State of Tennessee has nothing to do with the atomic plant in its territory at Oak Ridge. No elaborate inspection system would be needed, for the same reason that none is needed in the U.S. to prevent the various State governments from learning such secrets.

By this Union plan, as Dr. Harold C. Urey, the atomic scientist, said in urging it in FREEDOM & UNION July, 1947, "we would not give the atomic secrets to France, to England, to Holland, any more than we give our present secrets to the State of Illinois. There might be citizens of other countries who would know these secrets, but if so, they would be controlled by law, just as are the citizens of the State of Illinois at present."

As it is, he pointed out, "There are people in England, France, Denmark, who know a great deal about our atomic secrets. We have no control over their actions by any legal methods. The Union plan," he continued, "would replace the situation in which we have no legal control over people who know atomic bomb secrets, with one in which some sort of control would be set up, and thus from the standpoint of military secrets, the situation would be improved. Whatever leaks might occur through Union," he adds, "would not be as important as the greatly increased military strength of such a Union."

There would still remain the problem of securing atomic agreement with the nations outside the Union, particularly Russia. The Union, however, would be much better off in this respect than the U.S. is today. The Union would merely need to admit new nations to it to extend the jurisdiction of its Atomic Authority. As the Union's gigantic power thus grew, the outlook for catching up with it in the atomic arms race would become ever more hopeless. It would be so hopeless even at the start that the Kremlin might well prefer to reach atomic agreement with the Union soon after it was born.

Has the possession of atomic weapons by the Kremlin changed the situation decisively since *Union Now* proposed Atlantic Union?

No. Whatever atomic destruction the Kremlin might wreak on some of the cities of the Union by surprise attack, it could not hope thereby to knock out the latter's means of visiting worse atomic destruction on it in return. From the outset the Union would enjoy far more than the U.S. now does two tremendous strategic advantages: (1) Its territory and industrial and military centers would be widely dispersed—and (2) it would have advanced bases much closer to the Kremlin's citadel than the latter would have to the Union's citadel in North America.

The use of U.S. bases in Britain, France and other NATO nations is now subject to veto by the nation on whose soil they are situated; this encourages the Kremlin to gamble that the U.S. will be unable to use them at the showdown. Once an Atlantic Union is formed, its government would have the same sure power to use its bases throughout the Union as Washington has in all the 50 States of the U.S. today.

An aggressor is highly unlikely to attack unless he has a reasonable chance to win not merely the opening battle but

the war. For the Kremlin to have such a chance, it would need to back up its atomic weapons with a force stronger than the Union's *all around*—in guided missiles, warplanes, navy, army, productive plant, raw materials. This could hardly happen; any attempt to do this would spur the Union to develop its huge potentialities.

The Union would have enormous general power superiority from the start. The less hope a dictatorship has *of winning the less it is inclined to arms racing.* The strongest Latin American dictator has never tried to outarm the U.S.

Do you still fear the Kremlin would dare attack this gigantic Union? Then you must fear even more that Russia will attack the U.S. alone.

What about Latin America, the Monroe Doctrine, hemisphere defense?

The formation of the Union would enormously strengthen the Monroe Doctrine, for it would put behind it the combined power of the U.S. and Western Europe. It would do the same for hemisphere defense.

Once we put the U.S., British, and French fleets and air forces under the Union government, the Union would control the seas, and there would no longer be any danger to the Latin-American states of Soviet penetration, whether military, economic, or otherwise.

Under the present policy we have to do all the defending of the western hemisphere, supply practically all the soldiers, sailors, fliers, and dollars, for the Latin-American republics are debtor nations, almost unarmed for modern war. Only by Union do we get any real help all along the line in this job, for the western Europeans are the only ones in position to help effectively.

What would be the status of the Latin-American republics?

The same as now as regards the U.S. and the rest of the world. If they desired to enter the Union they would apply for admission. It is to be hoped that at least some of them would apply and be admitted soon.

It would be for the Union Congress to decide whether those with a very high rate of illiteracy and instability of government should wait till they gave better guarantees of democracy, or whether their standards could be raised more rapidly by admission into the Union. And it would be for each Latin-American republic to decide for itself if it wanted to join the Union. We should lean backwards not to appear to be trying to force any of them in.

A good many Americans seem to think that the Latin Americans would be so eager to enter the Union that they would be offended if they weren't included among the founders. But the fact is that it has always been possible for them to ask admission as states in the United States—a similar Union. Yet they have shown no inclination to do so, and no offense at not being urged by us to enter our Union.*

Nor was there anything to prevent the Spanish-speaking American colonies from joining together in a federal union as the English-speaking American colonies did. But they have never done so, or seriously tried to unite this way. Even the little republics of Central America cling to their own absolute national sovereignty. And they have not worked together too well even on that basis in existing international organizations.

Latin-American genius so far, in short, has shown little natural inclination toward federal union, least of all on a big scale. Until the Latin-Americans have shown strong evidence that they have changed their minds in this respect, it should not be assumed that simply because we and the Europeans want to unite they will want to unite with us at once—even before we unite ourselves.

---

*On the contrary, Latin Americans have taken offense at proposals to include them in the U.S. Thus, *The New York Times* reported Jan. 26, 1941, in a special dispatch from Havana—long before the Castro regime.

"The Cuban Secretary of State, José Manuel Cortina, today issued a statement observing that a resolution to admit Cuba as a State of the Union introduced in the United States Congress by Senator William H. Smathers (Democrat, New Jersey) was contrary to President Roosevelt's foreign policy, to pan-Americanism and to the opinion and decision of all Cubans. He said he believed it would be forgotten within a few days since it had no basis and no reason. . . .

"A group of youths late last night threw several bottles through the plate glass windows of the Woolworth store here. Police said the bottles contained notes that said 'Down with the American Senate. This reply to the American Senator.' "

The reaction to any such proposal would be far more violent, of course, in Castro's Cuba today.

The high cost of living—that's the question. What has Atlantic Federal Union got to do with it?

Plenty. At bottom, the high cost of living is a most urgent reason for Atlantic Union of the Free. The danger it symptomizes is—perhaps—even more urgent than the communist danger and the atomic threat. The rising cost of living that hits you and millions of others individually adds up to a rising trend toward a collective crash. A general economic collapse would speed both the communist and atomic dangers. World recovery would mean not only better living for you at less cost but greater freedom, stabler peace.

Is there danger of an economic crash?

No one can be sure—except sure that a key to Communist world policy lies in the conviction (a) that the U.S. is headed toward an economic crash, and (b) that this crash will come sooner or later.

Most of our authorities deny that we Americans are near a crash ourselves and give good reasons for doubt. But they did that right before the 1929 crash, too. Let us hope they are right. But it will be safer if we do all we can to prevent economic collapse.

What causes the economic danger?

The war, and the Cold War, and the urgent demand in the "new" nations for help in developing their economies—and the fact their political policies toward West and East depend on the aid they get —and, perhaps above all, the heavy and highly inflationary cost of the arms race. All this helps raise prices.

The higher prices go, the greater aid and loans they need overseas—and the more taxes we must pay to continue to give or lend them aid—and the more loans and aid we citizens need to continue *our* standard of living. Taxes help keep the cost of living high. That leads to demands for higher wages, over here and over there. Wage increases raise prices higher. Strikes do this too.

We cannot go on forever materially giving away much of our exports, via "mutual security" aid and loans that never will be repaid, but keep our taxes high. But if we reduce taxes by cutting off such aid, this will have a dangerously depressing political and economic effect here, while making prices skyrocket in black markets over there. Such a move would cause unemployment here, to the delight of the communists everywhere, and encourage communism still more directly in Asia, Africa, Latin America. We change shortage to famine for "uncommitted" nations, and the high cost of living into real misery.

Already the communist danger in Asia, Africa, Latin America, has encouraged heavier arming. But this means keeping more men in military service, out of production. And it keeps other men supplying non-productive soldiers and building machines of destruction. It greatly worsens the heart of our trouble.

How can we escape from this economic dilemma?

Only by finding some means of reducing *both* the shortage of goods *and* the tax burden, *without* thereby increasing the dangers of famine, collapse and communism, or lessening freedom's military security. A hard and urgent problem. But the toughest puzzle has an answer. And the answer is Atlantic Union.

How would Atlantic Federal Union avert the economic danger?

The key to the Union answer lies in this neglected fact: *The world's freest peoples are also the world's top producers.*

The burden of aiding world development now rests almost entirely on the Atlantic democracies. Soviet Russia has more than it can do to raise its own standard of living to even that of Eastern Europe.

A Federal Union of the Atlantic democracies would mobilize the world's best productive assets at maximum efficiency and minimum cost.

The construction methods that rapidly built ports, airfields and bases under the worst war conditions would then be building Latin America, Asia, Africa. Teamwork even closer than the Anglo-Canadian-American teamwork which produced the atomic bomb would then be hastening higher living standards everywhere.

The productive resources of the democracies would thus be pooled for construction even more effectively than they were for destruction during the war. Once we and the others agree to become fellow-citizens, we shall all pitch into the task of building up the new nations areas in quite a different spirit than any of us tackle any part of it today.

How would Atlantic Federal Union promote our economy—and the world's

One stable Union currency—backed by all that wasted gold buried in Kentucky—would then replace all the different, dubious currencies now holding back production among the democracies.

The Union would also remove, as rapidly as practicable, the national tariffs that now hamper production among the democracies. It would also cut out all the passports, visas, clearance papers and other red tape that now hinder trade among them. Private enterprise would then greatly reduce the need for governmental loans; this in turn would reduce the cost of economic development in taxes, thus further speeding recovery.

There would be no end to the demand for the Union's goods. The upbuilding of its European states would be but part of the much vaster task of world upbuilding, of helping supply all that Latin America, India, Burma, Indonesia, Pakistan, the Middle East, and Africa need to improve their living standards. And all this would mean more demand for Americans and the things they make.

Atlantic Unionists frequently refer to early U.S. history, but, after all, it was much simpler than ours now. Is the analogy valid?

Of course, the parallel is faulty; all historical parallels are. But it is the best we have, and no one yet has gone wrong who followed it to the extent of trying out the Federal system. And what is the alternative to seeking guidance from our own experience? It is to rely on pure guesswork, logic, speculation. Is that safer, less open to error? As for its being harder now to form a Union, was it really simpler, easier, to invent Federal Union, as they did then, and get people to try it out for the first time on themselves, than to apply these same principles after 171 years of successful experience with them?

But an Atlantic Union would be so much larger than the U.S. in 1789.

The vast size of the proposed American Union was one of the chief arguments against the Constitution when it was established, though the U.S. then extended only to the Mississippi. Oliver Ellsworth of Connecticut argued in the Federal Convention that "each of these states [Massachusetts and Virginia] is too large for a republican system." Even Hamilton, bold as he was, kept recurring to this difficulty, and went so far as to tell the Convention, "I have grave doubts whether a more energetic government can pervade this wide and extensive country."

The fact is that democracy was never tried, before or since, on so vast a scale as when the Constitution was established. Before then democracy had worked only in small areas. Thereafter, the advent of steam and of ever faster means of communication have lessened the difficulties of big-scale democracy. If we measure size by minutes rather than miles—and the former is the measure that counts in this problem—an Atlantic Union would be much easier to form and govern than the American Union in 1789. Eight years after its formation Washington still felt the need of pleading, in his Farewell Address, that Union on so great a scale be given a fair trial.

Yet only a few years later, in 1803, Jefferson got the American people to go still further and double the size of the country by purchasing Louisiana. They were bold then, able to see and secure our future needs when most of America hadn't yet reached the horse-and-buggy stage, when men nowhere dreamed of railroads—let alone airplanes and wireless—when the argument against a big Federal Union was a really stout argument. If we are afraid of size and cannot look ahead in our jet-atomic age as boldly and as far as they did then, we are not fit to govern even what we have inherited, we are already too big for ourselves—MR. UNIFEDAT

Ways to Strengthen the U.N. Significantly

By THOMAS J. HAMILTON
United Nations Correspondent for The New York Times

—UNITED NATIONS, N. Y.

THE FIFTEENTH anniversary of the signing of the U. N. Charter finds the structure of the organization very much the same as that of its predecessor, the League of Nations.

In 1945, when the Charter was drafted in San Francisco, the aim was much higher. It was assumed that the five great powers which had survived the war would enforce the peace, through the Security Council, which was to have sufficient military force at its disposal to compel the smaller powers to refrain from aggression or threats to the peace.

The break-down of great power cooperation doomed these hopes to failure. The Soviet Union's wholesale use of the veto focused attention in the early years of the cold war upon the question of restricting its use. The U. S. and like-minded countries campaigned for the abolition of the veto in the admission of new members, the election of the secretary general, and in most decisions taken under Chapter VI of the Charter, covering disputes and situations threatening the maintenance of international peace and security.

In those days the thoughts of everyone were centered on 1955, since the Charter provided that the question of calling a Charter Review conference would be placed automatically on the agenda of the tenth session of the General Assembly. Moreover, the Charter provided that in that year the Charter Review conference could be called whether or not one of the five permanent members of the Security Council was opposed.

But since the Charter saddled the veto upon the U. N. for keeps—it provided that no amendment could take effect unless it was accepted by all the permanent members—there were ample grounds for questioning the value of holding a Charter Review conference.

Realistically, the only way to get rid of the veto would have been to set up another U. N. Since the U. S. and the other western powers were not prepared to go that far, abortive moves to amend the Charter would merely have stirred up the Russians and accomplished no practical result.

These considerations, as it turned out, assumed greater validity as a result of three unexpected developments in 1955:

1. The tenth U. N. birthday celebration in San Francisco proved remarkably harmonious, since the Russians at that time were engaged in one of their more imaginative peace offensives. There were widespread appeals for a revival of the "spirit of San Francisco" of 1945.

2. The summit conference, held later in the year, also was harmonious, and was widely interpreted as meaning that both President Eisenhower and the Khrushchev-Bulganin team of those days had renounced the idea of nuclear war.

3. At the 1955 session of the General Assembly, the membership deadlock, which had produced half of the Soviet vetoes, was resolved by a deal under which universality of membership—with the exception of the divided governments of Germany, Korea and Viet Nam—was adopted by the U. N.

The General Assembly committee which was set up to examine the question of a Charter Review conference is still in existence, but the idea of holding one is now dead. So are the ex-

pedients adopted at the behest of the U. S.—the Interim Committee in 1947, the Uniting for Peace resolution of 1950—under which the General Assembly was to take over the peace-keeping functions of the Security Council.

As far as the structure of the U. N. is concerned, there now seems to be little point in striving for other changes. The continued rise in the number of Afro-Asian countries, with their marked preference for neutralism as well as anti-colonialism, makes it increasingly difficult to obtain a two-thirds majority in the General Assembly for resolutions challenging Communist aggression in Hungary, Tibet and elsewhere, even though no action is envisaged.

For Summits at U.N.

Only by moderating its position in the light of this altered parliamentary situation has the U. S. been able to obtain acceptance of its proposals at recent sessions of the General Assembly. At least a dozen additional African countries are now expected to gain admission at the 1960 session of the General Assembly, and this will have a pronounced effect.

In these circumstances, what can be done to advance the security of the free world by strengthening the U. N.?

The most important means, surely, is to *use* the U. N. and to abandon the growing habit of holding great power negotiations outside the organization on matters which it is especially fitted to deal with.

The recent unlamented summit conference, together with the exchange of personal visits among the Big Four heads of government which led up to it, is so fresh in people's minds that it is scarcely necessary to point out that such negotiations should have been held in the U. N.

What is sometimes overlooked is that three separate sets of negotiation in the disarmament field—on detecting surprise attack, on halting nuclear test explosion, and in the general field of disarmament—have been held by the great powers in Geneva, and outside the U. N., since 1958.

According to a theory that is widely held among the Western European countries, the tendency to go outside the U. N. results from the belief that the Afro-Asian group in the General Assembly has become so strong that neither the Soviet Union nor the Western powers want to give it a chance to interfere.

This attitude has been strongly criticized by Secretary General Dag Hammarskjold, but there is no question that it exists. Moreover, there can be no doubt of the fact that there would have been a strong movement in the Assembly to add Asian, African and Latin American countries to the ten-power group if the Assembly had been given an opportunity to interfere with the slate—which is composed exclusively of European and North American countries—agreed upon by the Big Four.

However, disarmament is of such paramount importance to all countries that it is difficult to see why the U. N. consented to negotiations outside the U. N.

The liquidation of the British, French and Belgian colonial possessions in Africa, which threatens to produce widespread disorder in the initial stage, confronts the U. N. with a great opportunity as well as an onerous responsibility.

It is difficult, however, to see what the U. N.—or any other organization—can do if there is simply a break-down of government in the new African states. For this reason the African aid program drawn up by Mr. Hammarskjold early in 1960 ranks as one of the most important recent moves for strengthening the organization.

The expenditure envisaged by Mr. Hammarskjold is pitifully small—only $2,500,000 a year—but it should enable the U. N. to make a start in providing a certain number of competent government officials for the new African states.

However, Africa is not the only region that badly needs outside help, whether it is in the form of experts or the money to build dams and other public works. The political prestige of the U. N. suffered severely from the decision to give it no share in administering the Marshall plan, yet even at this late date it would rally if the organization were permitted to administer a larger share of the assistance being provided the under-developed countries.

—Embassy of Switzerland

If the tendency to negotiate and settle international disputes outside the U.N. is not reversed, Mr. Hamilton believes, the U.N. will soon go the way of the League of Nations, whose palace in Geneva is shown above.

A decade after its inception the U. N. Technical Assistance Program—including the newly-established Special Fund—still has not risen to $70,000,000 a year. In contrast, the U. S. is spending about $2,000,000,000 a year in foreign aid (not including the military equipment program). Comparable Soviet figures have not been published, but the Kremlin is spending an increasing amount on bi-lateral programs, with only 8,000,000 rubbles a year for the U. N.

If the U. N. were permitted to step into this field, its potentialities for political settlements would certainly be enhanced, and this—pending a return to the use of the organization for great power negotiations—surely offers the most promising opportunity for strengthening it.

House Set for August Vote on Atlantic Convention Senate & All Presidental Candidates Approve It

THE ATLANTIC CONVENTION resolution cleared in June all but the final hurdle facing Congressional authorization of it*—approval by the House. It was the next item on the agenda when the House recessed July 3 until August 15. It is definitely scheduled for one hours debate and the decisive vote on the Floor soon after the House returns then. It almost got throgh before the recess. Its House sponsors say the outlook for victory "by a big majority" will be "much better" after the recess.

To reach this climax it had first to win this series of battles—with its life at stake in each of them:

January 19: The Atlantic Convention resolution as introduced in both Houses in early 1959** was granted a hearing by the Senate Foreign Relations Committee, at which the State Department gave its positive endorsement to the bill, if amended to make clearer that Congress would call the convention, and name the U. S. delegates.

February 10: The Foreign Relations Committee recommended it to the Senate by a vote of eight to seven, after rewriting it to meet the above wishes of the State Department, and to implement it otherwise. Its number was changed from Senate Concurrent resolution 17 to Senate Joint resolution 170, and its official title became "U. S. Citizens Commission on NATO," authorized to organize and participate in a convention to explore greater Atlantic unity.

May 17: The House Foreign Affairs Committee gave a very friendly hearing to the original resolution. (Full report in June FREEDOM & UNION.)

May 24: The Senate Democratic Policy Committee, thanks to its chairman, Majority Leader Lyndon Johnson, cleared S. J. Res. 170 for Floor debate with no dissenting voice.

June 15: The Senate approved S. J. Res. 170 without change 51 to 44 after a two-hour debate led by its young Floor Manager, Senator Frank Church of Idaho. Twelve other Senators spoke for it and three against it. Those voting for it—but not speaking for it—included all three Senatorial aspirants for the Democratic presidential nomination—Johnson, Kennedy and Symington—none of whom had ever previously taken position on it. Vice President Nixon authorized a statement on the Floor (see p. 41) that he was "actively" for it. The two Minnesota Democratic Senators, Humphrey and McCarthy, both of whom are vice presidential possibilities, voted for it.

June 20: The House Foreign Affairs Committee unanimously approved the resolution as written by the Senate Foreign Relations Committee. Twenty of the 32 Members of the House Committee were present and each voted for it by roll call—15 Democrats and five Republicans. Its sponsors believe that, had the other six Democrats and six Republican Members been present, the vote would still have been unanimous.* Eight of the absentees are known to be strong supporters of it, two more said they would vote for it, none opposed it.

June 29: The 12-man House Rules Committee by a nine-to-three voice vote granted the resolution one hour's debate on the Floor under an "Open Rule"—which means that amendments may be offered and the time allowed for debate thus extended. This was deemed "astonishing" proof of the bill's strength.

At that time it was expected that Congress would meet until July 8, if need be, to finish the mass of pending "must" bills and then adjourn for good. This meant that if the resolution failed to reach the Floor and gain approval within a week, it would die on the vine, and the long legislative process would have to be started from seed again in the Congress which will be elected in November.

On July 1 the leadership of Congress changed plans, however, and decided to recess by July 3 for the two party conventions, and return for a short session in August, the Senate on the 8th and the House on the 15th.

The resolution's Floor Managers—Chairman Morgan and Messrs. Zablocki and Judd—made every effort to secure approval before the recess. They enjoyed the powerful backing of Speaker Sam Rayburn and Majority Leader John McCormack, long a supporter of the proposal. The bill was placed on the House Program for July 1,

The last days before Congress recesses or adjourns are days of lightning changes in mood and program; items may be added, omitted or shifted with little or no notice. And so those who wished to hear the debate on S. J. Res. 170 had to listen in the gallery through weary hours of argument on other bills.

On July 1 this included sharp debate that unexpectedly rose over another

GIST OF CONVENTION BILL

Senate Joint Resolution 170 sets up a "U. S. Commission on NATO," composed of 20 representative private citizens to organize and take part in an all-NATO convention to explore stronger unification. This bill in various forms has been before Congress for 11 years. Half the U.S. delegates are to be named by the Senate President, Mr. Nixon; the other half by Speaker Rayburn. They are to hold such meetings "with similar citizens commissions in the other NATO countries" as "necessary in order to explore means by which greater cooperation and unity of purpose may be promoted by economic and political means." The Atlantic Congress in London last June urged that such a "special conference" be called this year and limited to 100 delegates. The bill does not stipulate the latter but its backers favor this. The resolution states that U. S. delegates are "not in any way to speak for or to represent the U. S. Government." (For text of S. J. Res. 170 see March *Freedom & Union*, or our free reprint).

*But not of its $300,000 appropriation, which requires separate action in both Houses—this may be left to 1960; lack of it does not invalidate the bill, once approved by the House.

**The resolution was originally co-sponsored as S. Con. Res. 17 by Senators Humphrey and Kefauver (D.) and Clifford Case and Cooper (R.); Later Frank Church (D.) joined them. The same text was introduced in the House by Chairman Morgan of the Foreign Affairs Committee and Messrs. Carnahan and Zablocki (D.) as H. Con. Res. 146, 107, 108; Later Repr. Judd (R.) joined them with H. Con. Res. 584. For text see April 1959 FREEDOM & UNION, or ask for our free reprint.

*Members who voted for the bill were, by seniority: Democrats: Morgan, Zablocki, Mrs. Kelly, Hays, Selden, Pilcher O'Hara, Fountain, Fascell, Saund, Beckworth, McDowell, Murphy, Meyer; Republicans: Merrow, Judd, Fulton, Mrs. Church, Bentley. Absentees (mostly out of town or on other business) Democrates: Carnahan, Burleson, Coffin, Diggs, Gallagher, Bowles; Republicans; Chiperfield, Mrs. Bolton, Jackson, Adair, Curtis, Wainwright.

Special for Student Debaters

Atlantic Federal Union Forensic Kit

Costs You Only $2—List Price Exceeds $4
The Equivalent of Two Books of 75,000 Words Each

As a special service to Student Debaters and Coaches we have prepared this Kit including a score of reprinted articles on Atlantic Union by a dozen authorities—*plus* more arguments in two complete back issues of Freedom & Union, regularly priced $1 each because of their rarity and expected to become highly valued "collector's items" once the United States of Atlantica is constituted.

While the limited supply lasts, each Kit will include a complete copy of the Special 40-page Fifth Anniversary issue of FREEDOM & UNION, including five pages of messages on Atlantic Union from statesmen, business executives, writers and other leaders in the U.S.A., Canada, Britain, France, The Netherlands, Sweden, Switzerland. First come, first served. When the supply is exhausted, the Special 10th Anniversary Issue will be substituted for it, and thereafter another rare issue of FREEDOM & UNION.

Here is Kit that Early Birds get in Handy Durable Envelop

TWO RARE BACK ISSUES OF FREEDOM & UNION* containing much debate material: Fifth Anniversary Number, List price $1, and the December 1958 issue, including "Sir Norman Angell Sums Up at 85—Urges Union of West," $1.

BOWER ALY: *History's Greatest Forensic Feat,** an expert analysis of how Alexander Hamilton, outvoted 2 to 1 at the start, persuaded the N. Y. Convention to ratify the Federal Constitution, 30 to 27, after debating 6 weeks. Invaluable to every debater. Only 800 copies left. 20¢ each.

SIR NORMAN ANGELL: *Nationalism—Tool of Communism,* by Nobel Peace Prize Winner. 5¢.

P. F. BRUNDAGE: *Atlantic Union to Save U. S. $10 Billion a Year,* by recent Director of U. S. Budget Bureau. 10¢

W. L. CLAYTON: *U. S. Should Lead World Economic Revolution,* by former Undersecretary of State, plus ***MAURICE ALLAIS:*** *The Only Road for the West—Atlantic Union.* A French view. 20¢

FRENCH PRIME MINISTER DEBRE: *National Sovereignty—An Obsolete Dogma,** from the book, *Peace by Oceanic Union,* he co-authored with former Bank of France Governor ***MONICK.*** Available *only* from us. 30¢

ALLEN F. MATTHEWS: *Mineral Resources of the Free,** by former editor U. S. Bureau of Mines Yearbook. 5¢

LOUIS DOMERATZKY: *Atlantic Union and World Trade,** 6 papers by ex-Commerce Dept. authority. 25¢

ELMO ROPER: *A Fresh Look at the U. S., World & Atlantica,* by famed public opinion expert. 10¢

CLARENCE STREIT: *Atlantic Union & U. N.,* 20¢; *Against the D-Bomb (Depression),* 25¢; *Freedom's Royal Flush,** 15¢; *Nato Potential,** 10¢; *Open Letter to Eisenhower,** 5¢; *Patriot—or Libertiot?** 5¢; *Freedom's Hardest Problem,* 5¢; *World Government—or Atlantic Union Now?* 5¢

LESTER VERNON: *Unexplored Advantages of Atlantic Union.* 20¢

*These items are in limited supply. When exhausted, they will be replaced with other items of roughly equivalent value. We reserve the right to replace other items, not marked with an (*) in the event that we run out of them, or that in a rapidly developing situation, we have some other article that seems more timely. Our aim is to serve student debaters the best we can.

Note: All prices given above are our lastest prices for individual items. These are subject to change as supplies run out or become short, and reprintings more costly.

Be the Early Bird that Gets the Best Kit—Order Yours Now

FREEDOM & UNION PRESS, 2700 Ontario Rd., Washington 9, D. C.

Please send me ..... of your ATLANTIC FEDERATION FORENSIC KIT(S) at your special Student Debater price of $2 each postpaid—with a 10 per cent additional discount on orders of 5 or more Kits.

measure that had strong committee backing and seemed sure of passage at first. It aimed to protect certain U. S. manufacturers and their employees— rather than consumers and taxpayers in general—against their own products, sold to the Government for use abroad and then found to be unnecessary "surplus" stock, being re-imported here and sold to taxpayers at low prices.

Even Clarence Brown of Ohio, a power in the Republican party and its Floor Manager for this bill—who in the Rules Committee opposed bringing S. J. Res. 170 to the Floor—wasn't protecionist enough for the majority of members present; the House killed his bill. This ominous upset was followed by a bad-tempered debate over the artistic merits of the Theodore Roosevelt Memorial. When the tired House, recessed overnight with S. J. Res. 170 the next but one item on the program, its friends felt relieved, despite their vain vigil.

On July 2, S. J. Res. 170 stood third on the program. The two bills before it seemed fairly non-controversial. One related to land grant colleges, the other compensated property owners forced to sell land to the Government for Chantilly airport near Washington, for the expense of moving. The House began in a relaxed mood. The college aid bill sailed through. The Floor Managers of S. J. Res. 170 were confident of an easy victory within a couple of hours.

They not only had their committee solidly behind them, and the strong support of the Democratic leadership but also the backing of the Administration and the House Republican leadership. Only one Representative had asked for a few minutes of the half-hour allotted those who wished to appose the bill. He was H. R. Gross a Republican representing the third Iowa district. He has a reputation for opposing almost everything international.

The outlook could hardly have been better at 2 p.m.—but when the Chantilly bill reached the Floor it provoked a sudden squall. Then a Supplemental Appropriations bill came back from the Senate with several controversial amendments added. It took precedence, the Chantilly debate was interrupted by hot argument and time-devouring rollcall votes on these amendments, particularly a $74 million appropriation to the international Development Administration, despite heavy Administration pressure for

its passage. This sharpened many a knife-like temper not merely for anything international but for an appropriation—and S. J. Res. 170 involved some expenditure, though only $300,000.

When the Chantilly bill got back to the Floor, tempers and opposition rose even higher. There were more amendments and more rollcalls of the 437 Members. The confusion was such that the clerk (who always repeats the vote of each Member as he calls the roll) seemed to catch the spirit; he began booming out the "No" votes with a nasal intonation that sounded like the foghorn the Ship of State badly seemed to need.

By 6 p.m. the atmosphere was such that the Floor Managers of S. J. Res. 170 thought it wise not to press for action before the recess. They still believed—Chairman Morgan particularly—that they could win, but felt the majority might be reduced and handicap action thereafter. The darker outlook came from no direct evidence of opposition. Mr. Gross was still the only listed opposition speaker, but he was enough to start debate,—and what snap judgments and demagoguery might be unleashed in the House's present mood? The leadership could no longer be sure of the outcome—particularly since the Cuban Sugar bill was due back from the Senate and would take precedence.

In such conditions, the Floor Managers reasoned: Why run unnecessary risk, when defeat would be "disastrous" at home and also abroad? It was known that statesmen in allied capitals were following S. J. Res 170 closely. They might well interpret rejection of it by the House, or even another narrow victory like the Senate one, as proof that Congress was not interested in tightening NATO. And Moscow, what gamble might it not be encouraged to take? Friends of the bill in the gallery shared these anxieties; they agreed it was safer to defer the battle.

The event proved action had to be deferred anyway, for the Sugar bill kept the House in bitter debate within itself and with the Senate all night long until the two recessed about 9 a.m. July 3.

"When we return the party conventions will be over," Dr. Judd told FREEDOM & UNION, "Since all the Presidential aspirants have already endorsed our resolution, we are sure that th candidates named by both parties will be for it." He also forecast that both party platforms would include strong Atlantic unity planks. All this, and the more relaxed meed Congress is expected to be in then, made him and the other Floor Managers confident of strong House approval in mid-August.

Dr. Judd is to be the keynote speaker at the Republican Convention, and Senator Church the Democratic keynoter. The Democratic Platform Committee chairman, Representative Chester Bowles, is an ardent supporter of S. J. Res. 170.

Senate Vote Dramatic

The bill's passage through the Senate was even more dramatic than its troubles in the House, for other reasons—above all, because it reached a final rollcall vote there, and the result seemed in doubt until the final announcement. It was dramatic too because there was also doubt of how the Senate's three candidates for the Democratic presidential nomination would vote. By alphabetical order Senator Johnson led the procession. His "aye" did not surprise insiders who knew he had led in bringing the bill to the Floor. Then came Senator Kennedy. He had been absent from the Foreign Relations Committee when it recommended the resolution eight to seven; his "aye" gave its supporters understandable relief and elation. Then Senator Symington made it unanimous.

Adlai Stevenson was already known to be in favor of the proposed convention. A few days later he led still further ahead by coming out on June 23 for an "economic union of the Atlantic,"—while Governor Rockefeller on June 21 called for a "North Atlantic Confederation" to tighten all political bonds.

For one simple and unanswerable reason the close vote can not be attributed to the arguments made by opposition Senators Bourke Hickenlooper (R., Iowa), Frank Lausche (D., Ohio) and Sam J. Ervin Jr. (D., N. Car.) None of them had an audience of more than 10 Senators, and this usually sank to five or six—and nearly all the listening Senators voted for the resolution. The Senators who spoke for the resolution rarely had a bigger audience.

The discussion began late in the legislative day of June 14 with Senator Church's presentation of the resolution. The eloquence which had made him already the Democratic keynoter came out in his peroration—but the only senators left on the floor then were two strong supporters, Senators Joseph Clark (Pa.) and Russell Long(La.).

Even so, this was charged with great drama for any one old enough to remember when Senator Borah of Idaho helped kill the League of Nations Covemant, and thereafter held court as isolationist chairman of the Foreign Relations Committee . . . while Russell Long's father, Huey, single-handed, killed ratification of the World Court Protocol which Borah had agreed to, under the pleadings of Elihu Root.

Senator Church's introductory speech and his interchange with Senator Long—for many years a co-sponsor of the Atlantic Convention resolution—may be (and should be) read in the pages that follow. There we give a full report of the Senate discussion. This includes all the formal two-hour's debate, which began early in the next legislative day, June 15, and continued—with many long interruptions by other matter—until late in the afternoon.

Though there were never more than a fifth of the Senate present, the galleries were fairly well filled throughout by a shifting audience of sight-seers. At the crucial final vote, this included a delagation of 30 delegates from countries of Africa and Asia to one of Washington's innumerable conventions. Throughout it included Elmo Roper, President of the Atlantic Union Committee, to whom the Senator of his state—Prescott Bush of Connecticut—paid tribute from the Floor as the layman most responsible for the Senate vote.

The close vote seemed to be the result of inertia—and misunderstanding.

The main opposition argument was that Congress would be usurping the right of the Executive to conduct foreign relations if it named the delegates. Those making this argument were demonstrably "more royalist than the king," for the Executive itself—in its statements of Aug. 25, 1959 and Jan. 19, 1960—had made its endorsement of the convention contingent on Congress instead of it calling the meeting and naming the U.S. delegates. Moreover, all the candidates for Chief Executive were in favor of this "usurpation" of Executive rights.

The opposition vote came from a combination of Southern Conservatives and New England and Midwest Republicans. Republican Senators voted two to one against the bill; Democrats, two to one for it (*Turn page for debate.*)

Senate Debate on Atlantic Convention

There follows a condensation of the Senate debate on S. J. Res. 170 on June 14 and 15, with only repetitions, senatorial formalities and courtesies omitted.
—Editors.

MR. CHURCH. Mr. President, the only hopeful aspect of the recent Summit conference in Paris was the impressive display of unity among the Western nations emerging from it. But steadiness in a moment of crisis should only emphasize our need for more consistent, continuing cooperation among the free nations of the West. . . .

Eleven years have passed since the birth of NATO. The nature of the Communist threat, and of the problems which beset the Atlantic nations, has changed drastically. No longer is direct military aggression the overriding danger. Changes in Russian strategy, the requirements of closer association, and the rise of the underdeveloped countries have had an impact on all NATO nations.

These developments cry out for closer cooperation in broader fields of policy. In hearings of the Senate Foreign Relations Committee, witness after witness testified to this problem. General William H. Draper, Chairman of the President's Committee to Study the U.S. Military Assistance Program, testified:

As a former U.S. permanent representative to the North Atlantic Council, I can testify from personal knowledge both as to the seriousness of the problems within the Atlantic Community and as to the overwhelming need for greater unity: Military, political, economic, scientific, and cultural.

Even in the military realm, which is the heart of NATO, there is need for greater coordination. But these steps cannot be taken within the present structure of NATO, for they involve going behind the defense line to the sources of the military power.

Responsible authorities in many countries have long been aware of these deficiencies. In fact, the likelihood of such developments was anticipated in the North Atlantic Treaty, which directs that further arrangements for cooperation among its members should be considered in the future. Efforts have been made to achieve greater unity of purpose, but they have had very little success.

Senate Joint Resolution 170 is a suggested solution to this situation. It represents an idea which is relatively new in international affairs, but which has been extremely successful on domestic matters in the U.S. and in other western nations. When we want an independent survey of a national problem, we appoint a commission of leading citizens to study that problem and recommend solutions to the proper governmental authorities. The two Hoover Commissions are the most notable American uses of this technique; in Canada and England royal commissions have long had a similar function.

S. J. Res. 170 would create a U.S. citizens Commission on NATO, consisting of not more than 20 private citizens. This Commission would invite the legislatures of other NATO countries to appoint their own corresponding delegations to a convention to recommend ways of achieving greater political and economic cooperation among these nations. It is expected that the convention would not include more than 100 persons in all, and that it would meet for as long or as often as necessary.

The American commission would take the lead in arranging for the convention as well as participating in it. It would be composed of eminent private citizens, appointed jointly by the President of the Senate and the Speaker of the House after consultation with the Senate Foreign Relations and House Foreign Affairs Committees. . . .

This proposal was first introduced as a Senate resolution more than a year ago.

Senator Frank Church from Borah's Idaho won his first victory in Senate with the Atlantic Convention bill; then was keynote speaker at Democratic Convention.

It has been entirely rewritten by the Foreign Relations Committee which produced the resolution before the Senate this afternoon. It has received strong support from numerous experts in foreign affairs as well as from authoritative gatherings concerned with strengthening the NATO alliance. It was approved unanimously by two NATO Parliamentarians' Conferences. Last year the Atlantic Congress, a meeting of 650 leading citizens from NATO countries, recommended unanimously that the convention proposed by Senate Joint Resolution 170 be held as soon as possible. The State Department is in favor of this resolution, and has testified that it would certainly welcome any constructive and practical ideas that might emerge from the proposed convention.

The failure of the Summit conference has made a stronger NATO more urgently necessary than ever. The values and interests which the Western nations share give us an opportunity to make the alliance more powerful by making the most efficient use of our resources, and agreeing on joint action to meet the various aspects of Communist penetration.

Mr. President, we have today an opportunity to plant a seed which may grow into great, constructive measures for the strengthening of the free world. To the best of my knowledge no one has denied the need for strengthening NATO. Instead, objections to Senate Joint Resolution 170 have dealt with the suitability of this method of dealing with the problem. Foremost among these is the fear that members of the Commission will in effect be conducting foreign policy in competition with the Government. The delegates to the convention would not represent the Government; they would be exchanging ideas with other delegates. They would have no power to commit this Government. The resolution specifically states that—

The U.S. Citizens Commission on NATO is not in any way to speak for, or to represent, the U.S. Government.

To make sure that this is understood, we have limited membership on the Commission to private citizens. If there were the slightest danger that this Commission would be taken as an official voice of American foreign policy, the State Department would certainly object to its formation. The State Department has no such fears, however.

Some critics . . . complain that there is already a multiplicity of organizations. The NATO Council is primarily the governing arm of NATO, and as such is preoccupied with dealing with a narrowly circumscribed set of problems—which are

largely military—in the light of existing policy. Each country's representative on the Council reflects his government's official position, and cannot deviate from it. Moreover, decisions of the Council must be unanimous; questions on which there is serious disagreement are left undecided and often are not even discussed. Many of these factors are matters of necessity for a body which essentially is the board of directors of a military alliance, but they do not encourage the imaginative searching which is required to find new solutions for difficult problems outside the scope of the Council's day-to-day operations.

The NATO Parliamentarians' Conference has been designed to serve a special and limited role and therefore is unsuited for the mission of the proposed convention. The annual conferences have operated under severe time limitations which would prevent adequate consideration of the kind of problems entailed or contemplated to be discussed.

The Atlantic Congress, which convened last summer, had a somewhat similar handicap, since it met for only a week. In addition, it had more than 650 delegates, which made it much too large a group for thoughtful discussion.

Private Convention Not Enough

It has been suggested that we might turn to meetings of strictly private groups financed by private individuals or foundations. Experience has shown, however, that citizens of the required eminence and ability have not been willing to devote sufficient time to such a task in the absence of a request from their Governments.

The convention is intended to go beyond the work of these various organizations. Avoidance of the difficulties under which they labor gives us added hope.

It is, in short, to be a small, deliberative convention that has sufficient time to consider seriously and to debate at length, the weaknesses of the present NATO alliance, and thus to formulate thoughtful recommendations, to be returned to the various NATO governments, as to the steps that the delegates think best designed to give added unity and strength to the alliance.

Finally, Mr. President, we should ask what reason there is for expecting such a convention as is contemplated by this resolution to be productive of any real good. In the course of our committee hearings, General Draper gave testimony bearing upon this point that is worthy of our serious attention. He said:

Departments of the government deal constantly with national and international problems but our own Government has from time to time felt the need for a fresh and independent look at these problems by a commission of citizens. The Committee on which I had the honor to serve as Chairman is one of the most recent ones.

For my own part, Mr. President, I would emphasize that the problem-solving procedures which this resolution would set in motion seem to me to be in the finest tradition of our own country, and of Western civilization generally. The chief glory of our society is the quality of the individuals it produces. This is what the doctrine of the state being the servant, not the master, of the people is really about. This is why we have, and seek to maintain, an open society.

If this kind of society is to survive, it seems to me that we must find more effective ways to exploit its advantages. The central purpose of this resolution is to enable eminent, free citizens, products of this open society, to consider the present situation and recommend possible lines of action that would contribute to the strengthening of the free countries to protect themselves against the Communist threat.

It is precisely because they would constitute a citizens' conclave, free to speak and act independently of the official positions which their governments may heretofore have taken, that we could expect from them ideas and recommendations which would breathe new life into the struggle of Western man to retain his freedom. Established governments tend to get bogged down in ruts, and it becomes difficult for them to lift themselves out of these ruts—to break away from habits of vested interest and fixed position.

For this reason, the greatest advances of Western civilization have most often been initiated, not by governments, but by free citizens, thinking and acting in ways made possible only by freedom; responsible, as free men are in the last analysis, only to their own consciences.

Whatever recommendations may come from the proposed convention will have no official status, no authority except what is given them by their intrinsic merit.

Mr. President, I see no basis for arguing that any harm can come from the kind of meeting which is here proposed. It seems to me, on the contrary, that it has in it the possibility of much good, that it is in the best tradition of free societies, and that it is the kind of initiative that we can properly take, and ought to take.

MR. LONG [D.] of Louisiana. First I should like to congratulate the Senator from Idaho for the fine presentation he has made this evening, and also for the very diligent effort he has made.

The North Atlantic Treaty has been regarded as one of the very foundations of the security of this Nation. . . . Most businessmen, when they see that their business is successful and showing a profit, usually like to expand it and make a greater investment in it, and broaden its activities. Yet there has been some fear expressed of what the possible consequences might be of considering new ideas such as those the resolution seeks to achieve.

I for one have been discouraged to see that there has been such a reluctance to consider or even to discuss ways in which this very successful undertaking can be enlarged upon. I very much hope that not only will the Senate pass the joint resolution, but that something will come of it.

I hope that those who will meet in this new organization will not only come forward with constructive suggestions, but will support them and help pursue them and also help muster public support for measures that will make NATO more effective.

There is no doubt that there are a number of things which could be done to strengthen the NATO alliance as far as military measures are concerned. Certainly, there must be some economic ways in which we can cooperate more fully.

I do not want the U.S. to make any concessions without gaining something by doing so. I would like to see the U.S. benefit, certainly, as much as the other members of the organization gain in a joint undertaking. I believe that as a result of this new organization, we might possibly achieve a greater matching by our partners of the effort we are making. The time has come when we have every right to demand that other nations make a greater contribution.

MR. CHURCH. The distinguished Senator from Louisiana is quite right when he says that the objective of this joint resolution is to seek out recommendations intended to give new strength and health to our NATO alliance. . . .

No alliance can remain static. It either will tend to unravel, to become weaker, and, in the end, fail, as the years go by, or it will tend to become stronger and more closely knit, and thus succeed in the accomplishment of its objectives.

There is a sense of uneasiness about the state of health of the NATO Alliance, and a realization that we must find ways to implement what was originally intended by Article II of the Alliance, which directs attention to political and economic ways by which the NATO nations should cooperate.

MR. CASE [R.] of New Jersey. I am one of four Senators who joined in submitting S. C. Res. 17 earlier in this Congress. Shortly thereafter we had a great accession to our ranks in the person of the distinguished Senator from Idaho [Mr. Church].

I should like to say, on behalf of the Senators who cosponsored Senate Concurrent Resolution 17 originally, that the committee has, I believe, produced a better resolution than the one which we originally submitted. . . .

A number of us have been working on this problem. Among them is the Vice President of the U.S.,* who, when he was in the Senate, had a great interest in this whole area, and still retains it. I am authorized by him to say that he welcomes

this initiative on the part of Members of the Senate; that he strongly believes it is extremely desirable for the countries of the Atlantic Community to engage in cooperative efforts of every sort to draw closer together, for many reasons, including, of course, the reason that if this is not done, the responsibility on those of us who are carrying the major load will become unbearable. But that is only one of the important reasons. The Vice President regards this action as a manifestation of the right kind of initiative in this area. If he were still a Member of this body and had a voice and a vote in its proceedings, he would actively subscribe to the procedure.

MR. CHURCH. I thank the Senator from New Jersey very much for his statement. I am happy that he emphasized the fact that the joint resolution has the approval and endorsement of the Vice President. Should a tie vote result tomorrow, we can thus be sure of prevailing.

The objective of this resolution has been supported for a number of years by such Members of this body as the distinguished Senator from Tennessee [Mr. Kefauver], as well as by the other sponsors of the original S. C. Res. 17. I think special credit should be given to the original sponsors.

MR. CASE of New Jersey. Mr. President, I desire to express my appreciation on behalf of myself and all cosponsors, each of whom is far more entitled to credit for this venture than I. Indeed, if it proves successful, there will be credit enough for all and great gain for the country.

MR. CLARK [D., Penn.]. First, I congratulate the Senator from Idaho on his very able presentation. I am confident that he is entitled at least to equal credit with the original sponsors, with all of whom I am happy to associate myself in this project. . . .

I have read the report of the Committee on Foreign Relations and have given some consideration to the reasons advanced by the members of the committee who oppose the resolution. It is very difficult for me to understand how those reasons can be taken very seriously. To me, they are not only not compelling, but are far from persuasive.

I am a little frightened at what the Senate is doing at this session in connection with our foreign relations. It occurs to me that we are living in a pretty rarefied atmosphere here and are not too well aware of what is taking place in the outside world.

I shall not detain the Senator further tonight other than to suggest to him that if the Senate cannot at this session pass this joint resolution, then indeed this body will have made it abundantly clear, in connection with many another action which we have either taken or failed to take, and I fear will take in the next few weeks, that we are not really very much interested in advancing, through the democratic technique of open discussion, the strength of the free world.

This attitude bothers me very much.

I hope the Senator from Idaho was speaking in jest when he talked of the possibility of a tie vote on the joint resolution being broken by the Vice President. Although I view with some chagrin the fact that the vote in the committee was 8 to 7, I hope the resolution can be passed with no dissenting votes. I see very little reason for opposing it. I hope I am not being ignorant or arrogant in saying this, but I am totally at a loss and am unable to understand the position of the opposition.

MR. CHURCH. Of course, I agree wholeheartedly that we should not have any fear of free men gathering together to debate ways and means to strengthen the unity of the Western democracies, if all they can do, as a result of their deliberations, is make recommendations to their respective governments, which in turn, will evaluate them on the basis of their intrinsic merits.

MR. CLARK. After all, what are we afraid of?

MR. CHURCH. Yes; what are we afraid of? The deliberations will result in the formulation of ideas which the governments of the Western democracies can appraise, and pass upon as they see fit.

To defeat the resolution, to take the position that there should be no convention, and no deliberation by eminent free world citizens, would be to put on the blinders, as if that were some kind of virtue, when the dire fact of our situation is that the Western World is challenged today as never before, and therefore is called upon to plumb its resources and exert itself to the utmost, to find methods to strengthen the unity of purpose and the vitality of the Western World, to meet the threat that has been thrust upon it.

Therefore, I see nothing but good to come from such a convention. I do not believe any harm could possibly emanate from it.

So, Mr. President, I hope the Senate will concur, and will pass the resolution tomorrow.

MR. LONG of Louisiana. I agree that a vote against the joint resolution could certainly be construed by many as fear on the part of this country of communication with other free peoples or fear of a good idea.

MR. CHURCH. Yes.

MR. LONG of Louisiana. Whereas the very basis of our type of democracy and that of our allies is, theoretically, the assumption that we have nothing to fear from exploring the other man's ideas, and discussing them and seeing how they can be improved upon, and that the answer to anyone's idea, if one does not agree with it, is to propose a better one.

MR. CLARK. And the cliché that is used is "to hammer out the truth on the anvil of discussion."

MR. CHURCH. Yes. No better method has yet been devised.

MR. LONG of Louisiana. That is correct.

MR. CHURCH. Mr. President, if there is no further business to come before the Senate at this time, I now move, under the previous order, that the Senate adjourn until tomorrow, at noon.

The motion was agreed to; and (at 6 o'clock and 2 minutes p.m.) the Senate adjourned.

June 15: The Senate resumed the consideration of the joint resolution (S.J. Res. 170).

THE PRESIDING OFFICER.* Under the unanimous-consent agreement 2 hours have been allotted for debate on the joint resolution and 1 hour on each amendment, to be divided equally.

MR. HARTKE. [**D. Indiana**]. The collapse of the summit conference, toward which many millions in many lands had looked with hope, makes it more imperative than ever that we take effective action to strengthen and unify the Atlantic Alliance.

Mr. Khrushchev has blocked the progress in negotiation which many had expected at the summit. He has the power to halt negotiations, to vituperate, and to threaten. But Mr. Khrushchev is quite powerless to prevent us and our NATO allies from reinforcing the solidarity of the West. Indeed, since a central policy of the Communists is to bring about the disintegration of NATO, immediate action to solidify NATO will demonstrate conclusively to Mr. Khrushchev that the kind of summitry he pursued at Paris has boomeranged.

The Congress of the U.S. can take such action to strengthen and unite NATO by passing Senate Joint Resolution 170 this session.

The passage of this resolution alone would be a telling answer to Mr. Khrushchev. And this new initiative towards greater unity within NATO will encourage our allies and strengthen our ties with them as well as exert a far-reaching psychological influence throughout the free

*Mr. Nixon as Senator co-sponsored the Atlantic Union Resolution in 1952.

*Senator William Proxmire (D., Wis.).

world. Too often has it been said that our action is usually a reaction to the moves of the Kremlin. Here we have an opportunity to initiate action that is both positive and constructive.

Mr. President, a year ago I served as one of the delegates from the United States to the Atlantic Congress.

This meeting was unprecedented in the history of the Atlantic community.

I came away convinced of the great value of such meetings of NATO citizens. And I am convinced now that the smaller convention provided for in this resolution, which would meet not just for 5 days, but for as long as necessary to perform its task, has exceedingly great potentialities for good. The more extended its consideration of our problems, the sounder its recommendations will be.

Mr. President, last November I served on the U.S. delegation to the fifth NATO Parliamentarians' Conference. The original recommendation for such a conference or convention of NATO citizens "directed to convene as often as necessary in order to examine exhaustively and to recommend" how greater unity may best be developed had been unanimously adopted by the third NATO Parliamentarians' Conference in 1957. The fifth NATO Parliamentarians' Conference renewed this recommendation.

This resolution has wide bipartisan support. . . . The cost is insignificant but the potentialities for good are exceedingly far-reaching.

MR. MANSFIELD [**D., Mont.**] I yield 2 minutes to the Senator from Kansas.

MR. CARLSON [**R.**] Mr. President, as a member of the Senate Foreign Relations Committee, I heard much of the testimony in support of S.J. Res. 170 . . .

This would be strictly a meeting of what might be recognized as a citizens group, and in my opinion could be helpful in making suggestions that would be important if we are to protect ourselves against the Communist threat.

In these difficult and trying times, it seems to me that we should secure the services of citizens who are willing to devote some of their time in behalf of the welfare of our Nation and other nations who have similar problems. It is for that reason that I am supporting this resolution.

MR. MANSFIELD. Mr. President, I yield 5 minutes to the distinguished Senator from Iowa.

MR. HICKENLOOPER. Mr. President, . . . I am definitely opposed to the pending, joint resolution. . . .

It seems to me that in the last few years there has developed a great flood of pressure groups that want to get on committees; that want to get some kind of official standing; that want to get Federal appropriations in order to have their meetings here, there, yonder, and everywhere else, but which really, in the long run, have no official standing, accomplish no particular concrete result, and spend substantial amounts of Federal money in the aggregate.

I have been familiar, as a member of the Committee on Foreign Relations, with this joint resolution in its various lives. It has had about nine lives. It has been altered, changed, amended, and substituted so that the resolution we are at present considering is in no real way like the original resolution which was proposed. This leads me to the opinion that all that was wanted, in the first place, was a resolution, because the contents have been changed so definitely and so substantially. . . .

We have the NATO Parliamentarians Organization, which meets every year. It has some official standing. No doubt it produces some beneficial results. Also, there are various NATO consultative groups. We have officials in our diplomatic corps, and elsewhere, who take care of the NATO situation.

But now comes a proposal for the United States Citizens Commission on NATO. The joint resolution provides that the commission cannot bind the U.S.; that is stated in the resolution. It will not, of course, bind the U.S. However, regardless of what is said, this so-called unofficial group, meeting abroad with unofficial groups of other nations, can indeed, in the eyes of many people of the world, commit the U.S. to a moral position, which is not an official position or which is not a calculated or studied position of the U.S.

The purposes of the Commission are altruistic; yes. They are to seek for peace and to seek formulas on which peace can be based. But a citizens' committee can do this without spending $300,000 or $400,000 of public funds, and without consulting under the guise of an official commission, when it is not, in fact, an official commission. A citizens' committee can now go to Europe or anywhere else it wishes to go, under its own steam, without benefit of this particular resolution.

Mr. President, I believe we are simply piling up committees, piling up groups, piling up unofficial organizations of people who, in the long run, will probably confuse the issue—because the committees are created by a resolution of this sort—rather than clarify it.

Citizens' committees can do much good if they operate truly as citizens' committees. I do not object to a group of 20 or a group of 40 private citizens doing everything they can to assist in achieving peace, or to the formation of 50, 100, or any other number of groups.

THE PRESIDING OFFICER. The time of the Senator from Iowa has expired.

MR. HICKENLOOPER. May I have 1 more minute?

MR. MANSFIELD. I yield 2 additional minutes to the Senator from Iowa.

MR. HICKENLOOPER. I think such groups may be able to bring people closer together. I think groups like International Rotary and International Lions have done much good and have assisted in creating international understanding.

What I object to is putting the stamp of official approval on an unofficial group and sending them abroad at Government expense to discuss international affairs. In the eyes of many people of the world, such a committee will commit the U.S. to a course of action which is not, indeed, an official course of action, and is not, indeed, a course of action sponsored by Congress, by the Department of State, or by the administration, but is purely the action of a private organization.

MR. CLARK. Mr. President. It ill behooves those who live in a democracy to suggest that citizens have no role to play, either in our foreign policy or in strengthening our alliance.

What are we afraid of? Are we afraid of the workings of democracy? Why are we concerned to have distinguished citizens meet with distinguished citizens of other countries in order to devise ways and means of strengthening our most precious alliance?

Are we afraid of the processes of democracy itself? Who are the pressure groups which, it is alleged, would attempt to convert to their own glory the convention called for by the joint resolution? Do my friends on the other side of the aisle not trust the Vice President, or do we on this side of the aisle not trust the Speaker of the House of Representatives, to assure that our representation at the convention will be composed of dedicated and distinguished citizens who are concerned only with the good of the country? It is difficult for me to believe that there would be such doubts.

Some seem to be afraid of the results of the meeting called for by the joint resolution. Mr. President, the sponsors of the resolution want to have a meeting of interested citizens held, and the sponsors of this measure have been ready and willing to amend the terms of the original joint resolution in order to meet any legitimate objections which might have been raised to it. Their purpose is to make possible the holding of the proposed meeting.

Mr. President, are we so sure that all wisdom resides in the parliamentary groups of NATO? Are we so sure that all wisdom resides in the State Department and in the foreign offices of our allies?

Some who oppose the joint resolution say that all such matters should be handled only through the U.N. We need more than governmental action; we also need an informed citizenry. This is the entire basis of our exchange program, by means of which the brains of the free world are exchanged and ideas are fertilized.

I suggest that the opposition to the joint resolution—impliedly, of course, not explicitly—stems from a feeling that we cannot trust the best brains of the free world to go to work on free world problems.

Mr. President, it is impossible for me to conceive how anyone can seriously contend that the representatives of the U.S. at the proposed convention would represent anyone except themselves—free, dedicated, distinguished citizens of the U.S. . .

They will donate, without charge, the most valuable thing they can possibly donate—namely, they will give to the meeting the benefit of their excellent, highly trained minds. Cannot we at least provide an adequate appropriation, in order to make sure that they will be adequately staffed, housed, and fed? In my judgment, the requested appropriation is indeed modest.

So, Mr. President, I shall conclude as I began: What are we afraid of? Do not we believe in the processes of democracy? Do we believe that the Vice President and the Speaker of the House of Representatives will let our country down? If we believe that, then this is a sad day for the U.S.

MR. CASE of New Jersey. Mr. President, I am in favor of the joint resolution, but I am in control of the time in opposition to it.

MR. ERVIN. Mr. President—

MR. CASE of New Jersey. Mr. President, I am happy to yield now to the Senator from North Carolina whatever time he may require.

MR. ERVIN [D.]. I shall need perhaps 7 minutes.

MR. CASE of New Jersey. Mr. President, I yield 10 minutes to the distinguished Senator from North Carolina.

THE PRESIDING OFFICER.* The Senator from North Carolina is recognized for 10 minutes.

MR. ERVIN.

Mr. President, I realize that any person who opposes a joint resolution of this nature renders himself subject to the charge that he is not in favor of using all methods of promoting peace. Nevertheless, I cannot refrain from rising in opposition to the joint resolution.

Mr. President, when I became a Member of this body, I took an oath to support and defend the Constitution of the U.S. I find it impossible to reconcile this joint resolution with my oath to support and defend the Constitution of the U.S. I have reached this conclusion for two reasons. The first is based upon clause 7 of section 9 of the first article of the Constitution, which provides:

No money shall be drawn from the Treasury, but in consequence of appropriations made by law.

It has been well settled by numerous decisions of the Supreme Court of the U.S. that under this section of the Constitution Congress does not have the power to make appropriations of public moneys, save and except for public purposes.

The proponents of the joint resolution say the group of people, who would travel and act under the terms of the joint resolution, would not be public officials, but would merely be private citizens, and would not be representing the Government of the U.S. If that be true, then the joint resolution conflicts with the constitutional provision I have just now read, because the joint resolution would undertake to authorize the appropriation of tax moneys to pay the private expenses of private citizens engaged in a private mission; and I cannot reconcile this joint resolution with that constitutional provision.

Furthermore, I cannot reconcile the joint resolution itself with the interpretation placed upon it by its proponents. Notwithstanding the language of the joint resolution and the arguments of its proponents, the Congress has no authority under the Constitution to name agents to represent the private citizens of the U.S. The persons proposed to be appointed under the joint resolution would have no authority from the private citizens of the U.S. to do anything for them. They would receive all their authority from the Congress of the U.S. When we consider that interpretation of the joint resolution—and it is the only interpretation I can give to it consistent with the truth—we run into another constitutional provision. Clause 2 of section 2 of article II of the Constitution provides:

He—[That is, the President—] shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur; and he—[That is, the President—] shall nominate, and by and with the advice and consent of the Senate, shall appoint Ambassadors, other public ministers and consuls.

Under this provision of the Constitution, the sole power to conduct the foreign affairs of the U.S. belongs to the President. The Congress is so aware of that fact that it has passed what is popularly known as the Logan Act, which makes it a crime for any private citizen to attempt to carry on negotiations with any foreign country.

The pending resolution provides that private citizens—so its proponents say—deriving whatever authority they have from the Congress of the U.S., shall consult at public expense with persons of other NATO nations to see whether or not they cannot make arrangements for an international convention to the end that the U.S. may get greater unity between those countries and itself by economic and political means. . . .

The pending measure constitutes an effort to bypass the constitutional authority vested with the power to deal with the foreign affairs of the U.S. and to permit some private citizens to receive authority to do so from the Congress, which itself has no power, under the Constitution of the U.S., to deal with matters of this kind.

Mr. President, I believe we should strengthen the NATO allies by procedures which conform to the Constitution of the U.S. And the pending measure is an effort . . . on the part of the Congress of the U.S. to appoint its own Ambassadors, to deal with the foreign affairs of the U.S., insofar as they relate to the NATO countries.

And all of the sophistry and all of the talk about peace cannot wipe out the plain fact that this is an effort on the part of the Congress of the U.S. to take charge of the foreign affairs of the U.S., in violation of the plain letter and the living spirit of the Constitution. All it can do is to cause confusion and cast doubt in the minds of Europeans upon the authority of those who are now in power to represent the U.S., both diplomatically and militarily, in connection with the NATO treaty.

Although the resolution has a high-sounding name, and although its proponents have lofty motives, I cannot reconcile the resolution with the Constitution of the United States; and for that reason I shall vote against it.

THE PRESIDING OFFICER. The Senator from Connecticut is recognized for 5 minutes.

MR. DODD [D.] Mr. President, I rise in support of the resolution. The distinguished Senator from North Carolina [Mr. Ervin] made reference to the Logan Act, which hits a very sensitive place with me, because I made some reference to it not too long ago, in relation to another individual who I thought then, and I think now, was and is in violation of the Logan Act, because of his meddling in foreign affairs. I refer, of course, to Cyrus Eaton. However, I say, with the greatest respect to my colleague and friend from North Carolina, that I think he misunderstands or misapplies the concept of the Logan Act as related to this resolution.

The Logan Act, in my judgment, prohibits anyone not authorized from carrying on negotiations or discussions of any kind with officials of foreign governments in matters having to do with the foreign policy or foreign relations of the U.S. Under the pending joint resolution, private citizens, who would make up the U.S. delegation, would be authorized by Congress and selected by the leaders of Congress to meet only with private citizens of other NATO countries, and they would not, in any sense, be unlawfully interfering in foreign affairs. I do not

*Senator Gale W. McGee (D., Wyo.) presided over the rest of the debate.

think the Logan Act applies to the present situation.

MR. ERVIN. Mr. President, will the Senator yield?

MR. DODD. Yes; I am happy to yield.

MR. ERVIN. I did not say that the Logan Act applied in this instance. I cited the Logan Act as being a recognition by the Congress that the power to deal with foreign affairs of the United States belongs to the President and to no one else, not even to the Congress itself.

MR. DODD. I thank the Senator for clarifying a misunderstanding in my mind. In any event, I think the Senator will agree with me—that the spirit of the Logan Act really is not involved in considering this resolution.

Mr. President, what we are trying to do is to take a small step toward that situation we must reach, and which I am confident we shall reach, when all of the peoples of the world, through their properly selected representatives, can meet together and decide disputes in the world, without recourse to the violence of war or aggression of any kind. That is what we are trying to do. We cannot do it all at once, for a number of reasons. The Church resolution provides a means to further this kind of process among our friends and allies of the free world.

I have no hesitancy in saying to my colleagues that I am a world federalist. World federation at the right time and on the right basis is the answer to peace or war. I do not think world federation is now attainable because of Communist deceit and treachery and because of uncompromising Communist hostility to the free world and its institutions. But I think it is ultimately the only sensible solution to the problem of peace and war in the world.

The resolution we are considering seeks to take another step forward in that direction by at least getting people together, by getting private citizens of the NATO countries to get together to talk about common problems and to find out how we can strengthen the alliances we now have, which are not worldwide but which are really regional and founded on free world principles. We can succeed here because we start out with a broad area of shared common principles. That is all we are trying to do.

This will cost a little money, $300,000 or $400,000. I know the value of the dollar, but $300,000 or $400,000 in these days of millions and billions of dollars is a drop in the bucket. If we can make any progress at all toward the ultimate goal of peace on earth, because men are able to sit down and talk out their problems rather than fight them out, then I say we ought to be willing to spend this small sum.

MR. MANSFIELD. Mr. President, regardless of what the result is with regard to passage of the joint resolution, I wish to take this occasion to commend and to congratulate the distinguished junior Senator from Idaho for the initiative he has shown and the responsibility he has undertaken.

I wish to point out that in the hearings on Senate Concurrent Resolution 17, in the first instance, and later Senate Joint Resolution 170, there are statements by various Members of this body in favor of this proposal. As to whether the Department of State is in favor of the passage of the resolution, I would suggest to the Members that they should read the communications from the Assistant Secretary of State, William B. Macomber, Jr., to the chairman of the Committee on Foreign Relations.

The resolution also has the support of a good number of outstanding citizens, such as Gen. William Draper, W. L. Clayton, of Houston, Tex., and our former colleague in the House, Robert Hale, of Maine, as well as others too numerous to mention.

My purpose in rising at this time and in asking for this brief minute is to pay my respects to the distinguished Senator from Idaho, and to again commend and to congratulate him for the initiative he has shown and the responsibility he has undertaken.

MR. CHURCH. I thank the Senator very much for his remarks. I appreciate them more than I can say. I am very pleased to yield 5 minutes to the distinguished Senator from Minnesota, who has long been associated with this proposal, and who has sponsored it in previous Congresses, as well as in the present Congress.

MR. HUMPHREY [D.]. There is no doubt that Atlantic unity, the North Atlantic Community, is vital to the security of the U.S. In fact, the NATO alliance has been properly termed our most significant alliance.

There have been many expressions of thought to the effect that NATO ought to be expanded. There could be economic cooperation and scientific cooperation, as well as greater cooperation on trade. There could be cooperation in the development of underdeveloped areas, economic assistance overseas, and a host of activities which are presently being carried on by the independent nation states.

Passage of this resolution by Congress—one forward step which Khrushchev is powerless to block—would immediately create new solidarity and hope for the future among the NATO peoples.

A fresh and independent survey of this problem is now urgently needed. While it is indeed a responsibility of the President of the U.S. and the executive branch to conduct foreign policy, there is no prohibition in or out of the Constitution against the citizenry advising and consulting on the formulation of foreign policy. In fact, the Congress has a special responsibility in this day and age, in which economic assistance trade, tariffs, scientific research, education, and information are so much a part of foreign policy.

MR. CHURCH. Mr. President, in order that the opponents of the resolution may have a full opportunity to present their arguments, and inasmuch as considerably more of the time allocated to the proponents has been consumed than is the case of the time allocated to the opponents, I suggest the absence of a quorum.

MR. LAUSCHE [D., Ohio]. Mr. President, as a member of the Committee on Foreign Relations, I voted against S. Concurrent Resolution 17. The vote finally cast was eight in favor of the resolution and seven against it.

I directed a number of questions to the witnesses who appeared before the committee. At the very beginning, my thinking in opposing the resolution was rooted in the proposition that under the resolution there would, in effect, be created a third agency which would participate in the formulation of foreign policy. The resolution contemplates the creation of a commission made up of private citizens, who would meet, would analyze what NATO was doing, and then, if it so desired, make recommendations of courses of action to be followed by NATO other than the courses of action it was following. That statement of fact immediately threw me into a quandary concerning the situation that would exist in the event the President and the State Department felt that one course of conduct was necessary to best promote the national interest of the U.S., and the commission of private citizens declared policies and made recommendations which were in conflict with the position taken by the Government.

On page 28 of the hearings I asked Mr. Draper this question:

Now, let us assume that our U.S. Government at NATO dissents while the other 14 agree. Assume that you have this agency in existence, and they meet, and the delegates appointed by this legislative body of the U.S., take a position contrary to what our duly constituted authorities under the Constitution took in passing on a question. You believe that will be healthy?

MR. DRAPER. I do not know that that would happen, but that would be an expression of their own views. I would not think that that would be harmful if they gave their views publicly and the American people and Congress can draw their own conclusions.

SENATOR LAUSCHE. Our Constitution contemplates that the foreign relations shall be conducted by the President of the United States, through his duly appointed officials, subject to whatever restrictions the Constitution places upon that power, and vests in the Senate; is that correct?

MR. DRAPER. That is correct.

I then posed the question:

Are you not proposing now the establishment, for the first time in the history of our country, of a separate citizens' group that will begin conducting foreign

relations and which may conduct them in a manner that will be completely inconsistent with what the President contemplates the foreign relations should be?

Those questions and answers are reflective of the reasons why I believe the joint resolution should not be passed. I care not whether the appointees to the commission are of the best and most prudent in the Nation. The fact is that they are to be responsible to no one. They will owe no responsibility to the President or to Congress. When once they are appointed, they, in assembly, can make declarations of what ought to be done, and make recommendations, even though such declarations are hopelessly and indefensibly in conflict with the course which the duly constituted authorities are following.

In a democracy, nothing is more essential than to have public officials answerable to the people. The members of the proposed commission will not be answerable to the people. In accordance with the answers given, they will be responsible only to their consciences. Consciences are very elusive things. Some are good; some are bad.

I remember when I was studying the subject of equity, in the early history of the law of equity the query was made: "How does a chancellor decide issues?"

The counsellor before the court said: "He decides them on the basis of conscience."

One of the chancellors declared: "That is a peculiar law. The consciences of individuals differ just as do the size of toes. Some are large; some are small."

The primary point at issue is to make certain that whoever is attempting to declare policy and make recommendations shall be answerable to the people of the U.S. I am quite certain that none of the proponents of the joint resolution will challenge my statement that after the commission enters upon the performance of its duties, it will not be limited in any degree in what it does by a power or authority exercised over it, either by Congress or by the President. When once the members of the commission are appointed, they will continue in office. The President cannot remove them; Congress cannot remove them; nor will the people have anything to say about the matter.

At the risk of repeating, if my arguments are disregarded, there can be no indifference shown to the fact that seven members of the committee voted against the favorable recommendation of the joint resolution. While I am not certain, there is a strong possibility that one member of the committee voted in favor of the resolution solely to get it before the Senate for final disposition.

Mr. President, I believe it would be a mistake to create the commission. I can see no useful purpose it would serve. Already there is too much confusion with regard to our foreign policy. The creation of the advisory commission would merely contribute further to it.

I pose this question: The President declares one course to be the policy. The commission advises a different course. How do we stand before the world? How do we stand in the minds of the people of our own country?

I think the safe thing to do is to adhere to the traditional approach, as declared by the Constitution; namely, that the foreign policy shall be conducted by the President and by the officials of the State Department. If there is to be a change in the manner in which our foreign policy is to be conducted, it should be done, in my judgment, only through a change in the Constitution. It should not be done by the backdoor method you proposed.

I urge Senators to vote against the joint resolution.

MR. JAVITS [R., N.Y.]. Mr. President, I desire to speak in support of the joint resolution.

Perhaps I will be pardoned if I say that I have had very considerable experience with the operations of NATO, especially inasmuch as I had the honor to be a representative, designated by the Vice President, to the NATO Parliamentarians Conference. This is the 3d year I have served in that capacity. I also had the privilege last year of attending the Atlantic Congress.

I believe the world has entered a new era, following collapse of the summit conference in Paris and the exacerbation of international tempers. There is also the great concern of the entire world over the violence of the language and the approach which accompanied the blow-up at Paris.

What has caused singular unanimity of opinion in our country, regardless of party, has been a realization of the fact —which Khrushchev has proved—that today the free world must combine and unify to a far greater extent than previously had been considered as necessary.

It seems to me we are witnessing an extremely effective reaction to that situation. For example, I noticed with very great interest that in the long and detailed speech made in this Chamber yesterday by a leading Democratic Senator, the junior Senator from Massachusetts (Mr. Kennedy), who is very prominently mentioned in his party for possible nomination to be its candidate for President of the United States, he emphasized that very point—namely, that whatever may be the differences of opinion between the administration and himself in regard to what should be done, or whatever may be the differences of opinion and the differences of approach between the two political parties, certainly it is agreed by all that we must increase our cooperation with the rest of the free world.

Economic matters are also of great importance in connection with this situation, Mr. President, because it appears that the gross national product and productive power of the 15 other NATO countries amount to approximately 15 percent of the gross national product and productive power of the United States. In fact, the gross national product of those 15 NATO countries amounts to approximately one-quarter of a trillion dollars.

In addition, enormous trade responsibilities are now being considered and negotiated among the NATO countries. For instance, all of us are familiar with the problems being reconciled between the Inner Six and the Outer Seven.

I believe I can state authoritatively, as chairman of the Economic Committee of the NATO Parliamentarians, that, in the immediate future, economic cooperation of the most intensive character between ourselves and our European allies is absolutely indispensable in order to achieve real success in the cold war.

For instance, we are faced with very grave problems in connection with the kind of economic warfare the Soviet Union could wage upon the free world, especially in individual primary commodities, including such items as tin, flax, and fuel oil. We are familiar with many of those problems, especially in connection with the new underdeveloped countries of Africa. All of these problems will have to be handled in a collective manner between ourselves and the European countries which are the principal consumers of the commodities.

In addition, the Atlantic Community controls the overwhelming proportion of the world trade, and certainly must take steps to deal adequately with the problems of trade competition. We are beginning to realize in a very definite way, in all branches of our economic system, the importance and the effects of the problems presented by both imports and exports, insofar as the United States itself is concerned.

The proper handling of all these problems requires far more in the way of contacts and interrelationships with our European allies than has heretofore been

accepted as the norm; at this time we are considering membership in the Organization for Economic Cooperation and Development, to replace the Organization for European Economic Cooperation, which was the European organization for cooperation in regard to the Marshall plan.

Mr. President, these developments will result in greatly increased intimacy of relationships as regards trade, aid, prices, and other economic problems between ourselves and the European countries.

Finally, Mr. President, we are looking forward to partnership with the European countries in order to help aid the less developed areas of the world—areas which, despite all we have done, including the work of the International Development Association, are still insufficiently developed to meet what everyone concedes to be the legitimate desires of their peoples to improve their standards of living. All of us recognize that the extent to which we take action to meet these needs will be the gauge as to which way these underdeveloped countries will turn—either to the free world or to the Communist bloc.

Mr. President, under all these circumstances, it seems to me that a technique as beneficial as the one called for by the pending joint resolution, which employs the grassroots spirit—which is the way I define the joint resolution—will definitely help in connection with the desire to attain world peace. It is necessary in terms of the security of the U.S., the security of the entire free world, success in the cold war, and success in the post Summit period, when such great emphasis is placed upon the necessity for coordination and unification of the free world to the maximum extent possible.

It seems to me that the joint resolution offers us an ideal approach, as a first step in dealing with what must be—if we are to succeed—the greater role of the entire NATO organization in enabling the entire Atlantic Community to cooperate more closely, and yet in practicable and completely constitutional ways.

MR. CHURCH. I am happy to yield to the distinguished senior Senator from Tennessee (Mr. Kefauver), such time as he may require. He has long been associated with this cause, and he is well known for his outspoken support of the objectives of the joint resolution.

MR. KEFAUVER [D.]. Mr. President, I rise to add my voice in support of S.J.R. 170.

The events at the Summit conference have convinced me that the No. 1 goal of Khrushchev is to destroy the North Atlantic alliance. This would seem quite natural on his behalf, as this alliance stands as the most potent defense against the U.S.S.R. today.

Most of us have long been engaged in seeking out ways to strengthen our NATO alliance. Along with a number of other Senators I sponsored the resolution which made the U.S. a member of the NATO Parliamentarians Conference. I have served as chairman of one of the major committees of the Conference.

I joined in writing and working for the resolution in the NATO Parliamentarians Association which brought about the Atlantic Congress in London last year.

Both the NATO Parliamentarians and the Atlantic Congress have strongly recommended the establishment of a smaller body which can meet for longer periods of time, and which can give intensive study to the possible means of strengthening our NATO ties.

The nature of the Communist effort for world domination has shifted to a considerable extent to the economic, political, and propaganda fields. The democracies can meet this new challenge

They must also have community of action. The adoption of this resolution will be a vital step in the creation of this action.

The continued success of the NATO with success only if they have workable mechanisms for consultation.
alliance may very well depend on what we do here today.

The U.S., and particularly the Senate today, is called upon to take the lead in this step for which other NATO nations have shown their support.

MR. SPARKMAN. I am in favor of the joint resolution. This proposal is not something new. It has been around here for a long time. Certain suggestions were made by the administration. It has been worked out in its final form in a way that was acceptable to the administration, and, in fact, to me.

For several years I have felt we needed something to bring together more closely the NATO countries. I have heard our military leaders in NATO say that one thing badly needed was a greater underpinning, politically and economically, of the countries; that they are very well unified from a military standpoint, but that they could never attain their full strength until they were brought together more closely with better political and economic understanding.

There is another thing that impresses me. Over the last year or two there has developed some talk of a trade war. I do not know whether it is right to call it a trade war, but certainly it is correct to refer to trade conditions as between two different groups of European countries. Anything we can do to help prevent a trade war, which could be destructive to the well-ordered trade of the world, as well as the good understanding which prevails among the various NATO countries, we ought to do.

MR. CHURCH. Mr. President, how much time remains to the proponents?

THE PRESIDING OFFICER. Twelve minutes remain to the proponents.

MR. CASE of New Jersey. Mr. President, how much time remains to the opposition?

MR. LAUSCHE. Mr. President, I ask for the yeas and nays.

MR. COOPER [R., Ky.]. Mr. President, as one of the original sponsors of the resolution, I am glad to support it today in the Senate. We must recognize that it is indispensable that members of the North Atlantic Treaty Organization and their peoples should be more closely bound together than ever before.

But certainly the events surrounding the Summit conference make it imperative that the people of the NATO countries understand the policies of the NATO and that they support them.

In 1950 I had the unique experience of attending two meetings of the Council of NATO in company with the then Secretary of State, the Honorable Dean Acheson. I remember the debate which occurred at the second meeting of the Council, held in London, with respect to the means by which Germany might be brought into NATO. The process was commenced by making Germany a member of the OEEC.

At the third meeting, in Brussels in December 1950, the decision was made that it was necessary that American troops should be committed to the defense of Europe, and General Eisenhower was chosen as supreme commander of the NATO forces. The Brussels meeting was followed by the great debate in Congress in 1951 on the issue of committing troops to Europe. I believe that if such an organization as is contemplated by the resolution before us had been in existence at that time, and the questions to which I have referred could have been discussed by private citizens of the NATO countries, the governmental decisions could have been made more quickly and accepted and understood by the peoples of the countries which are members of NATO.

My chief reason for giving the joint resolution my support is that from the discussions and considerations of able men and women who will be delegates there will be brought to bear upon the countries that are members of NATO new

ideas and the best thoughts of their people.

Those who were delegates to our Constitutional Convention were not bound by the views of any political party. They were free to bring to bear upon the Convention their best thoughts, their ideas, and their genius. Governments by their very nature are limited. We should not be afraid of the full scope and the best ideas of the peoples of our countries.

The resolution will give opportunity to the best minds of our country and of other countries which make up NATO to advance ideas, perhaps better ideas than may be held by those who are in power at a particular time—to join our countries more powerfully — economically, militarily, and in values which affect the opinion of the world.

MR. BUSH [R., Conn.]. The subject is one I have discussed on and off over a period of the past 10 years with a very distinguished citizen of my own State, Mr. Elmo Roper, who testified in support of the joint resolution before the Foreign Relations Committee. I believe that it would be well for us to pass this joint resolution today. I believe that a good case has been made for it.

I was very much interested to note in Mr. Roper's testimony before the committee that the much-maligned Director Emeritus of the Budget Percival Brundage is quoted as saying: "I support enthusiastically S.C.R. 17, consider it very important budgetwise."

I believe that our friends on the other side of the aisle should, when the Budget Bureau is not opposed to it, give the Bureau of the Budget a little round of applause.

I was very much impressed by the fact that the Vice President of the United States has firmly and enthusiastically endorsed the resolution.

MR. CHURCH. Mr. President, I yield to summarize the arguments in favor of the adoption of the resolution.

The arguments which have been raised against the pending resolution seem to me to fall into two categories. There have been those who have said that the joint resolution somehow interferes with the constitutional power vested in the President to conduct American foreign relations. I believe that, with all due deference to those who have made this argument, the facts simply do not support it. Certainly, if there were any shred of substance to this contention, the joint resolution now before us would be opposed by the President, who is naturally jealous of the powers of his office, and there would be objection to it also by the State Department. Yet the very contrary is true. The resolution has the blessing of the administration and the approval of the State Department.

Why does the resolution constitute no interference with the power of the President to conduct American foreign relations? It seems to me that the answer is simple. It is because no power is conferred upon the delegates who will attend the proposed convention. They merely will be sent to exercise their prerogatives as free citizens of the countries which comprise the NATO alliance, to deliberate and to reach conclusions with respect to how this alliance can be strengthened and how the unity of the free nations can be enhanced. This is a fundamental right of free citizenship.

The State Department, in commenting upon the resolution, has made it clear why it feels that recommendations emanating from a convention of this kind might be very fruitful. I quote the language of the Department of State:

> The Department considers that meetings such as the one proposed in this resolution might well serve a good purpose. We in the Department of State would certainly welcome any constructive and practical ideas which might emerge * * *. We particularly welcome the thought expressed in the resolution that the delegates to the proposed convention should be free to explore the problem fully as individuals.

Therefore, I submit there is no support for the argument that the resolution in any way interferes with the constitutional prerogatives of the President to conduct our foreign affairs.

The second argument which has been advanced is that the resolution is somehow unprecedented, that it opens up new doors, and therefore we should be cautious about approving it. I submit this is not so. Citizens' commissions are precedented, and we have used them to good advantage right here in the U.S. The Hoover Commission was a citizens' commission. It made recommendations that were highly useful and productive. The Government of Great Britain has used royal commissions with excellent results.

All we do in the resolution is to lift our sights and apply the precedent that we have used so well in other fields to the common problems faced by the NATO nations in strengthening the NATO alliance.

I submit that the resolution is in the best tradition of free societies. Our individual citizen is the finest product of Western civilization. Let us use him to the best advantage. Let us remember that the most important advances which have been made in our long quest for freedom have not been the acts of duly constituted governments, but have been the actions taken by free citizens in conventions assembled. Therefore, inasmuch as the joint resolution is supported by the administration, the State Department, the Vice President, and has been endorsed by the NATO parliamentarians' conference, and unanimously endorsed by the Citizens' Atlantic Conference in London last year, and has the majority support of the Committee on Foreign Relations, it ought properly to be approved by the Senate as a whole. I hope it will be so approved in the coming vote.

THE PRESIDING OFFICER. The joint resolution is open to amendment. If no amendment is to be offered, the question is on the engrossment and third reading of the joint resolution.

The joint resolution (S.J. Res. 170) was ordered to be engrossed for a third reading, and was read the third time.

THE PRESIDING OFFICER. All time for debate has expired. . . The question is on the pasasge of the joint resolution. The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

MR. MANSFIELD. I announce that the Senator from Wyoming (Mr. O'Mahoney) is necessarily absent.

The Senator from Missouri (Mr. Hennings) is absent because of illness.

I further announce that the Senator from Missouri (Mr. Hennings), if present and voting, would vote "yea."

MR. KUCHEL [R., Cal.]. I announce that the Senator from Maryland (Mr. Butler) is necessarily absent.

The Senator from South Dakota (Mr. Mundt) is absent on official business.

The Senator from Wisconsin (Mr. Wiley) is detained on official business. If present and voting, the Senator from Maryland (Mr. Butler) and the Senator from South Dakota (Mr. Mundt) would each vote "nay."

The result was announced—yeas 51, nays 44, as follows:

YEAS—51

Bartlett	Hartke	Magnuson
Beall	Hayden	Monroney
Bush	Hill	Morse
Carlson	Humphrey	Morton
Carroll	Jackson	Moss

Mundt	

So the joint resolution (S.J. Res. 170) was passed.

There is something noble and magnificent in the perspective of a great Federal Republic....closely linked in the pursuit of a common interest... tranquil and prosperous at home, respectable abroad; but there is something proportionately diminutive... and contemptible in the prospect of a number of petty states... with appearance only of union, jarring, jealous and perverse, fluctuating and unhappy.

ALEXANDER HAMILTON · in The Continentalist, July 4, 1782

I agree to this Constitution with all its faults b
I think a general Government necessary for u
think it will astonish our enemies, who are writing
confidence to hear that our councils are confounded

WHAT YOU CAN DO WITH A SHOESTRING TO HELP STUDENTS DEBATE ATLANTIC UNION

SOME EXAMPLES OF HOW FAR YOUR CHECK TO FEDERAL UNION, INC., CAN GO:

$10 lets us give 20 squads—at least 100 debaters—one forthcoming issue of *Freedom & Union.*

$50 lets us give 20 squads our Forensic Kit (debate material package regularly priced $4, offered to debaters for $2) and pay postage.

$100 lets us send 32 high school or college libraries *Freedom & Union* for one year.

$500 lets us send 330 libraries a copy of *Freedom Against Itself.*

$1000 lets us send 8 libraries (including your high school, college and city libraty) in your name a complete bound set of *Freedom & Union* (Vol. 1-14)—$120 each—containing more than 250 articles of value to debaters, and pay shipping costs. Note—supply is very limited.

$1500 lets us give 10,000 debate squads a forthcoming issue of *Freedom & Union*—reaching at least 50,000 debaters for only 3¢ each.

In every case your check also finances a subscription to *Freedom & Union* through the momentous year ahead to yourself, if you are not already a subscriber.

If you want your check earmarked for any one of the bargains listed above, put a checkmark after the desired bargain; if your check is more or less than the amount cited as an example, we will apply it proportionately to the desired bargain. If you wish to leave it to Federal Union, Inc., to decide how best to use your contribution, please check here ☐.

Gifts unaccompanied by any instructions will go into the general funds of Federal Union, Inc.

The American compact is altogether with individuals.
The only government is that which makes minute of individuals.
The whole theory of the universe is directed unerringly to one single individual—namely to You.

—Walt Whitman,
By Blue Ontario's Shore, 1856.

The Critical U.S. Period

To some persons it may seem as if the years 1861-65 were of more cardinal importance than the years 1783-89. Our Civil War was indeed an event of prodigious magnitude . . . and . . . decisiveness. The measure of that decisiveness is to be found in the completeness of the reconciliation that has already . . . cemented the Federal Union so powerfully . . . when we consider this wonderful harmony which so soon has followed the deadly struggle, we may well believe it to be the index of such a stride toward the ultimate pacification of mankind as was never made before. But it was the work done in the years 1783-89 that created a federal nation capable of enduring the storm and stress of 1861-65.—John Fiske, *The Critical Period of American History, 1783-89,* in its Preface, written Oct. 10, 1888, Houghton, Mifflin & Co.

Sudden a Thought...

—Annemarie Bonnet

Sudden a thought came like a full-blown rose.—Keats, *The Eve of St. Agnes*

*

The great and radical vice in the construction of the existing Confederation [of the 13 States] is the principle of *legislation* for *States* or *governments,* in their *corporate* or *collective capacities,* and as contradistinguished from the *individuals* of which they consist.—Hamilton, *The Federalist, No. 15,* 1788.

*

The consequences of disunion cannot be too highly colored, or too often exhibited. Every man who loves peace, every man who loves his country, every man who loves liberty, ought to have it ever before his eyes.—Madison, *The Federalist, No. 41.*

*

The triumph of tyranny in Central Europe should be a warning to the nations of the free West that they too court disaster by continuing to adhere to obsolete notions of national sovereignty. And the tragic story of Central Europe also has a lesson to teach the former colonial peoples the world over who are now entering the age of nationalism.—Stephen Borsody, *The Triumph of Tyranny, Macmillan* 1960.

Why U.S. Revolution Was Unique

American independence was the beginning of a new era . . . no other Revolution ever proceeded from so slight a cause, or was ever conducted with more moderation. . . . It was democracy vigilance, less against aristocracy and in its highest perfection, armed with monarchy than against its own weakness and excess. Whilst England was admired for the safeguards with which, in the course of many centuries, it had fortified liberty against the power of the crown, American appeared still more worthy of admiration for the safeguards which, in the deliberations of a single memorable year (1787), it had set up against the power of its own sovereign people. It resembled no other democracy, for it respected freedom, authority, and law. It resembled no other constitution, for it was contained in half a dozen intelligible articles.—Lord Acton, *History of Freedom,* Macmillan, London, 1919, pp. 84-85.

*

The U.S. has more citizens and private investments in foreign lands than any other nation.—Vice President Richard Nixon, in a letter to Eugene C. Pulliam, advocating repeal of the Connally Amendment.

*

Federalism is the only possible means of reconciling states and nations.—Oscar Jaszi, in 1948.

*

The quickest way to get three Americans to travel a thousand miles is to propose an exchange of ideas.—Jacques Barzun, *The House of the Intellect.*

The Citizen & Sovereignty in the U. S. [1835]

WHENEVER THE POLITICAL LAWS of the United States are to be discussed, it is with the doctrine of the sovereignty of the people that we must begin.

The principle of the sovereignty of the people, which is always to be found, more or less, at the bottom of almost all human institutions, generally remains there concealed from view. It is obeyed without being recognized, or if for a moment it is brought to light, it is hastily cast back into the gloom of the sanctuary.

"The will of the nation" is one of those phrases that have been most largely abused by the wily and the despotic of every age. Some have seen the expression of it in the purchased suffrages of a few of the satellites of power; others, in the votes of a timid or an interested minority; and some have even discovered it in the silence of a people, on the supposition that the fact of submission established the right to command.

In America the principle of the sovereignty of the people is neither barren nor concealed, as it is with some other nations; it is recognized by the customs and proclaimed by the laws; it spreads freely, and arrives without impediment at its most remote consequences. If there is a country in the world where the doctrine of the sovereignty of the people can be fairly appreciated, where it can be studied in its application to the affairs of society, and where its dangers and its advantages may be judged, that country is assuredly America.

At the present day the principle of the sovereignty of the people has acquired in the U.S. all the practical development that the imagination can conceive. It is unencumbered by those fictions that are thrown over it in other countries, and it appears in every possible form, according to the exigency of the occasion. Sometimes the laws are made by the people in a body, as at Athens; and sometimes its representatives, chosen by universal suffrage, transact business in its name and under its immediate supervision.

The people reign in the American political world as the Deity does in the universe. They are the cause and the aim of all things; everything comes from them, and everything is absorbed in them.—Alexis de Tocqueville, *Democracy in America* (1835), vol. I, Chap. 4.

Atlantic Federal Union Now—

THE ONCE-IN-173 YEARS DEBATE

When the U. S. Federation was a-borning most Americans thought it "too remote" to bother about. George Washington himself doubted in 1787 that the people were "matured" for "such an important change." He feared that the "Monster . . . Sovereignty" which had "taken such fast hold of the States individually," would make "another dreadful conflict" necessary before the 13 would accept Federal Union. On the eve of the Federal Convention itself he said: "It is too probable that no plan we propose will be adopted." But all this only made Washington fight the harder for Union. Because he won that fight we rightly revere him as the Father of our Country—but we wrongly forget the apathy, skepticism and opposition he and the other Federalists faced then. Result: Many are as blind now to the all important issue of their lifetime, as the long forgotten "Non-founding Fathers" of 1787-89 were then.

A copy of any newspaper of 1788 containing one of the *Federalist* papers is now a valuable collector's item—but when those *Federalist* columns originally appeared in the press nearly all of them were discarded as trash. Any evidence that a forebear fought for American Federal Union then is now a treasured family heirloom, framed and handed down from generation to generation. Few such treasures exist. Why? Because few people then were wise enough to recognize great history when it was happening before their eyes. Most Pennsylvanians, for example, thought the elections for President of Pennsylvania more important that Franklin's efforts to federate the 13 States . . . before he achieved his 35-year task.

Be Wiser than the Apathetic, Skeptical, Shortsighted "Non-founding" Fathers of 1787-89

Take a front seat* at the *Debate-of-the-Century by subscribing *now to Freedom & Union*—which has long pioneered Atlantic Union and has incomparable inside sources all round Atlantica from which to bring you in forthcoming months the story history will glean from its pages.

Better still, *have a hand in constituting the greater Union of the Free that our jet-atomic age demands.* Join Federal Union, Inc. the non-profit membership association headed by its editor, Clarence Streit, that publishes it; your $5 dues bring you the magazine for a year and make you a co-publisher.

Special Introductory Offer to Debaters, Students, Coaches, Teachers, Librarians and Others

If you are in one of the first 5 groups and *subscribe* now to *Freedom & Union* at the regular rate, we will send you *free* a special presentation copy of Clarence Streit's latest book, *Freedom Against Itself* (Harper; paperback, $1.50) inscribed by him to you personally . . . while the limited supply—1,000 copies—lasts. First come, first served—but if you *join* Federal Union you will be given precedence over subscribers—and will receive a handsome laminated membership card as enduring proof that in the great years of 1960-61 you were helping make history . . . better.

If you are not a debater, student, coach or librarian, we make the same offer to you *except* that instead of *Freedom Against Itself* we shall give you *free* an autographed copy of the forthcoming new edition of *Union Now* (paperback, 87¢. See page 38.)

For Immediate Release

Washington - This is taken from a report to appear in the September Freedom & Union:

HOUSE APPROVES ATLANTIC CONVENTION, 288 to 103; NEW APPROACH MADE TO NATO UNITY

The House of Representatives approved the Atlantic Convention resolution 288 to 103 August 24 after nearly three hours of debate and six moves to kill the bill. This added significance to the three to one majority in the House whose two-year term makes it traditionally more responsive to public opinion than the six-year Senate. The vote completed Congressional approval of Senate Joint resolution 170 which was approved June 15 by the Senate 51 to 44, with Senators Kennedy and Johnson voting for it and Vice President Nixon announcing he would actively support it if still a Senator. The resolution requires the President's signature but this is considered assured since the Administration has already endorsed it.

The resolution makes a new kind of approach to world problems in general and NATO unification in particular. It sets up a "U. S. Citizens Commission on NATO," composed of 20 representative private citizens appointed by Senate President Nixon and Speaker Rayburn to organize and take part in a con vention composed of similar commissions from other NATO nations. The convention's purpose is "to explore means by which greater cooperation and unity of purpose may be developed to the end that democratic freedom may be promoted by economic and political means."

Though not stipulated in the bill, supporters explained they expected the convention to be limited to 100 citizens, with the commissions from other countries roughly proportioned to population. The bill states that the U. S. delegates are "not in any way to speak for or to represent the U. S. Government." They are to serve without pay until the commission expires Jan. 31, 1962, but a $300,000 appropriation is authorized for expenses, staff and the U. S. share in the convention's cost. This requires a separate vote, but if lack of time prevents such action before the present short session ends, the appropriation can be made in 1961, and the Commission appointed meanwhile. Supporters expect it to be soon after the election, if not before.

Supporters during the debate left it to opponents to stress the newness of this whole approach in the international field; they themselves likened it to such familiar methods in the United States as the Hoover Commissions. In the House hearing it was also likened to the Federal Convention of 1787, and there too the success of the American example was emphasized. Although the resolution's approach resembles neither of these examples completely - a fact the debate did not bring out - it does resemble both in permitting convention participants to explore the problem as individual citizens.

In the debate, opponents - most of whom objected to such commissions in the national field as really efforts to promote "give away" legislation - attacked the novelty of asking citizens to explore international questions. They found this to be "unconstitutional" meddling by Congress and, worse, by "irresponsible" private citizens in foreign affairs which should be left to the Executive.

MORE

The State Department, in endorsing the resolution, had conditioned its support on Congress taking full responsibility and naming the delegates, pointing out that the resultant freedom "to explore the problem fully without being officially instructed or able to commit their governments" was "obviously in the interest of full and free exploration" which it "would welcome." The bill's opponents, however, insisted that it should, like the Hoover Commissions, include delegates named by the Executive and certainly Members of Congress.

Clement Zablocki (D., Wisc.) and Walter Judd, Minnesota keynoter at the recent Republican Convention, both of whom had sponsored similar resolutions for many years had the satisfaction of being the Floor managers for their respective parties who led the bill to its brilliant victory, with the telling support of another of its sponsors, Thomas E. Morgan (D., Pa.), chairman of the Foreign Affairs Committee. Another committee member, Wayne Hays (D., Ohio) backed it effectively as past President of the NATO Parliamentarians Conference which has recommended this measure since 1956. Others who spoke strongly for it included Ray Madden (D., Ind.), Barratt O'Hara (D., Ill.) Porter Hardy Jr. (D., Va.) and Republicans John V. Lindsay (N. Y.), Robert R. Barry (N. Y.), Robert J. Corbett (Pa.) and James G. Fulton (Pa.)

The opposition was begun and ended by H. R. Gross (R., Iowa) whose concentration on the negative is so notorious to his colleagues as to lessen considerably his persuasive power. Others who spoke against the bill included John J. Flynt Jr. (D., Ga.), John Dowdy (D., Tex.), James Haley (D., Fla.) and Otto Passman (D., La.) and Republicans Bruce Alger (Tex.) Frank Bow (Ohio), Clarence Brown (Ohio), Clare Hoffman (Mich.), and Keith Thomson (Wyo.) Most of them feared the commission would waste taxpayer money or bring pressure on Congress to give it away to foreigners.

As in the Senate, the opposition vote was composed mainly of Southern conservatives and midwest Republicans. Two contrasts with the Senate, however, were striking. In the Senate, Republicans voted almost two to one against the bill; in the House, they voted almost two to one for it - 91 to 50 with 11 absent. In the Senate, the Foreign Relations Committee approved the bill only eight to seven, with Frank Carlson the only Republican for it. In the House the Committee on Foreign Affairs unanimously recommended the same bill, with 15 Democrats and five Republicans present, and in the Floor vote only one of its 32 members, L. H. Fountain (D., N. C.) voted no, and he did not speak in opposition. Senate Minority Leader Dirksen voted against it; House Minority Leader Halleck voted for it.

Representative Flynt moved to amend the bill by making half the members of the Commission Members of Congress. Representative Hays replied that the latter could not spare the time needed for this job of exploration, and Representatives Zablocki and Judd opposed because any amendment would kill the bill since there was no time in this short session to reach agreement with the Senate. The move was defeated 59 to 33. Representative Bow then offered three amendments. The first cut from $170,000 to $50,000 the allowance for staff; it was rejected 55 to 38. Another teller vote defeated 76 to 46 the second, limiting the U. S. share in the convention expense to 20 per cent. The third, still more technical, was killed by a voice vote. Representative Gross then offered another technical amendment. A voice vote defeated it, and then his final move to kill the bill - a motion to re-commit.

Chairman Morgan brought out that P. F. Brundage, former Director of the Budget, had estimated that effective Atlantic unification would save taxpayers "more than $10 billion a year." Representative Zablocki pointed to NATO's need "to devise a strategy that would be effective in times of peace." Dr. Judd, who is a physician, likened Communism to a cancer and argued for seeking order not from the top down but "up from the bottom as was the case with out Original Thirteen States when they formed the order known as the United States of America."

(Turn page for vote in House)

Accordingly the Committee rose, and the Speaker having resumed the chair, Mr. BASS of Tennessee, Chairman of the Committee of the Whole House on the State of the Union reported that that Committee having had under consideration the joint resolution (S.J. Res. 170) to authorize the participation in an international convention of representative citizens from the North Atlantic Treaty nations to examine how greater political and economic cooperation among their peoples may be promoted, to provide for the appointment of U.S. delegates to such convention, and for other purposes, pursuant to House Resolution 587, he reported the joint resolution back to the House.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the third reading of the Senate joint resolution.

The resolution was ordered to be read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the Senate joint resolution.

Mr. GROSS. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the resolution?

Mr. GROSS. I am unequivocally opposed to it, Mr. Speaker.

The SPEAKER. The gentleman qualifies. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. GROSS moves to recommit Senate Joint Resolution 170 to the House Committee on Foreign Affairs with the following amendment: On page 4, line 3, strike the period and insert a colon and add the following: "*Provided,* That no part of any appropriation contained in this resolution or of the funds available for expenditure for any individual included in this resolution, shall be used for publicity or propaganda purposes designed to support or defeat legislation proposed or pending before Congress."

The previous question was ordered.

The SPEAKER. The question is on the motion to recommit.

The motion to recommit was rejected.

The SPEAKER. The question is on the passage of the joint resolution.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. GROSS. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the joint of order that a quorum is not present.

The SPEAKER. Evidently, no quorum is present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 288, nays 103, not voting 40, as follows:

The Clerk announced the following pairs:

On this vote:

Mr. Hébert for, with Mr. Taylor of New York against.

Mr. Wainwright for, with Mr. Smith of Kansas against.

Mr. Bentley for, with Mr. Hess against.

Mr. Celler for, with Mr. Baumhart against.

Mr. Buckley for, with Mr. Kilburn against.

Mr. Kirwan for, with Mr. Withrow against.

Until further notice:

Mr. Morrison with Mr. Glenn.

Mr. Thompson of Louisiana with Mr. Quie.

Mr. Loser with Mrs. Rogers, Mass.

Mrs. MAY changed her vote from "nay" to "yea."

The result of the vote was announced as above recorded.

The doors were opened.

to Atlantica, and the future.

To Beat K's Hidden Hand With Cards Face Up Free Need U-nity Rather Than U-2--Streit

CLARENCE K. STREIT
Author and Editor

I SUPPORT THE ATLANTIC Convention resolution before you. This may lead to some misunderstanding because of my long identification with proposals for Atlantic Union or federation. To be fair to the many supporters of this resolution who do not—yet—agree with me in those regards, and to prevent any misunderstanding let me make two things clear at once:

My support of this Convention resolution does not mean that it involves any endorsement of Atlantic federation (as did the so-called "Atlantic Union" resolution introduced in Congress in 1949.) Nor does it mean that I no longer urge federation of the free. It means simply this: I find that the security of the United States and of freedom has gone down so much since 1949 that any measure that promises—as does this resolution—to assure early consideration, at least, of how to unite the Atlantic allies more strongly deserves support, however short it falls of what I think necessary.

In 1949 we had an atomic monopoly, immense air and naval superiority, and no one worried about Russia in the economic and scientific fields. The signing of the Atlantic alliance had led Moscow to drop the Berlin blockade. Many concluded there was no need to unite more closely with our allies, and Congress took no action on the Atlantic Union resolution.

Since 1949, communism has grown strong in China, ended our atomic monopoly, armed itself powerfully with submarines, aircraft and long range missiles, greatly increased its production and been first with sputnik, lunik—and now with space ships. Meanwhile, the relative position of the U. S. has gone down, despite all the billions Congress has appropriated, to the point where Moscow has dared renew its Berlin threat and has got the Summit meeting it demanded. That meeting opened yesterday with our country and freedom in a painfully weak position.

In those precious 11 years, it is true that NATO has grown in military power. But it is also true that practically nothing has been done to strengthen the structure of the Atlantic alliance, despite the fact that General Eisenhower, in his report as SHAPE Commander on April 2, 1952, warned: "Peacetime coalitions throughout history have been weak and notoriously inefficient. . . . Visible and within grasp we have the capability of building such military, economic and moral strength as the Communist world would never dare to challenge."

What have we done thus far even to explore how to build this strength? Nothing, structurally, except the exploration made by the NATO Committee of Three Foreign Ministers in 1956. It is perhaps comment enough on this effort's results that two of these "three wise men"—Lester B. Pearson of Canada and Gaetano Martino of Italy—came out publicly two months ago in favor of exploring the problem now by the convention proposal before you. So have such other authorities as Lord Ismay, NATO's first Secretary General, and former Premier Robert Schuman of France, a pioneer for European Union. The 1949 hopes of a united, federated Europe have turned into a Europe bitterly divided now into economic Sixes and Sevens. Meanwhile the commitment in Article 2 of the Atlantic treaty to develop Atlantic economic cooperation has remained unexplored, down to this year.

Endorsed by State Department

This delay has resulted in so great a threat that it seems to me that every patriot must encourage all he can any step in the right direction that can be taken by this Congress. This crisis cries for quick action to strengthen Atlantic unity, and this resolution offers the only practical hope for such action in the few weeks left before you adjourn. It gives this hope for many reasons: It has the sponsorship of your distinguished chairman and other Members of your Committee who rightly are highly respected for their judgment. It has the endorsement of your eminent alumnus, Secretary Herter, and is unanimously recommended by the NATO Parliamentarians Conference and the Atlantic Congress.

—*Le Canard Enchainé, Paris*

I present my dove of peace

I would like at this point to quote two paragraphs from the statement that the State Deparment made on January 19th, since no one has given this in detail yet:

The Department considers that meetings such as the one proposed in this resolution might well serve a good purpose. We would be in favor of any useful meetings in which the future of the Atlantic community can be discussed realistically by thoughtful and responsible people. We, in the Department of State, would certainly welcome any constructive and practical ideas which might emerge from the proposed Convention.

We particularly welcome the thought expressed in the resolution that the delegates to the proposed Convention should be free to explore the problem fully as individuals. It appears to us that the cause of frank and constructive discussion at the proposed Convention can be best served if it is clear that no governmental commitment is involved.

Mr. Curtis: May I ask what letter that is?

Mr. Streit: that is the Statement the State Department made before the Senate.

It has the support not only of statesmen in other Atlantic countries, some of whom I have mentioned, but of many hundreds of eminent Americans in every field and State. I feel sure that such great pioneers of Atlantic unification as the late Justice Owen J. Roberts of the Supreme Court, Robert Patterson, Secretary of War and General George C. Marshall would be happy to see the kind of Americans who now favor exploring the subject by such a convention as you are now considering. I would like to annex to the end of my testimony a

small sampling of their names, with your permission.

Apart from the hope of action soon, this proposal has other merits. Above all, it permits exploration of a most difficult problem by the method that has solved other problems men long thought insoluble. This method consists simply in officially assigning a relatively small number of the more competent private citizens in a given field to tackle the problem fully, exhaustively and in complete freedom—as individuals free from official instructions— and report back their findings. This method, in other words, seeks to unlock the present problem by the key that has led to many of freedom's greatest successes—the enterprise, resourcefulness and common sense of the competent citizen when able to act as a free individual.

This method is known as the "convention" approach because it was discovered by our Founding Fathers who produced with it—through the Philadelphia Convention of 1787—no less a success than the Constitution of the U. S. In our time we succeeded in harnessing atomic energy by this same basic method —by the American, British and Canadian Governments assigning scientists from private life to tackle the problem together, free from official instructions. On a national scale the same approach was successfully used when President Truman appointed the Hoover Commission to explore how to make our Government work better.

The Convention approach would supplement—not replace or interfere with —the work of the NATO Council and the NATO Parliamentarians Conferences. They are necessarily so absorbed by current affairs that they have no time for the underlying problem of improving the machinery for handling these affairs.

If we liken current affairs to rocks and agree that we need something better than the hammer we are now using to break them with, then the function of this Convention, as I understand it, would be, not to hammer at any rocks nor bother those hammering at them, but to confine itself strictly to devising a better implement—a rock-crusher that will break rocks with less effort and cost, and crush even those that our hammers now are unable to break.

The Convention would be concerned only with working out more effective machinery than we now have for handling our common Atlantic affairs; it would not be conducting foreign relations itself in the slightest degree. Equally important, these current "head-aches" would not interfere with its concentration on finding how to make the Atlantic body politic healthy enough to meet growing demands, dangers, opportunities.

NATO is filled with specialists on the muscular, or military, side of the Atlantic problem. Recent plans for organization of Atlantic economic cooperation show that the specialists on its digestive ills are not idle. There is obvious need for these and other specialists—but it is no less obvious that the military, economic, monetary and political parts of the Atlantic community are as intricately inter-related as are the muscles, stomach, heart and brain of each of us. Good health requires us to keep always in mind the body they together form. But we have been so concerned with the various parts of the Atlantic man that we have neglected completely to provide him with a family doctor—or even a college to educate some general practitioners to treat this body politic as a living whole.

As *The New York Times* correspondent covering the League of Nations from 1929 to 1939, I had to report all kinds of conferences that tackled its problem piecemeal— none that tackled it as a whole. This piecemeal approach gave the illusion then, as it still does, that it simplified the problem, was more "practical." In reality, these illusions gave a false sense of security, wasted the time in which realistic remedial action was still possible, led to World War II.

The 10-year course I had in this school of experience led me to appreciate what I fear is still very little understood in our country today—the superiority of the Convention method by which our Founding Fathers tackled the problem of getting their 13 nation-states to work together effectively yet democratically. Their Philadelphia Convention set up no committee of military specialists, no political committee, no economic committee. It had only *one* committee (apart from drafting committees)—a Committee of the Whole through which it wrestled from beginning to end with the problem as a whole.

Compare the common sense of their approach with the complications of the "functional" approach which is wrecking Europe now as it did the League in my time. When you look at where the Atlantic community stands today in Paris after 11 years of this piecemeal approach and think of the enduring contribution to freedom our Founding Fathers made in only three months with their Convention approach—do you wonder that I feel that any patriot should support this resolution which would at least tackle the problem now by a method that makes sense? Certainly I do not wonder that two sponsors of this wise approach are experienced family doctors, general practitioners—Dr. Morgan and Dr. Judd.

The spy plane incident has thrown

painfully glaring light on the final reason I would give for delaying no longer to explore how to unite the Atlantic community effectively. In the game with dictatorship that we must win, freedom obliges the free to play with cards face up against an opponent whose cards are face down. To govern ourselves freely we must know what our government is doing. But there is no way whereby we can keep an eye on it without everyone on earth —and the Kremlin first of all—knowing everything we learn. We can know what the Canadians, British, French and other democratic governments are doing because their people have institutions like ours for keeping tabs on their governments. But none of us can know what is happening under the Communist dictatorship any more than can its slaves.

And so the free must win in a game for keeps where the cards of Uncle Sam, John Bull, Marianne de France are face up on the table, with the searchlight of the press and opposition parties playing not only on the cards but up the sleeves of the players and under their part of the table to make sure nothing phony is going on—and trying . . . vainly . . . to reach the other end of the table where the master of the Kremlin sits with his cards hidden in his hand.

There is only one possible way to win in such a game, and that is to have so strong a hand that the dictator cannot challenge it. Clearly freedom can not hold such a hand while its cards are divided as they are now. Clearly it holds no such hand at the Summit today. Eleven years ago some of us pointed out that by uniting the Atlantic democracies in the most effective democratic way we could give freedom "all four aces— and the joker, too."

In 1952 General Eisenhower confirmed this in the NATO report I quoted: "Visible and within our grasp we have the possibility of building such military, economic and moral strength as the communist world would never dare challenge." And he added in it: "Then the Atlantic Community will have proved worthy of its history and its God-given endowments. We shall have proved our union the world's most potent influence towards peace." We trusted instead in the "notoriously inefficient" alliance method. The resulting weakness has led us inevitably to begin turning down our cards, too, little by little. For let us fool ourselves no longer—we are copying dictatorship when we seek strength by spying, secrecy, giving more power to the Executive, making the people depend blindly on the Government.

True, one must fight fire with fire at times — but one can burn oneself badly that way. Must we burn ourselves worse before we fight fire with less dangerous means?

With the Soviet space-ship orbiting above us every 91 minutes now, some may fear that the proverbial power that lies in union can no longer give freedom the unchallengable hand that was in our grasp in 1952. If so, it is still true that the more strength we gain that way the safer we shall be. For my part, I believe that we can still thus gain the unbeatable hand we need —if Congress before adjourning calls this Convention.

Certainly whenever we have sought the strength that lies in Atlantic unity, Moscow has quickly made unilateral concessions—which indicates to me that it agrees that we can decisively surpass it this way and that it must therefore make sacrifices to remove our incentive to unite still more. Our atomic monopoly in

—Samoilov, Pravda, Moscow

The American delegation, as seen by the Soviets

1948 did not keep it from blockading Berlin then. But when this led us to form the Atlantic alliance in 1949, even this "notoriously inefficient" kind of unity caused Moscow to abandon that blockade at once. When Atlantic unity was strengthened by adding West Germany to NATO in 1955, Moscow immediately withdrew from Austria.

No other moves we have made have brought such concessions. It would therefore seem to me that the best way for doubters to see whether Moscow continues to believe—as I do—that we can still give freedom an unbeatable hand by uniting the Atlantic community effectively, is for Congress to call the proposed Convention now. If this move does not make Moscow concilliatory, then we are indeed in dire need of getting quickly all the strength we can from Atlantic unity.

In conclusion, let me add that even if the communist dictatorship did not exist, Atlantic unity would be needed to meet other dangers—and to allow us and all mankind to attain the higher standards of living, moral and material, which science and invention have placed within our reach. Dictatorship's growing threat makes it only the more urgent that this Convention be sent to explore the way to the New World that can be ours through effective unification of the free. As Santangel said in persuading Isabella—at the last moment—to send Columbus on his exploratory expedition: "So little risk for so vast a gain!"

Ladies and gentlemen, may I add this: I wrote the preceding prepared statement at the last minute, as an old newspaperman. This was on Sunday. Events are moving so fast that the situation that cried for action on Sunday really implores it now—on Tuesday. It seems to me that that should be an overriding consideration for all of us in considering this.

You have the opportunity—as I understand it, if the hearings conclude today—that you could take up this bill tomorrow, and so, before the Summit disperses—which I hope it won't, but we don't know—Mr. Khrushchev could get news in Paris that this committee had approved overwhelmingly a convention to explore further Atlantic unification, that would be, it would seem to me, the finest thing you could do.

You have a tremendous opportunity, ladies and gentlemen. I feel you will devote yourselves to it.

Chairman Morgan. Thank you, Mr. Streit. We are glad to have you here and I want to say the statement might have been written on Sunday, but it is a fine statement. You have been living with this matter closer than anybody in this country. How do you compare the two resolutions, the Senate resolution and the House resolution?

Mr. Streit. Mr. Chairman, as I said a

minute ago, my considerations on this are influenced tremendously by the situation in Paris today. This resolution in the Senate could certainly be improved upon. I think it ought to be improved somewhat in the light of that situation.

I think the overriding thing should be speed. I would say, take the Senate version for basis, maybe improve it here a bit—but not at the cost of delay. A very small thing, a bullet, if it goes fast enough, has more striking power than a stone that you throw by hand.

Chairman Morgan. Mr. Chiperfield.

Mr. Chiperfield. No questions.

Mr. Zablocki. Mr. Streit, your statement really is a very forceful and effective statement. I want to join my colleagues in thanking you for coming before the committee. I want to commend you for your untiring efforts in promoting the resolution. After all, you have been the motivating force.

Mr. Streit. Mr. Zablocki, might I put in a personal word right there? As you may recall, Dr. Morgan, it was one of your colleagues, the late Tom Morgan, who brought this resolution up. Tom Morgan

Chairman Morgan. Tom Gordon?

Mr. Judd. Martin.

Mr. Streit. The late representative from Toledo.

Chairman Morgan. Tom Burke.

Mr. Streit. May that be corrected? Tom Burke, your late colleague, had this very much at heart. He was the one that brought this resolution up with great foresight in the early part of 1959. He is no longer with us. I felt, as a dear friend of his, a personal obligation to push forward what he had done. I would want him to have the credit that is really due him in this respect.

Mr. Zablocki. As one who is fully aware of the provisions contained in the Senate Joint Resolution and the House Concurrent Resolutions, in your opinion which would be the preferable resolution to report out of this committee?

Mr. Streit. I would think the resolution here would need implementing. The Senate resolution has implemented it after considerable discussion. As I said, I think there are several little points in which it might be improved, but even there, in the interest of speed, I would be willing to settle for it as it stands.

I would hope that some editing might improve it in the light of the present situation. I don't mean in any bellicose way. We need to be extremely prudent at the present time, but we need to be firm.

This resolution is not bellicose; it does not get power through any military means; it gets power through moral means. There can be no possible objection to it on that line. I would seek to save time rather than try to get the greatest improvement in its text—well, you see my position. I have dropped overboard lots of things that I like. I would appeal to you to approach this in the same way, with a view to getting action soon rather than getting perfection.

Mr. Zablocki. The Summit Conference is about to end without any accomplishments. Isn't it too late for us to act on this resolution with the hope of bringing about an atmosphere in Paris which would be helpful, following your comments and your statement?

Mr. Streit. That was my prepared statement. There seemed more hope then.

It may blow up on us before you could possibly act. But if it does, the sooner you act, the sooner the consequences of that blow-up should be met. It would be better to act sooner, it would seem to me, in that regard, than later.

Mr. Zablocki. It seems impossible to have any action by the committee today or tomorrow. Perhaps it would be helpful to merely make a statement that the proposals were heard by the committee and there was no opposition present in the hearings.

Mr. Streit. You are much more competent, ladies and gentlemen, than I am in those respects.

Mrs. Bolton. Only this, Mr. Streit: We are happy to have your presentation. It is a very moving one. I think there is no moment that I have known since I came to Congress where such immediate action is needed.

Mr. Pilcher. Mr. Streit, I enjoyed your presentation very much. In case we don't have any more hearings, in order to get one little thing in the record, I have a constituent from Possum Poke in Possum Lane, Poulan, Georgia, the home of former Governor Chase Osborn, and for ten years Mrs. Osborn has lived this North Atlantic Union night and day. I have seen her ride a bus from here to Georgia and back to attend a meeting of her committee. I think she is one of the most dedicated women to this cause that I have ever known in my life. I wanted to get Mrs. Osborn's name in the record as having fought for this thing for years.

Mr. Judd. The papers all give the indication that the conference in Paris is all broken up. I am afraid that it may not be that fortunate. Mr. Khruschev has by no means given up his designs on dividing—his plan is to divide and thereby weaken the West, hoping some of the Big Three will beg that we make more and more concessions in order to get him back. I feel it is enormously important that we act at this time to strengthen any of our colleagues or allies over there who might be inclined to weaken with this notion that if he just came back in he would be different than he was when he went out.

I feel, I agree with the others, this is a propitious time in which to act, not so much to influence him, Khruschev, as to stiffen our allies who, as we know, have been trying to go further and further just in order to get him back.

Most of the concessions we have made at San Francisco and Panmunjom were in order to get them to come along to a meeting. Then they come to a meeting and wreck it. They make mileage out of our forum. They can't make any mileage at the meeting if we stand up.

I hope when you revise, Mr. Streit, your remarks, you will modify a sentence "when President Truman appointed the Hoover Commission to explore how to make our government work better." The record ought to be clear that Mr. Truman appointed one-third of the Hoover Commission; the House appointed a third and the Senate a third, and Mr. Hoover himself was appointed by Joe Martin and not the President.

The pattern was all the more apropos. It was the executive plus the two Houses.

Mr. Streit. That is correct, and I would like to have my statement so corrected. I would like also to associate myself with what Dr. Judd says in the statement that preceded that, and to add that it seems to me that our divided power system of government gives us a wonderful possibility at the present time.

The Executive has the burden of conducting foreign affairs. The Executive has plenty of difficulties righ now, must watch every move very carefully, but the Congress has the responsibility of looking into basic policy, basic procedure. It is independent of the executive. Many Europeans criticize this as an unworkable system of government, but it gives us an opportunity here where the Congress can move ahead to look into the basic policy, the basic question, while the Executive, without being concerned with this, is free to move ahead on its level.

Some of you may know I at one time compared this to the Great Seal of our country, in urging that there should be early action on this convention.

I pointed out that the President has got to make a peaceful policy, to hold

out the olive branch, go to the Summit meeting and things like that, but that if all that was done by us was on that side, then the picture that Mr. K. would see would be the eagle's beak and the olive branch, that half of the Great Seal, without the other side — without the eagle's eye and without the united arrows that are the other side of the seal. That side is the responsibility of Congress. By applying ourselves to these two courses of action that our Constitution permits, the executive can proceed with the olive branch as far as possible, while Congress goes forward with the other side of the Great Seal.

Mr. Judd. Mr. K. is a better showman than we are. I don't think you could possibly get him to go home any more than you could when he was in Los Angeles. By terrorism he persuades us to retreat from our own position. He lives it up over there. It looks like he is calling the tune and everybody is so anxious to have him. We are in a position of beseeching him. I don't want to be in that position. It convinces the other people of the world we are dancing to his tune. He is pulling a clever act.

Mr. Zablocki. Time is of the essence and I wonder if I could suggest, Mr. Chairman, that you appoint a committee possibly of those who are sponsors of the various proposals to meet this afternoon to perfect the resolution for consideration—

Chairman Morgan. We are going to meet in executive session in the morning. I think the appropriate time would be tomorrow.

Mr. Judd. Let's meet **ad hoc** anyway.

Mr. O'Hara. I would like to comment that I was very much pleased that the witness stressed superiority of the convention approach and as an illustration mentioned the value of the family physician. Specialists do good work in their field, but the real work of healing people is done by the family physician, and the real healers of our economic and political are in our conventions, as the witness so well presented.

Mr. Murphy. I would just like to ask Mr. Streit if the convention wouldn't be a great aid in uniting the two economic groups in Europe, the Common Market and the European Free Trade Association . . . where Mr. Khruschev is trying to split the West. This would nullify his action in some part.

Mr. Streit. I am glad you brought up that question. I think it would indeed. In the statement that Mr. Will Clayton made, he emphasizes that point, I believe. Mr. Clayton is much more competent than I to speak on that. I agree with the inference to be drawn from your question, that this is a very powerful reason for calling this convention now.

Chairman Morgan. Any further questions?

(No response.)

Chairman Morgan. Thank you, Mr. Streit.

Nationwide Church Program for Peace

By JOHN A. MATHEWS

FOR MANY YEARS, various denominations of churches have separately sponsored programs of education and action in world affairs. In recent years these have been coordinated through nationwide conferences sponsored by the National Council of Churches.

At the fifth of these conferences, which was held about fifteen months ago and was addressed by the late Secretary of State, John F. Dulles, it was decided to conduct a nationwide program for peace, with all denominations of the National Council working in unison.

The United Church of Christ has expressed its endorsement of this program in the recent Call for Christian Social Action. Our Church, through its Board for Social Action, has undertaken to co-

operate by appointing a committee on International Relations. We are now seeking to expand this nucleus.

Just what is this Nationwide Program for Peace? It is a program to stimulate study, discussion and action on Christian concerns in international affairs. The initiative is to be taken by the minister and lay leaders of the various organizations within the local church.

Two basic principles have been emphasized in planning for this program:

First, it is to be an authentic educational process. It is not to propagandize particular dogmas or views in international affairs. Rather, it is to encourage the use of the most responsible, thought-provoking materials presenting differing views, so that people will develop their own convictions on which to base effective action for peace.

Second, it is to be integrated into the ongoing life of the churches. It does not seek to set up numerous additional meetings or mass rallies. Rather, it seeks to relate Christian concerns in international affairs to the continuing life and work of the churches and their councils—through publications and programs at all levels—national, state and local.

What are the issues about which we need to be better informed in order to develop wise judgments on which to base our actions? There are many, but it may suffice here to mention six:

Disarmament seems to be the most publicized current issue, and in the past few years this has been simplified to the issue of stopping nuclear bomb testing. Many people and some of our leaders believe this can be solved by a treaty. While negotiations for such a treaty have been dragging for more than a year, a fourth nation, France, has begun such testing.

The very fact that this issue is being negotiated outside the U.N. points to a more fundamental one. The adequacy of the U.N. to maintain peace and security—and to resolve the human conflicts which cause war. How many of us know that its most powerful body—the Security Council—cannot act without the unanimous consent of Nationalist China, France, the Soviet Union, the United Kingdom and the U.S., not even on the question of admitting a new member nation! This Council which is supposed to be continuously in session "to ensure prompt and effective action . . . for the maintenance of international peace and security" now meets only occasionally (twice in the past six months). How many of us know:

That the International Court of Justice is limited to disputes between nations?

That nations cannot be brought to court without their prior consent and that the Court has handled only 15 cases in 15 years?

How many of us know that the total budget of the U.N. and all its subsidiary organizations is only about ⅛ of 1 percent of the U.S. Federal budget?

Freedom & Union

"For the Great Republic, for the Principle it Lives by and Keeps Alive, for Man's Vast Future."—LINCOLN.

Vol. 15, No. 7-8 July-August, 1960

Dedicated to Student Debaters-- What Youth & Age Can Do

WE DEDICATE THIS ISSUE — the greatest we have yet published—to the high school debaters, 50,000 to 80,000 strong, who will be tackling the question of Atlantic Federal Union in 10,000 schools all over the U.S.A. in the scholastic year that begins in September. Thanks to the vision and generosity of a subscriber who prefers to be anonymous, a copy of it will be presented free to each of the 10,000 debate squads.

We have tried to make this issue of special value to them, as well as to our older subscribers. Nothing, I think, could help do this more than to give the extensive reports and texts we print in it of major recent news events that make it highly probable that Atlantic unification will also be debated this Winter by experienced leaders in a Convention of NATO Nations patterned on the one that wrote the Federal Constitution.

The "Academic" Myth. Of the obstacles facing Atlantic Union, perhaps the toughest is the assumption that it is too remote" to be practical politics"—or even a subject for academic debate. The High School Debate Leagues in 46 States that decide what their topic will be, brushed this objection aside last February. They had then to pick one of three topics. They repected two that none would call academic: "How may television best serve the public interest?" and "How can the U.S. best use water resources?" They chose instead: "How can the security of the free world best be maintained?" This topic, too, was, and is in the news—but not the No. proposition for debate under it—"Resolved: That the North Atlantic Treaty Organization be transformed into a federal government."*

Singular Foresight. Dr. Bower Aly, Executive Secretary of the National Committee on Debate, who proposed the Atlantic Union question, and the members of the Committee who back in December voted to include it on the ballot, merit congratulation for their singular foresight. So, too, do the State Leagues who voted six months ago to make free world security the coming debate topic. Since February, events—U-2, Tokyo, Cuba—have made it the No. 1 election issue. Meanwhile the long-pending proposal that the U. S. call a convention of NATO nations to explore how they might best unite, has reached the point where, approved by Administration and Senate, it lacks only House approval—and the outlook is bright that this will be given when the House returns in August.

*There are two other propostions under this topic which debaters can choose to uphold: "Resolved: That the U. N. should be significantly strengthened" and "Resolved: That the U. S. should initiate a federal world government." Debate teams taking the negative against the above two could uphold Atlantic Union as a better alternative.

SENATE DEBATE ON ATLANTIC CONVENTION 40

[On Second Thought]

Politicians Lead, Press Lags. June also brought speeches from Governor Nelson Rockefeller and Adlai Stevenson that went far beyond mere endorsement of a convention to explore greater Atlantic unity. The former called for a "North Atlantic Confederation" or "Community" to "tighten all political, economic, military and cultural bonds linking Great Britain, Western Europe and North America." The latter urged "a permanent economic and social union in the Atlantic world." The press, led by *The New York Times*, omitted these creative proposals from the headlines—and thus many remain unaware that the once "academic idea" is now openly favored by leading politicians. We report this news fully on pages 6-7.

New Yorker "Letter from West." Almost simultaneously, *The New Yorker* ran June 18 a long, beautifully written "Letter from the West" by E.B. White which advanced with powerful argument "the vision of a federal union of free democratic capitalist states." Although Mr. White still cautiously called it "the distant shore," he made clear that he would welcome "political union with the United Kingdom, with France, with Scandinavia, with all the Western European nations—with any nation, in fact, that could show a long and successful record of government by consent of the governed." We deeply regret it proved impossible for us to reprint his article in full and warmly recommend it.

By November What New Disaster? Events will keep on making Atlantic Union increasingly imperative. Until November the election will absorb the U. S.—which invites communism to deal it a surprise. In our 1956 July-August issue I wrote apropos to U. S. election-year vulnerability: "The Kremlin can be counted on to exploit to the

Reprinted from FREEDOM & UNION, 2700 Ontario Road N.W., Washington 9, D. C.
Available by subscription only, $4 a year, anywhere on earth.

fullest in the coming weeks the present weakness of Washington. It will certainly consider the advantages of striking in this period of uncertainty to stop the flow of oil through Suez. Three weeks before the Canal was seized July 26, I sent this to Secretary Dulles. No heed was paid, Congress deferred the Atlantic Convention — and before November Atlantica was split . . . just when Hungary revolted. Such was the tragedy disunion brought in the last election summer. This one has begun worse.

Providential Debate. If the House approves the proposed Convention, it means that while Atlantic Union is being debated by 50,000 politically—talented boys and girls who have no memory of World War or depression, Atlantic unification will also be debated by 100 leaders from all round its ocean who *have* experienced two World Wars and the Great Depression—debated with a view to producing a plan that can save tomorrow's leaedrs from such calamities, and let them open wider"Man's vast future." It is providential indeed that so great a debate may take place simultaneously on both levels . . . among those at the threshold of leadership who have never known a non-atomic world, and those at the summit of their lives who can remember when men could not fly . . . youth's boldness and age's experience stimulating and balancing each other dynamically.

What Youth & Age United Can Create. The U. S. Federal Constitution proves how creative this interplay can be. That "miracle" (as men rightly called it hen) could never have been achieved by youth—wise though Hamilton and Madison were beyond their years—nor alone by Washington with his authority and Franklin with his wide and long experience. The problem had baffled the wisest philosophers and statesmen ever since the failure of such men as Solon, Pericles, Aristotle, to unite their city states ended Greek democracy . . . for 2,000 years. Such was the problem the Federating Fathers solved in 1787 —by the light which the sunrise and the sunset generations *together* threw upon it then.

Whether life is in its morn, at its noon, or near a glorious sunset, could one ask for more inspiring opportunity than now lies in each one's grasp?—Clarence Streit

Young Soldier Advises Student Debater

NOTE: This is an excerpt from a letter I wrote, as a former inter-scholastic and inter-collegiate debater, to my sister, Helen, on July 21, 1918. I was then 22, and serving in France as a sergeant in the American Expeditionary Force.—Clarence K. Streit

You wanted the sum of my knowledge of debating . . . I am pleased to see the interest you are taking in public speaking and debating. The latter is good training if you don't let it get the best of you and become merely an arguer. You know, in all school contests, so much emphasis is placed on winning the contest that the vote of the judges has come to assume far more importance than it should. A debate should be a search for the truth by means of placing in contrasting relief the arguments on both sides of a question. It is a strong temptation in the heat of a debate to employ arguments and facts which one knows are not true in the hope that the opponent will not know his subject well enough to detect the falsity. And especially is that temptation strong for the last speaker, for he knows the other side has no chance to answer him.

For my part, Helen, I don't think the personal or school glory of victory is worth such a price. If you don't believe in your side of the question, after you have studied it thoroughly, I wouldn't argue for it. And if I did argue its good points I would never employ arguments which could not stand up against my own reason. Sincerity is a far better ally for the debater than clever sophism. Train yourself, by debating, not to express merely *an* opinion, but *your* opinion . . . to express clearly your ideas on whatever questions may come up.

"Use Your Own Style" but "Be Simple"

As for the manner of expression, use your own style. Don't follow any stiff form too much. Study your question first—go to Poole's index, etc., search for references, read them, both sides of the question, noting down points that strike you as important and copy short quotations of opinion by men who have studied the question enough to be considered as authorities. But use these opinions sparingly, merely as re-forcements for the facts in the case. (In quoting any one, mention where and when he made the statement and why his opinion is entitled to special consideration in the question concerned. Thus the author, Sir Gilbert Parker's opinion would be perhaps of value on a literary question, but as a recommendation for a medicine, it is of no more value than that of any man who has not studied medicine or dietetics.)

When you have got the broad outlines of the subject arranged in your head, you can sketch out an outline. In it arrange your material so that it will drive home with the force of cumulated fact, logic and clearness. Arrange your material so that your argument keeps getting stronger and stronger, leading up to your trump cards for climax. Reiteration is often useful for emphasis but don't use it in a rubber-stamp way. Put some life into it. Always try to be persuasive. Don't try to cover too much. Better take two or three of the main arguments, show why they are the more important (do this in a few words) and treat them as thoroughly as possible.

And in time of refutation, don't permit your opponent to befuddle the debate with petty details. If he doesn't answer the main arguments you put out, point this out and do it strongly. Then take up his big arguments and answer them, or point out that, if true, they aren't important enough to uphold his side.

Be simple in your language and use short sentences. Remember the audience—talk to it, not the judges—does not know as much about the subject as you, and it is up to you to acquaint them in 10 or 15 minutes' talk with the results of several months of work.

HOUSE FOREIGN AFFAIRS COMMITTEE

Statement by Clarence K. Streit, Author and Editor

Hearing on H. Con. Res. 107, 108, 146, 584, on May 17, 1960

Ed. See p. 3 on spy plane

Mr. Chairman and Members of the Committee: I support the Atlantic Convention resolution before you. This may lead to some misunderstanding because of my long identification with proposals for Atlantic Union or federation. To be fair to the many supporters of this resolution who do not - yet - agree with me in those regards, and to prevent any misunderstanding let me make two things clear at once:

My support of this Convention resolution does not mean that it involves any endorsement of Atlantic federation (as did the so-called "Atlantic Union" resolution introduced in Congress in 1949.) Nor does it mean that I no longer urge federation of the free. It means simply this: I find that the security of the United States and of freedom has gone down so much since 1949 that any measure that promises - as does this resolution - to assure early consideration, at least, of how to unite the Atlantic allies more strongly deserves support, however short it falls of what I think necessary.

In 1949 we had an atomic monopoly, immense air and naval superiority, and no one worried about Russia in the economic and scientific fields. The signing of the Atlantic alliance had led Moscow to drop the Berlin blockade. Many concluded there was no need to unite more closely with our allies, and Congress took no action on the Atlantic Union resolution.

Since 1949, communism has grown strong in China, ended our atomic monopoly, armed itself powerfully with submarines, aircraft and long range missilies, greatly increased its production and been first with sputnik, lunik - and now with space ships. Meanwhile, the relative position of the United States has gone down, despite all the billions Congress has appropriated, to the point where Moscow has dared renew its Berlin threat and has got the Summit meeting it demanded. That meeting opened yesterday with our country and freedom in a painfully weak position.

In those precious 11 years, it is true that NATO has grown in military power. But it is also true that practically nothing has been done to strengthen the structure of the Atlantic alliance, despite the fact that General Eisenhower, in his report as SHAPE Commander on April 2, 1952, warned: "Peacetime coalitions throughout history have been weak and notoriously inefficient . . Visible and within grasp we have the capability of building such military, economic and moral strength as the Communist world would never dare to challenge."

What have we done thus far even to explore how to build this strength? Nothing, structurally, except the exploration made by the NATO Committee of Three Foreign Ministers in 1956. It is perhaps comment enough on this effort's results that two of these "three wise men" - Lester B. Pearson of Canada and Gaetano Martino of Italy - came out publicly two months ago in favor of exploring the problem now by the convention proposal before you. So have such other authorities as Lord Ismay, NATO's first Secretary General, and former Premier Robert Schuman of France, a pioneer for European Union. The 1949 hopes of a united, federated Europe have turned into a Europe bitterly divided now into economic Sixes and Sevens. Meanwhile the commitment in Article 2 of the Atlantic treaty to develop Atlantic economic cooperation has remained unexplored, down to this year.

This delay has resulted in so great a threat that it seems to me that every patriot must encourage all he can any step in the right direction that can be taken by this Congress. This crisis cries for quick action to strengthen Atlantic unity, and this resolution offers the only practical hope for such action in the few weeks left before you adjourn. It gives this hope for many reasons: It has the sponsorship of your distinguished chairman and other Members of your Committee who rightly are highly respected for their judgment. It has the endorsement of your eminent alumnus, Secretary Herter, and is unanimously recommended by the NATO Parliamentarians Conference and the Atlantic Congress.

It has the support not only of statesmen in other Atlantic countries, some of whom I have mentioned, but of many hundreds of eminent Americans in every field and State.I feel sure that such great pioneers of Atlantic unification as the late Justice Owen J. Roberts of the Supreme Court, Robert Patterson, Secretary of War and General George C. Marshall would be happy to see the kind of Americans who now favor exploring the subject by such a convention as you are now considering. I would like to annex to the end of my testimony a small sampling of their names, with your permission.

Apart from the hope of action soon, this proposal has other merits. Above all, it permits exploration of a most difficult problem by the method that has solved other problems men long thought insoluble. This method consists simply in officially assigning a relatively small number of the more competent private citizens in a given field to tackle the problem fully, exhaustively and in complete freedom - as individuals free from official instructions - and report back their findings. This method, in other words, seeks to unlock the present problem by the key that has led to many of freedom's greatest successes - the enterprise, resourcefulness and common sense of the competent citizen when able to act as a free individual.

This method is known as the "convention" approach because it was discovered by our Founding Fathers who produced with it - through the Philadelphia Convention of 1787 - no less a success than the Constitution of the United States. In our time we succeeded in harnessing atomic energy by this same basic method - by the American, British and Canadian Governments assigning scientists from private life to tackle the problem together, free from official instructions. On a national scale the same approach was successfully used when President Truman appointed the Hoover Commission to explore how to make our Government work better.

The Convention approach would supplement - not replace or interfere with - the work of the NATO Council and the NATO Parliamentarians Conferences. They are necessarily so absorbed by current affairs that they have no time for the underlying problem of improving the machinery for handling these affairs.

If we liken current affairs to rocks and agree that we need something better than the hammer we are now using to break them with, then the function of this Convention, as I understand it, would be, not to hammer at any rocks nor bother those hammering at them, but to confine itself strictly to devising a better implement - a rock-crusher that will break rocks with less effort and cost, and crush even those that our hammers now are unable to break.

The Convention would be concerned only with working out more effective machinery than we now have for handling our common Atlantic affairs; it would not be conducting foreign relations itself in the slightest degree. Equally important, these current "head-aches" would not interfere with its concentration on finding how to make the Atlantic body politic healthy enough to meet growing demands, dangers, opportunities.

NATO is filled with specialists on the muscular, or military, side of the Atlantic problem. Recent plans for organization of Atlantic economic cooperation show that the specialists on its digestive ills are not idle. There is obvious need for these and other specialists - but it is no less obvious that the military, economic, monetary

and political parts of the Atlantic community are as intricately inter-related as are the muscles, stomach, heart and brain of each of us. Good health requires us to keep always in mind the body they together form. But we have been so concerned with the various parts of the Atlantic man that we have neglected completely to provide him with a family doctor - or even a college to educate some general practitioners to treat this body politic as a living whole.

As The New York Times correspondent covering the League of Nations from 1929 to 1939, I had to report all kinds of conferences that tackled its problem piecemeal - none that tackled it as a whole. This piecemeal approach gave the illusion then, as it still does, that it simplified the problem, was more "practical." In reality, these illusions gave a false sense of security, wasted the time in which realistic remedial action was still possible, led to World War II.

The 10-year course I had in this school of experience led me to appreciate what I fear is still very little understood in our country today - the superiority of the Convention method by which our Founding Fathers tackled the problem of getting their 13 nation-states to work together effectively yet democratically. Their Philadelphia Convention set up no committee of military specialists, no political committee, no economic committee. It had only one committee (apart from drafting committees) - a Committee of the Whole through which it wrestled from beginning to end with the problem as a whole.

Compare the common sense of their approach with the complications of the "functional" approach which is wrecking Europe now as it did the League in my time. When you look at where the Atlantic community stands today in Paris after 11 years of this piecemeal approach, and think of the enduring contribution to freedom our Founding Fathers made in only three months with their Convention approach - do you wonder that I feel that any patriot should support this resolution which would at least tackle the problem now by a method that makes sense? Certainly I do not wonder that two sponsors of this wise approach are experienced family doctors, general practitioners - Dr. Morgan and Dr. Judd.

The spy plane incident has thrown painfully glaring light on the final reason I would give for delaying no longer to explore how to unite the Atlantic community effectively. In the game with dictatorship that we must win, freedom obliges the free to play with cards face up against an opponent whose cards are face down. To govern ourselves freely we must know what our government is doing. But there is no way whereby we can keep an eye on it without everyone on earth - and the Kremlin first of all - knowing everything we learn. We can know what the Canadians, British, French and other democratic governments are doing because their people have institutions like ours for keeping tabs on their governments. But none of us can know what is happening under the Communist dictatorship any more than can its slaves.

And so the free must win in a game for keeps where the cards of Uncle Sam, John Bull, Marianne de France are face up on the table, with the searchlight of the press and opposition parties playing not only on the cards but up the sleeves of the players and under their part of the table to make sure nothing phony is going on - and trying . . vainly . . to reach the other end of the table where the master of the Kremlin sits with his cards hidden in his hand.

There is only one possible way to win in such a game, and that is to have so strong a hand that the dictator cannot challenge it. Clearly freedom can not hold such a hand while its cards are divided as they are now. Clearly it holds no such hand at the Summit today. Eleven years ago some of us pointed out that by uniting the Atlantic democracies in the most effective democratic way we could give freedom "all four aces - and the joker, too."

In 1952 General Eisenhower confirmed this in the NATO report I quoted: "Visible and within our grasp we have the possibility of building such military, economic and moral strength as the communist world would never dare challenge. " And he added in it: "Then the Atlantic Community will have proved worthy of its history and its God-given endowments. We shall have proved our union the world's most potent influence towards peace." We trusted instead in the "notoriously inefficient" alliance method. The resulting weakness has led us inevitably to begin turning down our cards, too, little by little. For let us fool ourselves no longer - we are copying dictatorship when we seek strength by spying, secrecy, giving more power to the Executive, making the people depend blindly on the Government.

True, one must fight fire with fire at times - but one can burn oneself badly that way. Must we burn ourselves worse before we fight fire with less dangerous means?

With the Soviet space-ship orbiting above us every 91 minutes now, some may fear that the proverbial power that lies in union can no longer give freedom the unchallengable hand that was in our grasp in 1952. If so, it is still true that the more strength we gain that way the safer we shall be. For my part, I believe that we can still thus gain the unbeatable hand we need - if Congress before adjourning calls this Convention.

Certainly whenever we have sought the strength that lies in Atlantic unity, Moscow has quickly made huge unilateral concessions - which indicates to me that it agrees that we can decisively surpass it this way and that it must therefore make sacrifices to remove our incentive to unite still more. Our atomic monopoly in 1948 did not keep it from blockading Berlin then. But when this led us to form the Atlantic alliance in 1949, even this "notoriously inefficient" kind of unity caused Moscow to abandon that blockade at once. When Atlantic unity was strengthened by adding West Germany to NATO in 1955, Moscow immediately withdrew from Austria.

No other moves we have made have brought such concessions. It would therefore seem to me that the best way for doubters to see whether Moscow continues to believe - as I do - that we can still give freedom an unbeatable hand by uniting the Atlantic community effectively, is for Congress to call the proposed Convention now. If this move does not make Moscow conciliatory, then we are indeed in dire need of getting quickly all the strength we can from Atlantic unity.

In conclusion, gentlemen, let me add that even if the communist dictatorship did not exist, Atlantic unity would be needed to meet other dangers - and to allow us and all mankind to attain the higher standards of living, moral and material, which science and invention have placed within our reach. Dictatorship's growing threat makes it only the more urgent that this Convention be sent to explore the way to the New World that can be ours through effective unification of the free. As Santangel said in persuading Isabella - at the last moment - to send Columbus on his exploratory expedition: " So little risk for so vast a gain! "

STATEMENT TO THE HOUSE COMMITTEE ON FOREIGN AFFAIRS

Hearing on May 17, 1960 on the Atlantic Convention Resolutions
(H. Con. Res. 107, 108, 146, 584)

By Percival F. Brundage
Former Director, Bureau of the Budget; Senior Partner (Retired) Price, Waterhouse & Co.

Gentlemen: I appear here in support of the resolutions for an Atlantic Convention because of my strong feeling that a closer cooperation between the Free West and our own country is desirable in military, economic and fiscal policies, and also because I feel that it is the best way to counter the Soviet threat.

You may recall that each important step towards closer cooperation between the NATO countries has aroused reaction from the Soviet but, in each case, has brought concessions like dropping the Berlin blockade and withdrawal from Austria. This is because one of their foremost objectives is to divide the Western nations who believe in freedom and to see the NATO organization dissolved and the incentives for its fuller development removed.

In my work on the Federal Budget for four years, I was deeply concerned by the amount of duplication within the NATO group and the lack of uniformity in our Atlantic policies, in our equipment, in our training procedures and in our defense plans. I became convinced that a closer cooperation or coordination, even to the extent of a limited union of our NATO countries, would greatly reduce our over-all expenditures and greatly increase the effectiveness of our defense measures.

But these are not the only reasons why I support these resolutions for a convention of competent citizens to explore how to "achieve more effective and democratic unity" with our Atlantic allies. I had the privilege of being one of the delegates from the United States to the Atlantic Congress last June. This Congress, as you know, was sponsored by the NATO Parliamentarians Association and included some 650 eminent citizen delegates from all the NATO nations except Iceland, which was involved in a fishery dispute. I was tremendously impressed with the great feeling of unity among these leaders. While our policies, forms and procedures differ materially, the spirit was surprisingly similar and I found myself enthusiastically supporting recommendations of representatives from Western Germany and from France, with whom I had had many differences of opinion as to detailed procedure. That this feeling was very widespread is attested by the fact that in the Final Declaration which the Congress adopted unanimously, briefly setting forth its conclusions, it included among its "six major principles" these two:

> "A-3. No military alliance can endure unless supported by close political and economic cooperation.
>
> "A-4. The time is ripe for these nations to build an Atlantic community with responsibilities extending to military, political, economic, social and scientific fields."

The main difficulty the Atlantic Congress encountered was that it had so many delegates as to be unwieldy, and met for only five days; it lacked the time to come to grips with the problems of Atlantic unity. To keep the great advantages of its citizens approach while removing these difficulties, in carrying forward the task of building an Atlantic cummunity, the Congress delegates unanimously recommended that a special conference, practically the same as the convention proposed in the resolutions before your Committee now, be called by their governments "not later than the Spring of 1960." It stressed that the convention should be "composed of not more than a hundred leading representative citizens, directed to convene for as long as necessary in order to examine exhaustively, and to recommend as expeditiously as possible, the means by which greater cooperation and unity may best be

developed within the Atlantic community."

The resolution before you, which is endorsed by the State Department, would carry out this recommendation. Our Allies look to Congress for leadership in this proposal this very Spring, and I hope, gentlemen, that you will give it an overwhelming majority vote of approval so that it will pass the House at the earliest possible date.

The only objections that I have heard raised have been to immaterial details such as timing. Someone always objects to taking a forward step on the grounds that the time is not perfect. I feel, gentlemen, that there will never be a better time to pass this Bill, which might even have some influence on the current Summit meeting. As I mentioned before, every important step towards closer NATO unity has brought concessions from the Soviet. It is also important that we now express our confidence in the unity of purpose of the NATO countries and our willingness to explore all ways and means in which our cooperation can be increased and improved.

The military advantages of unity,to my mind, are clearly apparent. With common bases all over the world, we would be in a much stronger position to face either a total attack or small peripheral brush fires. In the economic field in which the Soviet leaders have thrown down the gauntlet, I think that the advantages of a closer cooperation are equally apparent.

In the budgetary and fiscal area, I believe that the people of this country are greatly concerned not only with our tax dollars but with the assurance that they are utilized most effectively for our common purposes. Herein, to my mind, lies the greatest saving that could be accomplished by recommendations of the proposed convention. The strength that lies in unity is proverbial - and this kind of strength does not increase our overall costs but actually saves the taxpayer money.

My own experience has indicated how difficult it is to put a dollar mark on any expected savings. I have estimated that the overall saving, if we were to accomplish a real effective coordination to the extent of unified forces, common bases, common weapons and a common master plan, could amount to more than ten billion dollars a year. I still believe that this is a very moderate estimate of the potential savings.

To explore - as the proposed convention would - how we can gain more of our strength by unity's tax-saving way has this added advantage: Communist Russia cannot compete with us in this field. The reason is that they have already carried unity to the extreme degree until it has become tyranny, whereas we have only begun with NATO to unite the Atlantic community. The strength that lies in Atlantic unity has rightly been called our vast untapped reserve of power.

Because its unharnessed possibilities are so vast, and because it costs virtually nothing to harness them, and because Moscow knows this, and knows also that it has itself practically exhausted its own "unity" resources, and because it counts on disunion among the free to deliver us to it, I believe that to undertake the proposed exploration of greater Atlantic unity would impress the Kremlin more than any other move that Congress might make at this critical juncture.

From my experience in the Atlantic Congress the differences that separate us are much less important than the spirit that unites us. With the negligible expenditure the convention involves, I believe that it might find ways to accomplish great things for the future of this country and the generations to come.

Feb. 11, 1959

Dear Ed:

When I saw you for a moment here recently you said you expected to be back in Washington in mid-February and would give me a signal; I do hope you will. You also asked me to let you know a few days ahead if I were coming to New York, as we might get together better there: I expect to be in New York Tuesday night the 17th for a dinner meeting, and will stay over the 18th and ring your office then in the hope of seeing you.

I am leaving by plane about Feb. 20-21 on a fortnight's trip to Paris, London and maybe Bonn. I expect to see Premier Debre, who is an old friend of mine. Between you and me, I am hopeful that his government may be very helpful in getting the long-overdue convention to explore Atlantic Union called. Some of my reasons for this hope may be found in the enclosed articles of mine on Debre and de Gaulle; believe me, Ed, there is enough basis for my hope that I am very anxious to get your advice on certain aspects of the matter. If we can't meet before I leave, I hope we may at least talk over the phone.

Our prospects are developing quite hopefully on the Hill, too - but again they are not quite ripe for publication. The Berlin crisis gives an urgent argument to us, as you may see from the attached "Brief" which I sent Premier Debre.

Moreover, as I said to you when I saw you here, on March 2nd it will be 20 years since Union Now appeared. That was the official publication date, but the first broadcast I made of the proposal was over CBS, national hook-up from Philadelphia, Feb. 9, a 13-minute sustaining talk. On March 9, 1939 Union Now was the subject of the first transatlantic radio debate - a Town Meeting of the Air debate with Wickham Steed talking from London and I in New York in favor, and George Sokolsky and Dorothy Detzer in New York against. The audience took a very lively part on our side. Sokolsky has since come round to our view. Would you be interested in a new look, 20 years later?

By the irony of history, Hitler's Berlin was the most urgent reason for Union Now in 1939; now it is democracy's Berlin - surrounded by another dictatorship.

I'm doing a book for Harpers now on the long campaign, answering the questions I get so often: How did I come to get the idea, and why the hell have I stuck to it so long? I hope it will be an interesting human story. With warmest regards, Clarence

Two F & U Reports
from Berlin
P. 12

In this Issue...

Freedom's Laggard Leadership—*Editorial* 1

Eisenhower in his "State of the Union Message" spoke of "U.S. Leadership"—but gave little proof of it compared to Europe's establishment of the Common Market, France's pioneering with its new Constitution and Soviet Russia's Lunik. He continued to neglect to seek the right balance between freedom and union both on the national scene and in the Atlantic Community. His "State of the Union Message" omitted even to mention political union and held that freedom alone described the U.S., though freedom without union is anarchy. He did, however, hold out some promise of working to advance the Rule of Law, and rightly demanded a balanced budget, and warned against inflation. Even so, there seems more hope for leadership toward Union of the Free from President de Gaulle.

Atlantic-Minded Premier Debré—*Editorial* 3

The new French Premier is not the narrow nationalist described in the American and British press—he is very Atlantic-minded. A brilliant, far-sighted statesman with broad knowledge of federation, which he began exploring during the war as a way to peace, he was vice president of the French *Movement for Atlantic Union* before he entered the de Gaulle Cabinet last June. He was one of the original signers of the Declaration of Atlantic Unity in 1954. Now he has a great opportunity to lead in making his Atlantic dreams come true.

Gen. Gavin Joins Atlantic Council 4

Leaders who have recently come out in favor of exploring Atlantic Union run a wide range, from Lt. Gen. Gavin to Norman Vincent Peale, and include many college presidents and prelates.

Nationalism and Federation Vie for Africa's Future 5

Paul K. Martin

Two forces are rising in Africa: Desire for independence, and recognition of the need for some sort of union in order to maintain independence. Ghana and Guinea, former British and French colonies, respectively, have already taken steps to form a "union." Budding African states, still affiliated with France or Britain, are expected to follow suit. Some observers believe that by 1970 many new geographical federations will have evolved in Africa.

Tell the Free the Truth 7

Is Peace "Message to Churches" a "Typhoid Mary?" 8

Mrs. Chase S. Osborn

In this open letter to delegates to the recent Cleveland World Church Study Conference, Mrs. Osborn charges there is a "deadly virus" in its "Message to the Churches," resulting from its mysterious omission of the recommendations of the majority in favor of such regional associations as the Atlantic Community. The "Message" instead sought to advance *only* on the universal level, where progress is necessarily hampered. Thus to exclude the Christian Atlantic Community, where conditions permit a real advance in freedom under law, the author says, is to play into the hands of the Kremlin.

U.S. Press Pays Tribute to Angell 11

Editorials from leading papers in Iowa, Texas, and Massachusetts comment on Sir Norman Angell's articles in the past three issues of FREEDOM & UNION.

West Berliners Keep on Building 12

Barbara Belford

Despite Khrushchev's six-month ultimatum for evacuation of Western Forces, West Berlin continues to work and to rebuild. One has but to pass through the Brandenburg Gate into East Berlin to realize the difference between the two sectors. In the latter all is drab and cheerless, in contrast to bright and bustling West Berlin. However doubtful the future of the city may be, its citizens seem to have plenty of faith.

Refugees Flood in from Red Areas 13

Henning Knudsen

Refugees from East Germany are pouring into West Berlin, in ever-increasing numbers, thanks to mounting political pressure. Persons who had held out for 13 years now find it impossible to remain in East Germany. Intellectuals, artisans, men, women, the young, the old—all kinds of people are starting anew in the West. As one refugee put it, "I have run from the sure destruction in the East to the West, where destruction is only one of several possibilities."

U.S. Jumps on "Common Market" Wagon 16

A German Economic Report

Knowing from experience the importance of markets covering large areas, Americans have been quick to see the opportunities the European Common Market offers. Their efforts aim not merely at holding their present positions there; they want to extend them. American investors find the political risk smaller in Europe than elsewhere. They hope also, by developing their European business, to be more independent of the fluctuations in the U.S. business cycle.

Europe's Common Market Faces British Issue at Outset 17

Frank Blumenthal

January 1 marked a new era in European cooperation, for the Common Market then came into being. Yet its future is cloudy. Britain still stays out, still insists on a larger, looser free trade zone. The Common Market, to become a going concern, must resolve its differences with the British and their bloc.

The Concept of World History 18

William H. McNeill

Although schools and colleges abound in world history courses, there is little scholarly concern with the subject. Textbooks tend to be jumbles of disconnected information. The materials are now available for much better world histories, but to write them new perspective is needed. The present one is too centered on Europe and the West. Moreover, accuracy and detail have been overvalued, interpretation and synthesis underestimated. The author would have world history written from the stand point of "innovating centers."

Atlantic Union—First Step to Rule of Law 21

James A. MacLachlan

This opens a series of "5-minute" presentations of the Atlantic Union case. The present one by a Harvard law professor advocates it as a first step in extending the rule of law. He finds that Atlantic federation would be less difficult than U. S. federation in 1787.

U.S. to Change its U.N. Policy? 22

Thomas J. Hamilton

In past U.N. Assembly sessions, the U.S. has insisted that members take sides for the West or the East. As the Afro-Asian bloc gains votes, the U.S. position grows precarious. Outright defeats can be avoided temporarily. Yet the day is coming when the U.S. must decide whether to stick with the majority and split the Atlantic Alliance, or stand by Britain and France and suffer defeat. A choice is unavoidable.

FREEDOM & UNION'S POLICY

To think, write and act always in terms of all the democratic world, and not of any one country in it.

To mean by "we" (except editorially) the citizens of the coming Atlantic Union or Federation of All the Free, not merely those of any existing democracy.

To speed its coming by helping its people understand better the principles of individual freedom and federal union, and their importance to peace, production, higher living standards and greater spiritual growth and happiness.

To advance it also by helping the people of this Free Atlantic Community to see that they do form a community which they need to govern democratically.

To provide a forum for all views in the vast field of freedom and federation.

To bring out the facts in this field by objective, imaginative research.

[*On Second Thought*]

Freedom's Laggard Leadership

NINETEEN FIFTY-NINE began with three major developments in the first nine days that could and should have been topped by President Eisenhower's State of the Union Message on the 10th—but weren't. He did sound, however, one very hopeful note which promises well for the future, if promptly and properly carried out.

*

On Jan. 1 the European Common Market went into effect for France, Germany, Italy and small but yeasty Benelux. On Jan. 4 Soviet Russia achieved the breath-taking feat of sending a ton-and-a-half rocket far beyond the moon, and into orbit around the sun—the first man-made planet. On Jan. 8 the Fifth French Republic began with the inauguration of its founder, President de Gaulle, who is now in a firm position to surpass Churchill and Roosevelt by becoming the George Washington of the United States of Atlantica (see July-August 1958 FREEDOM & UNION). On Jan. 9, he named as Prime Minister Atlantic Unionist Michel Debré over nationalistic Jacques Soustelle.

*

With three far-reaching events behind it before 1959 was 10 days old, this year promises to be a most memorable one. How much more may we not see in the remaining 355 days? It depends only on us—though mainly on our leaders. There is no question but that the free Atlantic Community is ripe for heroic leadership that will raise its sights to its high destiny and unite its vast resources in men, material and spirit. It is as hungry for such leadership as France—whose anarchy was less dangerous a year ago than Atlantica's is today—immediately proved to be when a man of heroic stature appeared. The stage is set, the curtain is up, and the orchestra is playing a very stirring march of events.

Lagging U. S. Leadership. On Jan. 10, President Eisenhower told Congress and the world that the U. S. "has in recent decades reached a position of recognized leadership in the Free World." There is no doubt that it had, nor that it can do this again, but on Jan. 10 the assertion seemed ill-timed even to some patriotic Americans.

Europe Leads in Common Market. It was the leadership of such men as Jean Monnet and Paul-Henri Spaak that resulted in the great step forward which the European Common Market embodies. True, the U. S. encouraged it—but so did the danger from Moscow. True, too, before Lester B. Pearson of Canada called for its extension into an Atlantic Common Market (October FREEDOM & UNION), Adlai Stevenson did (May FREEDOM & UNION.) But the U. S. chose for spokesman not Mr. Stevenson but Mr. Eisenhower, and his Message of Jan. 10 did not break his silence on an Atlantic Common Market, even when he devoted one sentence of it—the only one devoted specifically to the West—to praising "our friends in Western Europe" for having "more closely knit" the "bonds of freedom."

Soviet Leads in Space Race. Clearly the U. S. was not leading in rocket science or missile power on Jan. 10. The substantial, if perhaps over-Madisonized, achievement its "talking" satellite represented had hardly ceased broadcasting the President's pious plea for peace before Lunik left it and the U. S. far behind from every standpoint, except talk. It was, indeed, the kind of new

"Pearl Harbor" for the U. S. which the January 1958 FREEDOM & UNION had foreseen it would suffer during that year—a guess that proved only four days off.

France Leads in Political Pioneering. Within the free world the country that showed the most leadership in 1958 in tackling the toughest and most urgent problems facing democracy was not the U. S. but France. It put its trust in a man who had proved his integrity and courage, and followed his bold, creative pioneering by adopting a new constitution. This reversed two deep-seated trends in the French democracy—both the anarchy of parties in France itself and the over-centralization of its empire, the imperialistic subjection of its overseas peoples to Paris.

*

The eternal enemies of democracy, it cannot be repeated too often, are the twin extremes—anarchy, or freedom without union, and tyranny, or union without freedom. Through all history free men have lost their freedom by falling first into the evil of too little common government from fear of tyranny, and then turning to the evil of too much government from fear of anarchy. The unending problem of democracy is to achieve and maintain through changing conditions a healthy balance between freedom and union.

State of the Union—Sans Union. Washington gave no important lead in 1958 in achieving the right balance between freedom and union in any of the various fields confronting it. Its trumpet gave forth as uncertain a sound on its domestic problem of race relations as on its overseas problem of assuring united action in the divided, multi-sovereign Atlantic Community. In both areas Washington's great weight continued to lie on the side of too little government, not to say anarchy. The Administration's lack not only of leadership but of even a healthy balance in this vital regard was reflected in the President's Message to Congress Jan. 10. President Eisenhower spoke as if freedom without union was all we needed, although this was his "State of the Union" Message—itself a reminder that the U. S. in establishing mankind's first Federal Union had led the world in recognizing freedom's need of union and in providing an effective way to balance the two.

Ike's 1 Word & Webster's 3: Where Webster's "Liberty and Union, now and forever, one and inseparable," put pithily the policy that made Washington and Lincoln great, President Eisenhower is his State of the Union Message said: "America is best described by one word, freedom." How pervasive this idea of the meaning of the United States is to him may be seen in this fact: The only time he used even the word *union* in his Message Jan. 10 was in two references to "labor union" problems—and the only time he mentioned *union* in his Message the previous year was a reference to "Soviet Union" (see "State of the Union Without Union," February 1958 FREEDOM & UNION.)

United States—Or Free States? If "America is best described by one word, freedom," perhaps the Federal Constitution should be abolished, the name of the United States changed to the Free States of America, and the annual State of the Union Message changed to one on the State of Freedom. But by whom, and to whom, could the Message then be delivered? Under that concept of America the Federal Union would be scrapped in favor of 49 disunited, independent, sovereign "Free" Nations. How long would individual or even national freedom survive in all America, or in any of the 49, if freedom without union really described the U.S.?

For "Freedom Under Law." President Eisenhower's State of the Union Message ended on a note that brings hope for a better balance of freedom and union in future, if not bold leadership in tackling the most pressing problem in this field—that of uniting effectively the free Atlantic Community. Speaking of the need of achieving "throughout the world" "freedom under law"—which is one way of saying what we mean by "freedom and union"—he said:

"As never before, the world knows the human and material costs of war and seeks to replace force with a genuine rule of law among nations.

"It is my purpose to intensify efforts during the coming two years in seeking ways to supplement the procedures of the United Nations *and other bodies with similar objectives*, to the end that the rule of law may replace the rule of force in the affairs of nations. *Measures toward this end will be proposed later*, including a re-examination of our own relation to the International Court of Justice." (Emphasis added.)

The President's phrasing is broad enough to include the proposed Convention to explore Atlantic Union among the promised measures. But since the only specific reference is to the International Court, Atlantic Unionists should restrain their optimism. It will be more than a pity, however, it will be a tragedy if the Administration makes the kind of mistake which the Cleveland Church Study Conference was led into making (see Mrs. Chase Osborn's "Open Letter," page 8)—that of seeking to advance only on the universal level, where progress must necessarily be slow and ineffective, to the exclusion of the Atlantic Community, where conditions permit a real advance in freedom under law to be made and serve as a pilot plant for all the world.

The Present Price of Liberty

Golden Bombers. The urgent need of arming freedom with the strength that comes only from union was illustrated most graphically by this startling statement in the State of the Union Message: "We are buying certain bombers that cost their weight in gold." The President also explained that "the over-all cost of introducing Atlas into our armed forces will average $35 millions per missile on the firing line." Until the rule of law unites the Atlantic Community, there is every reason to fear that at the

showdown these golden bombers and missiles will fail to deter attack because of the incertitude the best of alliances must leave as regards the use of bases. In such circumstances it would seem mad to seek to advance the international rule of law everywhere except in Atlantica—where it is most needed for Freedom's defense, and least difficult to establish, since Atlantica includes all the handful of nations that have succeeded in maintaining both freedom and law for more than 80 years.

Right on Budget. President Eisenhower cited the soaring cost of modern weapons to fortify his wise and courageous insistence on a balanced budget. He is only too right in his warnings against the inflationary dangers to freedom that result from the tremendous expenditures for defense. But, unless he turns to the economies and strength that lie in Union on an Atlantic scale, he is bound to fall between two stools. For his present policy provides adequate defense neither against Communism's arms nor against its hopes of winning through inflation.

The Industrial Race—and Trap. The crash to which inflation inevitably leads not only lowers living standards but sets back industrial production more than defense spending promotes it. Witness the fall in production resulting from the recent recession—which was only a portent of worse to come. And the real Soviet strategy—as Walter Lippmann and Adlai Stevenson have reported (see January FREEDOM & UNION, page 1)—is to win the uncommitted nations, and thereby the world, by surpassing the U. S. in per capita production. The trap in this strategy, as was pointed out in these pages last month, is to make this race which is really between Communism and Freedom, seem to be one between Communism and only one free people, the U. S. A. Despite President Eisenhower's well-grounded fears of inflation, his recent pronouncements show no recognition either of this Red strategy nor of this trap. This seems also true of the Democratic leadership in Congress.

The Lunik Trap. Moscow quickly exploited Lunik as a victory not of Russia but of Communism over the free way of life—as represented by the U.S.A. alone. Explaining why "America is lagging behind" the Soviet Union, its radio spokesman, Viktor Shragin, explained: "To know and to conquer cosmic space requires maximum unity, single-mindedness of purpose and close human cooperation. This is possible only under socialism." While Khrushchev himself presented Lunik as a "victory for Communism," the Democratic leadership fell into his trap by implying they, too, looked on the race as one between Communism and the U. S.—instead of between Communism and Freedom as a whole.

*

The press on Jan. 4 reported that Senate Majority Leader Johnson "charged that the U. S. was not going far enough fast enough," while House Majority Leader McCormack called for "a redoubling of the U. S. program to 'avert a Pearl Harbor in outer space.'" It is right that they should have demanded greater efforts in the space race, for they have the special responsibility of being each the chairman of his House's Space Committee. It is understandable that they should have urged this on the U. S. as the most practical immediate thing to do. But Freedom would have a far better hope of winning this race—and the industrial and military ones, too—if at the same time they called for the proposed Convention to explore the advantages of uniting the immense resources of the free Atlantic nations as effectively as those of the 49 States are federated now. Both men are so alert and able that one can hope that they may give Congress the honor of providing this leadership.

France's Opportunity. While the Administration and Congress continue to try almost every solution to Freedom's problems except Union of the Free, the possibility grows that France may confront them with an invitation to explore this answer which they could not refuse. Every recent month has brought new proof that Charles de Gaulle sees far and realistically, acts boldly and promptly, and does not shrink from answering today's call for greatness because of the difficulties and risks it necessarily involves. Now that he is installed in the powerful position of President of the Fifth Republic for the next seven years, leadership toward Atlantic Union is not too big a thing to expect of him. His choice of Michel Debré for Prime Minister has opened the new year most happily for Atlantica.—C.K.S.

Atlantic-Minded Premier Debré

MICHEL DEBRE seems almost as misjudged now in the American and British press as General de Gaulle was when he came to power last year. The new French Premier has been presented as the General's Man Friday, and as a narrow nationalist, if not chauvinist. Certainly he is completely loyal to his chief. And certainly as long as the U. S. and Britain play their hands according to the rules of national sovereignty, he will fight fire with fire. Having known him personally since 1946 I have some basis, however, for testifying that he is no mere yes-man nor is he at heart a nationalist.

Premier Debré is a brilliant, far-sighted statesman in his own right. He has studied world affairs long and penetratingly. His range is broad—much wider than one might think from his decisive, determined manner. He is one of those rare lawyers who, like Justice Owen J. Roberts, are more drawn to Law's basic, constitutional than operational side. To his theoretical knowledge of federation—which he began exploring during the war as the way to peace—he has recently added invaluable experience gained in working out the problems of union in the widely dispersed and varied French Community, as chief drafter of its new Constitution.

Premier Debré gained his name as a nationalist because of his intransigent opposition to European Union and the European Defense Community. But this opposition resulted from the fact that he is Atlantic-minded rather than from nationalism. Before the EDC was dreamed of, or European Union was a practical issue, he had worked out his reasons for believing that the continental basis for international organization endangers peace and that the ocean offers a far better framework—particularly the North Atlantic ocean. To him the North Atlantic has long been "the modern

Mediterranean"—the core of western civilization around which the new Rome of Liberty must be organized, and not on either continental shore alone.

Before he entered the de Gaulle Cabinet last year as Minister of Justice, Michel Debré as a Senator was vice president of the French Movement for Atlantic Union. He was one of the original signers of the Declaration of Atlantic Unity in 1954 (see October 1954 FREEDOM & UNION for text and list of signers). He is the first member of the Atlantic Union Movement to attain his high office, though others have favored its objectives. He must, of course, deal with the practical political realities he faces, and one can be sure he will follow President de Gaulle's policy loyally in regard to Atlantic Union. One must wait to see what this will be. Meanwhile, it is worth noting that in a message to FREEDOM & UNION on its fifth anniversary in 1951 he wrote:

"A new force whose material power, political determination, and social attraction no one has a right to underestimate threatens liberty. The people of the U. S., Great Britain and France and other free peoples are staking their destiny in the coming years, and while some in the New World may still hesitate, those who live in the Old World can entertain a doubt only by remaining deaf and blind. However, there is no question that if they know how to unite their thoughts and political actions in all the important fields, the Western countries may not only live on but also restore to liberal civilization the appeal it has lost. The task is urgent and every delay makes war more probable and more imminent."

All the delay since these words were written eight years ago has served to confirm their wisdom, and make the task of uniting the Atlantic Community only the more urgent. And now their author is in a key position to assure to his beloved country and chief the honor of leading in this great undertaking—and to his own creative mind a further personal satisfaction. Now he himself can be a founder of the new and far freer Rome around "the modern Mediterranean" he dreamed of through the dark years when he fought to liberate France from the Nazi nightmare.

—CLARENCE STREIT

[Atlantic Union News]

Gen. Gavin Joins Atlantic Council

—*Dept. of Army photo*

LT. GEN. JAMES M. GAVIN, former Chief of Research and Development, Dept. of the Army has recently become a member of the National Council of the Atlantic Union Committee. Others who have thus come out in favor of the proposed Convention to explore Atlantic Union include ROBERT HALE, former Member of Congress from Maine; ERNEST HENDERSON, president, Sheraton Corporation of America; PAUL C. SMITH, Vice-president and Treasurer, American Export Lines; and HARRY A. WANSKER, president, Boston Regional Conference on NATO Affairs; ANDREW G. HALEY, president, International Astronautical Federation.

Twelve church leaders have recently been added to the Council (see also p. 8). The Rt. Rev. STEPHEN F. BAYNE, JR., bishop of Olympia, Washington; DR. ANDREW R. BIRD, past president, Council of Churches of the Washington Area, D. C.; The Rt. Rev. ROGER WILSON BLANCHARD, Bishop Coadjutor of the Diocese of Southern Ohio; DR. ALBERT BUCKNER COE, former Moderator, General Council, Congregational Christian Churches, U. S.; DR. SETH C. EASTVOLD, first vice-president, Evangelical Lutheran Church.

Rev. DR. W. M. ELLIOTT, JR., past Moderator, General Assembly, Presbyterian Church, U. S.; DR. PHILIP R. GILES, General Superintendent, Universalist Church of America; BISHOP REUBEN H. MUELLER, Vice-President for Division of Christian Education, National Council of Churches; The Rt. Rev. SHIRLEY H. NICHOLS, Bishop, retired, of Kyoto District, Japan, and Salina District, Kansas; Rev. JOHN PAUL PACK, President, International Convention of Christian Churches; and DR. NORMAN VINCENT PEALE.

New Council Members also include the head of another Lutheran institution: DR. OTTO P. KRETZMANN, President of Valparaiso University in Indiana; and DR. DAVID A. LOCKMILLER, President and President-elect of two Methodist institutions, University of Chattancoga and Ohio Wesleyan University. DR. ROBERT GORDON SPROUL, President Emeritus of the University of California, has now joined President CLARK KERR of that institution on our Council. Other new educational administrators are Presidents GEORGE L. CROSS, University of Oklahoma; DR. ELDON L. JOHNSON, University of New Hampshire, and DR. J. PAUL MATHER, University of Massachusetts; DR. ROBERT STRAUSZ-HUPE, Director, University of Pennsylvania Foreign Policy Institute.

Blackwelder Reports on Election

A major victory in the November election was won by the Atlantic Union Committee, according to Justin Blackwelder its executive secretary. Six senators who had supported the Atlantic Exploratory Resolution were up for re-election, and five of them were re-elected. Ten Senators who had opposed the Resolution were up for re-election and nine of them were retired by the voters. Four House supporters were elected to Senate. In addition, the new Senator from Wyoming, GALE MCGEE, was Legislative Assistant to AUC's tireless supporter, Senator O'MAHONEY, and is a long-time backer of the Resolution. In the House 130 supporters were up for re-election, and 126 were re-elected. A former sponsor, JAMES M. QUIGLEY of Pennsylvania, was returned to Congress and Council member, CHESTER BOWLES, was elected from Connecticut. DAVID LAWRENCE, long-time Council member, was elected Governor of Pennsylvania.

BRIEF OF SOME URGENT REASONS FOR EXPLORING ATLANTIC UNION

1. Berlin and German problems . . their urgency . . the great risks in opening and maintaining a land corridor . . worse risk in abandoning Berlin, or seeming weak.

2. Present relative weakness of Atlantic community - in both conventional and latest arms - in will-power in Britain, which is likely to grow still weaker until coming election, and may worsen thereafter - in leadership in Washington, which lagged in bold imagination even before last election - in over-dependence on aging Adenauer in Bonn (with which Mr. K told Lippmann he felt he could eventually make another Stalin-Hitler deal) - the time needed to change such weaknesses into great strength.

3. The need to turn the tide quickly - but without increasing inflationary danger . . the fact that only realistic hope of achieving this is to supplement all present answers with a powerful new politico-moral move.

4. Calling proposed conference to explore Atlantic Union gives needed power quickly, plus immensely greater material power later, without inflationary danger . . Kremlin makes fetish of unity, fears this most in West but believes capitalistic nations incapable of real union, banks on our divisions to give it world rule, hence nothing could impress it more than decision to try to form Atlantic Union - this would also disconcert Moscow as disproving basic Marxist assumption that capitalistic nations must inevitably cut each other's throats in struggle for markets and profits

5. Atlantic community's greatest untapped resource is union's proverbial strength . . Moscow knows it cannot compete once we harness this resource for it has already extracted all the strength it can from unity, whereas we have hardly begun to, and can gain far more since the free have vaster resources in men, knowhow & materials to unite.

6. Essential to take Kremlin by surprise if we are to gain enough strength quickly to turn tide (and not merely another corner) . . surprise gives much added force . calling proposed conference would surprise everyone - world now assumes Atlantic Union is as remote as it assumed Sputnik was until it soared into orbit . . to see us begin to explore Atlantic Union this year would astonish world more than to see Moscow begin exploring space with manned rocket.

7. Only a move that astonishes the West itself as this would can surprise the Kremlin enough to turn the tide . . we not only throw them off balance but strengthen ourselves by proving we can do far more than most of us now assume we dare even to attempt.

8. Atlantic Union move, unlike others, is no mere stopgap, provides new framework for Berlin, German, other problems in which we can tackle them much more hopefully - opens for West such now unthoughtof vistas that Moscow would be forced to reconsider all its policies - could not continue tough line without thereby directly speeding Atlantic Union and thus defeating its own major end.

9. Result: Moscow would most probably switch back to conciliatory policy in hope of gaining time and removing incentive for us to unite (as when it withdrew from Austria after NATO grew stronger by uniting with Bonn) - first fruit might well be cessation of its present Berlin-Germany pressure, as it ceased Berlin blockade in 1948 once this led the West to move toward unity by alliance.

March 7, 1958

Dear Ed:

It would greatly help us increase our circulation if we could mention that you are one of the many distinguished members of the press, TV and radio who are among our paid subscribers. I would deeply appreciate your consenting to do us this favor. Please return the enclosed note with your answer checked on it.

I do hope you'll take time to read the attached speech and give me a word on how it strikes you - for it was made in 1945.

With best regards,

Sincerely,

Clarence

Facing Another Bomb

by

Clarence K. Streit

. . . Now nothing in nature remains to protect liberty anywhere, nothing but the best in human nature . . .

NOW ONCE AGAIN the danger of war here on our own soil has come to test the mettle of Americans. The atomic age has swept us back to the life of constant peril that faced the pioneers. They had trading posts where we have cities. The weapons that meant annihilation to them seem crude today. But then as now a man had but one life to lose, and he lived in constant danger of an unseen foe.

And now as then we Americans stand at freedom's front. In World Wars I and II freedom had three walls. Back of the French stood the British, and back of the British stood the U.S.A. But in a Third World War we shall be target No. 1. We can count on having no one between us and invasion, no one

in reserve behind us, no one to save the cause of human freedom if we fail to withstand atomic assault.

Where others have only their chains, we have our liberties to lose, and those of all mankind.

This is no time to listen to panicky prophets, or trust in mediocre men who do not trust themselves and have no iron in their soul. Standing as we do today with the frontiersman who, musket in hand, built his cabin in a wilderness where death might strike savagely at any moment, we need now all those virtues that Americans then developed. We need their cool heads and capable hands, their courageous hearts and their buoyant faith in themselves, and in their liberty and Union. More than ever in our lives we need that combination of pioneering and prudence, of generous idealism and hard-headed attention to ugly facts, that made our Republic, against overwhelming odds, the citadel today of the world's free citizens.

There is no cause to despair. In the most dangerous conditions human liberty rose in America. As it rose America grew safer and more powerful. But safety tends to make men soft and heedless. Danger brings them back to essential values. We face now only the latest

in several great testing periods. But we face it in a history that records no failure ever by Americans to come through the most dangerous tests with triumphant colors.

It is only too probable that, whatever we do, the bomb at Nagasaki will not be the last to fall. We face another bomb.

But the bomb at Nagasaki was not the first one men have faced. More than 2,000 years ago the Greeks gave the name of "Bombos" to any huge stone that was hurled by a machine over a city's walls. The terror which that first bomb created as it pierced the city's defense we do not know. But we can imagine it from the fact that the word *bomb* has long been associated with terrorizing surprise. We can take some courage from the fact that we face now what men have faced ever since that day—another bomb.

We are told there is no defense against the atomic bomb. There are various defensive measures that can be taken—scientific, military, moral, political, national and international. None of them is certain, all of them can help. In so grave a matter we should make the most of every possible defense. Nor should we be overcome by the fact that all together these measures give no cer-

tainty. Since long before the atomic bomb, dangers against which no defense was sure have beset mortal man.

No matter what we do, in the end we each must die.

The atomic bomb should remind us that the surest way to achieve immortality here on earth is to live and die for some undying purpose. Those who so live and die live serenely and die without fear; their spirit lives on in the hearts of succeeding generations; it never ceases to comfort and inspire mankind. Among the immortal purposes which have made many men immortal are liberty and union.

Liberty has been tremendously endangered by the atomic bomb, and made far more precious. For the bomb is making ever clearer that the best defense against its aggressive use is civil liberty.

Rarely in history has one nation had such superior armed power as our Republic has today. Never in history did weaker nations have so secure a defense against the strongest power as they have against atomic-armed America. Their defense is not their own science or their own military power. Costa Rica is as safe from American atomic attack as is Soviet Russia. Nor is the defense of other nations *their* form of government

or *their* moral values. Spain and Argentina are as safe as Switzerland, France, or the Vatican. The best defense the other nations have against the atomic bomb lies not in them but in us. It lies in *our* form of government, in the character of *our* political institutions and our *moral* concepts, in the fact that civil liberty is supreme in the American Federal Union.

Why is civil liberty the surest guarantee against aggression? Mainly because the philosophy that gears government to liberty puts the highest value on the life, the dignity and the happiness of every person equally. It requires the most publicity in all public affairs, and the more publicity there is the more slowly the government can act and the less danger there is of its launching a surprise aggression.

The danger of aggression, atomic or other, lies not in the weapons themselves but in the will to use them. The less liberty there is, the more the national will is centered in the will of one dictator and the easier surprise attack becomes. The more liberty there is, the more the national will is divided into a myriad equal independent individual wills, that can act only by agreement. Thus the structure of a government based on civil liberty serves to guaran-

tee the citizens and the world alike against aggression by that government.

And now the rocket and atomic bomb have placed this guarantee of peace in deadly danger.

To rise at all and to survive, liberty hitherto required the protection of inanimate Nature,—the mountains of Switzerland, the lowlands of Holland, the Rhine of France, the Isles of Britain, the oceans of America. With such protection civil liberty has struggled up, but only among a fraction of our species. This fraction has been divided into a number of nations, into at least a dozen fragments, by the conditions that enabled freedom to develop in them.

Now nothing in nature remains to protect liberty anywhere, nothing but the best in human nature.

The free peoples are still free and still have a voice in world affairs because they proved stronger than their autocratic foes. To survive and keep this voice tomorrow these free peoples need to remain strong. Now as always their strength must be both material and moral.

While so much of mankind remains unfree they cannot safely renounce the armed power with which they have hitherto defended civil liberty without

delivering themselves to slavery and betraying humanity's surest hope of peace. But in this atomic age they need more power than they can possibly secure by arming nationally.

The effort each is making now to secure this power independently of the others threatens liberty in each of them, both from within and from without. It leads them to centralize power increasingly in the executive and the military. It encourages secrecy and spying. It makes them fear to help rebuild allies who may turn against them. It tempts them to seek power by clinging to the evils of imperialism.

In these and other ways this nationalistic policy undermines freedom's greatest power,—its moral power. It stains freedom with hypocrisy. It starts the free nations in a race that freedom cannot win, for it is a race with dictatorship toward dictatorship. The further the free peoples go in this direction, the more they will become divided from each other, and the more their division is bound to tempt the aggressive to attack them one by one.

These dangers threaten liberty at a time when hunger is gnawing on the minds of millions and cold is chilling their hearts. Hunger and cold threaten liberty, too. They often lead the people

to give rulers more and more power over them. They pave a trail to well-intentioned tyranny, and to chronic cold and hunger for the masses.

From Australia and America to Switzerland and Sweden, individual freedom began with nothing but deserts and wilderness, mountains and fjords. Yet invariably it has given the highest standards of living in the world to the masses who believed in it, and who put liberty above comfort or security or life itself.

Freedom has proved the best bread-winner and the top producer. So true is this that, before this war, much more than half of mankind's means of producing and transporting goods of all kinds were centered in a dozen of the world's freest nations. These means are now almost entirely centered in them. Though some of the democracies of western Europe have been crippled in the war, they have been less crippled than Germany, Italy, eastern Europe and Russia. Meanwhile there has been a great expansion in the productive machinery of the U.S.A., Canada and other democracies.

Hunger and cold and disease are more immediate enemies of liberty, and therefore peace, than is the atomic bomb. To overcome them freedom

needs all its actual and potential productive forces working at high gear. These forces cannot be mobilized effectively while the free remain divided into rival economic nations. Imagine how American production would be cut to pieces were the U.S.A. divided into a dozen rival democracies, each with its tariffs and separate currency, each protecting these with independent armaments. That will show you how appallingly the productive capacity of the world's most productive area is now cut to pieces by its division into a dozen rival nations.

Union of the free has always been the surest way to defend and to extend the blessings of individual liberty, and peace. This was never truer than in this cold and hungry dawn of the Atomic Age.

Only by Union can free men tremendously increase their defensive power with no sacrifice of their individual freedom. Only by uniting their human and material and moral resources through a Great Federal Republic can those with freedom of speech, freedom of the press, freedom of conscience, freedom of association, freedom of election, and other rights make their persons still freer while colossally increasing their defensive and moral power.

Only by federating themselves can they remove the temptation to aggression that their division now provides. Only thus can they gain the freeborn strength that encourages the elimination of imperialism and the admission of colonial peoples to full statehood in their Union as they grow ripe for this.

Only by Union of the Free can the world's most productive area mobilize its men, its know-how, and its machines effectively enough to bring the rest of mankind through war's aftermath and rebuild shattered continents. In Europe, Russia and Asia millions of men, women and children are doomed to starve and freeze to death if the free fail to unite in one Great Union.

Only by Union can the free gain sufficient strength to meet humanity's needs today, and pursue—inside and outside the United Nations Organization—a generous, peaceful policy toward all nations, one that gives no nation any cause to attack the free, and that gives every people a growing incentive to gain greater liberty.

Once the people of the free nations break the grip of absolute national sovereignty by federating in a World Republic, what then?

The desire for liberty and peace which impelled them to this Union can

be depended on to lead them to extend its principles to the people of other nations as freedom grows among them, until at last all mankind is united in equal individual liberty. For this Universal Union to come about, the free must create the nucleus from which it can develop. Nothing can encourage the growth of liberty and union everywhere so much as this first step toward it, the formation of this nucleus with its concrete proof that Union of the Free brings to everyone advantages that are beyond calculation.

We face another bomb, but it demands no more faith and courage than the ancient Athenians showed when Themistocles led them to abandon their city to the Persian hordes and take to their ships. Plutarch tells us that the Athenians "were very unwilling" to do this, "imagining that it would signify little now to gain a victory, and not understanding how there could be deliverance any longer after they had once forsaken the temples of their gods and exposed the tombs and monuments of their ancestors to the fury of their enemies." But they followed Themistocles to Salamis, and there and then began the glory that was Greece.

Just before that battle a Spartan chided Themistocles, saying that "it did not become those who have neither city nor house to lose, to persuade others to . . . forsake their countries." And Themistocles replied: "We have indeed left our houses and our walls, base fellow, not thinking it fit to become slaves for the sake of things that have no life nor soul; and yet our city is the greatest of all Greece, consisting of two hundred galleys which are here to defend you."

Freedom is a way of life that is founded on individual courage. Courage comes from the spark of divinity in every man,—his conscience. In times like these men must have faith in something. For our part, we keep an ancient faith. For we have faith in individual freedom, and in an ever-growing Union of the Free.

When you have read this booklet send it to a friend. Additional copies are available at 5¢ each, 25 for $1.

NOTE

This address was originally given on Nov. 16, 1945, in Pittsburgh, Pa. at the fifth annual convention of Federal Union, Inc.

If, in the light of the latest Sputnik and rocket developments, you find it even sounder than it was in 1945—if you are thinking now, "Had only the President spoken in such terms then!"—if you are looking for an answer whose values and whose vision meet the acid test of time . . . please help achieve Federal Union of the Free.

The Federal Union Organization

. . . originated when public-spirited readers of Clarence Streit's *Union Now* began joining together, immediately after its publication in 1939, to achieve its purpose. It was incorporated in 1940 as a non-profit membership association, "to promote education in the basic principles of federal union as exemplified in the Constitution of the U.S., with a view to attaining world order by a Federal Union of the Democratic Peoples."

Freedom & Union Magazine

. . . is published by Federal Union for the general public. Edited by Mr. Streit, it is indispensable to anyone who would follow progress in this field.

Annual dues to *Federal Union*—which include a subscription to *Freedom & Union* are: Regular $5 to $10, Sustaining $10 to $100, Sponsoring $100 or more. Non-member gifts are also welcomed, as are non-member subscriptions to *Freedom & Union* which are $4 a year anywhere on earth. Dues and gifts to Federal Union are deductible from taxable income. For further information write to:

FEDERAL UNION, INC.

Freedom & Union
2700 Ontario Road, N.W.
Washington 9, D. C.

Dec. 30, 1956

Dear Ed,

I listened today with much profit, as always, to your end-of-year discussion with the veritable galaxy of correspondents you have built up for CBS, and hasten to congratulate you on the program and even more on the achievement - that galaxy, I mean. I think back when I first met you . . in Geneva when I was there for the N.Y. Times in 1929 or 30 or 31 - and there was no hint of a counterpart on the air to the N. Y. Times . . and I would take off my hat to you, Sir - except that I haven't worn a hat for years.

You fellows have a great advantage over the newspaper correspondents, and a great disadvantage. The latter, of course, is that the spoken word is even more ephemeral than the one published in the daily press - and yet the test of any good newsman (Ibelieve now even more than when I was one) is his ability to give, by the space he gives to an event, or factor in events, or/and what he says about it, the verdict of posterity. The historian a century hence can easily check what the correspondents of The Times wrote in 1956 - but what of your galaxy?

I'm sorry there wasn't time for you to add your dollar's worth. I trust that in it you would have filled in what to me were (and I think to posterity would be)the big blanks in the program: namely, the fact that practically no attention was paid to the dangers to the free from an economic depression, subversion and disunion. Why forget these three things that Moscow never forgets, and concentrate on war as if the danger were still from Berlin? Also: Eric, I believe, said that no one had believed revolt against a modern police state possible. I enclose evidence that I did. If interested, I'd be glad to tell you how I learned long ago that what is important is not the weight of arms but will power.

(over)

Happy New Year! Clarence
Clarence Streit

Remembering what you told me of your interview with Nasser - how he was banking on western disunity - I don't understand why none of your correspondents dealt with this.

[On Second Thought]

Who Will Win Without War—Through the R-Bomb?

IN JUNE two years ago young men in Red Berlin, with only stones in hand, rose up and battled tanks. Already in 1953 the pressure of the arms race on living conditions behind the Iron Curtain had produced this picture—an incredible picture that was, however, not a fancy but a photograph.

*

Since 1953 the pressure of the arms race on life within the Red Empire has grown, and grown. And now the West German Republic has entered NATO with 500,000 soldiers about to be armed and added to these already at the front, right where the West and East face one another.

*

Small wonder that the Kremlin is now making concessions that astound those who feared to take any step toward uniting the Atlantic Community, lest this provoke Moscow to war.

*

The wonder is that U.S. policy, as it confronts today's Jericho, still is one of reacting instead of acting—still dances to the music Moscow calls, instead of marching on with its own trumpets . . . with its own revolutionary principles. Yet they have been toppling tyrants from within ever since Cornwallis surrendered at Yorktown while his band played a tune fittingly entitled, *The World Turned Upside Down.*

Revolutionary Resolution. The resolution to call a convention to explore Atlantic Union (Senate Con. Res. 12, House Con. Res. 73-80) would put America's twin trumpets—"Liberty and Union"—on the march once more. Its adoption would start a train of developments that could—and, I believe, would—end by unhorsing the Soviet dictatorship from within, without world war. This possibility deserves fresh consideration now when signs accumulate that the Red Empire is increasingly vulnerable to this revolutionary way to end the East-West tension—and seeks to turn the tables.

Red Disarmament Aim. Moscow's move to reduce and limit arms is a most important indication that its own basic strategy is to win the world by revolution rather than by war, and—still more significantly — that it fears revolution itself if it fails to gain a respite in the armaments race.

*

By its various recent conciliatory offers, the Kremlin, I believe, seeks these four goals:

1) To speed disunion in the Atlantic Community by removing the fear of Red aggression—the main bond now holding NATO together.

2) To bring on depression in the West by sharply reducing at one stroke the stimulus which the arms race gives to its economy and the unity Atlantica needs to prevent an economic setback from getting out of hand. (See *Freedom Against Itself*, chapter 19.)

3) To induce thus the conditions that make for Communist revolution in the weaker parts of the free world, and to gain at the same time the prestige of having led the world toward peace and disarmament.

4) To save itself, above all, from the danger that continuance of the arms

race will increase its present internal strain to the point where it falls victim to revolution itself.

Two-Sided Game. The free too often forget that in the great issue of our day —shall freedom or dictatorship gain the world?—either side can win by either of two major means, war or revolution.

*

In previous tests, only the free could hope to win by inducing revolt in the other camp. Hitler with his racial dogma could not possibly do anywhere outside Germany what Wilson did with his free principles not only in Germany but elsewhere. In the current test there is this new factor: The present dictatorship can compete with freedom in fostering revolt.

The R-Bomb. The Communist dictatorship has not only the A-bomb and the H-bomb but an R-bomb of its own. It has specialized, indeed, so long and so much in the technique of winning power through revolt that this should be deemed its favorite weapon.

*

Though its promises are false, Communism has proved that by subtly perverting the ideas of liberty, dignity, equality, fraternity, justice and peace, which Freedom embraces, it can echo Freedom's world-wide appeal to people of every class and country. It can do this effectively, however, only where there is acute economic misery, as in Asia, or the discontent that depression with its sudden unemployment and fall in living standards produces in the West.

Moscow's Losing Race. To understand the Kremlin's present policy one needs to see it against the backdrop of the past two years.

*

To relieve the strain within the Red Empire which the food riots of June 1953 dramatized, Malenkov felt forced to increase consumer and farm production at the expense of war goods. Only a year and a half later the failure of the food policy, combined with the growing power of the Atlantic democracies and the heavy drain on Soviet Russia to supply Red China with weapons and machinery, increased the internal strain to the point where Malenkov fell. Khrushchev rose, the effort to increase food production grew fairly frantic, and industry was shifted back to war—despite the obvious danger in thus disappointing the long-suffering consumers so soon after raising their hopes. And now the addition of West Germany's great weight to NATO's strength makes even more acute the strain within the Red Empire caused by the armaments race.

Present Imperative. Now that the U.S. has agreed to Four Power talks, it is imperative that it move forward with preparations to assemble the proposed Atlantic Convention. Otherwise it risks falling into the trap the Kremlin is now baiting with juicy concessions.

*

The main bond still holding together the Atlantic Alliance is the fear of Red military aggression—the fear that caused NATO to be made and a rearmed Germany admitted to it. Now that the Kremlin seeks by removing this fear to break this fragile bond, it becomes all the more urgent that the Atlantic democracies explore how best to unite themselves on an enduring, effective basis, one that no longer depends on the pressure of the Kremlin . . . which is notorious for abrupt reversals of its policies.

Union Decisive Factor. Whether the present situation evolves toward overstrain leading to overthrowal of dictatorship from within, behind the Iron Curtain, or toward depression and overthrowal of freedom from within the free nations, depends on whether or not the Atlantic democracies move now toward federal union. The following basic factors will help make clear why this is so:

1. The arms race depends increasingly on industrial and farm production.

2. The two major ways to augment this production are a) by uniting more effectively the nations in each camp, and b) by raising output within each nation.

3. Because the Atlantic democracies are far more advanced, industrially and agriculturally, than the Communist nations, and because they are at the same time far less united, they need merely federate to leave the Kremlin far behind in the race for power. Without increasing their expenditures for arms, but merely by gaining the economies and certitudes that organic Union brings, they can vastly augment their real strength, while at the same time raising instead of lowering their living standards. Union saves them in other ways from all danger of Communism winning by revolt.

4. Moscow could not possibly catch up with an Atlantic Union by uniting more closely the Communist nations, because Red China is too under-developed for tighter unification with Russia to add comparably to Communist power, and because the Eastern European satellites are already united to the Kremlin as completely as is practically possible. (As for the "Eastern NATO" with which the Kremlin replied to Bonn's entry into the Western alliance, insofar as it is not mere window-dressing, it indicates a weakening rather than an increasing degree of unity in the Red Empire.)

5. To raise output otherwise within the Red Empire means, in practice, to lower already low living standards.

6. In its efforts to keep up in the

FREEDOM & UNION'S POLICY

To think, write and act always in terms of all the democratic world, and not of any one country in it.

To mean by "we" (except editorially) the citizens of the coming Atlantic Union or Federation of All the Free, not merely those of any existing democracy.

To speed its coming by helping its people understand better the principles of individual freedom and federal union, and their importance to peace, production, higher living standards and greater spiritual growth and happiness.

To advance it also by helping the people of this Free Atlantic Community to see that they do form a community which they need to govern democratically.

To provide a forum for all views in the vast field of freedom and federation.

To bring out the facts in this field by objective, imaginative research.

To favor calling now a federal constitutional convention, representing the experienced civil liberty democracies, to work out and submit to their people a plan for uniting them in a Federal Union of the Free, or United States of the Atlantic, under a Constitution that would: 1) guarantee their Bill of Rights; 2) give them a free government in those fields where they agreed this would best advance individual freedom; 3) provide that this government shall be elected by, be responsible to, and operate on, the citizens and be federally balanced in its representation of them; 4) secure the right of each nation in the Union to continue to govern all its other national affairs in complete independence.

To seek to extend the Union's free federal relationship to other nations peacefully and as rapidly as this will advance liberty and peace until eventually it grows into a free federal world republic.

To assure that, pending universality, this union shall be a loyal member of the United Nations.

power race, the Kremlin has already had to lower living standards at home, while seeking to slow down the West by concessions aimed at removing its incentive both to arm and to unite.

7. If faced with the immense advance in power the Atlantic Community would gain by federal union, the Kremlin would be driven to grinding down the poor still more in its frantic efforts to keep from falling far behind.

8. This would mean harder work with less to eat and wear, in Eastern Europe particularly, because it forms the most advanced part of the Red Empire with the most juice left to be squeezed out, combined with the best productive capacity and know-how available to the Soviet squeezer.

9. For the Kremlin to seek to gain power this way is, at best, no answer, but full of peril to it. What it thus gains is trifling compared to what the free gain by Atlantic Union. Moreover, this policy makes for revolution in the area which is at once most essential to Soviet power and most likely to revolt.

Vulnerable East Europe. Moscow is most exposed to revolt in Eastern Europe for these reasons: a) Eastern Europe has been under the Red knout for only ten years—not 38 years like Russia and the Ukraine; b) its peoples have enjoyed much more freedom and better living standards than the rest of the Red Empire—and the higher one is, the more discontent a fall engenders; c) one needs but mention the Poles to remember how fierce is national patriotism in Eastern Europe, and how long schooled its peoples are in the ways of the underground; d) Eastern Europe is the area of the Red Empire that adjoins the Atlantic Community geographically—and it is far nearer to the West than to Russia in the ties formed by immigration with the U.S., by culture with France and Britain, by political thought with all three of these, by religion with Italy and by trade with Germany.

Union's Powder & Spark. Atlantic Union doubly makes for revolution in Eastern Europe, for it brings together in that key area the powder of oppression from the East and the spark of hope from the West—a most explosive combination.

*

While the great increase in material power which Union would give Atlantica would lead the Kremlin to grind down the people of Eastern Europe in a hopeless attempt to stay in the race with the West, the even greater moral power which the formation of this Union would

generate would fire the Eastern Europeans with faith in their future freedom.

*

Desperation can cause men to perform astounding feats, such as the camera immortalized in East Berlin in June 1953, but faith and hope must move men too before men can move mountains.

Alliance Moves None. Alliances rouse little enthusiasm anywhere—even less in Europe than in America, even less in Germany than in France, even less in Eastern than in Western Europe. Too many lessons have taught Europe to have no faith in alliances.

*

America was warned by the Founding Fathers against trusting in alliance even between the 13 States, warned by Washington in his Farewell Address:

"To the efficacy and permanency of your union a government for the whole is indispensable. No alliances, however strict, between the parts can be an adequate substitute. They must inevitably experience the infractions and interruptions which all alliances in all times have experienced."

*

How can alliance be expected in time of peace to rouse the oppressed to the sacrifices that revolution involves, when everyone knows that the nature of alliance leads allies to sacrifice it to save themselves, not themselves to save it?

*

What faith can we expect the Eastern European to have in the Atlantic Alliance, when we know as well as he that by its very nature no nation in it is loyal to it? Even its members are careful to remain loyal only to themselves, each one reserving the right to interpret its commitments to suit itself when its allies are in greatest danger.

Union's Moral Power. Whereas rearming on the nationalistic alliance basis of NATO has left German youth so cold as to worry the recruiters of Bonn's new army, the idea of European Union fired them with enthusiasm. Atlantic Union would have even greater moral power. It would not be so diluted by fear of German domination or French strangulation of Europe. It would present a far more eloquent picture, one not merely of the French and Germans uniting peacefully, but of the Americans and British uniting with them—great nations sacrificing the jealously guarded power of their governments to remain a law each unto itself alone. And they would be sacrificing this "Divine Right" of the Sovereign Nation so as better to preserve the life and liberty of the Sovereign Citizens through constitution of a common federal government to conduct their common affairs, and to guarantee their national independence in all truly national affairs.

*

Atlantic Union would put the American Revolution on the march again indeed. And the more boldly it presented to the suffering people behind the Iron Curtain the picture of a new and greater United States—a United States of all the Free in which there would be a place of equal dignity for them once they threw off the Communist yoke and proved their freedom—the more irresistible its revolutionary power would become.

Super-Magnet. The United States of America has long been a magnet that has drawn to it millions from every nation; countless families in Eastern Europe still testify to this. But the United States of the Atlantic would be a super-magnet. **For to the great mass of Europeans it would mean that they could look forward to enjoying there at home the freedom, dignity, peace and living standards which they previously could gain only by the painful process of emigrating to a distant land whose language they did not know. Atlantic Union would mean bringing America to their door—with all the advantages of Britain, France, Germany thrown in.**

Convention's Quick Impact. It will take time, of course, to get the Atlantic Union set up. The Convention to explore it must first be called; then a plan for Union must be worked out and agreed on there; and then this must be debated and ratified by the participating

peoples, before the Atlantic Union can begin to shower its material benefits on them. But its great psychological impact would begin with the mere calling of the proposed exploratory Convention. This would set in motion at once the twin revolution-making forces of deepening oppression and rising hope behind the Iron Curtain. As Atlantica moved on toward Union, these forces would be gaining the power needed to upset dictatorship from within, starting in Eastern Europe. Once the U.S. Congress approved the resolution calling for the Atlantic Convention it would have turned the tide, put Communism on the way out.

*

Congressional approval of the Atlantic Convention resolution would have the greater immediate moral impact because it would come with all the force of surprise, even in the United States. Though the resolution commits the country only to explore with other democracies the possibility of uniting Atlantica more effectively "federally or otherwise," yet the fact is that most Americans and Europeans assume even this is unlikely to be done this year.

President Eisenhower has repeatedly stressed the need of greater Atlantic unity, and both Secretary Dulles and Chairman George of the Senate Foreign Relations Committee publicly endorsed the Atlantic Union resolution before assuming their present offices. Yet who would doubt that if they now used their power to get this resolution adopted they would surprise the world?

Peace by Surprise. To repeat what we wrote in these pages in February 1953: "Why do we seek to win only war—never peace—by surprise attack?

*

"By its principles and practices, dictatorship is far better prepared than democracy to win by war through surprise attack at the start.

*

"Democracy's best hope is to win by surprise attack—without war."

*

"To surprise the enemy one must first surprise oneself, for one must do more than one thought one could do. But to outdo oneself—what gives more satisfaction, a greater thrill?

*

"By surprising ourselves, we electrify ourselves, and all our friends."

How can we reasonably expect to win against dictatorship without war—except by taking it psychologically by surprise? Then why not at long last try to do this with the Atlantic resolution? A more prudent yet potent surprise move could hardly be imagined than its adoption now.

Moscow Respects Unity. Nothing could more quickly make the West appear immensely stronger to the Kremlin than could a U.S. decision to call the Convention to explore Atlantic Union. Moscow not merely respects the proverbial strength that lies in union; it makes a fetish of unity, worships it to the point of carrying it to the extreme of tyranny, and permits no disunity or "deviation" even within the Communist party.

*

Time and again the Kremlin has pointed to Soviet Russia's "monolithic" unity as its chief source of strength, and has echoed Stalin's belief that the great weakness of the Atlantic democracies lay in their disunion—in a disunity so chronic and deep that Stalin assured Moscow it could count on these "capitalist nations" to cut each other's throats.

Bases Saved. Not only would Moscow be taken by surprise by the calling of a Convention to explore Atlantic Union; it could be counted on to appreciate better and sooner than anyone the swift, overwhelming increase in power that Atlantica would gain by Union. It would see at once that the West could thus grow greatly in armed strength even though it agreed to reduce to the levels Moscow proposes—and that federation would make the "foreign bases" in Western Europe the "domestic bases" of an Atlantic Union, thus ruining the Kremlin's scheme for nullifying this essential element in the NATO system.

Quick Results. Moscow did not wait for the London-Paris accords to be ratified before it began its efforts to increase its armed power by lowering living standards. It did not wait for West Germany's 12 new divisions to be organized and armed before it began to make concessions designed to prevent or delay this increase in Atlantic power. It is a safe guess it would not wait for an Atlantic Convention to agree on a plan for Union before starting its efforts to squeeze still more war production out of its poor slaves. Nor would it delay to offer surprising concessions to the West in the hope of removing all incentive for Atlantic Union. It can be depended on to do its utmost to create the conditions that would foster Atlantic disunion and depression. Only thus can it turn the tables and expose the free to the dangers of revolt with which their Union would threaten Moscow.

Dulles Saw Truly. Secretary Dulles stands out among the few statesmen who have seen the possibility of winning through Freedom's revolutionary weapon. His emphasis on liberating the oppressed peoples of Eastern Europe brought him widespread criticism in the Atlantic Community — a fact that reflects its present perverted scale of values, its accent on the military, its neglect of the revolutionary. True, part of the criticism was due to a mistaken belief that he meant to liberate them by military invasion.

At Valley Forge & Valmy. The thoughtless assumption that the only way Eastern Europe can be liberated is by another World War speaks volumes on how lamentably the free now tend to forget the great expeditionary idea that served them so decisively before, when Freedom faced crowned autocrats — whether at Valley Forge in America or at Valmy in France—and had little more than its own idea power to defend it.

What Dulles Needs. Secretary Dulles was right when he pointed to the possibility of ending the Red danger from within the Red Empire, and he was right again when he saw Eastern Europe as the key to success. He was wrong only in not arming himself with an expeditionary idea strong enough to do the job. The means he has so far offered since becoming Secretary of State have fallen far short of what his objective would require.

*

It is earnestly to be hoped that Secretary Dulles will not be deterred by past criticism from pressing forward now with his sound strategy. But may he first send to rest camp the tired ideas that have been serving so long at this front. May he soon replace them with the powerful idea he has been holding in reserve—the truly revolutionary American idea of Atlantic Union, the United States of Freedom.

[*On Second Thought*]

Depression, Too, Can Start In the Mid East

THE situation in the Mid East grows rapidly more ominous. It bears within it not only the widely discussed danger of sparking another world war but also the widely neglected danger of setting off an economic crash. Oil is the source of both threats.

*

Oil is a major factor not only in the U.S. economy but in that of Britain, France, Germany and all Western Europe. The British Isles produce no oil, France very little, Germany not a third of its needs. All Western Europe is heavily dependent on the Mid East for its oil supply. Most of this reaches it by tanker via Suez from the oilfields of the Persian Gulf and Saudi Arabia.

Risk War for Oil? Suppose that Western Europe's oil supply should be suddenly cut off by Soviet machinations among the Arab States. The West would then face this dilemma: Either it would have to risk war to keep its oil supply, or it would have to suffer disruption of its economy.

*

If Moscow succeeds in cutting off Mid East oil, it will probably do so only when the situation is such that Britain and the U.S. could not hold these oilfields by force except by risking an atomic world war with Russia.

Even if it were found to be bluffing, Moscow might well gain a propaganda victory. Certainly it would do its best to present to the world a picture of the U.S. and Britain ready to risk plunging the world into atomic war for "oil imperialism," and of Soviet Russia as the power that preserved the peace.

No Oil, No Jobs. Suppose that the dangers inherent in holding the Mid East oilfields by war led the West to let them be cut off from it. All the transporting, manufacturing and servicing industries in Europe that depend on oil—aviation, automobiles, buses, diesel trains, etc.—would then be crippled or halted. This would result in unemployment and social troubles that the Reds could easily exploit.

If Western Europe were deprived of the oil from the Mid East, the danger of losing key countries of Western Europe from within would bring heavy pressure on the U.S. to divert part of its own oil supply to its allies. Yet the U.S. with its booming economy and millions of automobiles is already oil thirsty. It could not divert enough of its supply to hold Europe without running short itself — without engaging in wartime controls, rationing, etc. What would happen to automobiles and farm machinery sales—already lagging —in such conditions? With the outlook for sales thus darkened, lay-offs would rise. Unemployment could spread rapidly by chain reaction from such a blow.

Egypt—and Reds—Celebrate. Only one great power—Soviet Russia—sent its Foreign Minister to participate when Egypt celebrated for three days—June 18-20—its having gained from the British complete control of the Suez Canal. The Kremlin sent its new Foreign Minister, Dmitri Shepilov, who won that post as the expert on Mid Eastern affairs who had engineered last summer's post-Geneva surprise deal by which Egypt got arms from the Reds.

To mark the withdrawal of the last British troops, Premier Nasser paraded his new armed power. Will it encourage him to close the Suez Canal to tankers bringing the oil of the East to drive the motors of Western Europe

. . . should this fit into the strategy of his Arab alliance?

What Price, Egypt? Moscow chose Egypt's Suez celebration to underbid substantially the Anglo-American offer to finance the Aswan High Dam project. Shepilov offered to loan Egypt $1.12 billion for 20 years at only 2 per cent interest to pay for this dam, on a basis that would bind Egypt's economy to the Soviets for at least that period.

Uncertainty in U.S. While Moscow was showing increasing evidence that it was giving No. 1 rating to Egypt and the Arabs and was prepared to gamble heavily in the Mid East, uncertainty was rising in Washington because of President Eisenhower's second illness.

Will Moscow Strike Now? The Kremlin can be counted on to exploit to the fullest, in the coming weeks and months, the present weakness in Washington. It will certainly consider the advantages of striking in this period of uncertainty to stop the flow of oil through Suez to the industries of West Europe.

August, when the Republican Convention names its candidates, is the lazy, vacation-minded month in the West which ushered in not only two World Wars but the 1929 economic crash.

One Moral. Failure of the U.S. Congress to call, before adjournment, the proposed Convention to explore Atlantic Union means that this move will have to be made later in worse conditions. Now it would be a sign of strength that would give the Kremlin pause. Made next year, conditions then may make the world regard it as a sign of weakness, and may help Moscow to picture it as motivated only by "oil imperialism." Death is the wages of sin . . . including the sin of omission.—C.K.S.

Forewarned of Suez . . and of Worse to Come

An advance proof of the preceding editorial was sent to Secretary Dulles, Sherman Adams, Assistant to President Eisenhower, and Senator Walter F. George, Chairman of the Senate Foreign Relations Committee, on July 3 — more than three weeks before Egypt seized the Suez Canal on July 26. An excerpt from the letter to Secretary Dulles — similar to the covering notes sent the others—follows; unlike the editorial it is not reprinted but published now for the first time.—C.K.S.

July 3, 1956

DEAR SECRETARY DULLES:

. . . You know the dangers in the Mid East far better than I. Experience, however, shows that the best informed sometimes overlook the blow that was really in preparation, and are caught by surprise, as at Pearl Harbor. And so I venture to attach a galley proof of my editorial in our forthcoming July magazine, entitled, "Depression, Too, Can Start in the Mid East"—by a Shepilov-shaped move to cut off Western Europe's oil supply.

For several years now I have warned that 1) the Soviet strategy aims to win by fostering depression, 2) the danger period starts in 1956, and 3) if the proposed Atlantic Convention is not called before a crash, it may be too late, for whereas military aggression in Europe tends to unite the democracies, an economic crash divides them worse than ever and stimulates nationalism to a degree suicidal for freedom.

This was true of Weimar Germany which fell to National Socialism through the last depression. I venture to say that it probably will be true of not only Germany but France, Italy, India, Japan and others if we wait for the economy of Atlantica to crash before we call the proposed Convention. In such an emergency it alone could recommend with the necessary speed and prestige the far-reaching measures of Atlantic unification which every responsible statesman must know in his heart are now quite overdue.

I hope I am wrong in fearing that an economic crash can come out of the Mid East, or anywhere else. However, my guesses of the kind of disaster that Atlantic disunion would produce at a given time have been right often enough since 1939 (see pp. 196-99, and Annex 6, *Freedom Against Itself**) for me to feel that I should express these fears to your now, before the adjournment of Congress delays the needed action until 1957.

You may be right in believing that the Kremlin is really losing control over foreign Communist parties. But if so, this picture of weakening Communism can: . . .

> Encourage the Kremlin to divert attention and restore its authority, not necessarily by the classical method of a foreign war, but by the bold stroke (more in keeping with marxist thinking) to which my attached editorial points . . . that of confronting us suddenly with the dilemma of either appearing before the world as ready to back Eden in risking H-bomb world war for "oil imperialism," as many uncommitted countries would see it, or risking an economic crash.

Where then would be the Republican campaign strategy of booming prosperity but not booming guns? And where would be some other important things?

If Congress approves the Convention this month, the world will regard it as a move from strength; it will cause consternation in the Kremlin, rouse new hope in Poland, Czechoslovakia, Hungary, and all through Eastern as well as Western Europe; it can turn Communism's present weakness into a rout. If we wait until next year to call this Convention, we risk losing its moral power. . . .

Sincerely,

CLARENCE K. STREIT

Oct. 17, 1956

Dear Ed:

Just heard you on radio tonight which reminded me that I hadn't yet carried out my intention of congratulating you on the Suez TV report which I saw Sunday a week ago and found a superb piece of reporting - you do ask the most searching questions - though I confess I regretted that you did not bring out the part played by the villain in the piece (the disunity among the democracies you stressed to me as the thing on which Nasser was banking.)

Only this disunity - as I recall you - allows this poverty-stricken country to challenge successfully the West. And Nasser had told you how he was counting on it to bring the western nations round. No doubt what he said on that subject couldn't be used as a direct quote on TV. But since you saw its significance, why not make it clear somehow to the public who think the villain is Britain, of France, or the U.S. (depending on the accident of where they were born) - not the dismal fact that they have no means of agreeing in good time on any common policy?

Enough - too much - of that.

To turn to your broadcast tonight: Is the important thing whether the President thinks he is strong enough to get out and campaign more than was expected - or whether he has fallen victim to a very common delusion, and is thereby likely to overstrain himself, with results that can be disastrous - after the election?

You know what it is to be wrapped up in a job and go charging on, thinking you have more nervous energy than you really have. I know it, too. I've done a little campaigning , too, in the past 17 years. Nothing to compare with what Kefauver does, but still, I know what it is to speak several times a day, with a view to persuading people to do something definite, and repeat this, day after day, from town to town. I was never really tired until I finished the long tour - and then, my God, I was tireder than I thought a man could ever be. I was luckily endowed with an iron constitution and lots of resilience - but I've noticed that as the years go on, they're not what they used to be. One cannot generalize for others, but, all things considered, my guess is that Ike won't survive a 2nd term, and will pay heavily for the present proofs of health. If so, the real issue is: Nixon or Stevenson. When it is so evident that the whole Republican campaign could be sunk any day - even Nov. 5 - by Ike having even a semi-major illness (to say nothing of another heart attack), I am astounded, and somewhat depressed, to see that apparently little weight is given to this consideration.

Incidentally, everyone thought Ike the picture of health just before he came down, September a year ago. I've yet to see any pictorial agency which showed comparative pictures of him then - before the attack - and now. Maybe they would prove the case he wants proved. I don't know. But the ;ictures should exist. Why doesn't anyone trot them out?

Best regards,

Clarence

October 2, 1956

Dear Ed,

Here is our Tenth Anniversary issue, which we discussed when I had the pleasure of seeing you last week. I hope you found time to read the editorials on Suez and on the election in the page proofs I left with you. In case you didn't, I have marked some ~~pages~~ passages in them, and also some other things in the enclosed magazine that I thought would interest you.

I look forward to hearing your talk on the general subject which I think you said you would make on TV Sunday. I would appreciate your having your secretary give me the correct day and the time if my memory is wrong and also send me a written copy of your talk on that occasion, if it is available. I still understand through the eye better than the ear.

If you can find a peg in our Tenth Anniversary on which to hang some comment sometime, drawing attention to our work, I would greatly appreciate it - and so would the many good souls who make this work possible. If you cannot find such a peg but have any suggestions to offer me as regards any other CBS service, I would appreciate that too.

I was delighted to hear you say that you would be in Washington within a fortnight or so and would try to find time for a good talk at lunch or dinner. We would be very happy to have you at dinner or lunch when you are here. Please let me know when that will be so that we can reserve the date. I realize that your tight and changeable schedule may make any arrangement impossible to fulfill in the end, but we would be quite willing to take our chances.

I, too, always feel better after seeing you, and so I do hope I may see you soon again.

With warmest regards, I remain

Sincerely,

Clarence

ATLANTIC UNITY

ATLANTIC CONVENTION RESOLUTION

All 4 candidates hit this target, especially those for Vice President. Nixon, as Senator, co-sponsored Kefauver's Atlantic resolution. See "Which Victory Helps Atlantica Most?" Page 1

Dutch Mayor Pays "$18 a Year"—Gladly —for *Freedom & Union*

Baron Michiels van Kessenich, Burgomeester of Maastricht, city of 80,000 in Limburg Province, Holland, wrote Mrs. Chase Osborn of Michigan, who had introduced FREEDOM & UNION to him, the following in a recent letter in his own English:

"Already much too long I have your letters, tokens of kind remembrance, unanswered. Receiving *Freedom & Union* regularly, I must confess that, although reading is quite a selective thing for me as I always have too much, I never forget to put this periodical somewhere in a safe corner, where I can read it attentively. On the 17th of July I made my subscription with $5,* and with this small amount —which is for Dutch purchasing value something like $18—I want to show my very keen interest in the great enterprise of this movement. As I see the difficulty of any kind of union, it is a basic difficulty to sacrifice a little own advantages for the betterment of a great thing of all."

Baron Michiels van Kessenich
Burgomeester of Maastricht

[*On Second Thought*]

Which Party's Victory Will Help Atlantic Union Most?

ATLANTIC UNIONISTS, face the happiest choice in this U. S. election they have ever faced. In October, 1952, we wrote here: "Whoever wins, they can't lose, since both Eisenhower and Stevenson are in favor of closer Atlantic unity, and both Nixon and Sparkman are sponsors of the Atlantic Union resolution." That applies now, only more.

*

The one change in the two tickets since 1952 is that the chief sponsor of the Atlantic resolution, Senator Kefauver, has replaced his unfailing co-sponsor, Senator Sparkman, as the Democratic nominee for Vice President. And meanwhile the office of Vice President has gained in importance. Meanwhile, too, all four candidates have moved our way.

Non-partisans Must Vote. The Atlantic Convention resolution has always enjoyed bipartisan support in both Houses of Congress. FREEDOM & UNION is, as it has always been, non-partisan. But every Atlantic Unionist — except rigid party regulars (the movement includes these on both sides)—will ponder carefully: How can I do best with my vote to speed the Atlantic Convention? For some this question will be all important; for others, it will be one of several considerations determining their choice between the tickets or between candidates for Congress. It may lead two equally ardent and intelligent Atlantic Unionists to opposite decisions.

—Burck, Chicago Sun-Times

"I Like 'em Both"

One Atlantican's Views. Some of the election pondering of one federalist—for whom the interests of Atlantic Union have long been all important—may help inform and clarify the thinking of others. In this spirit I give now my own personal views, written before the campaign has really begun.

Eisenhower Record. Eisenhower's war and NATO experience and the statements in favor of some form of union in the Atlantic which he made not only privately but in his public report to NATO in April, 1952, and other considerations led me to believe in 1952 that his victory would best serve the interests of Atlantic Union. He began, however, by sharply disappointing this hope.

*

During his first two years President Eisenhower badly neglected the Atlantic community — much more than Washington ever had since NATO began. This was due to no indifference, but rather to a strategy which aimed at speeding German rearmament by trying to force the European Defense Community on the French by making them believe there was "no alternative" to it, such as Atlantic Union. When this failed com-

pletely, and the EDC was replaced by the Paris accords in early 1955, the Administration began to move toward the Atlantic Convention. By June it had advanced far in that direction.

*

In July 1955 came Moscow's shrewd and successful diversionary move against Atlantic unity—the Summit conference at Geneva. This killed the hope of Congressional action on the Atlantic resolution before adjournment. Even so, it is to the Administration's credit that Secretary Dulles dropped all the many objections to the Atlantic convention which the State Department had voiced under Secretary Acheson, and expressly stated he was not opposed to it. He held, however, that Congress should take all responsibility for it. He also wanted certain things in the resolution changed; its sponsors were willing to do this. The Administration, however, did not, even privately, push for action.

Heart Attack Intervenes. Once Congress adjourned in 1955, the Soviet-Egyptian arms deal and the October Geneva conference showed how much the July excursion to the Summit had been in the clouds. But meanwhile President Eisenhower had suffered his heart attack. This made the movement toward Atlantic unity mark time for the next seven months. After the President returned to work, the Administration soon resumed its march toward closer unity—more strongly than ever.

Ike Accelerates. The Dulles speech last April in favor of exploring new ways to "advance NATO from its initial phase into the totality of its meaning" was the first positive public leadership the Administration had given in this direction. President Eisenhower followed May 9 by naming Senator George his representative for the development of closer Atlantic unity, and declaring, "I regard the contribution which the U.S. can make to this project as of the utmost importance." This was even stronger than the statement he had made four years previously in his report to NATO as SHAPE Commander:

"Within the Atlantic community, and in Europe, we have the opportunity to build a bulwark of peace—a central position of unity and strength for the free world. This, then, must be a first and fundamental consideration."

It was happily clear that President Eisenhower at long last had returned to the track he had so disappointingly left on entering the White House.

*

After the NATO Council appointed, on U.S. motion, its Committee of Three to explore strengthening NATO, I was personally though privately assured in the highest Administration quarters that it would be helpful if Congress supplemented this scouting party on the Executive level with the proposed Convention on the citizen level. Once more there was hope of action—which the Administration could easily have secured in Congress. But a month went by, in which it made no move, even in private.

Again Illness Intervenes. Suddenly in June the President was stricken again. Caution replaced courage in the State Department. Congress was rushing toward adjournment by the time the President recovered. In these circumstances, the Administration decided that it would create "confusion" if it favored exploring Atlantic unity simultaneously by the

How Election Result In Congress Would Effect Atlantic Resolution

The Senate. The election situation as regards the Senate Foreign Relations Committee—the decisive one for the Atlantic Convention resolution—is as follows: Of its eight Democratic members, six support this measure. Only three of these, Senators Fulbright, Long and Morse, face re-election now, and the first two are already assured of this. The other two Democrats are Chairman George, who twice co-sponsored the resolution before becoming chairman, and Senator Green who is non-committal but inclined to follow the State Department. Since George is retiring, Green, who will be 89 this October and is very alert for his years, will become chairman if the Democrats keep control of the Senate. The next in line for chairman on the Democratic side will be Fulbright, a supporter of the Atlantic resolution. If the Democrats lose the White House, Senator Kefauver would most probably get the vacant seat on the Foreign Relations Committee.

None of the seven Republicans in the Foreign Relations Committee has sponsored the current Atlantic resolution, though one of them, Senator Aiken, sponsored it in 1951. Three of the seven face re-election; they include two opponents of the measure, Senators Hickenlooper of Iowa and Capehart of Indiana. The other, Senator Wiley of Wisconsin, is friendly, and if re-elected would be chairman, should the Republicans win the Senate. Next in line is Senator H. Alexander Smith who has been benevolently negative, but would probably follow a Republican Adminstration line. If both Wiley and Hickenlooper lose, Senator Langer of North Dakota, who has the purest isolationist record in the Senate, would be the Committee's second ranking Republican. The other Republican member is Senator Knowland, who would become majority leader if the Republicans win the Senate. His attitude toward the Atlantic resolution has been negative, but passive. He has opposed Administration foreign policy more than once in the Senate.

The House. In the House Foreign Affairs Committee, eight of the 17 Democrats and only one of the 12 Republicans are announced supporters of the present Atlantic resolution, though four other Republicans were thus listed before their party won the White House. All the members of this Committee, of course, face re-election. The chairman, James Richards, is retiring from Congress. By seniority, the next chairman, in the event of re-election and Democratic control, will be Thomas Gordon of Illinois, a long-time supporter of the Atlantic resolution. Next in rank will be another supporter, Thomas Morgan of Pennsylvania.

If the Republicans win the House, Robert Chiperfield of Illinois would be chairman and John Vorys of Ohio second in rank. Neither has ever supported the Atlantic resolution and Vorys is benevolently opposed to it. John McCormack of Massachusetts, who would remain majority leader of the House if the Democrats keep control, is very sympathetic to the resolution. Charles Halleck of Indiana who will have this post if the Republicans win the House is non-committal, as are also Speaker Rayburn and Joe Martin, who would be the Republican Speaker.

Convention and the Committee of Three. And so again the resolution was stalled. The President did, however, take the trouble to write me his encouraging letter of July 26 (published in September FREEDOM & UNION), explaining that "this by no means forecloses future consideration of the alternative you support," and reaffirming his own deep interest in Atlantic unity.

*

Thanks to the active leadership of such Stevensonian Democrats as Senators Humphrey and Sparkman, the Foreign Relations Committee before adjourning gave the Administration one further opportunity to act this year. It watered down the resolution to where it called only for a Commission, which the Administration could name and finance without further action by Congress, and referred this to Secretary Dulles. But, as will be seen on page 7, the Administration has decided against this.

To Sum Up on Ike. At heart he is, I believe, for Atlantic Union. His strategy of pushing first for the EDC was defensible; though I always contended it was unsound, most Americans and Europeans agreed with it. But the event is the test—and the school—of statesmen; it proved this Eisenhower policy was a bad mistake. It cost the West two precious years, and leaves it now with the chief thing the President sought to gain — German rearmament on the NATO side — increasingly in doubt as Adenauer's star lessens. Meanwhile NATO has been undermined in many ways. No important strengthening of it can yet be credited to the Administration, but it has now begun a very serious effort to unite the Atlantic Community. I feel sure this will bear good fruit when the NATO Council meets in December.

*

The President, if he wins the election, will aim, I believe, to lead vigorously toward Atlantic unity in 1957, particularly if Dulles remains Secretary of State. His chief difficulty lies in his own party. How far and fast he goes will depend on several factors; most of all on his health.

What of Nixon? Vice President Nixon as a Senator was one of the co-sponsors of the Atlantic Union resolution when Senator Kefauver introduced it in January 1951. After he was nominated for Vice President in 1952, the Chicago *Tribune* questioned him about this. He stood firm, though the isolationistic wing of the Republican party was then stronger than now. He has never since then repudiated the resolution. Nor has he actively supported it.

*

As Vice President, Nixon has followed the President's lead, and I believe he shares his views on the Atlantic Community. True, the go-it-alone Republicans have done their best to identify him with them. I do not, however, share the fears that he is one of them, or would go their way in the Atlantic, if he became President. But I do fear that this would delay Atlantic Union for other reasons.

*

At best, I would expect a struggle for the Republican succession to start soon after the election, since the 22nd Amendment prevents President Eisenhower from having a third term. This fact should increasingly weaken his hold on his party during his second term. The leadership would of course fall to Nixon if he had to take the President's place. This would not make him more popular with such rivals as Senator Knowland, who are powerfully placed in the Senate.

*

Instead of having the cooperation that Eisenhower has enjoyed from the Democrats, Nixon as President would suffer from their distrust. He would probably be driven to appeasing the go-it-aloners in his party in the hope of preventing a bad split. This would make for rash caution in the Atlantic rather than prudent boldness—the thing that is needed.

Giving Blood—or Bleeding to Death?

Stevenson & Atlantica. There is no question in my mind that Adlai Stevenson is at least as strongly in favor of closer Atlantic unity as President Eisenhower. Since 1952, he too has publicly advanced in this direction.

*

Stevenson was a signer of the Declaration of Atlantic Unity in 1955. Its five-point program called for (1) "the development of NATO as a central agency to coordinate the political, trade and defense policies of" members, (2) a mutual lowering of trade barriers within NATO, (3) creation of NATO committees in the legislature of each NATO nation, (4) establishment of an advisory Atlantic Assembly, representative of NATO member legislatures, and (5) creation of an Economic Council representing employers and employees in NATO countries. This goes somewhat further than the Administration has yet gone publicly, though it gave the Declaration a very friendly reception. In endorsing the whole program, Stevenson wrote that NATO must advance "into the political and economic spheres."

*

As for the proposed Atlantic Convention, Stevenson, like President Eisenhower, has never endorsed it publicly. I have good reason to believe, however, that he is even more favorable to it than I think the President is, privately.

No Doubt About Kefauver. In Senator Kefauver Atlantic Unionists have long had their strongest, most active and dependable leader in the Senatorial and Presidential fields. He was the first candidate for the Senate to endorse our program, and the first in whose election it played a decisive part. That was in 1948 when he defeated the legendary Crump machine thanks—as he himself wrote me at the time — to a Citizens Committee of Seven. It was formed to support him because he promised to sponsor a resolution for a Convention to explore Atlantic Union if elected. Five of this Committee's seven, including its key man, Edmund Orgill, now mayor of Memphis, were active Federal Unionists.

*

Senator Kefauver promptly carried out his pledge; he was chief sponsor in 1949 of the first Atlantic Convention resolution. He was personally responsible for getting it more co-sponsors than anyone had dreamed it would get at the

start. He was again the chief sponsor when it was reintroduced in the 82nd Congress in 1951 and in the 84th Congress in 1955. For eight years he has urged it in many speeches.

*

Since 1948 I have been on close terms with Kefauver. I must testify that he has never wavered on this issue and has proved time and again that he put the interests of the Atlantic Union Convention proposal above what others thought were his own political or personal interests. He stood his ground when attacked because of it in both his campaigns for the presidential nomination.

*

When Senator Kefauver faced reelection in 1954, his opponent, Congressman Sutton, appealed not only to race prejudice but chauvinism, and made Atlantic Union a major issue. Charles A. Caldwell, who covered the primary campaign for the Memphis *Press-Scimitar* wrote of it in the September 1954 FREEDOM & UNION:

"It was the courage of Senator Estes Kefauver—exemplified in his refusal to back down on his support of Atlantic Union — that turned a vicious demagogue's attack on him into victory at the polls this summer in Tennessee. . . . As Sutton's attacks grew more vicious, Kefauver's tone grew firmer and firmer. When Kefauver ended his campaign the night before the primary election—with a State-wide radio broadcast . . . his last words to the people of his State were: 'I am for Atlantic Union.' "

Kefauver's Stature. I have been in an unusually good position during the past eight years to form a sound judgment about Kefauver. He impressed me favorably from the start, and he has grown and grown in my esteem, particularly in qualities which I rate high in a President. These include moral courage, integrity, stick-to-itiveness, good political judgment, sangfroid, far-reaching vision combined with a down-to-earth sense of the practical and a genuine, warm-hearted interest and respect for people, individually and collectively. Practically all the articles about him that I have read in the mass magazines and big newspapers have shown only superficial knowledge and perception, and have badly under-estimated him.

*

Kefauver does not have the exceptional gift of expression that characterize both Governor Stevenson and Vice President Nixon; he suffers in this respect much the same difficulties President Eisenhower does. Nor has he had the training for the Presidency and gained the intimate knowledge of current world problems that Nixon has enjoyed from working so closely with President Eisenhower and the National Security Council. But the Senator has some assets which I would consider still more important; they include a greater capacity to see the forest from the trees, and act accordingly, than the Administration has shown thus far.

*

Recent experience has taught that the Founding Fathers were wise in seeking to assure that the Vice President should be of presidential stature. However much one may admire and trust a candidate for President, his hopes may be wrecked by illness or death—and failure to provide adequately for the succession. The responsible voter must consider which ticket gives the best double guarantee of a good President. Even if Kefauver did not have the Atlantic Union record he has, I still would favor him for President.

If Estes Became President. If the Democrats win and Vice President Kefauver should have to replace President Stevenson, I have no doubt whatever that—assuming the Atlantic Convention had not already been called—one of his first acts would be to urge it strongly on Congress. He would be in a much stronger position to get action on it in a Democratic Congress than Nixon would be if similarly advanced to the White House with a Republican Congress, if only because the go-it-aloners are much stronger in the G. O. P.

Other Pro & Con. The Atlantic Convention's bipartisan support has always been more Democratic than Republican in both Houses. Curiously enough, it had more Republican supporters in both Houses during the Truman Administration than since President Eisenhower took over. A number of Republicans who had previously co-sponsored it then begged off for various reasons, while remaining favorable. The real explanation, I believe, was that they were all strong Eisenhower supporters, and his troubles with the nationalistic wing made them the more inclined to follow him.

The Administration's attitude toward the Atlantic Convention was so negative in 1953-54, when the Republicans controlled Congress and the Administration was bent on "no alternative" to EDC, that no serious Republican sponsor could be found for the resolution, and it was not introduced that session. After the Democrats regained control of Congress, it was introduced early in 1955 when the State Department's attitude was still negative. Even so it did gain some Republican sponsors then.

State Department's Role. The State Department under Dean Acheson was always much more opposed to the Atlantic Convention than it ever was under Secretary Dulles. Acheson was never friendly and constructive in his attitude as Dulles became in mid-1955.

*

One reason why I favored Eisenhower in 1952 was the danger that Stevenson, who then owed his nomination to Truman, might retain his friend, Acheson, as Secretary of State, whereas it was known that Eisenhower would replace him with Dulles, who had publicly endorsed the Atlantic Union resolution. Since State Department career men are habituated to thinking in terms of diplomacy, their attitude toward the Atlantic Convention and Union tends to be negative or hostile. To offset the heavy weight of this bureaucracy it is highly important that the Secretary of State himself should have the deep personal interest in this measure that Dulles has. Perhaps the worst hazard for the Atlantic Convention in a Democratic victory now is that Acheson should become Secretary of State again, but there seems no danger of this since Truman opposed Stevenson's renomination.

*

Secretary Acheson's hostility caused President Truman to withdraw the green light he once tentatively gave the Atlantic resolution. But this never kept even Administration Democrats in Congress from sponsoring it, as the lack of Administration approval deterred Republicans in Congress after 1953.

Congressional Paradox. In sum, experience indicates strongly that (1) because of the division in the Republican party there is practically no hope of getting Congress to call the Atlantic Convention without active Administration

—*Stampone, Army Times*

support if the Republicans control it, (2) there is much more hope for action in Congress without Administration leadership when the Democrats control Congress and/or the Administration, and (3) paradoxically, the best way to assure the strongest Republican support of this resolution is to have the Democrats in full control, as in 1949.

Bipartisan Voting. Many factors will, of course, govern most voters. One may, for example, conclude that a Democratic victory would be best for the Atlantic Convention, and yet, if a Kentuckian, vote to send to the Senate so needed a Republican champion of it as former Ambassador John Sherman Cooper. Or an Atlantic Unionist in Iowa, Indiana or Idaho may conclude in favor of Eisenhower, and yet vote against such Republicans as Senators Hickenlooper, Capehart and Welker. Other things than the direct effect of one's vote on Atlantic Union will also enter into the decisions of most Atlantic Unionists.

Two Sweet & Sour Parties. Personally, I find in general that Republican policy is more to my liking on the domestic side, and Democratic policy in foreign affairs. I prefer Benson's farm policy to Kefauver's, and hard money and balanced budgets to inflationary solutions. I sympathize with Republican fears of centralization, even those of Senator Bricker. I find the Democrats too inclined to turn to the Federal Government instead of the States or the citizens for the key to all problems. But to me the present threat to liberty from centralization lies in depression and war, not in Democratic domestic policy.

*

The dangers of depression and war originate in the field of foreign affairs. These disasters are certain to strike us, no matter how Republican our domestic policy may be, if we do not hasten to federate the Atlantic democracies. The Brickerites not only oppose this but worsen the danger from anarchy in Atlantica by their methods of curbing centralization in Washington. Their cure is more dangerous than the disease is now.

*

Once depression and war strike, they inevitably result in giving immensely greater power to the government. And so my way of preventing centralization and statism is to prevent the pressure of emergency that leads to these, to concentrate not on the effects but the cause —the disunion in the Atlantic.

*

Once the source of the danger of war and depression is removed by Atlantic Federal Union, I am confident that the so-called New Dealers will get nowhere in the U.S.A., and the Marxists will retreat in Europe.

If Reason Ruled. If logic ruled, and the Democrats were really bent on deliberately building up the Moloch State (as Republican orators say, but I don't believe), they would couple their domestic policies with Bricker-Jenner-Knowland foreign policies. And if the Republicans were really intelligently seeking to advance free enterprise and curb centralization, they would combine the domestic policies of the Bensons and Humphreys with the foreign policies of the Kefauvers. Such combined policies would add up, make sense.

*

The voter, alas, is not confronted with an easy choice between two logical and coherent policies. Instead, each party is more or less divided against its own policy—and against the freedom they both seek. The Democrats tend toward centralization on the domestic side, but offer on the foreign side the best hope of removing the forces that make for statism and marxism. And the Republicans who are most loudly alive to the danger of statism from within, are doing the most to produce it by their foreign policies. The voter must strike the balance, and take his risks.

Ideal Party. When President Eisenhower in the frustrations of his first years in the White House dreamed of founding a third party, I have no doubt he aimed at the logical ideal—a party that would unite Republican domestic policy with Democratic foreign policy. He has failed thus far to remake the Republican party along these lines, and I doubt that he will be able to succeed in a second term—on his way out—or that Nixon can do better in this regard.

*

If Stevenson wins, he will face a similar problem, but he has a better chance of working it out. Fortunately for him, he faces in his own party far less opposition to Atlantic unification than Eisenhower does in his, and much stronger incentive to move in this direction. The more rapidly he does advance toward Atlantic Union, the less pressure there will be from war and depression to give government more power over the citizen, and the easier it will be for him to develop moderation at home, and remake his party on lines where both its foreign and domestic policies protect freedom from the two fatal extremes—anarchy and tyranny—that have brought so many democracies to ruin.

Which Way, November? To sum up, as I size up the pro and con, the outlook for the Atlantic Convention resolution in 1957 will be good if the Republicans win, and it will be still brighter if the Democrats do. I may be wrong—in fact, I was wrong in believing the reverse of this in October four years ago, and so I write with diffidence now. But this is the present picture as I personally see it. What is your own view?

—CLARENCE STREIT

Suez, Oil, & 7 Neglected Facts

TO A DISTURBING DEGREE news and public comment in the Atlantic Community continue to neglect the main danger to it in the Mideast, to which we called attention here in July, three weeks before the seizure of the Suez Canal. That danger is not world war but a major economic crash caused by Western Europe being cut from its Mideast oil supply.

•

Even when general agreement rose that war was unlikely to occur now, the spotlight did not shift to the other possibility, that the Kremlin's Mideast maneuvring aims instead at fostering an economic crash in the West. Though the importance of Mideast oil to Europe has been widely stressed, there has been little attempt to spell out the major peril that would result from the loss of this oil. The Atlantican public has been kept blissfully unaware that this loss might well lead by chain reaction to western economic crash.

•

Even those most inclined to see Reds under every bed and to ascribe the worst to Kremlin plotting do not seem worried by the possibility that Soviet scheming in the Mideast aims at producing an army of the unemployed in Atlantica. Yet this would be the obvious way for Moscow to recruit a really formidable fifth column in the West.

•

The reasoning that led us to point in July not only to the immediate danger at Suez but to the resultant eventual threat of economic disaster has not been answered, or denied. It has not been agreed to or acted on. It has simply been generally ignored—the not uncommon fate of truths that people do not want to face. Meanwhile the economic danger has grown graver.

Test Case at Suez. The Kremlin and the Arab nationalists could hardly have picked a better test case than the Suez one to open a campaign to shift control in the Mideast from the West to the Arabs and, through them, to Moscow.

The maximum resistance to a program of national socialization could be expected at Suez. The Canal is an international waterway in which many nations are directly interested. It gives the West the best moral case for strong action that it has in the Mideast, and the most widespread incentive to act.

When Premier Nasser seized Suez on July 26, Britain and France threatened to restore their rights by force. The U.S. made clear it would not back them up that far. Moscow thereafter indicated it would support Egypt with arms. Result: another international conference. The British counted ten, the war spirit cooled, and though Britain and France sent armed forces to Cyprus, few took the threat seriously.

Before the Suez crisis broke, the economic situation in both Britain and France gave much cause for alarm. Their tough talk and costly preparations for war since then have thus far

Volga Boatman Gets Around

served mainly to weaken further their economies, both morally and materially, by lessening confidence in them and increasing inflationary forces. By going to war they can escape the loss of prestige which empty threats entail, but only by jumping from a frying pan into the fire of inflation.

Next, the Oil Fields. It seems reasonable for the Arabs and the Kremlin to conclude from the Suez test that it is safe for other Arab governments to go ahead and nationalize—the fashionable euphemism for socialize or communize—the oilfields and pipelines in their territory. They may be tempted particularly to move as Nasser did—while a presidential election dominates American considerations.

If Washington should use force to restore communized Mideastern oilfields and pipelines to their American owners, this would undoubtedly be considered "naked imperialism" throughout the uncommitted countries. It would fit into communist propaganda much more than would American use of force to keep international a waterway in which Americans have practically no financial interest. Neither would fit into Republican election strategy.

Communization of Mideastern oilfields and pipelines would put the Arabs—and the Kremlin on whom they would then depend decisively—in position to cut at the source the oil that is essential not only to Western Europe's economy but to the NATO airbases which the U. S. strategy of "massive retaliation" requires. This threat can not be met, as the Suez one might be, in time, by building super-tankers to go round Africa.

Doubtful Hope. Many count on self-interest to keep the Arab rulers from cutting off Western Europe's oil. They stress that the Arab states last year received "one billion in oil royalties on a 50-50 profit-sharing basis with the oil companies," and depend on this income for their normal and development budgets. No doubt this will give them pause. But emotional factors, such as nationalism, often cancel out self-interest. The West should know this.

If self-interest ruled, it should have led us to enjoy the economies and other advantages of Atlantic Union; instead, our democracies have sacrificed hundreds of billions of dollars and millions of their citizens rather than "sacrifice their national sovereignty" enough to federate. Why expect the Arabs to be governed less by blind emotion, more by common sense? Especially when Russia is playing an active hand in the game, and has more to gain from ruin than from reason?

Cheaper Than War. In both Arabia and Atlantica nationalism is playing hob with self-interest, but in Russia nationalism and self-interest are working hand-in-hand. Both the elements composing Russian nationalism today—czarist imperialism and communist

ideology—urge it to seek control of the Mideast, not only for its intrinsic value to an empire lacking ice-free ports but as an instrument for wrecking Atlantica's economy.

It cost Russia hundreds of billions of dollars to overthrow Nazi Germany by war. Since then it has spent many billions every year in preparations to destroy the West by war. If the Arabs, from fear of losing present revenues, should hesitate to communize their oilfields and pipelines and cut off Western Europe's oil long enough to bring it to its knees, self-interest would seem to advise Moscow to give them a billion, if need be, to do this.

4 Red Advantages. Nationalization of Mideast oilfields and pipelines has these four advantages for Moscow:

1. It could result in mechanical and technical breakdown, because of lack of experienced management. This would stop the flow of oil westward in a way that would gain the sympathy of uncommitted countries and not incur the risks that willful stoppage would.

2. It could easily lead the Arabs to replace western oil technicians with Soviet ones, thus strengthening Moscow's position.

3. The more power it gives the Kremlin in the Mideast, the better position Moscow is in to gain its ends by mere threat of cutting off the oil, rather than by running the risks of actually stopping it.

4. In any event it advances marxism, since nationalization really means communization or socialization. (To understand why nationalism, far from being the foe of marxism, as some leaders of the Veterans of Foreign Wars mistakenly believe, is bound by its nature to serve communism rather than freedom, send for a free reprint of our May 1950 editorial, "Nationalism Means Nationalization.")

Once Again. The free are paying in the Mideast for the divisions among the Americans, British, French and other democracies which did so much to bring on and prolong the 1929 depression and World War II, and the heavy losses suffered since then in China, Korea, Indo-China. Once again, and not for the last time, they are paying heavily to maintain the undemocratic dogma of unlimited national sovereignty, that each democracy should remain, in last analysis, a law unto itself, —retain the right to do itself precisely what it blames Egypt for doing at Suez. And once again attention in each major democracy is centered on the merits of its own policy and the faults of its fellow-democracies.

7 Facts the Free Dodge. When, for once, will the Atlantic democracies center their attention on the basic fault they all share? That fault is their blindness to these seven facts:

1. Differences of opinion—which are the strength of democracy where there is a common government to assure that the majority can act for the whole community in good time—are transformed into paralyzing divisions by national sovereignty in the Atlantic Community, because it lacks a common government.

2. National sovereignty will inevitably continue to produce these fatal divisions; the leagues and alliances based on it have never prevented them.

3. The one sure way to transform these paralyzing divisions into the healthy divisions of democracy is Federal Union.

4. Communism, unlike the Nazis, Japanese and Kaiser, can win by economic crash instead of war, and this is the key to its strategy in the Mideast.

5. Atlantica is much more vulnerable to paralyzing divisions on the economic than the military side; it has nothing in the former field to compare even with NATO and SHAPE.

6. There are exceptions to the "law that all change must be gradual" which democratic leaders so often cite to justify their snailishness. Crashes are not gradual.

7. Time is running out.—C. K. S.

Dulles Defers Atlantic Commission Idea

THE EISENHOWER Administration has let pass its last chance to begin this year to explore closer Atlantic unity not merely on the alliance level of diplomacy but also on the broader level that opens when citizens meet—as in the 1787 Convention that drafted the Federal Constitution—unhampered by official instructions. The Senate Foreign Relations Committee referred to it a proposal that the President follow this example by naming a citizens' Commission to explore the problem. (See September FREEDOM & UNION for text and comment.)

The Administration has answered by reaffirming its position on the previous, stronger version of the Atlantic Convention resolution. Secretary Dulles explained in a letter to us Sept. 7 it sought to avoid "the creation of confusion by seeming simultaneously to support two different approaches"—NATO's Committee of Three and the Commission idea. He added:

"Since the report of the Committee of Three Ministers has not yet been made, the Administration continues to be reluctant to support this other approach to the development of Atlantic unity. This by no means forecloses future consideration of it."

No Nip—Just a Canal. Clearly, all that Suez has shown already has not yet convinced the Administration that the Founding Fathers were right when they warned against the dangerous confusion inherent in diplomacy's alliances. It strains at a nip, and swallows a canal.

"Confusion" Won A-Bomb. Had this kind of thinking prevailed during the war, the free nations would never have won the race to make that atomic bomb. For it was won when citizen scientists, unhampered by official instructions, decided to take not one, or merely two but *four* different approaches to the problem simultaneously—run the risk of confusion, but not the risk of trusting all the eggs to one basket.

We hoped for better from the President who, when speaking in London July 3, 1951, of the smaller but similar problem of European unity, said:

"Any soldier contemplating this problem would be moved to express an opinion that it cannot be attacked successfully by slow infiltration, but only by direct and decisive assault, with all available means. The project faces the deadly danger of procrastination, timid measures, slow steps and cautious stages."

Arabs, Asians Rise in First U.N. Decade

By THOMAS J. HAMILTON
U.N. Correspondent, N.Y. Times

ALTHOUGH THE U.N. CELEBRATED its 10th birthday in San Francisco in June, the real dividing line will be the 1956 session of the General Assembly, which opens November 12. The three new members, Tunisia, Morocco, and the Sudan, will be admitted in the first day or two, thus confirming the revolutionary action of the Assembly and the Security Council last December, which approved the package deal for the election of 16 members. Thus the U.N., whose membership has remained at 60 ever since 1950 when the 60th member was elected, will reach an unprecedented 79.

This is a far cry from the first concept of the organization, under which the coalition which fought in W.W. II was to constitute a new League of Nations for the enforcement of peace. We are a long way from the days when the only way to get a ticket for admission to the San Francisco Conference was to break off diplomatic relations with the Axis powers.

Neither Germany nor Japan is yet a member, but Italy was part of the deal on the 16, and all the minor Axis satellites are now members. The U.N. is well on the road toward universal membership. Japan is still excluded under the theory that unless an enemy country has signed a peace treaty with all members of the U.N. group it doesn't deserve membership. The Soviet Union has not agreed to a treaty with Japan. Japan's ambition to become a member of polite society again is one of the reasons why most people think it will have to accept the Russian terms before the Assembly meets.

Also barred under the terms of the membership deal are rival governments claiming jurisdiction over divided countries—Germany, Korea, and Viet Nam. With the exception of these six, the phantom state of Outer Mongolia, and Switzerland (which refused to join the U.N.), all the sovereign states of the world are members.

Others who have been promised independence, or are likely to get it soon, such as Nigeria, Malaya, the Gold Coast, and Algeria, seem to be guaranteed election as soon as they cast off their colonial bonds.

(Of course, it can be said that 500 million or 600 million Chinese are not represented, since Chiang Kai-shek's writ is confined to Formosa. The Chinese Communist Government is not a member of the U.N. or its specialized agencies. This situation seems likely to continue unchanged until next year; certainly there will be no change before the American presidential election. The opening of the Assembly, which normally takes place in mid-September, was postponed two months to avoid such a development.

Within a couple of years it is likely that the membership will rise to 85. Even the present 76 members have created a problem for the space experts at U.N. Headquarters. The General Assembly Hall can handle them, and it has only been necessary to do away with the gold disks behind the rostrum; there was only room for 72.

The rooms for Assembly committees are the real headache, since each committee has in it a representative of every U.N. member. Even with 79 members the committee rooms will be crowded; if the total ever reaches 85 the problem will be much more difficult.

—*Scott Long, Minneapolis Tribune*

"You'll Have to Wait for the Next Show"

The change in the nature of the U.N. will be even more significant. The League of Nations was largely a European show, in which Britain and France played the dominant roles. The Soviet Union, Germany, and Italy might have disputed their preeminence but for the fact that the Russians did not join until 1934, while Hitler and Mussolini pulled out. The U.N. so far has been controlled by the U.S., which has relied on Western Europe, the British Commonwealth, and particularly the 20 votes of the Latin American countries. Since the Assembly resolutions on subjects of any importance require a two-thirds majority, the U.S., through its influence on the Latin Americans, had a veto in the Assembly that was almost as reliable as its veto in the Security Council.

All this has been changed. The Latin Americans have been reduced to little more than one-fourth of the voting strength, and their influence, and that of the U.S., has declined. The Asian-African bloc, including the countries to be admitted in November, will total 26. Together with the enlarged Soviet bloc of nine, Yugoslavia(which more and more is back on the old stand on U.N. issues), plus a few discontented western proteges, such as Greece, are now a majority.

Three immediate conclusions are clear.

1. Since both the Arab-Asian and Soviet blocs are anti-colonial, the U.N. is in the process of becoming an organization for the liquidation of the white man's political and economic influence. This tendency was noticeable from the first days of the U.N.; it is now unmistakable. The Suez Canal, Cyprus, and Algerian issues are likely to hold the stage at the coming sessions.

2. The intended functions of the U.N. as an agency for the enforcement of peace are virtually over. The anti-colonial countries are, with few exceptions, neutralists. It is impossible to conceive of the U.N., 1956 model, repeating the action it took on Korea six years ago.

3. The influence of the U.S. in the U.N. has greatly declined.

—*United Airlines*

Why is Atlantic air travel less than 1/50th of domestic volume? Airliner view on left shows it's not lack of good sleeping quarters, and other view proves language differences don't lessen the lure of the other side of the ocean. What's the answer, then?

[*Research Report*]

What Keeps Myriads from Flying Across the Atlantic

By DAVID MILLER

Planes have broken the ocean and the sound barriers—but not the barrier of national sovereignty. It keeps traffic down with red tape and high fares that could be halved, at least, by Atlantic Union; this would add greatly to travel.

AIR TRANSPORT, already one of the strongest material links connecting the nations of the Atlantic Community, promises to be of even greater importance in the future. Research shows that even now it could bring them closer together and serve their people in other ways much more than it does, were it not checked by a political barrier—national sovereignty. This keeps the Atlantic Community divided into more than a dozen nations.

The ocean barrier to air transport went down in the 1920's and 30's, the sound barrier was broken in the 40's, but the political barrier remains.

What this means may be seen by contrasting air transport in the politically divided Atlantic Community with its functioning in an area that is only less vast—the American Community where the people of 48 home-ruled States have entered the air age politically united in a Federal Union which governs such common affairs as interstate commerce and communications.

Three examples may show the high price paid by the people of the Atlantic community—Americans included—for maintaining in air transport the sovereign rights of their individual nation, instead of federating as the 48 States have dine in America. Consider:

A. When goods are shipped by air from New York to Los Angeles—across a dozen States or more—no export declarations are required. But goods shipped abroad by air from the U. S. now require annually the filling out of 8,340,000 of these export forms. This is but one instance of the mountains of needless red tape that national sovereignty creates in Atlantica.

B. The minimum air coach from New York to Los Angeles (about 2,500 miles) is $80. The comparable fare from New York to Paris (about 3,600 miles) is $310. The latter distance is about 40 per cent longer—but the fare is almost 400 per cent greater where national sovereignty enters.

C. In 1952, the number of passengers carried in flights within the 48 States was 25,009,815. In that same year, the number of passengers carried in North Atlantic flights (an area vastly larger and more populous than the U. S.) was 448,072. The two comparable figures for 1955 are 37-392,000 and 692,404. Again, national sovereignty's blighting influence.

It is true that the people of the federated American community have more money to spend on air travel (partly because of the many economic and other advantages of federal union) than do the people of the European half of the divided Atlantic Community. But national sovereignty manages in various ways to discourage even many Americans from flying abroad. The U. S. Department of Commerce and European tourist bureaus say the number of air travellers to Europe from the U. S. alone has not greatly increased in recent years, if one remembers the increased income and leisure Americans have gained.

In short, national sovereignty acts to impede Atlantic air communications and make it more costly by:

1. creating red tape,
2. keeping fares high, and thus,
3. depressing substantially the volume of Atlantic air traffic.

Information based on a survey by a task force of the International Air Transport Association (IATA) provides a few graphic ideas of how the paper work piles up at national borders. The task force was concerned with regulation of air traffic between the United States and other nations. Excerpts follow:

"It was estimated by the Task Force that the compilation of the [Passenger] Manifest costs the airlines over $330,000 per annum for operations into the U. S. No estimate was made of the cost to the Government which, as a result, handles

yearly 2,382,625 pieces of paper . . .

"In the U. S. the required number of copies of the Passenger Manifest is five . . .One extra copy of the Manifest per flight would mean another one-half million sheets of paper each year . . .

"The Task Force estimated that the presentation of [the list of stores] form for flights arriving in the U. S. costs the airlines $14,000 a year. Many countries require only an oral declaration of stores.

"Carriers at present must prepare a form of authority for consignees to clear consignments through customs . . . It was suggested that these forms should be rubber stamped with the release order. This simple change would eliminate 1,000,000 forms and save the airlines over $200,000 a year.

"An outstanding example of a form being required unnecessarily is the shipper's export declaration. In the U. S., a copy of the declaration is given to three government departments, each department receiving in one year 8,340,000 forms . . . The Task Force, however, found that one of the departments concerned did not require the form for shipments under $100 value. This represents 2,500,000 unnecessary forms. If the other departments were to accept the same minimum valuation, over 7,000,000 forms a year would be saved . . .

"The Bureau of Customs undertook to introduce simplified procedures for in-bond shipments . . . The airlines estimate that those changes will save $150,000 a year to the industry.

Federation Cuts Red Tape

Virtually none of these forms are required for traffic between states of the United States, nor would they be required if the Atlantic Nations formed a federal union. While it would be wrong to say that Atlantic Union would eliminate all red tape, it seems certain it would do away with a basic condition which is responsible for much present "paperfluousness."

Other problems caused by national borders, as reported by the IATA, center around Air Traffic Control Centers. These are created to conform with national boundaries and with little regard for the needs of aircraft operation. The result is that the control areas are often excessively small and unrelated to route patterns and require excessive transfer of information among the centers. This is expected to get worse as aircraft speeds increase.

Another problem caused by creating control areas along national boundaries is seen in Ireland. There, through planes not intending to land must circumnavigate the country, wasting time and fuel. Finally, the IATA points out, national customs regulations prevent or hamper the pooling of spare parts among airlines, and this raises costs.

None of these problems occurs in the entire U. S. where there is a single federal control. Nor would they exist in a federated Atlantica.

So much for the red tape that hampers Atlantic air communications. What about fares?

Offers $145 Transatlantic Fare

In recent months Trans-American Airlines (formerly North American) has sought to establish regular services from the U. S. east coast to Luxembourg, with one-way fares of $145 to $158. These are far below the $310 New York-Paris fare cited earlier in this article, and they have served to call attention to what seems to be an inflated fare structure. Trans American is the non-scheduled U. S. airline which led the way in creating domestic low-cost air travel by offering a coast-to-coast fare of $80, a rate later accepted by the scheduled airlines. In discussing the proposed rates, Trans American's J. B. Lewin said:

"Allowing for certain higher costs involved in international operations [presumably including the red tape described above], Trans American is confident that aircoach service can be made available at a fare of four cents per mile. While this is about 30 per cent higher than domestic fares, it would constitute a reduction of 43 to 53 per cent in existing transatlantic aircoach fares."

(IATA is a non-governmental organization to which almost all scheduled airlines belong. Its rates are usually accepted by the U. S. and other governments of member lines and it has thus become a quasi-official rate-making body in the international field. The Civil Aeronautics Board (CAB) regulates U. S. domestic rates.)

Concerning Pan American's request to IATA that rates be lowered, President Juan Trippe said:

"The number of Americans traveling by air would increase 50 per cent soon after the low air fare service became available. Tourist expenditures abroad are now the most important factor in American foreign trade; in fact, tourist expenditures abroad last year permitted friendly governments to earn a billion and a half dollars with which to purchase American-manufactured goods and farm products. **Low fare air service and a great expansion of tourist travel abroad would become, in the critical years ahead, the most important single contribution to the growing economic strength and mutual understanding of the free world."**

Agreeing with this in principle, CAB said in May, 1955:

"We have concluded that the public interest requires a liberalization of our policy in this area. This liberalization will make it possible for groups of people who would not otherwise be in a position to do so, to obtain the advantages of foreign travel so helpful to the development of better international understanding."

Air fares and traffic volumes are closely linked. What is the volume of North Atlantic air traffic now and what might it become if fares were to be substantially reduced?

Figures supplied by the IATA indicate that in 1955, North Atlantic scheduled lines carried 692,404 passengers. The comparable figure in 1952 was 448,072. That amounts to an increase for the three-year period of a little more than 30 per cent, or about 10 per cent a year.

There is a feeling, at least in the U. S., that rates could be cut to a level which would remain profitable while increasing U. S. transatlantic volume by 50 or even by 100 per cent. The two estimates are those Pan American and Trans American respectively quoted in support of their proposed rates.

Trans American says that if the U. S. air passenger volume abroad were to be doubled, dollar exports to Europe in the form of tourist expenditures would increase from the 1955 level of $600,000,000 to $1,200,000,000 annually.

Some effort has been made to reduce fares. While the IATA refused to accept the rates proposed by Pan American, it did make rate revision recommendations in June. The IATA says that proposed rates (to take effect Oct. 1 if members' governments agree) amount to a 20 per cent reduction.

However, in analyzing the proposals, Paul J. C. Friedlander said in *The New York Times* on July 1:

"A study of the proposed new tariffs shows that there will be some marked increases in first-class fares, and that the present off-season (Nov. 1 to March 30) reduced rate fares will be abandoned this Fall. And, paradoxically, two adults can go to Europe under the present tourist-class family plan more cheaply than they will be able to under the new and supposedly sharply reduced 15-day excursion rate."

Meanwhile, Trans American—which as a non-member of IATA does not need its permission to offer sharply reduced rates—has been unable to gain approval from the CAB to try them out on an experimental basis and without the government subsidy received by the scheduled airlines.

If there is a mass air market to be reached, why are IATA's member airlines not adjusting rates to reach it? An important part of the answer was given in testimony before a House Committee investigating airline practices. The following dialogue took place between Sir Percival Hildreth, IATA's director general, and Representative James M. Quigley (D. Penn.) a member of the Committee. After the latter inquired about the great discrepancy between the fare of $80 from New York to Los Angeles and the $310 fare from New York to Paris:

HILDRETH: The answer is that the terrific dvelopments here, the expert skill, has produced a wonderful thing. I hope we can match it, but give us a chance.

QUIGLEY: Do they suddenly lose their expertness when they get out over the Atlantic?

HILDRETH: No sir. I think that is not quite a fair question, you see. **In the States, one country, no currency problems, one control and an enlightened one at that—the nation with its high standard of living demands this great development. On the Atlantic, you are not dealing just with the Americans. It is conceivable that if the whole Atlantic traffic were in the hands of four or five Americans, you might—God forgive me for saying this, but I am trying to be honest—you might get a more efficient thing, because after all, if you get a little airline flying because their government wants the prestige of a flag line, and you get a lot of them, little ones, you do not get quite the same degree of efficiency."**

—*British Overseas Airways Corporation*

Air passengers in 1955 within the 48 United States (160,000,000 population) totalled 37,392,000 while transatlantic traffic came to only 602,404, though 400,000,000 live in 15 Allied States of NATO. The two pictures illustrate this huge difference in volume. Many factors cause it; a major one is that Federal Union raises standard of living in U.S. while reducing air fares and red tape. Airline executives estimate Atlantic fares could profitably be cut 53 per cent and that this alone would double number of U.S. transatlantic passengers. But national sovereignty prevents this action.

Meanwhile *Aviation Daily* reported that the head of the French civil aviation administration, René Lemaire, told the IATA meeting last May that European governments could not permit rate competition on international flights. M. Lemaire was reported as saying that Europeans believe rate cuts should be delayed until jet transports are in service, indicating the jets would be cheaper to operate in reduced-fare service. He added that fleets of many of the European airlines are too small to give them the flexibility to compete on a three-class basis.

National sovereignty, it is evident, is a barrier to air communication in Atlantica which must be sealed with miles of red tape. It keeps inefficient airlines alive for reasons of national prestige. Its red tape and high fares combine to prevent air traffic in the Atlantic Community from reaching its potential volume. Airlines and governments pay in increased overhead and less business. Travellers pay in higher fares and slower travel, or by being unable to finance the trips of their dreams. Nations pay in reduced trade. Who gains?

Some Non-Federal Ways to Strengthen NATO

By BARBARA WARD

AT THIS STAGE of the discussion of a possible Atlantic Community, to argue the overwhelming necessity of it is the most vital task. . . . Yet even at this stage, it is not enough simply to state the arguments for closer association. The concrete steps needed in the advance towards union need also to be discussed, for it is difficult to raise enthusiasm or focus conviction about a disembodied ideal.

Yet here at the outset there is, it must be admitted, a sharp difference of approach. There are those who believe that nothing less will serve than an explicit federal constitution, dividing powers between the constituent states and the new federal authority, setting up central organs of government and enlarging elective processes to cover them.

Others, however, are equally convinced that what is sometimes called the "confederal" and functional approach to co-operation is the only possible line of advance. They envisage separate governments meeting together to agree on joint policies to cover specific problems or setting up inter-governmental agencies to carry on the joint policies upon which agreement has been reached. In fact, there are grave difficulties in the way of both methods.

The full federal approach has a rigidity and a finality that might scare away the timid and actually lessen the degree of rather fluid unity at present existing in the free world. Such indefinable yet valuable links as those which bind Britain to the new Asian dominions might be snapped and with them would go one of the main channels of communication between East and West.

One can conceive of new African dominions finding a place in the informal family of the Commonwealth. It is less easy to envisage them formally seeking admission to a White Man's Federation. Moreover, there is no doubt that government becomes more unpalatable as it grows farther and farther away from the reach of the individual citizen. In the United States there is widespread reaction against the encroachment of federal government because it is felt to be increasingly remote. How much greater would the risk be with a free-world authority, and with what care would the subjects it was competent to consider need to be delimited. A fixed and fully drafted federal constitution might add unbearably to the weight of government and to its inaccessibility to the ordinary citizen.

—*British Information Services*

Miss Ward, wife of Sir Ronald Jackson, was assistant editor of the London Economist. Her books include "The West at Bay" and "Faith and Freedom."

On the other hand, inter-governmental arrangements do not strictly transcend sovereignty and must remain at the mercy of shifting national sentiment. They are not incorporated in lasting institutions and although the Commonwealth is a magnificent example of how much genuine co-operation can be secured in the almost total absence of machinery and in the strictest recognition of national sovereignty, nevertheless the Commonwealth has evolved from an earlier period of close attachment and of subordination to a single centre and it is not likely that so indefinable a relationship of goodwill and forebearance could be built up between nations some of which had fought each other repeatedly.

It is perhaps the institutional argument that is decisive. There is no doubt that once an order of ideas has received embodiment in institutions to which authority is attached, the ideas have a lasting power, and a power of imposing themselves which no shifting arrangements can equal. If there is no formal instrument of sovereignty higher than the nation, then, in a real sense, our world will remain an anarchy of nation states. For this reason it is the view of the present writer that, in spite of all the difficulties and drawbacks, the federal approach to free world union is the one most likely to produce the final result.

There may, however, be a halfway house between the federal and the confederal approach which goes further than simple inter-government co-operation and can act as a practical preparation and education for federal association. The nations may also find, in practising it, that a full federal constitution is too rigid an instrument for a community as wide as the world and that a looser system of states is practical.

This intermediate method may be called the Treaty System. Two functioning experiments are already in being and it should not be impossible to devise more. In the North Atlantic Treaty Organization and in the Schuman Pool for Coal and Steel in Western Europe, the contracting governments agree to abrogate their exclusive sovereignty in certain specific fields, and to transfer the administration of policy from a national to an international secretariat. These treaties are binding over a number of years and the areas they cover are, to a great extent, removed from the purview of governments.

Day-to-day administration is in the hands of an international body—the

permanent Council of NATO under its Secretary-General and the High Authority of the Schuman Pool. In addition, NATO is reinforced by a Military Standing Group in Washington on which Britain, the United States, and France are represented. Many supporters of NATO would like to see such a group set up to combine a common strategy in the field of foreign relations.

The subjects covered by NATO are in a sense more important than those with which the Schuman Pool is concerned. Security is at the very root of sovereignty. Yet in the case of NATO, the transfer of sovereignty is hardly complete. The Schuman Pool covers a narrower field, but in that field, the common market for coal and steel in Western Europe, its authority is absolute and purely international. It may well be that these two institutions, in the immediate future, hold the key to further advance.

In the field of security, for instance, it might be possible to apply to the Atlantic forces the principles proposed for the European Defence Community —that of a single Defence Minister, a common military budget, standardized equipment, and a complete transcending of nationality in the higher ranks and in the larger units of the army.

Article 2 of the North Atlantic Treaty empowers the signatories to explore means of creating more effective economic and cultural links between each other, and there can be no difficulty today, after the discussions of the last five or six years, in picking out those economic problems which can only be solved by international agreement and co-operation.

Admittedly, such co-operation calls for the greatest sacrifice from the U.S., for only in America is there any basis for the illusion that a government, acting singly, can determine its own economic future. The other Atlantic members know their dependence only too well, and know that the choice is between being violently affected by U. S. policies over which they have no control or of attempting to set up instruments of agreement. Yet even the U.S. must realize to some extent that although international co-operation may mean some loss of control, it is at least rational and methodical, whereas complete national sovereignty means not unity, but an irrational and unpredictable loss of control—to plunging markets, to soaring prices, to cycles of boom and bust.

Provided this realization is strong enough to offset the deep distaste Congress—and not Congress alone—must feel for this sharing of responsibility, it is possible to envisage perhaps three Atlantic treaties covering trade and currency, investment and development, and commodities. These are the substance of all recent negotiations between the Atlantic Powers.

The contracting parties would agree to move towards the elimination of tariff barriers—possibly with an agreed time-table. They would accept measures for balancing their trade exchanges at the highest level—and not, as under the rules of non-discrimination—at the lowest. These measures would undoubtedly entail some assurances about the maintenance of high levels of employment—but clearly the whole economic stability of the Atlantic area depends on avoiding depression.

The contracting parties might also undertake to examine the plight of any area falling constantly into credit or debit in its international trade, and would undertake such measures in the field of investment and migration as would be necessary to reintroduce balance. This trade policy would automatically lead to the convertibility of currencies and eventually, perhaps, to a single monetary system.

Send for our Research Report No. 1, "How Atlantic Union Would Affect U.S. Economy," (16 pages) and No. 5, "Atlantic Union and World Trade" (32 pages) both by Louis Domeratzky—retired U. S. Department of Commerce expert. Single copies 25c, if ordered together, 35c for both.

The question of investment might be the subject of a separate Investment and Development Treaty. It would lay down the guarantees required by private international investment and would fix—possibly again as a proportion of national income—the amount of Governmental investment that might be made available for basic social investment—in transport, housing or utilities, for instance—which would hardly be forthcoming from private sources.

It is worth noticing that the principle of a contribution in direct grants from the wealthier to the poorer members of the free world community would be completely in keeping with the aim of reproducing in international relations the stability of domestic society. It can be argued that progressive taxation has done more than anything else to defeat Marx's forecasts of the collapse of Western society. It is the essential instrument of the Welfare State. Its extension to the international scene is almost certainly an absolute pre-condition of establishing the rule of law and the protection of law courts and police in the lawless world of sovereign States.

Further treaties—to cover the production, price stability and in some cases the allocation of basic world commodities—would no doubt be necessary.

The treaty system leaves open the question of political organs of association. The NATO approach—and indeed that of the Commonwealth—is that of regular conferences between heads of States and between Foreign and Finance Ministers. Reinforced by the treaty system, they might come to operate as an embryo federal cabinet. At least they would be doing the work that would fall to one. Whether or not more formal and elective political organizations should be established would depend upon the growth and strength of federal sentiment in the Atlantic Community at large. One advantage of a slowly evolving treaty system is that it would not entail sudden breaches with existing forms of international associations. The signatories would continue their work in the U. N. but would do so the more effectively in sharing a

common approach to the great issues of the day. They would be, in a sense, the first sketch of a political party in the parliament of man.

The special relationships of Britain with the Commonwealth and of the U. S. A. with Latin America need not be unduly disturbed. The Sterling Area is far more likely to be disrupted by the failure of sterling to become convertible and of trade to expand than by measures of consolidation which link sterling securely with the Dollar Area. And although many of the new Dominions may not be parties to the proposed treaties, the organs of consultation between them and London will remain intact and they, too, will not be unduly disturbed by a strengthening of the economic position of the West.

In military affairs, they will continue, no doubt, to practise their preferred policy of neutrality, but their security wil not be endangered if Western defence is more effective than it is at present. Nor will their tendency to fear impulsive American action be increased if a measure of international control is extended over all Atlantic forces. In this way, the erection of closer and more explicit links within the Atlantic Community need not disrupt the informal ties holding the free world in some sort of unity.

Yet whatever the elaboration of possible ways and means of selling Atlantic co-operation, it remains true that no precise formulation, this way or that, of institutions, will call an Atlantic Community into being. Atlantic unity can come only from a political will strong enough to overcome the free world's instinctive bias towards the anarchy of complete national sovereignty. With almost the single exception of the Thirteen American Colonies—and they with their common speech and tradition are a special case—the cause of unity by agreement has been lost, and when unity comes at last, it comes in the guise of a unifying conqueror—the Romans who enforced in Greece a unity the Greeks could not agree to among themselves, the Spaniards, who brought the unity of oppression to Italy. The chances of history are against the establishment of an Atlantic Community, and those who preach distrust, dislike, division, and national self-sufficiency can console themselves that they have all the weight of tradition and inertia on their side.

And yet there is, in Western history, an unquenchable spirit of innovation. The mightiest discoveries about man and nature have been made in the West and the boldest experiments in living and governing and working. Even if the forces behind our status quo of anarchy are strong, Western man has shown a unique capacity for breaking out of the crust of custom and seeing his world and his institutions with new eyes.

After the mindless upheavals of two great world wars—the second underlining the futility of the first by its almost exact repetition of it—it does not take much imagination to feel that the world is spinning in a vicious spiral of sovereignty from which only the transcendence of sovereignty can set it free.

Those who support Atlantic Union can at least feel that they belong with the pioneers of the West and that their vision, if it succeeds, will not only release mankind from the prison of exclusive nationhood, but add a new dimension to human society and even perhaps achieve the first practical realisation of the unity of man.

[Atlantic Editorials of the Month]

Toward Atlantic Unity

St. Louis Post-Dispatch:

REMEMBER THE BOOK *Union Now?* The struggle for Atlantic Union or at least for more Atlantic unity, proceeds year after year under the leadership of author Clarence K. Streit. And this year the issue was stretched from a Senate committee to the White House itself.

Senate Resolution 12, sponsored by Senator Humphrey of Minnesota, urged the President to name a committee of private citizens to meet with citizens from other NATO countries to explore ways of achieving better unity in the Atlantic community.

In the last days of the Congressional session, Mr. Streit appealed to President Eisenhower to call for speedy and bipartisan consideration of this proposal. The President promptly replied that since his Administration was co-operating with an official committee named by the North Atlantic Council, he did not wish to seem to support at one time two different projects which had the same intent.

Mr. Streit's main appeal went somewhat neglected. For he had argued the advisibility of a study by *private* citizens who, since they could not commit anyone, would also be able to explore Atlantic unity the more freely.

Nevertheless, his efforts had one reward. While the Senate Foreign Relations Committee did not act on the Senate resolution, it took the unprecedented step of bringing the proposal to the attention of the Secretary of State. The Administration could on its own initiative do what the resolution suggests. This is a long way from "union now," but the continuing and joint effort to bring the Atlantic democracies closer together can proceed along many lines.

Walla Walla Union Bulletin

THE ATLANTIC EXPLORATORY Resolution was not acted upon by Congress at its recent session. However, the failure is not to be interpreted as being caused by any lack of interest among congressional and administration leaders.

President Eisenhower's position on the matter of Atlantic Union is that he desires to avoid "creating confusion" by "seeming simultaneously to support two different concepts of Atlantic unity." However, the President, in a letter to Clarence Streit, of the Atlantic Union Committee, said: "This by no means forecloses future consideration of the alternative you support."

Actually, the only issue between the two approaches has to do with the method of representation. Plans for NATO studies of the question would be confined largely to the official, diplomatic level. The latest revision of the Atlantic Exploratory Convention resolution calls for appointment of a commission of private individuals from this country to meet with similar groups from other NATO countries, so that citizen delegates with no official instructions can explore freely all the possibilities of co-operation without committing anyone to anything. In a world no closer than ever to a lasting peace, such common action would appear to be the only possible hope for mankind.

[Letter from London]

U.K. Feels Let Down on Suez

By KENNETH HARRIS
An Editor of the London Observer

IT HAS BEEN A LONG TIME since people in this country have been so conscious that the say-so about a vital British problem has somehow passed largely out of their hands. Britons have a feeling that somehow Britain isn't going to be allowed to deal with the Suez problem on its own.

In the first ten days after Premier Nasser's coup, the main topic of conversation in Britain was whether or not there would be war. A month later people felt that war was at least a considerable way off.

All that people here seem sure of now is that there is going to be a lot of talk and little real action. The more thoughtful Briton seems to think that some kind of settlement will emerge rather unsteadily under pressure from both sides, a settlement which will not preserve much of the status quo and will go a good way toward giving Egypt at least the substance of what it wants. Nobody seems to have more than a hazy idea of what the settlement might be. And one senses a certain relief in the tones in which people—even powerful people—express their vagueness.

My personal feeling is that two things have happened which have had some effect and may have more. Most people I talked to after the first ten days seemed to think that the British government may have been a bit too tough in what it initially said and did, and that several of our newspapers, including the influential and usually statesmanlike *Times*, may have started beating the drum a bit too soon. Some say, however, that the Government's apparent bellicosity, and the gunboatism of some of our newspapers had a most salutatory effect: Public opinion, which might have boiled up in anti-Nasser jingoism, reacted strongly against the pace set by the Government and the press, and remained comparatively calm and discriminating.

The other thing I am conscious of is a marked decrease in the public ill-feeling inspired by Nasser personally. Some newspaper stories at first represented him as another Hitler. Others told of concentration camps and torture chambers in the Sahara and roused a great deal of anti-Egyptian feeling. The temperate tone of the statements put out by the Egyptian Embassy, and Nasser's behavior on some television programs screened here, helped allay this. Most people in this country have little use for the Egyptians right now; but I think they are not as angry about what they have done as some of our newspapers suggest. I don't believe many people now put Nasser personally in the same class with Hitler.

"Anything in Sight Yet?"

With Egypt and Suez so much in the news here, practically every other country failed to get a look in. The one exception was the U. S. This was probably because of the tremendous interest here in the role (much praised on the whole) which Secretary of State Dulles took in the conference. But the main American news came from the party conventions.

The Republican Convention surprised nobody, I suppose, though it did not altogether please many. Everybody here is for Ike, of course, well or ill, but Vice-President Nixon has few admirers. Britons seem to be largely anti-Nixon. The great number of people I have heard discuss him feel that his face reminds them of some of the men around Hitler, and that his personality seems to go with the face. It seems to me a pity that appearance and manner should so disqualify a man in a foreign country which has no opportunity to get to know his true qualities.

President Eisenhower's personal prestige and popularity here are as constant as ever. People who saw tele-recordings of him speaking at the convention, however, were shocked. To them it seemed that his health had deteriorated sadly since his illness; he appeared to have aged ten years.

In spite of the efforts of our correspondents, few people I talked to in London could regard the Democratic nomination for President but a foregone conclusion. Everybody is delighted that Adlai Stevenson won; if he hadn't, America's reputation for sense and sensibility would have sustained a grave blow in Britain.

Senator Kefauver's elevation to the ticket was also very popular here. Few Britons know enough about what he says and how he says it to be more than emotionally in his favor. All that most of us know is that he married a girl whose folks live in Glasgow, fought a sensational campaign against corruption, has a big, friendly smile under big, horn-rimmed spectacles, is a sticker, and an internationalist. He could do pretty well over here on that record.

We thought that 1952 had proved that the American people were crazy about politics on TV. Some of us Britons thought that perhaps General Motors or another big company would try to sponsor a couple of conventions every month. Now, according to reports here, Americans don't care for political conventions on TV. This rather fits in with *our* own experience with televised politics. The top rating for the programs televised during the general election of 1955 was only 14 per cent of the possible viewing public. Right now it seems as if the two peoples look at politics on TV rather more similarly than had been supposed.

Freedom & Union is 10 -

October 1946

July 1947 (above) June 1948 (below)

TEN YEARS AGO FREEDOM & UNION was born. Let us look anew at our field, our philosophy, our primary practical purpose for the present, and our progress.

*

We have taken for field the vast one implicit in our name, FREEDOM & UNION.

*

What do we, what do you, mean by freedom? by union by freedom-and-union?

*

When you think of freedom, whose freedom do you think of? That of the God-made individual person, or that of the man-made individual "person"—the nation or tribe—which individuals form when they unite politically in a John Bull or Uncle Sam?

*

Would you say that when you think of freedom you put first individual liberty? That would be a natural thought for any person. But, alas, people—even the most "freedom-loving" and enlightened people—are far more willing to sacrifice to maintain the freedom, the "sovereignty" of their nation, than their own individual freedom and sovereignty. Of course, they confuse the two. They think they are putting individual liberty first by putting national sovereignty first. Else they would not sacrifice so much of the former to the latter in taxes, jobs, markets, even life itself . . when all this could be saved by union —union of the free for even greater freedom.

* * *

This magaizne was born to explore, develop, teach and apply practically the way of life embodied in its name.

*

The individual and society—what is their true relation? How are they to be fiitted better together? Practically? Theoretically? This is man's eternal basic problem, all through his rise from the cave to the cosmos. He faces it in the two sexes, in the family they form, in the tribe, nation, and in the coming union of the free.

*

Union without freedom is tyranny, has always been tyranny, from the cave family to communism now. But freedom without union—whether in a community of persons, tribes, or nations—is anarchy, and will always bring the evils of anarchy.

*

Human freedom and human union when worshipped separately—as they are too often—are Molochs, each of whom devours its worshippers.

Februa

April 1949

October 1950

) - Its Purpose and Progress

February 1956

Freedom *and* union together—that is the ideal. How best to unite them is the immortal issue facing man.

*

To see freedom and union not as two irreconcilables, but as a couple, as two great truths to be married lovingly, fruitfully—this is the way of life that leads to man's vast future. It is the mother lode of greater golden ages. It is the philosophy that *Freedom & UNION* was named for, and seeks to make ever clearer.

* * *

Atlantic Union is to us the most urgent practical application of our philosophy. In the past 10 years what progress has been made toward it!

*

When we started, even the freest men deemed it more important that nations should be "peace-loving" than that they should love, and practice freedom. Even the Atlanticans did not recognize any community of spirit among them—any "Atlantic community."

We already have an Atlantic Pact, an Atlantic Council, an Atlantic Command, an Atlantic Parliamentary Conference, and Atlantic Union Committees. Repeatedly in recent months the Administration has talked of the "Atlantic Community" and the President has called the U.S. contribution to its development "of the utmost importance." A committee of Three of NATO's ablest, most union-minded members is exploring now how to unite more closely. The NATO Council is to act on this recommendation in December. On the day I write this—Sept. 17, anniversary of the signing of the Federal Constitution—the Committee is hearing in Paris the views of the U.S. government on this problem.

The proposed Convention to explore Atlantic Union which we have urged from our first issue has made immense progress, especially in recent years. Its leading champion in Congress, Senator Kefauver, is now Democratic nominee for Vice President. We still race with catastrophe—but are gaining ground.

* * *

With gratitude and pride we present in the following pages some birthday greetings. Spurred by them we shall continue to carry on the spirit of the American, English, French Revolutions.

The progress achieved in the past 10 years by our principles and practical policies makes one feel confident that in the next 10 years the Atlantic democracies will cross the Rubicon that separates alliance and federation, war and peace.—CLARENCE STREIT.

June 1955

July 1953 (below) July 1954 (above)

October 1951

November 1952

Our Aim as Stated in Vol. I No. I

Volume I, No. 1 of Freedom & Union began with a policy statement which we reprint now somewhat condensed.

"I ENTERTAIN A high idea of the utility of periodical Publications . . . I consider such easy vehicles of knowledge more happily calculated than any other to preserve the liberty, stimulate the industry and ameliorate the morals of an enlightened and free people." George Washington wrote these words to Mathew C. Carey on June 25, 1788. On that day Virginia ratified the Federal Constitution 89 to 79, despite Patrick Henry.

Better than anyone, Washington knew that Virginia's vote would be decisive in his 13-year fight for freedom through union of the free. In 1775 he had stood out against the majority of colonists who preferred to appease the king, who sought peace through union of liberty and tyranny at the sacrifice of freedom. He had led the war for liberty. When it was won and disunion with tyranny was achieved, the majority of his fellow victors sought liberty and peace in more disunion even of the free—or nothing tighter than confederation to hold the 13 states together. Washington had led the campaign then against that folly, had fathered the world's first attempt to unite the people of free states through federal union. But there could be no Union if the most powerful of the 13 democracies, his own Virginia, rejected the Federal Constitution. None knew better than Washington how near to ruin his whole life's work was on June 25, 1788 . . . the day when he took time to stress the importance of periodicals.

In the same letter he wrote that he "could heartily desire" that "Magazines . . . might be spread through every city, town and village in America." That wish has been realized. Men far less burdened than Washington complain now that there are too many magazines.

No Magazine in Our Field

And yet, how many magazines today take for their special field the one that made George Washington desire them spread throughout the land of the free . . . the problem, the conflict, the cause of liberty & union? . . . In all the multiplicity of magazines, how many do you find devoted principally to information, opinion or discussion of the principles of freedom & union? Is there one such periodical among all those that go to every village in America? If there were one that reached them all, it would not be spread wide enough today.

Since 1788 the principles of liberty & union have spread far beyond the strip of western Atlantic coast they then held. They now rule democracies all around the North Atlantic . . . Scandinavia, the far-flung British Commonwealth, Eire, Holland, Belgium, France, Switzerland. They have made that central waterway what the Mediterranean was in the time of Rome, the civilizing sea. Here lies the Atlantis that is not lost, that has not yet found itself, that is a community already but not yet a state. . . . The land of the free is divided in a dozen Atlantic countries, but no magazine today concentrates on serving liberty & union through this area, seeks to speed the step from community to country . . . reaches one in 10,000 of the small fraction of mankind that has known freedom. . . . even 30 years.

If Washington was right about the need of periodicals for liberty & union, is it then so surprising that the free today are in a state of such confusion, frustration, discouragement and division? Even Churchill felt the need of tools.

And so, we add FREEDOM & UNION to the multitude of magazines . . .

To See Time as a Whole

We find the press and radio today much too fascinated with only one element in Time—the Present. This concentration on Time's most fleeting, ephemeral and tensest tense—on the day, the week, the month—gives the mind no depth, the heart no direction, the judgment no foundation or standard of values, the senses no perspective, and life no stability, poise or purpose. It deludes men into believing that flotsam and jetsam are freighted ocean liners. It makes men easy victims of mass hysteria. Yet it gives them no real sense of urgency, no wise awareness of the deadlines and the tides there are in the affairs of men.

The Present is important, exciting, rich in interest, but so are the Past and Future. FREEDOM & UNION will try to keep them all in mind, see Time as a whole. The world we live in is not only wider than the widest nation, it is deeper than the day or month or year, it draws its food both from the ground and air, its leaves go higher, higher as its roots go further down . . . and in it there are times to plant and times to harvest. That is the world we hope to keep before you.

How shall mankind avoid the looming war . . . grow in soul as in science . . . save liberty from chaos & dictatorship? These questions together form man's world problem now.

FREEDOM & UNION will do more than inform you concisely of important facts and trends in this vital field. We shall 1) report diverging or conflicting views 2) give our own views, 3) try to bring the "world" nearer to you personally, make it more entertaining, more human and humane. . . .

FREEDOM & UNION itself will champion the principle of individual liberty, equality and fraternity through an ever peacefully expanding federal union of the free, beginning with the new Atlantis. We shall tackle the emotional as well as the structural and practical problems of such federalism today. We shall teach the federal union philosophy that seeks freedom, peace and prosperity and . . . *yes* . . . heaven on earth . . . through faith in individual man, and also through the dynamic balancing of opposite forces: Individual liberty and union, local and central government, private and public enterprise, the practical and the ideal. . . . This may indicate how vast is the philosophy of federal union. We aim, also, to develop an ever deeper sense of community loyalty among the people of all nationalities who practice individual liberty, a "Bill of Rights" patriotism.

We shall seek to show why individual liberty is the surest guarantee of peace . . . how civil liberty makes for high production and high standards . . . why federal union of the freest peoples is the best safeguard for liberty, and therefore of peace and prosperity . . . how such union can be worked out structurally and practically . . . how it would solve or affect current world political, economic, financial, labor and other problems. We shall expose the dangers to peace and freedom wherever we find them, not only in totalitarianism but in imperialism, nationalism, racism and other discriminatory dogmas based on birth, in security-ism and in materialism.

We believe the spiritual has been neglected far too much in our field. Indeed, in every field people seem today as tongue-tied about their soul as they were about their sex when we were a child. We shall do our part in breaking down this new taboo. Every month under the heading, "The Human Venture," we shall consider the things of the spirit.

Faith and work can do more than move mountains. Creative faith, we affirm, can at long last create the kind of world that is the ideal of man, whether black, brown, red, white or yellow, and has been ever since the soul began changing a brute into a brother.

Faith . . . with work. And so to work.

—C.K.S.

John, Jean & Johann Q. Visit SHAPE in Droves

Group visits to SHAPE in a typical summer month included: Rotary Club of Paris (70 persons) Sherwood Eddy Seminar (74); French consultants at U. S. air bases (30); American Federation of Teachers (20); Branting Institute (46); French Reserve officers (27); Federation of Insurance Companies (20); British Atlantic Committee; Canadian students, Trinity College, Ontario (62); U. S. teachers group; Congressional Medal of Honor holders.

Atlantic Leaders Greet Freedom & Union on 10th Birthday

John Foster Dulles, SECRETARY OF STATE:

I note that *Freedom & Union* is celebrating its tenth anniversary this autumn. Throughout this decade I have been a reader of this publication and have found it stimulating and constructive. I strongly believe in the need for growing cooperation as between members of the Atlantic community.

Senator Estes Kefauver, DEMOCRATIC NOMINEE FOR VICE PRESIDENT OF THE UNITED STATES:

I am happy to extend best wishes to *Freedom & Union* on the tenth year of its publication. *Freedom & Union* has done much to inform and enlighten its readers on Atlantic Union, and I wish for it continuing success.

Henri Bonnet, FORMER FRENCH AMBASSADOR TO THE UNITED STATES:

If the democratic nations want to prevent other nations, which are still free today, from despairing and giving up liberty, they must eradicate the doubts that the totalitarian countries try to cast on their future. There is no better way to attain that goal than to foster, within the Atlantic community, an ever-growing solidarity between the U. S. and a United Western Europe.

Senator Karl E. Mundt, REPUBLICAN, SOUTH DAKOTA:

Freedom & Union is entitled to generous congratulations on the part of all peace loving Americans on the occasion of its tenth anniversary. The emphasis placed on the plans and programs for peace in every monthly issue provides inspiration for many Americans and contributes both to the determination and ability of this country to continue to lead the world forward on the paths of peace. Somehow or other the world must learn to live together without war and the candle of hope which *Freedom & Union* continues to hold aloft is among the beacon lights which help to spark the hopes and stimulate the plans of those who believe that peace can be permanently preserved.

CLARE BOOTHE LUCE, U. S. AMBASSADOR TO ITALY:

Congratulations to *Freedom & Union* on its Tenth Birthday!

Freedom & Union is a publication inspired by a creative and powerful idea, the serious discussion of which is most pertinent to our times. In the world in which we live, survival itself depends on

greater and more effective unity of Western policies and actions. The best, perhaps the only, certainty we have of avoiding the piecemeal destruction of the free world lies in our ability to concert with the greatest extent possible our goals and methods.

Under your long and dedicated leadership the great ideas of freedom and union now inspiring the magazine have increasingly become ideas upon which all men of good will must seriously, indeed prayerfully, meditate.

Lord Ismay, SECRETARY GENERAL, NATO:

For ten vital years *Freedom & Union* has championed the cause of Atlantic unity with vigor, foresight, and courage. Never was this unity more essential than it is today. I am therefore delighted to have the opportunity of sending my warmest congratulations to my good friend, Clarence Streit, and his colleagues on this, the tenth anniversary of their magazine, and to offer them my best wishes for their continued success.

Sir Roger Makins, FORMER BRITISH AMBASSADOR TO THE UNITED STATES:

The survival of the free world in the last two decades has depended upon the ever growing unity and understanding between the free nations. Every effort to foster their cooperation it to be applauded. In explaining what is being done and in exploring new possibilities, *Freedom & Union* has been working manfully for the strengthening of the Atlantic community.

George W. Perkins, U. S. AMBASSADOR AND REPRESENTATIVE ON NATO COUNCIL:

I have found your magazine to be most interesting and look forward to reading it in the future. I trust that the unity among the nations of the Atlantic Community which we so fervently desire will continue to be strengthened so that it may become an even firmer bulwark of freedom and may continue to be a source of peace and understanding among nations.

Ernest K. Lindley, DIRECTOR, WASHINGTON BUREAU, NEWSWEEK:

I congratulate *Freedom & Union* on its tenth birthday. The role of the explorer and trail blazer is not easy. It requires imagination, courage, and tenacity. Over the decade, you have demonstrated all of these qualities.

General of the Army George C. Marshall, FORMER SECRETARY OF STATE:

I am glad to salute *Freedom & Union* on its tenth anniversary and am hopeful that it will enjoy many more years of success. Its accomplishments so far have been warmly recognized by many of our world leaders and I am sure that it will grow in stature as its principles become known.

Arthur Krock, WASHINGTON COLUMNIST FOR THE NEW YORK TIMES:

On your tenth anniversary, what I said in 1951 on the fifth anniversary of *Freedom & Union* is even more emphatically the truth as I see it.

"Whatever progress humanity has made toward enduring world order is due to the unselfish efforts of men like Clarence Streit. When he writes, 'danger and difficulty have always been the bread and butter of the soul,' he unconsciously pens his own epitaph—one to engender pride in disciples and hope in the oppressed and endangered."

Erland Waldenstrom, MANAGING DIRECTOR, SWEDISH IRON ORE EXPORT COMPANY:

Clarence Streit's long, patient, and keen struggle for a federal union of the Western world has my fullest admiration. I wish him every success in his continued attempt to get more and more people to understand the nature and the necessity of a political union, and I think we should all be grateful to him for his self-sacrificing work. The difficulties may still be enormous but the idea of bringing about a federal union will in the end be victorious.

Walter Hallstein, PERMANENT GENERAL SECRETARY FOR FOREIGN AFFAIRS, GERMAN FEDERAL REPUBLIC:

On the occasion of its tenth anniversary I wish to express my cordial congratulations to the editors and staff of *Freedom & Union.* May that outstanding publication and your own personal efforts continue to be successful in ensuring the ever-tightening unity of the Atlantic community.

Closer cooperation between the free peoples is now a dictate of self-preservation. The new political methods of the Soviets require a far-reaching harmonizing of all our policies—and not in the area of defense alone. Above all, the foreign policies of the free world must be coordinated more closely than has been the case in the past. The free nations will succeed in meeting the dangers of world communism and in preserving the peace if they are united in a genuine and firm solidarity not only in the military but also in the political, economic and cultural fields.

The United States have preceded us Europeans in setting the best of examples. Under their leadership the Atlantic alliance has progressively tightened to the point where today it has become the firm base of the relations between the peoples of the European and the American continents. For this achievement our sincere gratitude is due to the people and the government of the United States.

The Atlantic Community has made since its start a decisive contribution to the preservation of peace and freedom in the world. I am convinced that it will continue to be successful in achieving this objective as long as we stand together with courage and determination and jointly strive to remove the real causes of world tensions, which include the grievous partition of our country. In the great cause of preserving the peace, the German people and Federal Government feel as one with the United States and all free peoples of the world.

Representative Kenneth B. Keating, REPUBLICAN, NEW YORK:

A tenth anniversary is always a momentous occasion, but especially so when the event marks unparalleled achievement of a pioneer such as *Freedom & Union.* Your courageous trailblazing in a previously unexplored field has won the admiration and respect of all thinking men, whether they agree with you or not. By informing the pub-

Lester B. Pearson, CANADIAN SECRETARY FOR EXTERNAL AFFAIRS; MEMBER, NATO COMMITTEE OF THREE:

On the tenth anniversary of the publication of *Freedom & Union,* I am very happy to join in sending a message of goodwill and congratulation to you and to your colleagues.

Although wise and honest men may differ on the methods and on the appropriate timing of measures most likely to increase the sense of community and partnership among the North Atlantic nations, there can be no doubt that there has been a steadily increasing realization of the urgent necessity to create a closer and more comprehensive unity among these nations than that of the military alliances of the past.

To this new understanding and to the increasing awareness on this continent and elsewhere of our new responsibilities, and to our recognition of the clear fact that we of the Atlantic Community of Nations are all members one of another and that each of us best serves his interests by working together with his neighbors in close partnership, *Freedom & Union* has made a distinguished and important contribution.

lic concerning Federal Union you are doing much to advance that cause.

Needless to say, the success of this magazine is due in large measure to your realistic and able guidance . I am confident you will continue to adhere to the high ideals which prompted the founding of *Freedom & Union,* in order that the aims and principles of the cause for which you labor may gain wider recognition and understanding.

Halvard Lange, NORWEGIAN FOREIGN MINISTER, MEMBER, NATO COMMITTEE OF THREE:

Since 1945 cooperation among the Atlantic nations has grown apace. Through a web of bilateral and multilateral agreements in various fields, the foundations for an Atlantic community have been laid. The OEEC and NATO, occupying a central spot in this picture, are examples, each in their own way, of the new and efficient type of intergovernmental cooperation on which the western democratic world can base its future. We need no longer fear that governments of the Atlantic nations arrive at important economic and political decisions without informing their allies.

Though great strides have been made in the post-war era in developing economic and military cooperation, the members of NATO agree on the necessity for a further intensification of the organization's work in the non-military field. It has been encouraging to note the powerful support for the Council's decision to this effect in all members.

I, for one, feel that as more attention and energy is devoted to such cooperation new perspectives for the Atlantic community will open and solidarity among our peoples will be further strengthened. If this world is to succeed, political leaders must have the backing of an intelligent, interested public opinion, as is expressed, for instance, in *Freedom & Union.*

We are not at a stage in the development towards an Atlantic community when it is necessary to consolidate the positions we have won and to prepare ourselves for a rapid expansion in new fields. Unless we have the people on our side, any structure we build will come tumbling down in the first storm.

I thank you, Mr. Streit, for your incessant contribution to a closer understanding between the Atlantic peoples, and I wish you continued success.

General Pierre Billotte, FORMER FRENCH MINISTER OF DEFENSE:

When they signed the North Atlantic Pact on April 4, 1949, the nations of the free world brought the danger of a third World War to a halt, perhaps permanently. But by having limited their contractual co-operation thus far only to a general war and to the limited dimensions of the Atlantic area, they have left the field wide open—everywhere else in the world—to aggression.

And so, either simultaneously or successively, we have witnessed in Korea, in Southeast Asia and in North Africa aggressions which took different forms but had the same origin and the same objective. Each of them shook the very foundations of the Atlantic structure. Now the political significance of the Suez crisis completely overshadows its technical aspects; this time an unsatisfactory settlement would undoubtedly deal a mortal blow to the Atlantic Treaty.

For ten years, with unfailing perspicacity, *Freedom & Union* has been constantly preaching the vital necessity of complete solidarity between the Atlantic nations in their common affairs everywhere in the world, and their need for not merely a military but also a political and economic organization in keeping with this concept of solidarity.

Thus, *Freedom & Union* points the way to the best, if not the only road to salvation for that part of the world which remains free, the only one good enough to meet the perils we face. Readers of *Freedom & Union* understand this. May the governments of Atlantic nations, in turn, understand it soon.

General Alfred M. Gruenther, SHAPE COMMANDER-IN-CHIEF:

It is a pleasure to congratulate *Freedom & Union* on its tenth anniversary. I want you to know how much we at SHAPE deeply appreciate the splendid effort the magazine has always afforded our effort within the North Atlantic Treaty Organization to insure peace by building such strength that no military aggression, or coercion and intimidation backed by military power, could destroy our freedoms. Keep up the good work.

Stephen Chadwick, PAST NATIONAL COMMANDER, AMERICAN LEGION:

Like all movements for lasting peace which appeal to the sound intelligence and reason of men, progress toward freedom and union seems to its missionaries to be terrifying slow. Yet that dramatic progress is being made through continued education and the evangelism of your magazine none can deny.

Ten years is but a moment in the history of mankind. May your next ten years be even more fruitful.

Whitelaw Reid, CHAIRMAN OF THE BOARD, NEW YORK HERALD TRIBUNE:

President Eisenhower recently used Ibsen's words, "I hold that man is in the right who is most clearly in league with the future." It seems to me that it could be applied to no man or organization more aptly than to you and *Freedom & Union.* Clearly your whole work has been narrowed immeasurably between what the future holds and what the present requires for the North Atlantic Community. Heartfelt congratulations on the advances you have made in a cause so important to mankind.

We received more messages than space permits us to give in this issue. We shall publish the others in our November issue.—The Editors.

FREEDOM'S CRISIS

(Reprinted from the first issue of Freedom & Union, October 1946)

HOW SHALL we secure our freedom —your freedom, mine? We of the brood of Washington, Lafayette and Paine? Now in mid-twentieth century, when dictatorship rules more armed men in one country than it ever did in history? When all the massive machinery of production can be quickly geared to butchering the species that devised it . . . and talk of war is drowning talk of peace?

When men have learned how to burn alive myriads of babies, some in a flash and others slowly and invisibly from within? When men can learn this dread atomic secret much more readily than how to govern themselves in union, with freedom, equality, fraternity?

How shall we now preserve our freedom, we of the gasoline generation, now in the early electric era, at the dawn of the jet atomic age of the air? We of the brood of Franklin, Watt, Ampère . . . Faraday, Curie, Bell . . . Pasteur, Darwin and the Wrights? Now when distance is no more a thing of miles but of minutes, when the Old World and the New are closer than New York and Virginia were to George Washington?

Freedom has worse foes than foreigners. There is the enemy within the gates. Free constitutions and laws are more concerned with safeguarding freedom from domestic danger than from foreign invasion. And rightly so. Against autocracy from within, protective tariffs, vast air armadas, mighty fleets and armies are of no avail. Nor is the atomic weapon. Indeed, the greater the armed power at the government's command, the graver is the potential danger to our freedom from the insidious enemies who went to school and church with us . . . from the little Hitlers, Chamberlains, or Kerenskys that live on in each of us.

How shall we preserve our freedom when the devoted efforts of a Roosevelt to free the forgotten man end by saddling him the more with burdens they were meant to lift? When they load him with heavier taxes than rich men paid before? Vex him with a bewildering bureaucracy? Habituate him even in time of peace to ever greater governmental interference in his life, to ever greater concentration of power in the executive, and ever greater dependence of the citizen on the state? When victory, in a war for freedom from want and freedom from fear, leaves all the world a-shiver?

When every week seems to bring the government in some country some new power over the citizen? When nearly every measure—political, military, economic, financial, monetary, or social—that the free man is persuaded to adopt to make him independent of the foreigner ends by making him more dependent on his own government? When the lessons of Fascist Italy, Nazi Germany and Communist Russia are there to teach us that every powerful people that lost what rights of man it had, lost them to no foreign foe but invariably to a citizen who pandered to the passions of the people, and preached adoration of himself and hatred of the foreign and the few.

* * *

How shall we now "secure the blessings of liberty to ourselves and our posterity" that our constitutions were created to secure? We of the brood of Rousseau, Locke and Jefferson . . . Mill, Hamilton, de Tocqueville . . . Shelley, Hugo, Whitman . . . we of the brood of Abraham Lincoln? Now, when their names are invoked to inoculate the ignorant with the very evils they sought to free men from? Or when we are told that the principles they upheld are wrong, that individualism is decadent or is done for, what counts is the mass and not the man? When our young take liberty for granted instead of for a treasure that they must guard alertly and develop? When they hunger for a purpose and fail to find in freedom a cause worthy of their lives?

Freedom has other foes than men. It is beset by poverty, ignorance, disease, vicissitude, premature death.

How shall we now secure our liberty —political, economic, financial, material, social, intellectual, spiritual—against all enemies, foreign and domestic, and nature, too?

That is the question that troubles men these days wherever they have long practiced freedom—whether they call themselves Americans, British or French, Dutch, Belgians, Scandinavians or Swiss, Irish, Canadians, Australians, or New Zealanders.

That the free are increasingly concerned for their freedom is a cheering thing that offsets a horde of dangers. We must know what is dearest to us, before we can secure it. Confusion over what we really want is the thing that perhaps most frequently defeats us. For such confusion puts all our conscious power to seeking some counterfeit of our true desire. It divides us against ourselves, sets hand and mind against the heart, and thus brings us to nought. We have nothing to fear but confusion, and lack of faith in freedom and ourselves.

Some of the dangers that beset our freedom now are new, but most of them are old as man—and not so bad as those that men have overcome before. None but a coward, fool, or thoughtless man would say man's conquest of atomic energy faces human freedom with worse dangers than those man long ago confronted in the cave. Among the people who whine about the perils that plague modern man, who would prefer the sinister unknown that beset each man when his hand could not yet write and stones and clubs were his only weapons?

Like all that's good, freedom's crisis is eternal. But never did it offer greater opportunity than now. And men who lie yet in the womb of time shall think themselves ill-starred they were not here—until they learn we did what we shall do so they might do much more.

Here in FREEDOM & UNION, we shall tackle the problem of how to secure human liberty today, tackle it with anxiety, and yet without dismay. We thank God that these, too, are times that try men's souls. The soul that is never tried never knows its power, nor grows, nor even lives. Danger and difficulty have always been the bread and butter of the soul.

—COMMON SENSE, JR.

Our Family Album: 1946–56

Some pictures we published in our first 10 years, marking milestones on the road to Atlantic Union

Freedom & Union October 1946 —*Press Association*

Freedom & Union rst appeared Sept. 28, 1946—the 170th anniversary of the world's first constiutional guaranty of free speech, given in the Constitution Pennsylvania adopted Sept. 28, 1776. To mark this anniversary, and Freedom & Union's birth, Justice Owen J. Roberts, one of its editors, presented on its behalf that day an illuminated scroll to Lt. Gov. John C. Bell of Pennsylvania (left) in Independence Hall, home of both the Declaration that men make the State for their own Freedom and the Constitution of the first Federal Union of the Free in history.

F & U August 1947

Estes Kefauver—then a Congressman—as he looked when we first printed his picture (1947). Occasion was review of his "A Twentieth Century Congress"; book showed rare concern for improving Democratic governmental machinery which led him naturally to Atlantic Union.

In January, 1948, Federal Union held a conference in Louisville, Ky.; many urged political action, and Tennessean Lucius Burch boomed Kefauver for Senate. First senatorial candidate to endorse Atlantic Union aim, Kefauver attributed his 1948 victory over Crump machine to Memphis Citizens Committee of Seven—five of whom were active Federal Unionists, including leader, Edmund Orgill, (below, left) who was elected mayor of Memphis last year.

Brice Toole, Asst. U. S. Atty. General, Treasurer of Federal Union, died 1949, after writing, speaking 10 years for it.

Freedom & Union, March, 1948 —*Louisville Courrier-Journal*

Federal Union met in Louisville, Ky., 1948. Chm. and co-founder John Howard Ford (extr. rt.) died 1949. Others, l. to r.: Edmund Orgill, Lawrence Duncan, C. K. Streit

Freedom & Union September 1949 —*Acme*

Some founders of Atlantic Union Committee in 1949, all members of its first Board, tackle early problems that summer in New York. L. to r.: Arnaud Marts, George Shea, Jr., Hugh Moore, Edm. Orgill, Justice Owen J. Roberts, C. K. Streit, John Young, Walden Moore.

F & U Jan. 1950 —*International News Photo*

Dr. Harold C. Urey, the Nobel Prize atomic scientist, is a Federal Unionist since 1939; has been on AUC Board since its foundation.

Sen. Kefauver's election in 1948 led directly to Justice Roberts issuing invitation to the meeting which founded Atlantic Union Committee, Jan. 23, 1949, to push for Convention to explore Atlantic Federation, which Federal Union, publisher of Freedom & Union, has urged since Union Now readers founded it in 1939.

Justice Roberts beams as ex-Under-Secretary of State Wm. Phillips gives Mrs. Chase Osborn "Councilwoman of Year" citation for "outstanding devotion" to Atlantic Union, 1951. At 1952 Ottawa AU session (below, l. to r.) Sen. Gouin (Can.), Rep. Leroy Johnson (U.S.) MPs Alastair Stewart & J. A. Burdette (Canada), Sen. Gilette and Justice Roberts (U.S.)

Freedom & Union June 1952 —Newton, Canada

F & U May 1956 —Harcourt

Firmin Roz—attired as Membre de l'Institut—wrote introduction to French edition of "Union Now," 1939, founded French Comite pour l'Union Atlantique, 1951, retired as its President in 1956 when 90. Gen. Billotte, former Defense Minister, has since then led French "Mouvement."

Freedom & Union, December 1951 —F & U Photo

Gov. Browning, Justice Roberts, former Memphis Congressman Chandler open giant "Union Now" as 160 delegates hold the first AUC Congress, Memphis, Nov. 2-4, 1951.

F & U Dec. 1954 —*Wide World Photo*

Speaker Robertson of Canadian Senate receiving 1954 AUC Atlantic Award from Justice Roberts, got Ottawa Senate to adopt Atlantic Union resolution, 1950. He fathered Nato Inter-Parliamentary Body, 1956.

—Green, Providence Journal

P. F. Brundage (L) co-incorporated Federal Union, 1940, helped found Freedom & Union, 1946; resigned as chairman, 1954, to be Eisenhower's Deputy Director of Budget. In April he became Director of U. S. Budget.

F & U Sept. 1952 —*British Information Service*

Sir Hartley Shawcross, ex-Attorney General, has headed British Friends of Atlantic Union since foundation, 1952, with Lord Tweedsmuir as Deputy Chairman. Herbert Agar did much to start this group.

F & U Jan. 1956 —*Painting by Oswald Birley*

Lionel Curtis, "prophet" of federalism, worked for it in British Empire since 1909, began urging it internationally in 1937 in his "World Order," backed "Union Now" at once, strove on till death, 1955.

Estes Kefauver, three years after he began pioneering in Senate for Convention to explore Atlantic Union, was runner-up for Democratic nomination for President. Violently attacked as "sacrificing sovereignty" through Atlantic Union, he easily won re-election to Senate, 1954. He led in 1955 in re-introducing Atlantic Convention resolution, which reached new heights. Now as V.P. nominee he is again proving "God's chillun got wings."

Meanwhile, AUC gained great men, as Gen. Marshall—but in 1955 mourned loss of Justice Roberts at 80. New AUC President, opinion poller Elmo Roper (below) was early Federal Unionist, co-founded AUC & contributed to our first issue. And so album ends all smiles as the next decade's pictures begin next month.

THIS BOOK IN BRIEF

Chapter 1 of FREEDOM AGAINST ITSELF entitled, "What This Book is About"

THE UNDERLYING TENSION of our time lies within freedom itself, within us. This tension is preparing new disaster now. By prompt, right action we can still avoid danger—or keep it under control—and turn it to great good.

Today's lament is that political progress lags far behind scientific discovery and technical invention. What we overlook is this:

It is freedom that is causing this rapid advance of discovery and invention. And it is also freedom, or rather our faulty grasp of it, that at the same time is halting man's political and moral progress. We the free, we are the ones who have long been thus dividing freedom against itself, and bringing depression, dictatorship and war down upon us, and all mankind, again and again.

Let us look at our primary problem afresh. And let us begin by taking, and keeping the standpoint that men too seldom clearly take and carefully keep, the standpoint of their own individual freedom.

From this standpoint, the world is growing greater for each of us. Not smaller, as we often say.

We have discovered much that our forefathers did not know, but still we find our world increasingly hard to understand. We each want it governed peacefully, democratically, in the interests of the individual's life, liberty, happiness. But the more prodigious our inventions grow, the greater difficulty we find in harnessing their power to these, our major purposes. Our machines free us more and more from the host of things with which nature, as Hobbes found three hundred years ago, made "the life of man solitary, poor, nasty, brutish, and short." Yet we complain today as he did then that we live in "continual fear and danger of violent death."

The fault is not in our star, or world, but in ourselves. For generations now our freedom has been working simultaneously to pull men together and to pull them apart. While it unites them through the machines its inventiveness produces, it divides them by the political policies it favors. With its right hand it creates an Atlantic community; with its left it keeps this community ungoverned, a prey to anarchy. Worse—our machines that have helped form this community also serve, unavoidably, to arm dictatorship to destroy freedom and fill the vacuum caused by our refusal to constitute the needed international government.

The tension that results from this conflict of freedom against itself has long been tightening from both sides, more and more. It is bringing us nearer and nearer to catastrophe . . . when freedom—were its house united—could be bringing everyone an ever higher, safer, freer life.

It is this cleavage within freedom, this schizophrenia, that makes our world seem now so mad. Since freedom has no flesh or blood or personality save

TO SEE A BOOK AT A GLANCE

We call you here on an . . . adventure, on a voyage of discovery into space as yet uncharted.—ALLBUTT, *Introductory Address at St. George's Hospital, 1889.*

THIS BOOK GIVES ITS FINDINGS at the start instead of at the end. It would be wrong to infer, however, that I began with these conclusions and wrote the book to prove them. The fact is that the first chapter you read is the last one I wrote.

I have placed it first partly for your convenience, and partly because of long experience as an American newspaper correspondent. It teaches the advantage of giving in the leading paragraphs the main things the reporter has found, and then the supporting facts.

This method, which I followed in *Union Now*, has a special advantage in a book of this kind: It permits the reader to begin by seeing the work as a whole. We see at once all of a painting, statue, bridge, monument, however great it may be. We do not start as we do in most books, where we see one detail, and then another, and another, before gradually we grasp the book as a whole.

When we enter the Sainte Chapelle in Paris we cannot, of course, see all the beauty in it at first glance, even though we do see it at once as a whole. We see still more of it in the next few moments as the eye sweeps over its walls of stained-glass windows, with the sun bringing out the jewel they together form. But to see all the beauty stored in the Sainte Chapelle takes much more time—though not the time its creation took the thirteenth-century artists who, aware that God would see their work even in the darkest places, made it a mosaic of minor masterpieces. You need much more than one visit to see all this beauty. The Sainte Chapelle continues to reward you no matter how much time you give it.

It seems to me that an author should at least try his best to make his book reward the reader as quickly, completely and enduringly.

—From the Foreword of *Freedom Against Itself.*

that of the individual persons who are free, the cleavage is really in our own minds and hearts. We can cure this madness, but it is high time that we begin.

This volume offers no little evidence to support these conclusions.

This book is composed of five parts. We examine, first, what freedom is doing to unite men; second, the field where it now needs to unite them; third, what it is doing there instead to divide them and to arm dictatorship to unite them by force. Then we consider, fourth, how great, growing and imminent is the resulting danger to freedom; and fifth, how we can turn this danger into opportunity. Before examining these five topics in detail, let us look at them briefly, to see still better Freedom's House as a whole.

I

We find in Part I that the major inventions and discoveries have had, more and more rapidly, this characteristic effect: They bring people together in a community greater than concerned them before, and in many ways liberate and unite them. This process has been going on now with accelerating speed for two hundred years.

What yeast has so expanded man's once static world? We find this yeast was freedom or, more precisely, a relatively high degree of individual liberty enjoyed by a relatively large number of persons united through a relatively free government—a combination I shorten into the term, *freedom-and-union.*

MERCATOR FRANKLIN ELI WHITNEY MACADAM STEPHENSON

Study of 1,012 major inventions and discoveries listed in FREEDOM AGAINST ITSELF shows 95 per cent came from Atlantic community—thanks to its freedom.

We reach this conclusion by first ascertaining from what area and nations these world-widening machines came. Study of a list of 1,012 major inventions, discoveries and innovations since 1750—the most comprehensive one I know of —brings out these facts:

1. Practically all of them—95 per cent—came from the people living in the nations around the North Atlantic ocean. (I call this region "Atlantica" for short and include in it all fourteen members of the North Atlantic Treaty Organization,[1] plus Germany,[2] Sweden, Switzerland and Ireland.)

2. Nearly all these inventions and discoveries came from the freest of these peoples—the democracies whose federation was proposed in *Union Now*. The three great democracies, the United States, the United Kingdom and France, have led in producing them; together their citizens have contributed nearly three-fourths.

3. The peoples who have long suffered despotism have shown little creativeness. Those who spent this two hundred-year period first under the Czars and then under the Communist dictatorship have contributed only a handful of the inventions and discoveries that have made our modern world.

Study of the nationality of all the Nobel Prize winners since 1901 confirms this.

Why has this astonishing creative power of the free Atlanticans passed so unnoticed? Though their machines have knitted Atlantica into the closest, most interdependent international community on earth, it remains the forgotten country, because it has no common government.

Next we find that the creativeness of the Atlanticans followed on the heels of freedom's advance among them. The great political inventions of the Atlanticans *preceded* their other inventions. Creativeness followed freedom through no accident; by its nature liberty fosters invention and discovery, whereas dictatorship by its nature blights them. Necessity, and the economic, geographic and racial factors have not played the decisive role liberty-and-union has.

Yet we the free ourselves have paid little attention to the fact that freedom-and-union is the yeast that has caused invention and discovery to expand so wonderfully. We have neglected badly this mother lode of power and progress. Merely by clearly seeing and showing others where the key to our creativeness lies, we make surer that the techniques the awakening Asians are now learning will not again be turned against us (as they were at Pearl Harbor), but will help harness to greater liberty-and-union the world's richest and most wasted natural resource—man himself. Yet the science of free government which to Franklin came first is today the Cinderella science.

II

For two hundred years freedom with its machines has been bringing together its far-flung followers, forming them into a highly interdependent Atlantic Community. Once such a community exists, it cannot remain without an ef-

[1]Members of NATO are the U. S., Canada, Britain, France, Belgium, the Netherlands, Luxembourg, Denmark, Norway, Iceland, Italy, Portugal, Greece and Turkey.

[2]The German Federal Republic became a member of NATO after *Freedom Against Itself* was published.—Editor.

BACON'S REQUEST TO HIS READERS

I have one request to make, the one that a great English scientist, Francis Bacon, expressed so well in the Preface to his *Novum Organum:*

"I have on my own part made it my care and study that the things which I shall propound shall not only be true, but should also be presented to men's minds, how strangely soever preoccupied and obstructed, in a manner not harsh or unpleasant. It is but reasonable however (especially in so great a restoration of learning and knowledge) that I should claim of men one favor in return; which is this: If any one would form an opinion or judgment . . . concerning these speculations of mine, let him not hope that he can do it in passage or by the by; but let him examine the thing thoroughly; let him make some little trial for himself of the way which I describe and lay out; let him formalize his thoughts with that subtlety of nature to which experience bears witness; let him correct by reasonable patience and due delay the . . . deep-rooted habits of his mind; and when all this is done and he has begun to be his own master, let him (if he will) use his own judgment."

—From the Foreword of *Freedom Against Itself.*

fective government. Whether it is on an Athenian or an Atlantic scale, a community without a government is in a state of anarchy. Anarchy's evils always result in government being established by force or by agreement.

III

Instead of meeting this need for union with the exploring, inventive spirit they have shown in all other fields, the free have been splintering their world. Through confusion they have replaced the divine right of sovereign kings with the divine right of sovereign nations. They have been walling men apart increasingly with new nations, new armies, new taxes, new censorships, new currencies, new man-made barriers to travel, trade, production, employment, and other sacrifices of individual life, liberty and happiness on the altar of Absolute National Sovereignty.

The tendency of the free to associate individual freedom with disunion goes very deep. It has splintered the Church, and political parties. It early began splintering empires. The freest among them was characteristically the first to split; that came when the thirteen Colonies broke away in 1776. Since then the British Empire has produced ten more sovereign States, always in the name of freedom. In its name the American Colonies began their independent existence as thirteen sovereign States, separated by thirteen currencies, tariffs and defense forces, and united only by alliance.

The resulting anarchy led them, however, to do a most exceptional thing in the history of freedom: They formed by agreement in 1787-89 an organic union, a federal interstate democracy, something then quite new in the world. But the proneness of the free to confuse liberty with absolute state sovereignty almost destroyed the United States later by Civil War.

The same confusion led freedom's two greatest powers, Great Britain and the United States, to follow foreign policies that Balkanized the Western world. And so the 800,000,000 people living west of Soviet Russia now enter the Jet Atomic Age splintered into fifty-seven sovereign nations. East of them 1,450,000,000 people enter it divided into only fifteen sovereign States, five of whom govern almost half the human race.

FARADAY BRAILLE WESTINGHOUSE BUNSEN BELL

While freedom unites Atlantica by the machines it invents, it keeps it splintered by its chronic tendency to confuse individual liberty with national sovereignty.

Instead of providing by free international government the degree of unity that liberty requires, the free have formed, instead, associations of governments designed to maintain unlimited national sovereignty—leagues of nations and alliances, from the Wilsonian Covenant through the Atlantic Charter and the United Nations to the North Atlantic Treaty Organization.

Where freedom fails to unite, force succeeds. History records few nations that were created by free agreement. Whereas freedom by its nature is divisive, dictatorship's nature leads it to expand. While the free are breaking up their empires into independent nations, Russia continues its imperialistic course.

Two characteristics of freedom's inventions inevitably arm dictatorship industrially and militarily to fill the need for international government which the free keep on creating and keep on refusing to meet themselves: (a) these machines and weapons permit the unskilled to do what only the highly skilled, or no one at all, could do before, and (b) once they are invented, slaves can soon learn to make and use them.

Dictatorship can speed their use by forcing its slaves to make sacrifices that free people make only when in desperate danger. Nor is it checked by the vested business, labor and farm interests that often defer the development of inventions where people are free. Dictatorshop's ability to exploit freedom's machines has its limits, but even so it partly offsets despotism's blight on creativeness. There is greater danger of dictatorship arming itself through this channel—which no security measures can block—than through spies stealing any secrets we retain. What the Japanese and Russians have already done with our machines, the Chinese who start 450,000,000 strong may do on a greater scale.

Freedom has another characteristic that makes its machines arm dictatorship more rapidly than democracy: The most complex machine is simpler than man. We quickly teach men anywhere to fly planes, but we still find it hard to govern ourselves. The paradox that men learn to govern the most awesome machines more readily than they learn to govern themselves is understandable. Free government puts man to a much severer test. It requires the citizen to govern one of the most unpredictable and potentially powerful of units, a human being—himself. At the same time, he must also help govern and be governed by millions of these complex beings, on a basis of equal individual freedom.

Liberty is a heady liquor. Those unused to it tend to drink it to excess. Self-government all too often results in no-government, which nearly always ends in mono-government, dictatorship.

Hamilton and Gruenther

As States are a collection of individual men . . . which ought we to respect most, the rights of the people composing them, or the artificial beings resulting from the composition? Nothing could be more preposterous or absurd than to sacrifice the former to the latter. . . . This [is] the critical moment for forming . . . a Government. . . . Henceforward the motives will become feebler, and the difficulties greater.—*Alexander Hamilton*, in the American Federal Convention, June 29, 1789.

Never was there greater need among the NATO nations for unity, for wisdom, and for perseverance. Never was there a greater need to see clearly that our lives are bound inextricably together. — *General Alfred M. Gruenther*, Supreme Commander of the North Atlantic Treaty Forces, August 31, 1953.

—*Don Hesse, St. Louis Globe-Democrat*

"The 800,000,000 people living west of Soviet Russia now enter the Jet Atomic Age splintered into 57 sovereign nations. East of them 1,450,000,000 people enter it divided into only 15 sovereign states." —Freedom Against Itself.

Of the seventy-seven sovereign nations on earth, only four—the United States, the United Kingdom, Switzerland and the Netherlands—have had even 150 years of unbroken experience in relatively free self-government. In all four a protecting natural shelter—ocean, Channel, mountains, delta—gave freedom the time it needed to achieve this degree of maturity. But its machines have made such shelters of no avail today, when so many sprouting democracies seek to achieve this, too. Freedom must henceforth count for protection on human wisdom only.

Freedom's survival depends now on the people of Atlantica learning to spread the know-how of liberty-and-union through humanity as rapidly as their other know-how spreads. They may do this by learning first to govern freely but effectively their own Atlantic community. By forming an Atlantic federation they can, moreover, supply through it the shelter from dictatorship which mountains and oceans no longer give to infant democracies.

IV

My studies in 1942-43 not only brought out the basic tension the free have themselves created but made me conclude that the danger in it was great indeed. Since then all four of the major forces causing this tension have tremendously increased it, and the resulting danger. In that brief decade (1) freedom's inventiveness has produced the supersonic plane, the atomic and hydrogen bombs while (2) its political divisiveness has produced fifteen new sovereign nations and prevented the creation of any international government. At the same time (3) the area united under dictatorship has expanded more than in any decade in centuries and (4) dictatorship has armed itself far more formidably in Soviet Russia than it was in Germany, Japan and Italy, and has quickly learned to make our most advanced weapons.

At this rate how much greater will the tension be ten years hence . . . if it does not meanwhile produce catastrophe? Consider this ABC of one element in this tension, the growing economic strain on Atlantica:

A. We are still adding to the huge load of debt we acquired in the two World Wars and the Depression. The biggest factor in it, the cost of armament, is soaring fantastically. Bombers already cost eight times more than in 1945. This curve seems certain to continue, and to burden us much more than it does the Kremlin.

B. The practice of seeking to solve economic problems by artificially increasing costs has become chronic throughout Atlantica. In the past forty years the free have reversed their 19th Century policies that cut away man-made obstacles to the free movement of men, money and goods while their machines were removing natural barriers to this trinity of economic freedom.

At the very time when mass production and the automobile, airplane and atom came, requiring for their growth an even wider market than the steam age did, we Atlanticans turned back to the thinking of 1750. We have sought prosperity through building all kinds of man-made barriers to business, until Atlantica in this year of the reign of Absolute National Sovereignty is as cluttered up with them as was France under the reign of Absolute Royal Sovereignty two hundred years ago.

On top of this, organized business, labor and farm interests, which freedom has brought to great power in every Atlantic nation, use their influence to limit in costly ways the market their fathers freed. In so doing they inevitably give greater power to the governments their fathers sought to limit. They have their disputes, but they tend to settle them usually by agreements that raise prices and wages—increase still further the cost of living, producing, marketing.

Were it not that our machines are continuing to cut costs, freedom's economy would have collapsed already. But the economies they effect are being devoured by the rise in man-made costs. These could be drastically cut by Atlantic federation extending the free movement of men, goods and money on an oceanic scale at the dawn of the Jet Atomic Age, as the American Federal Union extended it on a continental scale at the dawn of the Steam Age.

Once invented, slaves can soon learn to use and make freedom's inventions. They inevitably arm dictatorship industrially

—*Ford Motor Company*

and militarily to fill by force the need for international government which the free create but refuse to meet themselves.

Until this is done the economic strain is bound to grow worse.

The Soviet dictatorship has its own difficulties, but it does not suffer these pressures that afflict all Atlantica. There are fifteen States in the Soviet Union —but not fifteen currencies, fifteen barriers against the movement of goods and men, fifteen defense forces devouring taxes. Nor is Moscow hindered by the kind of cost-raising pressures that business, farm and labor bring so freely

on Washington, London, Paris, Ottawa.

C. Then there is the witch's brew of fear and suspicion in Atlantica . . . the growing mistrust among Americans, Britons and French . . . the fever of investigations that divert attention from essentials and destroy the mutual faith which freedom needs to live. All this so distorts our sense of values that to gain illusory security against a future Fuchs we sacrifice all we could gain from having a team of Fermis, Bohrs, Meitners, Einsteins, Curies and Rutherfurds continuing to work freely together.

Our most powerful weapon, as this study shows, is the great inventive power that lies in union of the free. This weapon remains the monopoly of the free. We need no security measures to keep dictatorship from stealing it. We cannot persuade Moscow to copy it. Yet this is the weapon that we are sabotaging now—in the name of security.

The Kremlin aims to steal whole countries now—with hungry depression as its skeleton key. And our "security" zealots are busy now helping produce the key.

The imminent danger now lies in political disunion and economic depression rather than World War—though the war danger remains so great (particularly as regards new "Koreas") that it would be folly to weaken our defenses. We have probably closed the domestic door through which depression came in 1929. But we have left open the door which Atlantic disunion provides. The people of Atlantica still lack even the most elemental means of dealing with a common economic crisis; they have no common government.

It would seem common sense to hasten to tighten Atlantic unity from within as Moscow removes the pressure of fear that now holds NATO together. If the NATO nations need to have the means prepared beforehand for joint military defense, they need international machinery on the economic side, too. An attack by general depression on one of them can also imperil them all.

Atlantic disunion and depression form a vicious circle. The worse disunity becomes, the greater is the difficulty of nipping depression in the bud. On the other hand, depression makes for worse disunion. Military danger often leads the free to unite, but economic danger nearly always divides them more than ever.

The Kremlin is busy undoing its folly which produced NATO. But Atlantica's statesmen and politicians are not yet seeking to replace NATO's made-in-Moscow bond before it vanishes. Instead of hastening to replace it with the internal cement of organic Atlantic Union, they urge the Kremlin to remove more rapidly the pressure that brought them together.

The need of uniting the free is so urgent "we should tackle it simultaneously by every reasonable method—by federalist-constitutional procedures that made U.S. as well as by diplomacy and "gradualist' methods that made Britain," author says.

They make the people think that the way to peace lies in concessions that depend on others, on Moscow or on Paris—on a united Korea, a united Austria, united Germany, a united Western Europe—not on a United States of the Atlantic. At Yalta, they paid the Kremlin to come where it wanted to go . . . into position to win China. Now they beg it to prove its "sincerity" by concessions that would speed the descending spiral of disunion and depression, which it already sees is the best way to destroy freedom.

How near is the danger?

When two opposing winches put a chain under increasing tension, it is impossible to say at which link and at which moment it will break, but it is easy to see that it is bound to break somewhere, sooner or later, if the strain continues.

So it is with this basic tension of our time. Since the break would be a major catastrophe, and since it takes so much time to arouse to salutary action those with most at stake, it is safer to err in fearing that we are at the eleventh hour than in assuming that we have plenty of time.

V

I believe catastrophe can still be averted—and this danger turned to great good. To work this transformation we need to keep in mind that the primary source of the danger lies in us, the free, rather than in dictatorship. Only the free can end this tension while preserving freedom. They cannot do it by ending their inventiveness; they cannot help but continue to be creative while they continue to be free. They cannot alter totalitarianism's inherent trend to expand until it is truly total. Nor can they keep their machines from being so simple that dictatorship can make and run them with its slaves, and use them to impose its government. *There is only one way the free can peacefully end the world's most dangerous tension.* They *can* end their own divisiveness; they can constitute an effective free government for their common concerns.

Despite the Machiavellis of Moscow and the depression, I for one believe this will be done. Among my reasons why are these two:

1. By great good fortune the key country on which Atlantica now depends for leadership, the United States, provides in its history the proof that economic danger can persuade free States to federate. It is the exception to the rule that war unites but depression divides. Where war led the people of the thirteen original States to form merely an anarchic alliance, hard times thereafter produced their present Union.

2. The first step to Atlantic Union is relatively easy: All we need do now is to call another Federal Convention, much like the one of 1787, where delegates from the people of Atlantica would explore the possibility of uniting in a federation. This commits no people to any Union; the time for commitment would come only when the Convention presented them with a Constitution to debate and ratify.

Merely by calling this Convention we tackle the long overdue task of learning better the principles of free government, so that we can spread this know-how more rapidly through a world that learns so quickly to turn our weapons and machines against freedom. Both by its debates and by the example it set, this Convention would give our principles a power among the young democracies and behind the Iron Curtain that nothing else could do.

To explore this solution would not hurt, but help, the United Nations, NATO and the unification of Europe. The need of strengthening international organization is so great that we should tackle it simultaneously all along the line and by every reasonable method —on the Atlantic as well as on the universal and the European level, and by the federalist-constitutional procedures that made the United States, as well as by diplomacy and the "gradualist" methods that made Great Britain and the Commonwealth, which we are confining ourselves to at present.

The essential is that, before Moscow removes more of the pressure that now keeps the free from falling apart, we should thus redouble our efforts to weld them together. Once we have freedom's ablest statesmen assembled, and authorized to submit to us a plan for governing our common affairs adequately, we can have faith that even a depression would not deliver the free to dictatorship and war, but would lead the Atlanticans, as it did the Americans in 1787, to the higher standards of life and liberty that Federal Union brings.

If we astonish the many skeptics among us by actually achieving Atlantic Union, we can be sure that we shall also take the Kremlin by surprise. This surprise will be the more devastating to the Communists since they are banking so deeply on Stalin's assurance—plus all we are doing now to confirm it—that the peoples of Atlantica have not "been taught sufficiently by the experience of two World Wars" to unite.

The convulsions that have wracked our generation—two World Wars and a Great Depression—need not be convulsions of madness and death for individual liberty. They can mean, instead, merely the end of the present worship of Absolute National Sovereignty, and the birth of far greater freedom for us and our children.

None of us can hope to save freedom without some personal sacrifice. No matter what it is we most believe in, it requires some sacrifice. The god of Absolute National Sovereignty demands that we sacrifice our sons to it, our jobs, our individual freedom. For these sacrifices it brings us only greater grief, as our generation knows from experience. Liberty-and-union requires us to sacrifice some of our prejudices, some of the power we have given our politicians, some of the special privileges that some of us have. To those who have made these sacrifices in the past, it has brought greater liberty, richer, safer life.

On a memorable occasion in 1789 the beneficiaries of Absolute Royal Sovereignty in France offered to sacrifice to liberty-and-union some of their privileges and prejudices. But they sacrificed too long to the wrong god, too late to the true one. They sacrificed only when they saw this was their only hope to save themselves, and they soon lost all they sought to retain, and their lives, too.

Abraham saved his son Isaac by unhesitatingly offering to sacrifice even him when he thought his God required this proof of faith.

Whose example shall we follow? And how soon? It is for each to decide what he or she holds supreme, the sovereignty of the State, or the sovereignty of its Citizens. You know my answer. It is for you now to say which you will put your faith in—Freedom's Divided House or the Union of the Free.

Life in Atlantica

Kremlin Jets to Jets

"The numerical strength of the Soviet Air Forces in recent years has been about 20,000 aircraft," the NATO Letter reports, "but the rapid increase in the Soviet air potential is illustrated by the rate of change-over to jet aircraft. Today, all Soviet first-line fighters and bombers are jet powered. A similar development has occurred with respect to their light bombers. In early 1951, jet light bombers had not been introduced into operational units. Today, all of their light bomber forces are jets."

Nato Youth Meet

The second conference of delegates from youth organizations of NATO nations was held at the Palais de Chaillot in Paris last summer. Mr. S. Stray, of Norway was elected chairman. The conference formed four committees, each dealing with one of these topics:

1. Program for exchange of military personnel on leave, students, teachers.
2. Organization of seminars, holiday camps, rallies, sport meetings.
3. Forms which cooperation between young people of the NATO countries might take, and institutions which might be designed with this in view. Relations between the youth of NATO countries and other countries of the Free World. Desirability of setting up "Atlantic Community" associations open particularly to young people.
4. Contribution which youth organizations can make in disseminating information on NATO aims and methods.

Atlantic Cultural Exchange

The first conference of Cultural Experts sponsored by NATO met at the Palais de Chaillot in Paris last summer. It was presided over by Dr. H. J. Reininck, Director General for the Arts and Foreign Cultural Relations of the Netherlands Ministry of Education, Arts & Sciences. The meeting was attended by senior officers primarily concerned with government-sponsored cultural activities in the member countries of the Atlantic Alliance. The Conference adopted specific recommendations for intensifying cultural exchange among their countries.

Soviet Satellites Arm

The number of Soviet satellite divisions has almost doubled since 1947 bringing their total to about 80 divisions, according to the official NATO Letter. It adds that in 1951 the aircraft of the satellite Air Forces were obsolete. By the end of 1952, their strength had been doubled to over 2,500 aircraft, about half jet fighters.

The Little Dog Laughed

Here are a few of the cartoons printed in FREEDOM & UNION *in the past 10 years that I enjoyed most. So many made me laugh that I can't resist continuing to celebrate our birthday by showing you next month some more of my favorites.*

"I don't know how the Russians do it. When I drink vodka I say 'yes' to anything."

Should Auld Agreements Be Forgot?

Should auld agreement be forgot
  And never brought to mind?
Should auld agreement go for naught,
  As though it ne'er were signed?

Then here's a pen, my trusty friend,
  And gie us a pen o' thine,
We'll sign a coupla treaties yet
  And keep 'em, well, in brine.

We diplomats have high silk hats,
  Great power is our wine,
But when we break a treaty—hic!
  We hear no bullets whine.

Then here's a pen, my trusty friend,
  And gie us a pen o' thine,
And when we break our treaties—well,
  We'll have some more to sign.

June 28, 1956

Dear Clarence:

Many, many thanks for your thoughtful letter of June 25th. You are, of course, right; but the trouble is we fight a clock in this business, and I felt it advisable to confine myself to what had actually happened rather than attempt to detail a set of conditions which might have prevented it.

Your idea about a "Letter to the Editor" has merit. The only trouble is there wouldn't be many as thoughtful as yours.

I am taking a little time off starting tomorrow. Let us talk about it when I get back in the autumn.

As ever yours,

Mr. Clarence K. Streit

June 25, 1956

Dear Ed,

I've just listened to your commentary on the vote in Iceland and learned, as usual, a few things, for which I thank you.

But I think you made one mistake yourself, by way of omission, and in view of your quotations from the Chinese on the human virtue of correcting errors, I believe you'll want to correct it some time.

Your broadcast implied throughout that the fault lay in the way our Government had handled the situation in Iceland - not in the system, in the basis on which we conduct our relations with Iceland, that of alliance.

Granted that we made the mistakes you pointed out, and that they were avoidable, and that we should learn from them to do better in future. Granted that under any system men make avoidable mistakes.

Still, is it not a profound mistake to choose and cling to the system under which the errors in question are not only most likely to occur but to have far more dangerous consequences?

The Government can, and does, make the same kind of mistakes in dealing with the people of this or that State in our own Federal Union that it has made in Iceland, and in other States of NATO. But however bad they may be, the result is not the loss of a most important air base.

Another thing: If our 48 States were united merely by alliance, as are the 15 States of NATO, Moscow might step in and "solve" the farm problem in the sovereign nation of Iowa as you report it "solved" the fish problem in sovereign Iceland. Conversely, if the States of the Atlantic Community were federated as are our 48, the Kremlin could not hope to buy off any of them.

Too many Americans forget, or never learned, that originally the 13 States were united merely by an alliance - the Articles of Confederation. Under that system, as Madison pointed out in the Federal Convention on June 29, 1787, the smallest State could defy the alliance as Iceland can defy NATO now - "Delaware during the late war opposed and defeated an embargo, to which twelve States had agreed, and continued to supply the enemy with provisions in time of war."

It was this sort of thing that led the 13 States then to tackle the basic mistake

they had made in organizing their relations as an alliance. They tackled it by calling into being, not a Committee of Three diplomats, as NATO has done recently, but that Federal Convention of delegates where Madison spoke, and voted, as did all the delegates, as an individual citizen, free from instructions from his home government. That Convention produced our Federal Constitution, the most enduring success any conference of sovereign States ever had.

If the alliance system couldn't work even among the 13 States, if it failed so miserably among allies all of whom spoke the same language and had so much in common, how can we realistically expect it to work better among the nations of the Atlantic Community today? Unless we can count on angels for diplomats, legislators and voters, is this system not bound to produce more and more dangers such as the present one in Iceland? If little Iceland can defy NATO, or the U. S., what ally can't? Making another Cyprus of Iceland is, I submit, no solution. Would not federation solve these problems?

"Peacetime coalitions throughout history have been weak and notoriously inefficient," General Eisenhower warned on April 2, 1952 in his report to NATO. Yet since he became President his Administration has done nothing yet even to explore by the Convention method that produced our own Constitution how to unite the Atlantic democracies effectively.

A resolution to call such a convention for this purpose is now before the Senate Foreign Relations Committee which recently decided to hold a final day of hearings on it, probably next week.

I suggest, Ed, Iceland provides a good peg on which to hang broadcast on this subject. And if you want some juicy quotations on the mistake any democracy makes in trusting to alliance, I would be glad to supply them hot from Hamilton and Washington.

With best regards,

Clarence

Clarence Streit

P. S. Why not have a "Letter to the Editor - I mean, Commentator" in your broadcast from time to time? I nominate a piece of the above as a starter!

Edward R. Murrow
CBS New York City

GENERAL GRUENTHER FAVORS ATLANTIC CONVENTION RESOLUTION

Testifying on the Mutual Security Act of 1956 at the Senate Foreign Relations Committee in executive session on May 31, General Gruenther was questioned by Senators George, Fulbright and Humphrey regarding Atlantic Union and the Atlantic Exploratory Convention resolution [S.C.R. 12, H.C.R. 72-80] . The questions and answers below are reproduced from the Report of the Hearings on this Act, released June 17.

The CHAIRMAN. If, injected into this present picture, there should arise a belief in the NATO members in Western Europe that there would be a probability that the United States and Canada would become parties in a federated union, would that be a divisive influence right now?

General GRUENTHER. I would say that if the United States were willing to make that kind of offer it would definitely have a favorable influence on the NATO members.

The CHAIRMAN. I would not want to say that the United States would be willing to do that because I presume that the men around this table would know better.

General GRUENTHER. I was taking your question as posing a hypothetical situation.

The CHAIRMAN. Yes, a hypothetical question. I just wanted to get your view on that point, looking at it from the standpoint of the Western European states.

General GRUENTHER. I would say this, Senator. Anything that can be done to create in the minds of our NATO allies the belief that there is a mutuality of interests between the United States and Western Europe, is all to the good. Any indications in that direction would be helpful. We must always bear in mind that United States participation in European affairs is something very new. Many of our Western European friends entertain the haunting fear that sooner or later we may pull back and leave them alone. All too often some of the public utterances of some of our prominent citizens give this impression.

* * *

ATLANTIC UNION

Senator FULBRIGHT. Do you see any alternative to continued military preparation?

General GRUENTHER. With conditions as we know them now, I can see no acceptable alternative.

Senator FULBRIGHT. What do you think of Atlantic Union as an alternative? Do you support such an idea?

General GRUENTHER. I think any feasible action which would improve unity within NATO is all to the good.

* * *

Senator HUMPHREY. Just this final question. You are familiar with the proposal for a NATO convention, that is, for representatives of NATO countries to get together and talk over the possibility of strengthening NATO.

General GRUENTHER. Yes.

Senator HUMPHREY. There has been a resolution introduced here in the Senate—Senate Concurrent Resolution 12—and there have been some recent revisions of it. The last revision was merely to suggest that—

> The President is requested to transmit to other democracies which sponsored the North Atlantic Treaty Organization the proposal of Congress that they name delegates to meet in a convention with delegates from the United States and from other democracies, to explore and report to what extent their people might, within the framework of the United Nations and in accordance with the basic principles of the Constitution of the United States, achieve more effective unity in advancing their common economic and political affairs and their joint defense.

How do you feel about such an exploratory convention?

General GRUENTHER. I feel that the bringing together of representatives of the NATO nations is desirable.

Senator HUMPHREY. Do you think it would be helpful in terms of political unity of our NATO pact countries?

General GRUENTHER. Yes; I think any decision that would improve mutual understanding of the problems of the NATO nations would be helpful.

GRUENTHER PUSHES ATLANTIC FEDERAL UNION

Testifying behind closed doors, General Gruenther gave Atlantic Union a powerful push at the Senate Foreign Relations Committee hearing on Foreign Aid May 31. The Committee has only now given out his answers to questions including this significant passage:

> Chairman George: If . . there should arise a belief in the NATO members in Western Europe that there would be a probability that the U.S. and Canada would become parties in a federated union, would that be a divisive influence right now?
>
> General Gruenther: I would say that if the U.S. were willing to make that kind of offer it would definitely have a favorable influence on the NATO members.

The July Freedom & Union will include a full page of General Gruenther's answers to questions on the Atlantic Convention resolution put to him at that hearing by Senators George, Fulbright and Humphrey. Don't miss it, nor the other reports of progress in our field that crowd our July issue.

Following General Gruenther's favorable testimony, - which we are told was even stronger in the oral than the printed version - the Committee decided to have one final day of hearings on the Atlantic resolution as soon as it finishes with the Foreign Aid bill - in late June or early July. This is to enable the DAR et al to testify against the resolution and to let its supporters meet the objections that Secretary Dulles raised to certain provisions in the original text. The result will be to clear the stage for possible action before Congress adjourns.

(over, please)

Yes . . . I want to help win the battle Federal Union's in now. Here is some ammunition - $_____. Please count it as my:

EDITOR, CLARENCE STREIT

Atlantica . . . in the Stars (p. 2–3)

I agree with Sen. Kefauver (Atlantic Convention Sponsor.)
—Italy's MARTINO

Our ultimate destiny may require some form of federalism.
—Canada's PEARSON

Closer Union between the free countries of the Atlantic . . . is the chief task of our generation. —Norway's LANGE

I regard the contribution which the U.S. can make to this project as of the utmost importance.—Eisenhower naming GEORGE as his personal Atlantic unity explorer.

"The best English dictionary of its size"—NEW YORK HERALD TRIBUNE

Given to you ... A "BIG" DICTIONARY FOR YOUR LIBRARY CONSIDERABLY LARGER THAN THIS PAGE

IF YOU JOIN THE BOOK-OF-THE-MONTH CLUB NOW AND AGREE TO BUY AS FEW AS SIX BOOKS DURING THE NEXT TWELVE MONTHS

WITH A NEEDED BOOKREST

This handsome bookrest, which allows the dictionary to lie open for easy reference, will also be sent without charge.

- ✶ Now 2544 pages
- ✶ Fifty years in preparation... the latest edition, reprinted with corrections and up-to-date additions
- ✶ The only dictionary of its size that explains not only the meanings but also the history of words, from as far back as Chaucer up to the present day
- ✶ Apt quotations are used wherever needed to illustrate correct and precise usage
- ✶ Includes scientific words and colloquialisms
- ✶ Employs the most modern system of phonetic symbols to indicate American and British correct pronunciation

The Oxford Universal Dictionary

LATEST EDITION • *Published by Oxford University Press*

IMPORTANT NOT TO DELAY

Because of the expense involved in printing such a huge work, the number of volumes manufactured for the Club has had to be carefully estimated. We believe that our supply is sufficient to meet a reasonable demand. If it proves insufficient, another printing will be required *and this will necessitate a delay*... at least four months. Consequently, it is important that you mail the coupon at once. Orders will be filled in the sequence they are received. Should there be a delay in your case, you will be notified and you may cancel the membership, if you wish.

THIS INTRODUCTORY OFFER is a demonstration of three marked advantages of membership in the Book-of-the-Month Club.* First, as a member, you are kept from missing the important new books. Second, you get Club choices at a considerable saving; an average of about 20% less than the retail price, over the past two years. And third, you share in about $12,000,000 worth of free books (retail value) distributed during the year among members as Book-Dividends. Because of its large membership the Club prints enormous editions of its selections at a great saving in manufacturing costs. The money thus saved is invested in editions of other desirable volumes, each of which is a Book-Dividend* given without charge to members. THE OXFORD UNIVERSAL DICTIONARY represents an "advanced" Book-Dividend, earned by the purchase of the six books you engage to buy later.

★ **YOU AGREE TO BUY ONLY SIX BOOKS** within your first year of membership, from among the Club Selections and Alternates. During the year at least 100 good books will be made available to you, from which you may choose. You will receive a careful advance description of each Selection and if you think it is a book you would *not* enjoy, you send back a form (always provided) specifying some other book you may want. Or you may say: "Send me nothing next month."

★ **AFTER BUYING SIX BOOKS** — and as long as you remain a member—you will receive a Book-Dividend with every second book you buy from among the Club Selections and Alternates.

★ **YOU MAY CANCEL YOUR MEMBERSHIP** any time after buying six books. Membership in the Club is for no fixed period, continuing until notice of cancellation is received from the member.

BEGIN YOUR MEMBERSHIP WITH ANY OF THESE GOOD BOOKS

☐ **ANDERSONVILLE** by MacKinlay Kantor *Price (to members only) $4.25*

Double Selection: ☐ **WE DIE ALONE** by David Howarth and ☐ **AN EPISODE OF SPARROWS** by Rumer Godden *Combined price (to members only) $3.95*

☐ **MARJORIE MORNINGSTAR** by Herman Wouk *Price (to members only) $3.95*

☐ **INSIDE AFRICA** by John Gunther *Price (to members only) $4.25*

☐ **SOMETHING OF VALUE** by Robert Ruark *Price (to members only) $3.95*

☐ **GREAT RIVER** (2 vols. boxed) by Paul Horgan *Price (to members only) $5.95*

Double Selection: ☐ **NO TIME FOR SERGEANTS** by Mac Hyman and ☐ **ONIONS IN THE STEW** by Betty MacDonald *Combined price (to members only) $3.95*

☐ **THE GOOD SHEPHERD** by C. S. Forester *Price (to members only) $3.75*

☐ **A STILLNESS AT APPOMATTOX** by Bruce Catton *Price (to members only) $3.95*

BOOK-OF-THE-MONTH CLUB, Inc. A546
345 Hudson Street, New York 14, N. Y.

Please enroll me as a member and send, free, THE OXFORD UNIVERSAL DICTIONARY with the purchase of my first selection, indicated above. I am also to receive separately, without charge, the bookrest illustrated above. I agree to purchase at least five additional monthly Selections—or Alternates—during the first year I am a member. I have the right to cancel my membership any time after buying six Club choices. After my sixth purchase, if I continue, I am to receive a Book-Dividend with every second Selection—or Alternate—I buy. (A small charge is added for each book bought to cover postage and mailing expenses.)

PLEASE NOTE: A "Double Selection"—or a set of books offered to members at a special combined price — is counted as *a single book* in reckoning Book-Dividend credit, and in fulfilling the membership obligation.

Mr. / *Mrs.* / *Miss* .....

[On Second Thought]

Ike Moves to Unite Atlantica —and Moscow to Divide It

AT LONG LAST, the U. S. Government has committed itself to explore stronger unification of the North Atlantic Community. It did this by four important moves in quick succession, though none—at this writing—went to the point of calling for action on the resolution for an Atlantic Exploratory Convention, pending in Congress. Meanwhile there have been a series of important moves on the other side of the Atlantic table. Their effect is to advance the Kremlin's strategy of weakening Atlantic unity and winning the world through another depression. On balance, it seems to me that the Eisenhower Administration awoke none too soon, and is still moving much too slowly. It deserves a slap on the back for what it has already done—and another, lower down, to speed it on.

One Two Three. The Administration's turn toward Atlantic unification began April 23 with the speech Secretary Dulles made at the Associated Press lunch in New York announcing that if this "be the common desire of the NATO member nations, the U. S. will join eagerly in exploring" it. (See the May FREEDOM & UNION for excerpts from this major speech.)

Next came the NATO Council session in Paris on May 5-6 and its decision to name a Committee of Three to explore the matter. (On page 15 we give the text of the Council's communique, and on page 12 the public report on the meeting Secretary Dulles made on his return.)

The third move: President Eisenhower on May 9 wrote Senator Walter F. George, that "I regard the contribution which the U.S. can make to this as of the utmost importance" and asked him to "crown" his career by acting "as my personal representative and special ambassador in the development of this new evolutionary step within the North Atlantic Community." (See page 3 for text of this letter, and the Senator's acceptance.)

"There Be Three . . . Yea Four." This Old Testament way of emphasizing a point applies not only in the way our cover suggests but also to the moves the U. S. has made toward Atlantic unity. For along with the three steps which all the world could see marked a turning point in U.S. policy, there came a fourth whose relation to Atlantic unification passed unnoticed, yet was of far-reaching importance. President Eisenhower on May 4 threw his weight behind an air-power policy which makes U. S. security depend on foreign bases while Russia gains the lead in long-

range bombers. This policy leads to Atlantic Union as surely as President Truman's guarantee of Turkey and Greece led to NATO.

Ike vs. the America Aloners. A basic choice faced President Eisenhower when General Curtis LeMay, head of the U.S. Strategic Air Command, roused wide concern in Congress and the press by testifying that the Kremlin is now surpassing U.S. production of long-range bombers and, if this continued, would lead in this kind of striking power by 1958 or 1960. An air strategy that relies primarily on intercontinental bombers implies a political policy that is primarily one of "America alone" nationalism, though General LeMay and many of his supporters may have missed this implication.

*

Questioned on this issue at his press conference May 4, President Eisenhower, according to *The New York Times*, "reiterated the Administration policy of basing military strength on national requirements rather than matching the Soviet Union plane for plane." He went on to stress that medium bombers were "more efficient," and that the U. S. could and would rely heavily on them because it had "the most powerful Navy in the world," which "featured air power." Moreover, he added, the U. S. has "bases around the world established for the particular purpose of using the medium bomber, and not being forced to make all our bases in the U.S. and, therefore depend on intercontinental machines."

Air Base Advantage. Soviet Russia can build a navy, but it is far harder, if not practically impossible, for it to gain the equivalent in bases for medium bombers of those the U.S. has. By far the most important of these are in the North Atlantic community.

*

If the Kremlin could take over all the foreign air bases the U. S. has, it still would be little closer to the U. S.—except through those in the Atlantic area. Iceland would bring it closest, but would not give it the striking power against the U. S. which this base gives the U. S. against Russia. A bomber which could reach Washington from Iceland could strike only Northeastern America, whereas it could bomb all European Russia, and all the European satellites.

*

Suppose the Kremlin could gain a base in northern South America. It would still be farther from Washington than a U.S. plane based on France is from Moscow, and Stalingrad. Even if the Kremlin had a base on the Rio Grande in Mexico, it would be farther from Washington than a West German base is from Moscow.

Basic Fact on Bases. The U. S. is the citadel of the Atlantic community, its centers of power are scattered across the continent, and by the Eisenhower rating of bomber efficiency it is far better protected than is the citadel of Communist power — European Russia and east Europe—from bombers based on the European side of Atlantica. This basic fact makes it easier to understand why the central aim of Kremlin strategy is to neutralize, at least, Germany, France and Iceland, and destroy what unity Atlantica has gained in NATO. But this same basic fact makes it harder to understand why Congress and the U. S. press should be so concerned lest the U. S. fail to match Russia in the highly expensive and relatively inefficient bombers that circumstances require Moscow to rely on—and so little concerned at the alarming headway Moscow is making in lessening the vast advantage which the combination of Europe's bases with U. S. power gives the West. Happily, the President has shown better judgment.

Congress Backs Ike. Commenting on the President's preference for bases rather than long-range B-52s, John G. Norris wrote in the *Washington Post and Times-Herald*, May 5: "It will come as a shock to many in the country that the nation is prepared to give up its lead in global bombers — long considered one of the nation's most potent weapons." On May 11 Mr. Norris reported that the House, before unanimously passing a $36 billion defense bill, had decisively rejected an amendment to add another billion dollars for more intercontinental bombers. It did so after the manager of the bill

HALVARD LANGE, FOREIGN MINISTER OF NORWAY, said, at the Congress of the Atlantic Union Committee, Nov. 21, 1952:

"You have foregathered here in Buffalo to discuss how best to further a closer union between the free counties of the Atlantic Community. The establishment of such a closer union is the chief task of our generation. Its establishment is a main condition if we are to prevent the present cold war with all its stresses and tensions from turning into the world cataclysm of an Atlantic war."

GAETANO MARTINO, FOREIGN MINISTER OF ITALY, in a statement made for the July 1955 FREEDOM & UNION, said:

"I am glad that so many eminent members of the American Parliament have seen fit to introduce the Atlantic Union Exploratory Convention Resolution into the American Congress. I agree with your Senator Kefauver that the peace of the world cannot be assured by methods of formal diplomacy alone; and I feel that any efforts on the part of leading citizens in different democratic countries to explore and carefully discuss the probable advantages, obstacles and problems connected with some possible form of eventual democratic federation are very desirable."

LESTER B. PEARSON, CANADIAN SECRETARY FOR EXTERNAL AFFAIRS, stated on April 30, 1956, in London—just before the NATO council met in Paris:

"We have not fully recognized the changes . . . which render obsolete many of our old concepts of national sovereignty, and which . . . make essential the growth . . . of supranational association: changes that require that we give priority to interdependence over independence.

"This does not mean, however, that we should move at once into world government, or some form of Atlantic union or broad political federation . . .

"Those who advocate such schemes of federation do so from the highest motives. They perform . . . a good and useful service in preparing public opinion for the political changes which will undoubtedly be called for in the future. . .

"Our ultimate destiny—to safeguard our very existence—may require some form of federalism on a regional or even a wider basis. But meanwhile we have to work with the institutions which exist today."

WHAT NATO'S THREE SAY OF ATLANTIC UNION

opposed it on the ground that more bases were "desperately needed," not more B-52s.

Bases Depend on Union. President Truman could not make good his guarantee to Turkey and Greece without assuring the line of communication to them, and this meant guaranteeing Western Europe—as he proceeded to do in the Atlantic alliance. Still less can President Eisenhower guarantee American defense by air bases without being sure of the right to use them. Only organic union can assure this—and the President is proceeding now to explore Atlantic unification. None too soon. On May 18 the press reported that new U. S. air base construction in Iceland had been suspended in view of the uncertainty resulting from the Iceland Parliament's request in March that the U. S. withdraw all its troops.

*

If national sovereignty permits little Iceland to force the U. S. to leave the key base it has built there, then clearly the NATO alliance gives even less assurance that the U. S. can use its bases in Britain or France at the showdown.

*

If the U. S. keeps its troops in Iceland despite Icelandic opinion, it risks having all the trouble on that island that the British are having in Cyprus. If Atlantica were a federation instead of an alliance, the Union would be as certain of being able to use without difficulty its base in its State of Iceland as the U. S. is now of a base in any of the 48 States in its Union.

Singapore Threatened. In Iceland the Communist party is influential, and in another important base, that of Britain at Singapore, the Chinese who form most of the city's population look with favor on Red China. London's negotiations with the Singapore government broke down in May, and Britain's hold on this key area is increasingly threatened. This adds to the danger it faces of losing the rubber and tin in the Malayan peninsula which are so important to its faltering economy, especially its dollar position. Loss of Singapore and Malaya would make it all the more imperative that the West compensate for this by gaining the military and economic strength Atlantic Union gives.

Kremlin Advances. While the West was retreating in Iceland and Singapore — and also in Ceylon, the Near East and North Africa,—the Kremlin was also advancing in other quarters and other ways. It was drastically integrating the economy of its European satellites, and gaining still more production—and wide applause by reducing arms it no longer needed.

Ike Names George Ambassador to Atlantica

On May 9 President Eisenhower wrote to Senator George:

I know that your present term in the Senate expires this year. In view of that fact I should like to say two things to you:

It has been my great hope that you would continue on in the Senate where you have been able to make so great a contribution to peace through helping to develop and sustain a non-partisan foreign policy. Your contribution in that respect has been incalculable and I believe it was the overwhelming desire of the American people that you would have found yourself able to continue in the Senate.

I can, however, realize that you may desire to concentrate more exclusively on the great problems of war and peace which confront our Nation, free of the other responsibilities which inevitably go with the Senatorship. If that is your preference I earnestly hope that you will be willing to act for this Nation with reference to the development of the North Atlantic Community so that it will, in greater unity and greater effectiveness, serve the cause of international peace and the preservation of those ideals of human liberty and freedom which are so deeply rooted in the community.

As you know, at the latest meeting of the North Atlantic Treaty Council, it was decided to *explore* ways and means by which the North Atlantic Community, through the NATO Council *or otherwise* might more fully realize its potential for peace and human welfare. I regard the contribution which the United States can make to this project as of the *utmost importance* and feel that it may indeed play a decisive role in the achievement of a just and durable peace and the preservation of the great values inherent in our Western civilization.

It would be a great service to the Nation and, indeed in a broader sense, to the whole world if you would be willing, for as long as I may hold my present office, *to act as my personal representative and special ambassador in the development of this new evolutionary step within the North Atlantic community*. In case you do feel impelled to lay down the responsibilities of your present office, I can think of no way where you could better serve our Nation and more fittingly crown your great career as a statesman.

The White House announced Senator George's acceptance thus, May 14:

"Senator George stated that he would be glad to accept this responsibility and . . . would be available after the adjournment of the present session to perform any duties, consistent with his Senatorial responsibilities, that might be required by the President. In the meantime the Senator, in cooperation with the Secretary of State, will study the problem of developing the NATO concept and consult with the foreign ministers of Canada, Italy and Norway, who were designated by the NATO council to study the problem with the governments involved.

"Following his retirement from the Senate, Senator George would plan to devote himself actively to advising the President and the Secretary of State with reference to this matter as well as regards the general development and implementation of a bipartisan foreign policy."

Note: We have added the italics to the text.—THE EDITORS

Satellite Economies United. On May 5—the day that Mr. Dulles launched in the NATO Council his proposal to explore greater Atlantic political and economic unity, — the Warsaw Pact launched a plan for dividing and coordinating industrial production among the eight members of this Red equivalent for NATO. Each nation is to restrict its economic development to its most suitable industries, and rely on imports from allies for other needs.

*

By the Red plan, East Germany will concentrate on brown coal, coke, chemical derivatives, steel and fertilizers. Poland and Czechoslovakia will expand their hard-coal output, Hungary its aluminum production, Romania oil and natural gas, and so on. This amounts to the economic unification and specialization which federal union has produced among the 48 United States without any Marxist planning or dictatorship.

*

While NATO timidly sends out three explorers, and the U. S. Congress hesitates to call a convention to explore Atlantic Union, the Kremlin is already integrating the economy of its satellites. It is bringing them into a far closer economic union than most Americans yet dream of even considering doing themselves with their allies, even though their alarm mounts at rising Red production.

Soviet Arms Cut. Moscow sought to get all the propaganda value it could from its announcement, May 14, that it would reduce its army by 1,200,000 men. This put "tremendous pressure on the West to make new cuts," as *The New York Times* recognized, adding, "it taps the sentiment—current in this country, rampant in Europe — against conscription and taxes."

*

The strategy behind the Soviet cut in armed manpower, it seems to me, is still the one I outlined in these pages just a year ago, under the title, "Who Will Win Without War?" The Kremlin feels the need of lessening the burdens on its long-suffering slaves and increasing their supply of food and consumer goods. Its disarmament move serves all these defensive purposes. On the offensive side, it does much more than let the Kremlin shift more men to atomic bomb and long-range bomber production, while gaining credit in Asia, Africa and elsewhere for setting a peaceful example.

Depression the Aim. By its arms cut, Moscow replies to the Dulles move to explore stronger Atlantic unity; its reply is to lessen still more the fear of aggression which caused NATO to be formed, and whose diminution led to the Dulles move. The arms cut not only weakens still more the cement that now holds NATO together, but tends to check German rearmament and reduce throughout Atlantica the stimulus that defense and foreign military aid have given the economy. The Kremlin believes this is the way to speed both disunion and depression in Atlantica.

*

Moscow timed its "disarmament example" to come when sales of automobiles and farm eqiupment were falling in the U. S., lay-offs in these industries were "alarming" labor leaders, consumer debt and farm prices and surpluses were causing anxiety, and a Conservative British Government was resorting to a lottery to balance its budget. When Wall Street read the Moscow move, the market fell—which did not discourage Moscow.

U. S. in a Race. The Eisenhower Administration has made a good if slow start toward Atlantic unification, but it needs to remember that it is in a race, and that there are other races than arms races. Fortunately, there are indications it is aware of this, and some reason to hope it will do what is necessary to supplement the three NATO explorers of unity via diplomacy with Congressional action before adjournment to provide for exploration of deeper union by the proposed semi-official convention.

Three Good Men. The three foreign ministers — Lester Pearson of Canada, Halvard Lange of Norway, and Gaetano Martino of Italy — whom the NATO Council named as its Committee of explorers into Atlantic unity could not have been better chosen. Their previous statements on this subject (see page 2) make them especially welcome to Atlantic Unionists. Two of them—Pearson and Lange—served with Foreign Minister de Gasperi of Italy and the Dutch and Belgian foreign ministers on the Committee of Five which the NATO Council named in September, 1951, to do a similar task. If their work then came to little—the committee was disbanded at the Lisbon Council session five months later after it had made one meagre report* — it was through no fault of theirs. Now the climate is better, and they can profit from experience. Even so, neither will have any illusion about the difficulty of achieving effective, enduring Atlantic unity within the limits of diplomacy.

Hopeful Signs. Several things make one think the U. S. Government aims at doing more than strengthening the present NATO set-up. The Administration's utterances on the subject are less concerned with NATO than with the "North Atlantic community"—a vague term which might be composed other than NATO is. Moreover, the President, in writing Senator George, spoke of exploring how "the North Atlantic community, through the NATO Council *or otherwise* [my emphasis], might more fully realize its potential." And he named the Senator by a very curious formula as his "special ambassador in the development of this new evolutionary step within the North Atlantic community"—not as his envoy to NATO or its Committee of Three, as the press headlined it, but rather as his ambassador to Atlantica . . . an "envoy extraordinary" indeed.

Ambassador to a Country Yet To Be. An ambassador is normally named to a country, and the naming of Senator George to one yet to be created is a particularly welcome sign that Atlantica is on its way. Before becoming chairman of the Senate Foreign Relations Committee, he twice sponsored the resolution for a convention to explore this unknown country. If any one can assure action on it before Congress adjourns this Summer, Senator George can—and this would indeed crown his 34 years in the Senate. Was this the reason why the President named him to the new post before he left the Senate? Certainly the added prestige Senator George now enjoys as the President's spokesman on this whole subject should facilitate such action.

—CLARENCE STREIT

*For a summary, see FREEDOM & UNION, January 1952, p. 18.

Atlantic Editorial of the Month

Next Step--An Atlantic Convention

W. K. Kelsey in the Detroit News

AT LONG LAST Secretary Dulles has adopted an idea which in various forms has been discussed ever since it became evident to thoughtful people that the powers of the United Nations were inadequate to preserve order in the world. That idea involved a political organization . . . with specific powers delegated to it by its members, who would retain all other powers.

U.S. Sets Pattern

The organization would thus be patterned on that of the United States under the Constitution, and would be established for the same reasons that caused the 13 states to seek a tighter, or, as they expressed it, a "more perfect" union than a loose confederation. Experience and necessity dictated that certain sovereign powers, jealously maintained by the separate states, be surrendered to a central, national, representative government.

For years resolutions have been introduced at each session of Congress asking the President to invite the Atlantic democracies to join with the United States in an exploratory convention to consider whether a "more perfect" union might be possible. . . .

Secretary Dulles has not gone so far as to endorse, in a public speech, this particular way of getting the Atlantic democracies together. But in his address to the Associated Press (on April 23) he referred to NATO as an organization which "contains the possibilities of great development" and which, though conceived primarily as a military alliance, "can and should do more."

He added that Canada "has notably espoused this point," and that at last December's meeting of the Council "both the French and Italian delegations introduced resolutions along this line."

Secretary Dulles might have added that on March 2, Chancellor Adenauer of West Germany spoke for the expansion of NATO into a political organization which would present a united front in the "cold war" with the Soviet Union.

For some reason not yet explained, Dr. Adenauer's statement was not published in this country. Mrs. Chase S. Osborn, a member of the national council of Atlantic Union, learned of it through a letter to her from the secretary of the Bundesrat at Bonn. She interested Senator Neuberger, who asked the State Department for the text of the statement. State claimed ignorance of it, but investigated and turned it up. Mrs. Osborn sent it to President Eisenhower.

Be it noted that the question is not yet the nature of a NATO political organization, but whether it would not be a good thing to decide on one. And if the principal powers agree that a political organization ought to be established, why would it not be advisable for President Eisenhower to invite the rest to a conference, or convention, which would explore the possible means?

Mr. Dulles has committed himself to nothing more than to join with the other members of NATO in "exploring those possibilities which now beckon us forward." He is still on safe political ground. No Democratic leader seems likely to take issue with him at this stage, —certainly not Senator Kefauver, who introduced the resolution in the Senate, and certainly not Senator George, chairman of the Foreign Relations Committee, who favors it.

Of course, no resolution is really necessary. The President could summon the exploratory conference on his own hook, if he were sure that Britain would join Canada, France, Italy and West Germany in participating.

"Next to the Originator..."

JOHN BARTLETT
Born in U.S.A., June 14, 1820

JUST 101 YEARS AGO there appeared the first edition of Bartlett's *Familiar Quotations*. The 1855 edition had only 295 pages. Nine editions were edited by Bartlett himself, who prefaced the ninth edition in 1891 with the statement that the book "now culminates" its career and "closes its tentative life." Since then it has continued to grow steadily; the latest edition—the twelfth—was published in 1948 and totals 1,831 pages.

Although it is easy to measure thus the growth of this classic, it is impossible to estimate all it did in the past century to free authors from having their nuggets buried amid all their words, or their wisest, pithiest sentences misquoted. It freed other writers and speakers from having to dig for literary allusions that were perched elusively on the tips of their tongues, or for ideas and inspiration when they had neither. To everyone who has used this treasury of wisdom, wit and beauty, it has opened unexpected doors.

Little has been written of Bartlett himself. He was born in Plymouth, Mass., of a family that came there in 1620. It is said that he read from the Bible to his mother at three, and at nine had read all the Scriptures. He entered the bookstore business in Cambridge at 16, became a publisher, brought out himself the first three editions of his famous book, and became a partner of Little, Brown & Co. in 1865, which has published it since. His classic grew out of the practice of collecting quotations and their sources which he had developed for his own benefit. One wonders if he may not have been stimulated by his contemporary, Emerson, whose "Next to the originator of a good sentence is the first quoter of it," Bartlett helped to make familiar. Certainly this should be his epitaph.

Bold, Dynamic General Billotte Heads Paris Atlantic Movement

GENERAL PIERRE BILLOTTE, the newly elected President of the French *Mouvement pour l'Union Atlantique,* brings to this work the experience of an extraordinarily brilliant and colorful career: Soldier, prisoner of war, diplomat, administrator, author, deputy and Cabinet Minister.

When World War II broke out, Pierre Billotte, son of a general, was attached to Army Headquarters; he asked to join a fighting unit. During the tragic days of May, 1940, while in command of a unit of heavy tanks he met, head on, 20 German tanks, destroyed 12 and scattered the rest.

Wounded, he was transported to a hospital in Germany and then joined his comrades in a prison camp. There he organized a "University" and a committee for study of the arts. He used the first to lecture on the inevitable defeat of Germany, and the latter to stage a play where all the actors had to be in civilian garb. How much easier it was to escape in that costume! They did. Pierre Billotte eventually reached Soviet Russia and was interned again. He went from prison to prison, from camp to camp, including Katyn of sinister memory. Soon Russia entered the war: General Billotte represented General de Gaulle in Moscow and then returned to London by the long, circuitous way of the Spitzberg, and brought 186 Frenchmen out with him.

In London, de Gaulle made him chief of staff. For two years he helped prepare the liberation of France. Roosevelt rewarded him with a citation.

Now the war was on again on the Continent, and the General wanted to fight. He was nominated as national delegate to the French Resistance, but General Eisenhower expressed his opposition: the risk was too great because General Billotte had participated in planning the invasion. He wanted to rush in with an army of parachutists and land in the middle of the fight, in the Massif Central. Again the Allies held him back. Finally he was given command of a Leclerc brigade and fought in Normandy. He went on to Paris. He got there first, an hour and a half before the forces of General Leclerc—thus winning a bet he had made with him three years earlier. Then he went on to Lorraine, conquered the Vosges mountains, and fought at Colmar.

At the war's end he was in command of the Second Army Corps and Governor of Rhenania and Hesse-Nassau. Now his exceptional talents as an administrator found an immense field of action: Three million men to be fed, sheltered—in a word, kept alive—in the midst of rubble, where there was no bread, no coal, no roads. Everything had to be recreated or rebuilt.

In his "spare" time, he conceived a plan of collective security and disarmament which he took to de Gaulle. Though only 38, he was immediately entrusted with the highest functions in the Army.

Later he turned to politics: France was threatened with having a communist government formed through the collaboration of the socialists. He and his friends had much to do with removing that threat.

General Billotte was among the first to understand that the atomic hegemony of the United States made possible the defense of Europe, in spite of Soviet superiority in armaments. In 1946 he came to the United States to urge an Atlantic Pact, as a first step toward American union with Western Europe. He ran head on into a wall of objections: the fear of the military that at the first sign of help from the United States, Russia would be on the march; the certitude of the diplomats that the United States, faithful to the Monroe Doctrine, would never set foot out of its hemisphere in peace time. But the Marshall Plan and the Atlantic Pact proved him right.

Note: Billotte is pronounced "bee-yott."

Farmers Union for Atlantic Resolution

Excerpt from a letter to Sen. Walter P. George from James A. Baker, Assistant to President James Patton, April 26th:

"We are taking this means of expressing our views concerning S. Con. Res. 12. This resolution proposed a conference of representatives of industrialized democratic nations of the North Atlantic Treaty Organization with a view to broadening the basis of supranational cooperation to include economic and social policies in addition to security.

"Over a long period National Farmers Union has supported all efforts of the Congress to promote, encourage, facilitate and assist the economic growth and development of the free and democratic nations. The basic premise underlying all our testimony before the various Congressional committees on legislation, the objective of which is to strengthen the democratic world, is the deep-seated desire for peace which is grounded in farm areas of the nation.

"We have long urged the establishment of a Democratic World Economic Union, composed of nations that subscribe to the kind of democratic rights and privileges set forth in the United States Constitution and Bill of Rights. Such an economic union of democratic nations, we feel, would add materially in the rapid development and growth of free world economies and even more importantly bring us toward peace.

"We shall not attempt to elaborate further in this communication concerning the operation of such a union of democratic nations, primarily because the records of hearings before your committee already contain our views. We do want to support S. Con. Res. 12 because we feel a conference of representatives of the more highly developed democracies that are members of the North Atlantic Treaty Organization would be a step in the right direction."

In Asia, however, General Billotte failed in similar efforts for the creation of a Pacific Pact. Six years of work ended in the collapse at Dien Bien Phu.

In 1950 General Billotte resigned from the Army and entered the political arena. He was elected to the National Assembly on the Gaullist ticket. Later he was one of the "dissident Gaullists" who broke away from that party.

General Billotte became a member of the Committee on Foreign Affairs; he was *rapporteur* for the Atlantic Pact and the Paris Accords bringing Germany into NATO. The gravity of the situation in North Africa induced him to accept the post of Minister of Defense in the Faure government in 1955. He voted for the dissolution of Parliament in the hope that France would give itself a strong government.

An ardent sportsman, General Billotte has taken part in rugby, swimming and boxing matches. He still skis and plays tennis. He also has an airplane pilot's license: Union Now and his own wartime experience made General Billotte a convinced believer in Atlantic Federal Union. He made a strong case for it in his book, *Le Temps du Choix,* which appeared in Paris in 1950 and shows a remarkable grasp of basic federal principles, and of economic and political as well as military affairs.

General Billotte for many years has been an active apostle of Atlantic Union in France. He helped found the French Atlantic Union Committee in 1951. He has visited the U. S. a number of times, speaks English well, and addressed the Congress of the Atlantic Union Committee in Memphis, Tennessee, in 1951.

On being elected recently to succeed Firmin Roz, the historian who retired at 90 as President of the French Atlantic Union Committee (see the May FREEDOM & UNION), General Billotte at once proposed that it be enlarged from a select committee of leading personalities into a popular movement. The Board a little later agreed to this, changed the organization's name to the *Mouvement pour l'Union Atlantique,* and adopted other Billotte plans for a press campaign and wide membership.

A man of vast vigor and great resources, to whom difficulties are only a chalienge, General Billotte takes the leadership for Atlantic Union in France at a most opportune time. He can be counted on to advance it rapidly and far.

—JEANNE DEFRANCE

Our Mission is Man, Billotte Book Says

General Billotte's book, *Le Temps de Choix* (The Time to Choose), published by Robert Laffont, Paris, 1950, is a thorough-going, deep delving and vigorously put analysis of the world situation. It concludes with a chapter urging Atlantic Union as the only solution. In early issues of FREEDOM & UNION we plan to publish this chapter, and another explaining why neither the U. S. alone or a United States of Europe is big enough for the needs of the time. The following excerpt from this book concerns the moral side of the problem.

WHEN WESTERN civilization had added to its spiritual motivation the material strength, which it then alone possessed, the Western world imagined that its reign was established by the unchanging Law of Nature. It ceased to be concerned with safeguarding the elements that made its strength.

Consider its unity. Born of the upheavals of the 16th century, both the nationalisms of the 19th century and the wars of the 20th have divided and exhausted the Western world to such an extent that the Soviet bloc has been able to infiltrate the diverse independent nations. . . .

Consider the West's material superiority. This was a temporary advantage that it soon had to share with others. The error of our time is to believe that the life of a civilization can be built enduringly on industrial and scientific progress. . . .

Consider the mission of the West. Its belief in Individual Man has changed. This belief embodied the spiritual principles of the Western world. It could have brought together the various religions and rallied the peoples of other races. But it suffered the worst of perversions from Hitlerian crimes and Fascist madness; colored races then partly turned their backs. China, an ancient nation where evolution moved slowly through the centuries, adopted in less than four years a regime where Man is merely the slave of the state. Southeast Asia, the Mid-East, Africa itself have been gradually infiltrated by the "inhuman" principles of Muscovite Marxism.

Although cleansed of Nazism and Fascism, the West has not regained integrally its conception of individual man. It has allowed the combined effects of the old errors and of the Stalinian poison to penetrate it. For the concept of the predominance of individual man there has been substituted a pernicious notion of "categories." Categories such as "classes," whose struggle is being gradually erected into a political and social system. Categories such as "parties," which dominate both individuals and states. Categories such as exacerbated nationalisms. Individual man —in the noblest meaning of the term— is being ground to dust between these "categories" which now dominate the Western world.

Western civilization is no longer the harmonious setting the individual needs in order to blossom and grow both personally and collectively. On the contrary, the contradiction in this dual human evolution raises problems which the worship of categories and the struggles that result make impossible to solve. Western civilization has too often become a battlefield where the sordid, clamorous clashes of the various categories are fought, over the body of individual man. . . .

Since the end of World War II these weaknesses have made it impossible for the West to create a wide political concept and have forced it instead into temporary expedients.

Billotte was recently Defense Minister

Here is important European news in the making—which author finds American newspapers, periodicals report competently, but . . .

Swiss Appraises U. S. Press in Europe

"I have just read Kenneth Counsell's article on foreign correspondents in Washington,"* writes E. J. B. Rose, director of the International Press Institute, of Zurich, Switzerland. "I wonder," he says, "if you have ever tackled the complementary subject of American newspaper coverage of, say, Asia, or even of Europe. I draw your attention to a study, published earlier this year, by Theodore Kruglak [*The Foreign Correspondents: A Study of the Men and Women Reporting for the American Information Media in Western Europe,* Librairie E. Droz, Geneva]."

The following article is a digest of Mr. Kruglak's study of "the people who are interpreting Europe to Americans"—reprinted from the *I.P.I. Report,* bulletin of the International Press Institute, with permission.—Editor

As befits a doctoral thesis, Professor Kruglak's work contains not a glimmer of the daredevil in the trenchcoat depicted on film and in novels. Instead he has amassed facts about real people which should prove fascinating to all American editors who consider foreign news an important part of their newspaper.

This is the first study anyone has made of the people who are interpreting Europe to Americans. The author found that in Western Europe (Austria, Belgium, Denmark, Finland, France, the German Federal Republic, Holland, Ireland, Italy, Luxembourg, Norway, Portugal, Spain, Sweden, Switzerland, Trieste, the United Kingdom and Yugoslavia) the correspondent corps population came to 396 persons. They report for 16 newspapers or syndicates, nine magazines, three major news agencies and three supplemental agencies, and three radio networks. Of the 286 full-time correspondents in the group, 169 work for the agencies. Specialized magazines and papers were not included in the study, nor were those people who cannot truly be said to give a significant portion of their time to gathering news.

By anonymous biographical questionnaire and personal interview, Professor Kruglak sought to determine the personal background, education, professional experience, salary, and attitude toward world problems of the correspondents. Not all the correspondents answered his questionnaires, and it would have been a physical impossibility to interview the entire group. However, nearly three-fourths of the questionnaires were returned, and almost 100 interviews conducted.

From the mass of material thus assembled, one thing is particularly noticeable: the differences between agency correspondents and the correspondents for the other media. The agency men are younger and given responsible positions at an earlier age. A higher percentage of them enter the correspondents corps with no previous journalistic experience (13 per cent as compared with less than five per cent for newspaper correspondents), or with less than five years experience (the American Newspaper Guild's level of maximum qualification). The agencies have the highest proportion (38.8 per cent) of correspondents who have been in their present posts for less than a year. The agency men, by their own evaluation, have the least proficiency in the foreign language of the country where they are stationed. They are the lowest paid group among United States personnel (as distinct from foreign nationals working for U.S. media). Approximately 30 per cent receive less than the Guild minimum for experienced reporters.

Criticizes Agency Reporters

Adding this all up, Professor Kruglak says that "it is possible to say that the news agency correspondents have lower professional qualifications for the job of reporting and interpreting the Western European scene than the correspondents in other media. Not that this is a judgment on the entire news agency corps. It merely indicates that there are more correspondents without a well-rounded background in the agency ranks than in other media." The bureau managers, or what the author calls the "elite" group, are an exception to most of these remarks, but here, again, they sometimes fall short of the "elite" of other media (correspondents responsible directly to editors in the U.S.) because they have been shifted too rapidly around Europe to become truly familiar with the scene, or have just arrived in Europe. Then too, their salaries are generally lower than the elite of other media; as a consequence they are frequently hired away from the agencies, which are considered "good training ground" by other media.

*"Curious Case of the Missing Correspondents," by Kenneth Counsell, FREEDOM & UNION, April, 1956

Added to all this is the fact that in the smaller countries, where the agencies provide virtually all the coverage, agency correspondents are frequently expected not only to collect news for home consumption but also to supply and sell news to the agency clients in that country. . . . It is important to keep in mind that the agencies are the primary, and in some places the only, source of news for American papers.

Another interesting aspect of the correspondents corps is the status of the non-American working for American media. Here a few figures are pertinent. Of the 176 American citizens who are full-time correspondents in Western Europe, approximately 92 per cent are stationed in the U.K., France, Germany and Italy. The other eight per cent are scattered throughout the other countries, and these are chiefly news agency men. Of the 44 news agency correspondents in these other countries, about 82 per cent are non-American citizens.

Who are they? A look at their professional qualifications is helpful. A greater proportion of them come from non-journalism backgrounds than is the case with the American correspondents. Their ranks include former lawyers, teachers, economists, engineers, chemists and students. However, in length of experience in journalism they compare favorably with the Americans, and their time spent within the country where they are stationed is usually a good bit longer. With the exception of the newspaper elite, twice as many of them have had pre-war experience in Europe as their American colleagues. The language problem, so far as the country where they are stationed is concerned, is presumably non-existent. However there is the question of their ability to speak and write English. One failing, according to American correspondents, is their unfamiliarity with the American idiom and with American history and political affairs.

What about political pressures on these nationals? The author says that they are relatively free of it. "Only in Spain, Portugal, or possibly Yugoslavia might a non-American correspondent risk bodily danger or arrest or expulsion by reporting news detrimental to or critical of his country's policies." There is fear elsewhere, however, and the author cites an Austrian correspondent who pointed out that whereas Oatis was finally released, the Czechs who worked for the Associated Press in Prague are "either dead or in jail." This has not contributed to the calm of non-U.S. personnel in several other countries where a change in government could result in a spy trial, according to the author.

Most American correspondents interviewed by Professor Kruglak felt that important stories should be written by Americans, not merely because of possible bias, but more importantly, because the non-Americans lacked knowledge of what a story must contain for American understanding of its significance.

Full-Time U.S. Correspondents In Western Europe

*6 News Agencies**	
U.S. Citizens	84
Non-U.S. Citizens	85
Total	169
16 Newspapers or Syndicates	
U.S. Citizens	52
Non-U.S. Citizens	17
Total	69
9 Magazines	
U.S. Citizens	27
Non-U.S. Citizens	7
Total	34
3 Radio Networks	
U.S. Citizens	13
Non-U.S. Citizens	1
Total	14
Total full-time correspondents	286

*Includes 3 supplemental agencies

The non-American correspondent has distinction of a sort, or, as Professor Kruglak puts it, "it is interesting to compare the non-American news agency and newspaper correspondents' salaries with the American Newspaper Guild minimum rates. Eighty-six per cent of the non-American news agency personnel and 76.9 per cent of the newspaper correspondents earn less than Guild minimum." He adds that none of the non-American magazine correspondents are below the Guild level. If one takes the British National Union of Journalists' minimum salary of $2,100 as a criterion for a non-American's salary, instead of the Guild minimum of $6,760 for foreign correspondents (or $5,720 for an American agency reporter with five years' experience or $6,240 for newspaper reporters) the non-American salaries show up better. Sixty per cent of the non-American news agency correspondents and almost 70 per cent of the newspaper correspondents are well above the NUJ minimum scale, and only one full-time correspondent reported getting less.

Non-Americans Predominate

Professor Kruglak says, "When a low salary can be combined with the ability to act in a dual role, the non-American is more likely to be employed. With wage levels in the U.S. constantly rising, it is apparent that the news agencies . . . will find the wage differential between American and non-American correspondents abroad even greater than it is today. The tendency inevitably must be toward hiring more non-American correspondents abroad."

Among American correspondents there appears to be a great waste stemming from the high turnover within the corps. Some leave for better-paying jobs; some are transferred to jobs in the U.S. as executives or Washington correspondents; some cannot adjust to European living conditions, and a few are fired for incompetence. . . . A common reason for a correspondent's returning to the U.S., often after a tour of duty of two or three years, is that the glamour of Europe cannot compete with the conveniences at home so far as his wife and children are concerned. Thus the correspondent leaves just as he acquires value insofar as knowledge of the country he is reporting is concerned.

Basic to the whole problem of foreign correspondence is the fact that there are not enough correspondents to cover the field. Although the agencies have the most manpower, it is barely adequate for their primary task of covering "spot news"—anytime and anywhere. The newspapers, magazines and radio concentrate their correspondents in the four countries mentioned above, leaving the rest of Western Europe to roving reporters or part-time correspondents. The author says, "The manpower shortage is further aggravated by the relatively few magazines, newspapers and radio stations that employ correspondents abroad. . . Nor do these

media have equal personnel. Many of the newspapers are trying to cover Europe with one correspondent, while only one newspaper, one radio network and one news magazine have correspondents outside the United Kingdom, France, Italy and Germany." He goes on to say that the contribution of the part-time correspondent to this strength is debatable. It is obviously easier and quicker for him to copy the local newspaper's crime story than to dig for the interpretive article, and, at least so far as newspapers are concerned, he will seldom receive more than $25 for either story.

Turnover Too Great?

What can be done to improve the correspondents corps? Professor Kruglak starts with the agencies. He suggests that the gathering of news and the sale and transmission of news are two distinct operations, and should be kept separate. The news agencies should improve their methods of hiring. Inexperienced personnel — "fresh blood" — should not be eliminated, but there should be a better balance between inexperienced and experienced correspondents. Salaries should be on a graduated scale in keeping with experience and ability. A correspondent starting his second tour of duty should receive greater financial incentive to remain in Europe and with the agency.

The news agency elite should have greater inducements — financial and otherwise—to stay in Europe and with the agency; otherwise the draining off of the cream of the agency force in Europe will continue.

In the newspaper field, the author points to some 85 American newspapers with over 100,000 circulation which are prestige papers "in the sense that they exercise national or regional influence in social or political affairs." More than half of them are monopolies in the local field; nearly half of them own an important radio station and a third also own a television station in the same city. He suggests that the executives of such organizations owe it to their positions in their areas to be leaders in the presentation of foreign news. One way to achieve this would be the organization of newspaper pools. Professor Kruglak feels that for interpretive reporting on an adequate scale, eight correspondents, to be stationed in London, Paris, Frankfurt, Rome, Geneva, Vienna, Stockholm and Madrid, would be necessary. For this, an American newspaper participating in a four-newspaper pool would contribute the services of two correspondents. (It is estimated that a newspaper in the 100,000 circulation class must add approximately one per cent to its editorial budget to establish a *four*-man foreign correspondents staff.) These two would file their stories to their own paper, which in turn would teletype the stories to the three other member papers.

Pooling arrangements can also cut across media lines. Professor Kruglak remarks that "The publisher (who also owns radio and television outlets) who divides the services of correspondents among his own media probably obtains the maximum value from the correspondent's service. The iteration of the correspondent's by-line in the newspaper, his voice over the radio and, when possible, his face on television, create a continuing impression of authority.

Experienced correspondents must be hired for such a job, and luring the top-flight news agency correspondents with more money will not increase the overall corps unless this competition results in a higher wage scale which would keep other foreign correspondents abroad. The author feels a better source would be "the hard core of experienced newspaper, magazine, or radio correspondents who are working as free-lance journalists in Europe." Their earning level is equal to that of the average agency correspondent but not equal to the pay of other media correspondents. They are experienced and know the country in which they live, and its language.

Professor Kruglak's parting shot indicates whence the initial impulse for any improvement of foreign coverage must come:

"Providing the data upon which an informed public opinion is based is not the sole responsibility of the foreign correspondent. It devolves upon the owners of the American information media as well.

"To achieve this goal, some improvement in the training and selection of foreign correspondents is necessary, but above all there must be a sincere desire upon the part of the owners of the press and radio to give their readers and listeners more European information than the media now offer and believe the American public want, and to present it within a framework of understanding and perspective."

"Life" Editorial Honors George Lehleitner

GEORGE LEHLEITNER, *whose article, "Hawaiian Statehood Would Win Friends for the U. S. in Asia," appeared in our May issue, has received a quite unusual tribute from LIFE magazine. In an editorial it devoted on May 7 to Mr. Lehleitner's "Tennessee Plan" for Alaskan statehood, which was published in the April* FREEDOM & UNION, *LIFE said:*

"Hats off to Mr. George Lehleitner, a refrigerator dealer of New Orleans. His private hobby looks as if it would yield a big benefit to Alaska, to Hawaii and therefore to the U. S. When he was in Hawaii as a troopship commander during the war, Mr. Lehleitner was outraged to discover that American citizens were being governed like pre-Revolutionary colonists; so from pure disinterested conviction he began working for Hawaiian statehood as soon as he got out of the Navy. Later he visited Alaska and took on that cause as well. He is a scholarly as well as an energetic man, a walking encyclopedia of U. S. constitutional history.

"With some help from the Library of Congress he turned up an almost forgotten method by which seven earlier states got into the union. Calling it the Tennessee plan, after the first state to use it, he sold it last winter to leading Alaskans, and the people of Alaska have just voted to adopt it by nearly two to one.

"It consists of acting like a state before becoming one: electing two Senators and a representative and sending them to the Capitol to lobby until they are seated . . .

"We hope they get results, and that Mr. George Lehleitner proves as good a political prophet as he is a constitutional scholar. It is always a pleasure to see peopeople claim their right to self-government . . . The case for Hawaii has long been overwhelming; now the Alaskans have added a lot of punch to theirs—punch soundly based on historical precedent and the traditions of the American frontier."

[United Nations Review]

Middle East Taxes U.N. Diplomacy

By THOMAS J. HAMILTON
U.N. Correspondent for the N.Y. Times

United Nations, N. Y.

IT IS A PITY, from the standpoint of both the United Nations and the prestige of the Secretary General, that the world expected so much from his mission to the Middle East.

The Palestine problem, even before the emergence of the Soviet Union as a Middle Eastern power, was one that did not yield to dramatic efforts. Ever since 1949, when the armistice agreements were signed, it has become more and more complex as a result of the decline of Western power in the area and the resulting increase in Arab demands.

Now, with the Soviet Union arranging with Czechoslovakia to supply jet planes and other equipment to Egypt, the best that can be hoped for is a partial solution. And since the U.S., Britain and France have agreed to seek a solution in the U.N., the Soviet veto in the Security Council—and what amounts to an Arab veto in the General Assembly—inevitably limit the possibilities of action.

—Burck, Chicago Sun-Times
"—And he rent him . . ."

Limited Objectives

In such a situation, Mr. Hammarskjold was inevitably limited to two basic objectives: to stop the fighting (which flared up again between the time the Security Council asked him to undertake the mission and his arrival on the scene); and to patch up the machinery for detecting and (one may hope) preventing incidents along the armistice lines.

These two aims he has accomplished, but the broader issues—the Palestine Arab refugees and the development of the Jordan river, the acceptance by the Arab States of either the present or revised boundaries of Israel, indeed the acceptance of Israel as a fact—remain.

Mr. Hammarskjold felt that under his overall powers as Secretary General, which are set forth in Article 99 of the Charter, he had the right to take up these larger issues even though they were not included in his mandate from the Security Council.

However, he returned impressed with the enormity of the task, which certainly is enough to strain all the resources of the United Nations. Even apart from the Soviet veto, the admission of the 16 new members last December, and the fact that they are predominantly neutralist or Communist, has effected a basic change in the nature of the U.N.

The organization is no longer in a position to use force, and henceforth it must confine itself mainly to an attempt to settle great political issues, including Israel-Arab relations, by conciliation and compromise.

Mr. Hammarskjold, both by temperament and by the training he had as a Swedish civil servant, is well suited for this task. But there are limits to what the ablest diplomat can accomplish unless he has sufficient backing in military and economic power as a last resort.

These resources, of course, would have to be supplied by the U.S., Britain—and France if the French Government can find sufficient energy to deal with anything besides Algeria. But the Western Powers had no common policy when Mr. Hammarskjold left, and indeed it is clear that the mission was proposed in the hope that within a month they would be able to produce one.

The discussions between the Big Three foreign ministers during the NATO meeting in Paris, which coincided with the end of Mr. Hammarskjold's mission, again failed to solve the fundamental dilemma—should the Western Powers provide Israel with planes to ward off the threat of the Czechoslovak planes Egypt is now learning to use, or should they continue, as Mr. Dulles says, to try to cultivate friendly relations with both sides?

Since this is an election year, the Palestine issue presents domestic as well as foreign policy issues for the Eisenhower Administration, and its situation is not one to be envied.

In any event, it was obviously useless to rush into a Security Council meeting to examine Mr. Hammarskjold's report unless and until a Western policy could be developed.

Despite the fact that Mr. Hammarskjold had been given a deadline for submitting his report, so that it would assist the Council in deciding what further action would be required, an awkward period of waiting developed after his return.

Indeed the Secretary General himself counseled delay, and if he had had any earlier plans for a second trip to the Middle East under his overall powers, he gave them up.

Soviet Consent Needed

The situation in which the U.N. now finds itself is assuredly difficult, and the best that can now be hoped is that fighting will not be resumed. If this is achieved, the Security Council will have time to try partial solutions of individual problems.

This will require the consent of the Soviet Union if anything is to be accomplished, and it remains to be seen whether the Russians want to continue to keep the situation off balance, or have now decided that it is dangerous to continue to encourage the Arabs. But the first necessity, of course, is the formulation of a Western policy.

The Secretary of State told of the "turning point" NATO Council session in Paris May 6-7 in this talk which he gave in Washington May 8.

Dulles Reports on NATO Decision

ALL WHO KNOW and share Western civilization can take great pride in its accomplishments. It was based upon the Judeo-Christian conception of the spiritual nature of man. Out of this faith came individual resourcefulness and a sense of mission which brought much of good to much of the world.

But when we think with pride of what Western civilization has accomplished, we must also think with regret of the fact that it has never yet found the way to live within itself at peace. If today the West is seriously challenged by believers in an atheistic creed, it is largely because two world wars, coming in quick succession, drained off the life blood of our finest and bravest youth and gravely impaired the economic strength of the West. Also the West has lost in moral authority because, while professing a religion of peace, it has not found a sure way to make peace a permanent reality within its own membership.

Great Strides Taken

Since the end of World War II, great strides have been taken to create unity at various levels within the Atlantic Community. . . .

The broadest effort at unity is represented by the North Atlantic Treaty itself, now embracing 15 nations, including two from this hemisphere—Canada and the United States. Under this Treaty great progress has been made, particularly in military terms. There is an integration of military forces on the Continent of Europe, including contributions from Great Britain, Canada, and the U.S., the like of which has never been seen before. The newly developing forces of the Federal Republic of Germany will share that integration.

The military unity under NATO is supplemented by the new (1954) treaty for Western European Union which unites France, Germany, Italy, the United Kingdom, and the three Benelux countries under a system for limitation of armament and of armament supervision and control. . . .

In addition to these efforts on the military front, there is the Coal and Steel Community whereby France, Germany, Italy, and the three Benelux countries deal with the production of coal and steel. . . .

There is the Council of Europe, where Ministers and Parliamentarians of European countries regularly meet for discussion of matters other than defense. There is the Organization for European Economic Cooperation (OEEC), and the European Payments Union..

But at Paris last week we had to ask ourselves whether what has been done is good enough. There has been a marked development of the consultative process. But it still remains the fact that matters of vital importance to the Atlantic Community are not being given timely consideration on a community basis . . . .

The problem of the Middle East . . . had never been seriously discussed by the North Atlantic Treaty Council even though the future of Western Europe is deeply engaged by developments there.

We have seen, in North Africa, where serious disturbances within a part of the North Atlantic Treaty area have brought about a shifting of forces from continental Europe which alters the capability of defense as against a possible aggression from Eastern Europe.

There is the problem of Cyprus which deeply concerns three parties to the North Atlantic Treaty—the United Kingdom, Greece, and Turkey.

I do not suggest that any of these problems should today be made a matter of common consideration around the NATO Council table. At the point to which these particular problems have now developed, there can reasonably be questions as to whether consultation is or is not desirable. Neither do I imply any criticism of the past, for there has never been agreement or understanding that problems of this type should be discussed. But surely the Atlantic Community is not adequately organized if matters of this nature, which could shake the Community to its foundation, develop over the years without any effort at broad consultation between the members.

Then there is the problem of the reunification of Germany. That subject was discussed by the NATO foreign ministers at special meetings which were held just prior to the Geneva "Summit" Conference with the Soviet rulers and before the Four Power Foreign Ministers Conference which followed. But, as we know, the Geneva Agreement by Messrs. Bulganin and Khrushchev on "the reunification of Germany by means of free elections" has been ignored by them and they now unashamedly continue the division of Germany as though

Model of new home for NATO made by French architect Jacques Carlu. This six-story "magnet" is to rise in Paris where the Avenue Foch ends in the Bois de Boulogne.

—Photo by NATO Information Service

on to Explore Unity

they had never agreed to the principle of reunification. . . .

Then we have the problem of the relation of the Atlantic Community to the newly independent nations of the world. They now represent upwards of 650 million people, composing 18 independent nations, and more non-self-governing peoples are at the threshold of independence or knocking at the door. What has happened is an amazing tribute to the basic beliefs of the West in the rights of man and in government by consent. Nevertheless, it would be a great mistake to conclude that, because these newly independent peoples have peacefully won their independence from the Western powers, relations are in all respects good. In many cases there remain unresolved problems between the newly independent countries and the colonial powers. Above all, there remain barriers in terms of sensitiveness to racial arrogance which has at times been practiced by some persons of the West.

One-third of the world's population is ruled by Communist despots. Another third are new nations which are today the special target of the predatory tactics of international communism, which seeks to stimulate the prejudices and to appeal to the aspirations of these peoples.

The members of the Atlantic Community have so much to offer in the way of genuine brotherhood—they can do so much to strengthen the political and economic institutions of the newly independent peoples—that it is tragic that the outcome is anywhere in doubt. Certainly, as was often said at our Paris meeting last week, NATO, until now primarily military in its nature, is no proper organ for implementing political and economic policies between the Atlantic Community and the newly independent countries.

But the Community does contain, within its own membership, nations which themselves have been through the experience of being colonies and winning their independence. Also it contains colonial powers which have demonstrated and are illustrating great statesmanship in promoting evolution from colonialism to independence. Surely the members of such a community could generate greater dynamism to help, in acceptable ways, to sustain political and economic independence elsewhere. Also we should be able to help to find relationships expressive of true brotherhood and recognition of the fact that other civilizations than our own have immense values. We perhaps have material and technical things to give.

Balance Not One-Sided

They also have things to give. And if we are wise enough to perceive and to take what other civilizations have to offer, the balance struck between us will not be one-sided by any true measure of values, and will be consistent with the equal dignity of all the parties.

It may be said that the North Atlantic Treaty members already have a permanent Council where problems can be discussed which vitally affect the welfare and integrity of the Atlantic Community. There is a Council composed of permanent representatives who are men of stature and great ability. In theory, they could discuss any problems of common concern. The fact is that, as they are now established, their discussions often have been merely reports of actions already taken or decisions already made.

That is because the governments concerned have never taken the basic decision to have a council to which problems affecting the Atlantic Community would normally and regularly be brought. If that decision were taken, it would greatly alter the entire character of the Community relationship. It would not require different personalities at the Council table, but a different approach and far greater "depth" in terms of political advisers than is now the case. But above all is the basic decision to take seriously the unity of the Atlantic Community and seek to promote it, not by super-government, but by common counsel.

Dulles Finds Many Ties Unite Atlantica

REFERRING TO THE THINGS the democracies of the Atlantic Community have in common, Secretary Dulles said in his major speech on April 23rd:

"Our nations basically have so much in common that we should be able to do more in common. . . . All of our peoples embrace a religious faith which makes atheistic materialism seem abhorrent to them. We have a common sense of moral values. Our political institutions predominantly reflect democratic conceptions which had their origin in Greece, and legal institutions which had their origins in Rome.

"Our economies are similar. We believe in and encourage the private ownership of property, and there is a large and flourishing trade between our countries. Our educational systems are much the same and provide a broad basis for the free exchange of views and the gaining of common understanding. And not only do we have this firm foundation, but also we hold in common many guiding principles of action which should enable us to develop practically our fellowship."

Such a decision has not yet been taken, except in military terms.

This was the problem which was most actively discussed at Paris during the past week. In that connection we discussed the Soviet threat—the acts of violence which had marked Soviet foreign policy until recently and the latest changes in that policy. We recorded the fact that it was our joint military efforts which had successfully deterred Soviet aggression in Europe and contributed to the adoption by the Soviet Government of the so-called "policy of coexistence."

Our joint communiqué said that, to the extent that this Soviet policy involves a certain easing of tension and the admission by the Government of the Soviet Union that war is not inevitable, it is welcomed by the Atlantic Powers. But also we recorded our joint conclusion that the reasons which gave rise to the Atlantic military alliance have not disappeared and that the Western Powers cannot relax their vigilance while many outstanding problems have not been solved and when there is no effective disarmament plan. . . .

Then we went on to record what may prove to be a historic decision. The communiqué said that "the Atlantic Council considered it timely and useful for the members of the Atlantic Community to examine actively further measures which might be taken at this time to advance more effectively their common interests." And the Foreign Ministers went on to designate three of their members to advise **"on ways and means to improve and extend cooperation in non-military fields and to develop greater unity within the Atlantic Community."** The three Ministers were asked to submit their report as soon as possible.

It is significant of the importance attached to this matter that the task of exploration was given to, and assumed by, three foreign ministers themselves—the Foreign Ministers of Canada, Italy and Norway. They are each men of wide experience, each of whom personally believes in the development of the Atlantic Community both on a broad base and, within the framework of that broad base, as between groups of members which can in certain respects work together with greater intimacy than can the whole. These three Ministers will be conferring with each of the 15 Governments during the coming weeks and, in the light of what they learn, will submit a report, perhaps early next fall, which the Governments then can further consider from the standpoint of further action.

It would, I think, be prudent to note that there is as yet no clear definition of the concept of closer Atlantic unity. And we could hardly expect acceptance in advance.

The U.S. perhaps can visualize that

Federal Union's "Million-Dollar Answer"

FEDERAL UNION, INC., publisher of FREEDOM & UNION, states in its report for 1955 its total income and expenditure since its incorporation in 1940 as a membership association has now passed the $1,000,000 mark. Its 1955 income was $83,834. The report, entitled "The Million Dollar Answer," says:

"An answer to a major problem that wins a million dollars in voluntary support from the public may be called a 'million-dollar answer,' at a time when television has drawn such attention to $64,000 questions.

"In the 15 years and seven months from its incorporation as a non-profit, educational membership association to the end of 1955 Federal Union received $1,048,393 to advance the purpose for which it was incorporated: 'education in the basic principles of federal union as exemplified in the Constitution of the United States, with a view to attaining world order by a Federal Union of Democratic Peoples.' . . . It spent on educational work in those years a grand total of $1,030,435, including $81,815 in 1955. . . .

"We mounted to the Million-Dollar-Answer level step by step through more than 15 years of struggling to survive, often from month to month, even from week to week. Federal Union grew from only an idea, an Answer, largely through myriad dues, contributions, and subscription fees $1 to $10. Many of these have been repeated for 5, 10, 15 or more years by devoted men and women who would not take *No* for the answer. Less than 20 per cent came in contributions of more than $1,000. . . . Federal Union has never received a grant from a major foundation. In a world where the majority of new corporations formed each year, profit or non-profit, perish within five years, Federal Union has existed for fifteen."

Federal Union's annual income, the report says, has ranged from a low of $26,098 in 1943 to a high of $101,256 in 1941, and its expenditures from $22,346 in 1943 to $101,709 in 1949. Measured by 5-year periods, its income has steadily risen; 1955's was above the highest 5-year average. Most of the 12-page report reviews the "new heights" the organization's work attained in 1955. It includes a concise statement of the Federal Union "Answer."

concept more readily because of its membership in the Organization of American States. That Organization traces its origin back 66 years to the foundation of the Pan American Union. It is not only the oldest but by far the most effective regional organization which has been created. It deals effectively with problems as between its members, and has conspicuously done so within the last year or two in relation to the broad threat of international communism, and in relation to particular situations such as those that arose in Guatemala, in Costa Rica and as between Ecuador and Peru. It seeks to develop hemispheric international law.

It is obvious that the Organization of American States, which has developed in a particular environment to deal with problems typical of this hemisphere, cannot usefully be duplicated in detail as regards the Atlantic Community. Each community is distinctive. But the experience which the U. S. has had, in cooperation with the other American Republics, enables us perhaps to see more clearly the possibilities inherent in the Atlantic Community.

Speaking on April 23 prior to this last meeting of the NATO Council, I said, "The North Atlantic Treaty already serves as an indispensable and vital instrument of the Atlantic Community, but the time has come, I believe, to consider whether its organization does not need to be further developed if it is adequately to serve the needs of this and coming generations. If that be the common desire of the NATO member nations, the U.S. will join eagerly in exploring the possibilities which now beckon us forward."

It is gratifying to report that it is the common desire of the NATO member nations at least to explore these new possibilities. That decision was taken, not lightly, but after a discussion which prolonged our meeting of Friday and Saturday into the early hours of Sunday morning. It was recognized by all as being a decision which could be of historic importance, since it could contribute mightily toward erasing what has been the great weakness of the West—namely, its disunity. To erase that disunity, which has given birth to so many tragic consequences, is one of the greatest tasks of postwar statesmanship.

NATO Council Session Communique

The following final communique was issued in Paris, May 6, after the NATO *Council of Ministers meeting there:*

1. The Atlantic powers, seven years ago, entered into the North Atlantic treaty in face of the Communist threat to their common ideals and civilization. For they had seen imperiled all the human rights which their peoples regard as essential for their life and freedom, particularly representative government, freedom of the individual, the rule of law and liberty of the press. . . .

2. The collective defense efforts of the Atlantic powers have not been in vain. They have successfully deterred Soviet aggression in Europe and have contributed to the adoption by the Soviet government of the so-called policy of co-existence.

To the extent that this policy involves a certain easing of tension and the admission by the government of the U.S.S.R. that war is not inevitable, it is welcomed by the Atlantic powers, who have always supported this idea. It is now possible to hope that those principles of the United Nations Charter which have regulated the relations between the peoples of the Atlantic community may eventually also regulate the relations between the Soviet Union and the Western powers.

3. The reasons which gave rise to the Atlantic alliance have not, however, disappeared. No progress has been made towards solving certain vital European problems including the reunification of Germany in freedom, which have to be solved on a basis which would satisfy the legitimate security needs of all. The Western powers cannot relax their vigilance until these problems have been solved and until a disarmament plan providing the necessary guarantees to all and an effective control system has been put into effect.

Soviet military power continues to increase. Security remains therefore a basic problem, and the Atlantic powers must continue to give priority to the maintenance of their unity and strength. However, present prospects seem to leave scope for further peaceful initiatives on the part of the Atlantic powers. They are determined to pursue these initiatives with the same energy that they displayed in building up their defense organization and with which this will be maintained.

They solemnly affirm that this policy will be pursued in common and based on the unity, solidarity and co-operation of peoples sharing common ideals and standing together in the cause of freedom.

4. The Atlantic Council consider it timely and useful for the members of the Atlantic community to examine actively further measures which might be taken at this time to advance more effectively their common interests. The Atlantic powers already are a forum for consultation regarding policies of general interest. In order to enable the council better to perform these tasks, the ministers agreed to appoint a committee of three ministers to advise the council on ways and means to improve and extend NATO co-operation in non-military fields and to develop greater unity within the Atlantic community. The committee of three was requested to submit its report as soon as possible.

5. In the meantime, the Council agreed:

(A) To undertake periodic examinations of the political aspects of economic problems.

(B) To strengthen economic co-operation between member countries, to seek to eliminate conflict in their international economic policies, and to promote conditions of stability and well-being.

(C) To instruct the permanent representatives of the Council to examine economic problems in the light of the ideas set out above and of the plan put forward by M. Pineau, Foreign Minister of France, calling upon the services of a committee of technical advisers working under their authority.

6. Members of NATO are by their treaty dedicated to "safeguard the freedom, common heritage and civilization of their peoples, founded on the principles of democracy, individual liberty and the rule of law." Their first seven years of working together have resulted in marked success and have strengthened the bonds between them. The members of NATO are determined to remain united and steadfast to their ideals. They face the future with confidence.

Kefauver in Campaign Urges Atlantic Convention

Senator Kefauver gave the following address to the faculty and student body of Vassar College at Poughkeepsie, N. Y. on April 26:

I WAS GLAD to note that here in New York Mr. Dulles this week turned the debate into a phase of our foreign relations which has given me considerable concern. This is our relations with our fellow Western democracies of the North Atlantic.

Not long ago I was rereading some of the files that I have accumulated through the years in the Senate, and ran across a report which I felt was quite incisive. It was dated April 2, 1952, and outlined some of the developments within the North Atlantic Treaty Organization during its first year of existence. It included this statement which I shall read in full:

"As we look back over these developments, it seems almost as if the nations of the West have been, for decades, blindly enacting parts in a drama that could have been written by Lenin, prophet of militant communistic expansion. This pattern of events, which points so surely to ultimate disaster, can be changed if only the peoples of the West have the wisdom to make a complete break with many things of the past and show a willingness to do something new and challenging. NATO itself is a significant step to meet both the present danger of aggression and the tragic struggles and dissensions that have divided our peoples in the past. But NATO's development is not automatic: action is the test."

Agreement Needed

The report went on to say that if "the free nations are to remain secure, our peoples must march together, agreed on common goals, and win that cooperative unity possible only in a free society."

Now personally I found myself in agreement with the sentiments expressed in that report at the time I originally read it in April of 1952. I find myself in agreement with them now. The report was signed by Dwight D. Eisenhower, then Supreme Commander of NATO.

This week I was interested in reading in Mr. Dulles' remarks this statement:

"The North Atlantic Treaty Organization is another organization which, in its own distinctive way, contains the possibilities of great development. It was, to be sure, conceived primarily as a military alliance, and that aspect of the organization remains vitally important. But the organization can and should be more."

Mr. Dulles continued:

"The historic weakness of the West has been its disunity. Out of this disunity came wars which have taken the lifeblood of its finest youth and weakened its economies. A major task of postwar statesmanship was to find the ways whereby the West can maintain its solidarity . . ."

I find myself also in agreement with these remarks of the Secretary of State concerning NATO. But I am wondering what has happened in between April 2, 1952, when Eisenhower spoke from his post of Supreme Commander, and April 23, 1956, when Dulles spoke as Secretary of State in an Eisenhower Cabinet.

Just a little over a year after his report, General Eisenhower became President Eisenhower. He then had the office and the authority to seek to bring about the conditions that he believed beneficial. But where is the action that he spoke about as the test?

There has been none.

In 1952 General Eisenhower wrote that "the enormity of the present threat will never be met by half-hearted measures." And he continued: "Required is the full awakening of the free world and the pursuit of energetic, far-reaching measures to insure our form of life —even our survival."

But what has President Eisenhower done since he entered the White House to awaken the free world to the enormity of the threat to which he called attention so ringingly in April 1952? I leave it to you and to him to decide.

Do I need to prove to any of you that the threat remains enormous still? Would you say that the free world needs to be awakened to it any less now than in April 1952. The one thing that President Eisenhower has done which gained the most attention in the world was to go to the Summit Conference in Geneva. But no one would say that its purpose or result was to awaken the free world to the enormity of the threat it faces.

Sees West Weaker

Where are the "energetic, far-reaching measures"? I search my memory and can recall the Marshall Plan, NATO, Point 4—all adopted under the administration of Franklin Roosevelt and Harry Truman. But what has the Eisenhower administration proposed?

During the past 4 years, rather than improving, our relations have deteriorated badly. The fact is that the Atlantic Community's continued disunion has left the West far weaker in April 1956 than it was in April 1952. With the Mediterranean — the whole southern flank of the Atlantic alliance—seething from one end to the other, I am sure that I need not convince you that there is serious need for improvement in the alliance. We are today weaker in important areas of Africa and Asia. Need I do more than mention Indochina, India, the Middle East, Cyprus, Tunis, Algeria, Morocco?

Our relationships will continue to deteriorate, in my judgment, unless we take some of the bold and imaginative steps that President Eisenhower called for but then failed to carry out. I note in Secretary Dulles' present speech the glimmer of hope that something may now be done. He says that the Canadian Government "has notably espoused this point (that NATO can be more than a military alliance)."

What has the Canadian Government done? It has done only what I have long proposed that our own Government do, and which only our Government can do successfully, because only it has the geographic location, prestige, and strength to provide the necessary leadership.

On February 9, 1955, I introduced

in the Senate a resolution which I have had pending from time to time for a much longer period. This resolution, simply provides that the President call a convention of the other sponsors of the NATO agreements to meet and determine what steps they might take to forge unity in their military, economic, and political policies. It is known as the Atlantic Union Resolution.

I have no partisan interest in this resolution. The Marshall Plan, NATO, Point 4, all were adopted with Republican support. Some of us remember that the proposal for a League of Nations was put forth first by a Republican, former President William Howard Taft whom Woodrow Wilson defeated in the 1912 election. But in May 1916, Wilson announced his support of a League of Nations, at a dinner presided over by former President Taft.

Many people have forgotten that Wilson took over the proposal of the league from Taft. Once he adopted the idea, it was his. And so it can be with Eisenhower. If I sought personal political advantage, I would wait until after Congress adjourns to make this speech, but now there is time for Eisenhower to provide the leadership within his party necessary to fulfill the desires that both he and his Secretary of State have expressed.

The convention, let me emphasize, would be one at which free peoples would meet together to discuss the desire and hopes and dreams of the entire free world searching for a common policy, the purpose of which would be to make freedom itself more secure.

Whatever proposals they in their wisdom adopted would have to be ratified by the respective nations according to their own constitutional prerogatives. To fear such a meeting is to fear democracy itself.

And democracy cannot be strong, nor can it be democracy, if it is afraid.

What we seek is unity of purpose.

Only good can come from intensifying that search.

* * *

There follows a radio and television address given by Senator Kefauver in Pensacola, Fla., on April 30.

I want to talk about a significant new development, which is now in the process of formation in the foreign policy of our Nation.

It is important that we consider it, because foreign policy—the question of peace or war—is by far the over-riding question with which you and I are faced today or any day.

Our economic structure, our jobs, our farm income, the highways and roads that we build, the schools that we construct, our social-security system—all of these are of necessity tailored to the question of whether we are in the shadow of war or on the brink of peace.

The peace and security of your family and mine is based as much upon decisions that may be made 3,000 miles from here as they are on the decisions that we ourselves made at our breakfast table this morning.

Tomorrow the Secretary of State will leave Washington for Paris to attend a session of the North Atlantic Council. He has said that he has some thoughts to exchange on the question of transforming the North Atlantic Alliance into a broader association of free nations. He has said that without cutting back western military strength, the foreign-policy accent of the United States should be shifted to the economic and political fields.

My reaction is, it's about time.

This is the emphasis that I have been seeking to achieve in our policy toward the Western nations every since I became a Member of the Senate.

It is most certainly the emphasis that I would pursue should I be chosen as the next President of the United States.

Therefore, I can wholeheartedly give my support and encouragement to the Secretary in his present mission—and say that this is at least one trip on his part which I consider is necessary.

In adopting this new attitude, it is my feeling that the Secretary of State is at long last expressing the kind of sentiments which find their birth within the mainstream of American thinking and culture. A brief review of the development of our North Atlantic relationships will, I believe, bear that out.

Five years have passed since a President of the United States who has been much abused and much criticized, but who will go down in history as a man who made the right decisions on the big issues, signed the NATO agreements. I am speaking, of course, of President Truman. This NATO agreement was a dramatic—and a highly successful—step in the effort to control and contain militant communism.

From its very inception, it seems to me, these Western demorcaries which entered into the NATO agreements were taking a step which inevitably would grow and develop into a new concept of relationships among nations.

In the North Atlantic Treaty itself they declared themselves "determined to safeguard the freedom, common heri-

Whether it's Uni-ty or Uni-on, it's whale of a good idea

tage, and civilization of their peoples, founded on the principles of democracy, individual liberty and the rule of law."

They agreed, in article 2 of the treaty, to "contribute toward the further development of peaceful and friendly international relations by strengthening their free institutions." They agreed to "seek to eliminate conflict in their international economic policies." They agreed to "encourage economic collaboration between any or all of them."

Now why was it that they could do that? The reason was simply that we are so much alike—we residents of the United States and Canada and England, and the free nations of Europe. We may have differences in accents and languages, but we are alike in our love of freedom, in our respect for the dignity of every man, in our fierce belief in democratic institutions, in our pursuit of liberty.

Basically, however, despite these larger concepts, the NATO agreements were and have remained treaties of military agreement.

For a long time I have thought they should be more. You see, wars do not just occur. More often than not we stumble into them. Like all disputes, an action here, a word there, a misunderstanding, an underestimation—these are the things of which wars are made. I therefore felt that since we were binding ourselves, one to the other, to fight one for all, we ought to have some kind of channel—some kind of arrangement—by which we could also forge common policies for peace. . . .

We did, nevertheless, maintain excellent relationships with our Western friends for the succeeding few years. Then our entire Atlantic policy went into eclipse. Why was this?

In the first place, with the advent of the Eisenhower administration, those of us who believed in an enlightened foreign policy, including the President himself, found it necessary to spend a great part of our time in a type of guerrilla warfare against powerful go-it-alone and isolationist elements within the GOP itself. . . .

Another great obstacle in the path of real Atlantic cooperation during those first years of the Eisenhower administration was the single-minded obsession of United States policy with the European Defense Community. It was rather obstinate on our part to try to force upon the European nations a union which many of them did not want, and which we and Great Britain would not join.

Well, the French refused to ratify EDC. We had no alternative to propose, but the British did. Through the London-Paris agreements, far superior to what was proposed in EDC, Western Germany became an equal partner in NATO. NATO was strenghtened in many respects and for the first time a sort of international control over armaments was established among a group of sovereign States.

I then felt that the time had again come when we should push forward toward these economic and political goals and when the present Congress convened, I introduced again my proposal for a convention of the NATO sponsors.

World is Ready for this Move.

A former great Secretary of State and military commander, Gen. George Marshall, endorsed my proposal. He wrote: "There is no blinking the fact that this country now stands at a turning point in its relations to its traditional friends among the nations of the Old World."

Another great statesman, Robert Schuman, former Premier of France and the author of the Schuman plan joined the author of the Marshall plan, in endorsing my proposal. He said:

"If the American Congress accepts the Atlantic proposal of Senator Kefauver, all the democratic European nations should be happy to accept the invitation to send delegates to such a Study Commission. Should there result from the work of this conference and from later proposals the outline of an acceptable plan of union . . . we would then certainly have made a great step toward world peace and general propserity."

Paul-Henri Spaak, foreign minister of Belgium; Paul Van Zeeland former prime minister of Belgium; Gaetano Martino, foreign minister of Italy—all sent words of encouragement and endorsement.

Said Mr. Spaak:

"I personally hope that such discussions will take place between the citizens of the Atlantic nations very soon."

Said Mr. Van Zeeland:

"To sum up, it would be a major step toward peace and prosperity throughout the world."

Said Mr. Martino:

"I agree with Senator Kefauver that the peace of the world cannot be assured by methods of formal diplomacy alone."

Last year a step in the direction in which the Secretary is now going was taken. A resolution which I sponsored resulted in the United States participation in an association of NATO legislators, then being formed, which held its first successful meeting in Paris last summer, and which formed itself into a continuing body.

Therefore, I would say to the Secretary as he leaves tomorrow that he will find the ground already well-plowed for his mission. Four years ago Dwight Eisenhower, called for "bold and imaginative" steps to further develop NATO. President Eisenhower was then General Eisenhower, commanding the NATO forces. Since he has been President there have been none of these bold and imaginative steps and indeed I believe this is the first major speech on NATO. But this, it seems to me, is the President's and the Secretary's great opportunity. They can leave on the pages of history a chapter comparable to the United Nations, the Marshall Plan, NATO itself.

I would commend to them the method of exploration which my resolution proposes—a convention to be attended by representatives of the people of the nations involved. I fear that cautious discussions between cautious diplomats will result in nothing if they occur in a vacuum—but coupled with simultaneous exploration on the part of the people in convention—then we might take that step toward world peace and general prosperity which we all seek.

IF IT WERE ONLY FICTION

From William L. Laurence's report in *The New York Times* of the hydrogen bomb test, May 21:

This lays to rest some fantastic speculations that the hydrogen bomb was not actually a fusion bomb, but rather a so-called fission-fusion ¾ fissing [sic] device, in which some 80 per cent of the explosive force is derived not from fusion but rather from the fission of the otherwise non-fissionable and most abundant form of uranium, namely, Uranium 238. . . .

The so-called fission-fusion-fission bomb therefore, must henceforth be known as "the fission-fusion-fission-fiction bomb."

NATO Blossoms in Press

By JOHN T. KANE

WHATEVER the ultimate outcome of Secretary Dulles' recent efforts to revitalize the North Atlantic Treaty Organization, the Administration has certainly succeeded in putting "NATO" back in the news and editorial columns of American newspapers. Newspaper interest blossomed like the spring foliage.

The St. Louis *Post-Dispatch* struck an oft-sounded chord in newspaper editorial comment with its statement that ". . . there is no question that the strengthening of the Atlantic community's political and economic ties needs thoughtful examination."

"A military alliance of mutual defense is necessarily negative," it added. "But it cannot be made positive merely by extending into political and economic fields the psychology of military containment."

Marquis Childs, the columnist, complained of a "withering away" of the military front of NATO, and then went on to write:

"The alliance has failed to take the steps for unity and cohesion that would have made Western Europe a strong force politically and economically. The fundamental fact was that the old haunting problems of poverty and surplus population could not be solved within national boundaries by nation states going it alone.

Finds Step Overdue

"Now the formal step has been taken —it should have come at least two years ago and, better still, four or five years ago—to try to develop the political potentiality of NATO."

The *Christian Science Monitor* devoted a sizeable number of feature articles and editorials to NATO developments since the Dulles speech of April 23d. After the Paris meeting it commented that the challenge which confronted the ministers "has rested at the heart of NATO since its founding." The same editorial pointed out that this challenge has been to ". . . preserve NATO as a military alliance by making it much more than a military alliance. The aim is to keep it a ready alignment of military power back of the developing idea of defensible Western European unity, insuring American security and logically made practicable by American support."

The *Baltimore Sun* included a comment on NATO in a rather lengthy editorial on the Saar. The writer asserted: "If the Continent remains a group of states which co-operate only under the compulsion of fear, as they co-operated in entering NATO, the Saar will still be a bone of bitter contention."

The ultra-nationalist *Chicago Tribune* interpreted Mr. Dulles' statement that the time had come to "advance NATO from its initial phase into the totality of its meaning" as indicating that the Secretary was thinking of transforming NATO into a sort of super-government. The *Tribune's* editorial suggested that Mr. Dulles ". . . could hardly hope to transform NATO into an effective organ for unified political action without qualifying the sovereignty of the United States. As it is, his larger hope in this direction has been placed in the hands of three men, none of whom is an American."

After a prediction that America is bound to be short changed no matter what the three foreign ministers decide, the *Tribune* thus concluded:

"The only thing we can say of the Paris meeting is that it could have had far worse results for the United States. This was not because of any lack of willingness on the part of Mr. Dulles to invite them."

In *Human Events*, the weekly nationalistic newsletter, Editor Frank Hanighen, wrote:

". . . If plans of the White House Palace Guard mature, an 'expanded NATO' would turn out to be 'Atlantic Union,' Clarence Streit's proposed international organization, as a preliminary to global government.

"Members of Congress who are in a position to know say that Dr. Milton Eisenhower, whose 'one world' proclivities are well known, is strongly backing these blueprints for American surrender to international organization." [Emphasis in original.]

Columnist Walter Lippmann, after describing the foundations of NATO, commented that it was not these that were disintegrating but rather a superstructure that is obsolescent. Now that people have lost the fear that ". . . World War III could take the form of an attempt to invade Western Europe," he viewed NATO's first need to be ". . . reappraisal of its strategical concepts."

Press comment seemed to be practically unanimous in praising the appointment of Senator George as the President's personal representative for the development of the North Atlantic Community. Typical was the New York *Herald Tribune* view that President Eisenhower's choice was ". . . both admirable and logical." It concluded that "The projected expansion and evolution of the North Atlantic alliance along new political and conceivably economic lines is of the greatest importance in the attainment of a durable peace. Certainly, Senator George can be counted on to make a vigorous impress. He is just the man for the job."

At Long Last!

The Reporter magazine began a signed editorial with unaccustomed exuberance, Max Ascoli writing:

"At long last it is happening. A little over nine months after the Summit meeting, the post-Geneva America foreign policy is a-borning. We are in no mood to recount the time wasted and the lost opportunities. We are in a mood to rejoice." He added:

"We take these recent foreign-policy pronouncements unreservedly at face value, and consider as utterly irrelevant the accidents that may have prompted them. This is the way some decisions which turned out to be the most momentous in recent American foreign policy were made—like the Marshall Plan or Point Four."

Cautioning that "we must be ready to pay the price for the strengthening of political and economic ties with our allies," Ascoli concluded that "our nation for several years has been dangling on the brink, not of war, but of the Bricker amendment."

David Lawrence, usually at the other end of the political spectrum from *The Reporter*, likewise had high praise for the new U.S. NATO objectives, which

he described as the Dulles Plan to stop the disintegration of political unity on our side in Europe.

In a signed editorial in *U. S. News & World Report*, he commented:

"The idea now is to make the NATO Council of 15 nations a living organism of diplomacy. This means that mediation and conciliation can be quietly employed to work out solutions for the complicated problems of Europe as well as of the Middle East and Asia where European powers have historic involvments." He concluded:

"By coordinating the energies of the free governments which are ready to make great sacrifices for ultimate peace, this bold and brilliant plan initiated by Secretary Dulles can take root. It could give the world at last what it has long been praying for—a constructive program which, by its challenge, must attract the attention of peoples on both sides of the Iron Curtain."

British Press Cautions

"What is now needed," *The Times* in London wrote on the eve of the Council session, is—"preferably without the creation of any new organization"—to give NATO "some continuous political life."

"If this is to be done," it continued, something more than window-dressing is needed. It will be tempting in Paris to play down the still vitally important military aspects of NATO, and to talk in generalities about the merits of article 2 on the treaty. But, in fact, such talk will be meaningless, and quite possibly harmful, if it is not accepted that article 2 implies a genuine political and economic community. This faces Britain and America, in particular, with considerations affecting their sovereignty at least as far-reaching as those implicit in the Coal and Steel Pool or Euratom. The assessment of how the 400 million people now embraced by NATO can be brought closer together politically and economically will be enormously difficult, but it must be tackled."

"No projects for dovetailing economic plans will achieve anything if the member States of NATO drift further apart politically," *The Times* warned. "To a certain extent the political issues which divide them are due to faulty liaison, but to an even greater extent they stem from the hard facts of the situation. It is clear that a good deal of the friction which has been seen recently over such questions as Cyprus, Algeria, and the whole Middle Eastern situation could have been avoided if the machinery of consultation had been better.

"The fact is that NATO has never been made a clearing-house for political policy. It has been the body where Communist intentions were regularly assessed and the means needed to combat them estimated. It has been a forum where points of dispute between individual members could be quietly debated. But in this limited sense NATO only functions spasmodically."

"From the economic point of view," *The Times* held, "the most important consideration is how aid can be coordinated both to countries which are members of NATO and to those which are outside it. Communist aid to the outside world, though still richer in promises and suggestions than in deeds, is closely integrated. The web which ties Russia and the satellites together makes it easy for the industries of Czechoslovakia and East Germany to support Russia's political plans, whether or not they can really afford to do so."

The *Manchester Guardian* stressed the continued importance of the miltary side of NATO—a point *The Times* also noted—and added:

"The Atlantic alliance is 'robust and virile,' in the words yesterday of the Foreign Secretary. There is no reason to doubt his judgment, and it is good that this should be the impression which he has brought back from Paris. Even if the military forces in Europe are degenerating, the alliance need not lack vitality. . . .

"If now it is to be encouraged to range over a wider area of diplomatic and economic co-ordination . . . it may prove highly valuable. But co-ordination, if effective, can hurt. If, for example, it is seriously intended that the Council should try to eliminate conflict in international economic policies, it may have to give unwelcome advice on points of trade and financial policy which Congress in Washington, Parliament in London, and other legislative bodies regard as their own prerogative.

"If, as another example, it is intended that the Council should try to remove points of political friction, it may have to tell the British Government that every other member of NATO thinks we are in the wrong over Cyprus, much as they may sympathise with our difficulties. This is the kind of matter from which the North Atlantic Council hitherto has been discreetly steered away . . ."

House Approves NATO Solons Meeting

THE HOUSE OF REPRESENTATIVES passed, on May 7, by an overwhelming voice vote, H.J.R. 501, providing for annual participation by a delegation of nine Senators and nine Congressmen in the NATO Parliamentary Conference. This resolution had been introduced on January 31 by Hon. Wayne L. Hays (D., Ohio), Chairman of the U.S. delegation to the first NATO Parliamentary Conference of last July and U.S. Member of the Conference's Standing Committee. It had been reported unanimously by the House Foreign Affairs Committee on February 23 and is now before the Senate Foreign Relations Committee.

To say that the debate in the House was one-sided is to surpass the British in understatement, since opposition came from only one member. One minor amendment, however, was proposed by a member supporting the resolution, and accepted by Mr. Hays. It provided that the delegation should be appointed to meet "when Congress is not in session." This was the result of experience at the first Conference, held in the closing days of the 1955 session, when no Senators were able to attend and a delegation from the House could be selected only at the last minute.

The resolution constitutes permanent legislation authorizing 18 members from Congress to participate annually in the Conferences. It provides that half shall be appointed by the President of the Senate and half by the Speaker of the House, not more than five of either group being from the same party. It also authorizes up to $30,000 annually for the expenses of the delegation, and up to $6,000 as the annual U.S. contribution to the expense of the Conference and its Secretariat.

The 1956 Conference is scheduled for November 19 at the NATO headquarters in Paris. It is expected to contribute effectively to the non-military development of NATO.—L.H.

[Letter from London]

U.S. More O.K. in U.K. After B.K.

By KENNETH HARRIS
An Editor of the London Observer

WHEN, two months or so ago, it became known that Bulganin and Khrushchev were definitely going to pay a visit to Britain, disciples of Anglo-American unity, and of the wider Atlantic association of which Anglo-American unity is a major pre-condition, were deeply disturbed. The memory of the visit B. and K.—as they are now known here—made to India was still vivid. They had used the cities and plains of India as platforms from which to denounce Britain as a war-mongering country. Would they not use Britain as a platform from which to hurl abuse at the United States? And did not the very fact that Britain was, in spite of the lessons of the Indian visit, willing to invite B. and K. to London, suggest that Britain was somewhat careless about the susceptibilities of American public opinion? As the date of the visit approached, the shadow over Atlantica lengthened.

Now that B. and K. have come and gone, all is, comparatively speaking, sunny. Having watched what happened to them here, and having seen the direct and indirect consequences of their visit, I feel that they have made a substantial contribution towards the unity of the West.

In the first place, the fact that B. and K. decided to accept Prime Minister Eden's invitation to visit Britain once more centered public attention on the nature of the Anglo-American relationship. For several days the British press thoroughly ventilated the question of whether B. and K. should be allowed to come, in view of the risk of their using Claridge's Hotel, London, as a platform from which to condemn the policies originating in Foggy Bottom.

The British and the American man in the street heard, for some days, a keen and sometimes vehement debate in which one of the main issues was whether it was decent and neighborly towards the U.S. for Britain to allow B. and K. on British soil. The underlying

—Burck, Chicago Sun-Times

"I say, have they finally gone?"

unity and identity of interest of the two countries is too much taken for granted at times, too much ignored at others. For a number of reasons, mainly connected with the critical situation in the Middle East, the differences of outlook and interest, rather than the similarities, had been holding the stage. The public debate as to whether, out of deference to Anglo-American relations, the visit of B. and K. should be permitted, restored perspective.

It had been made clear to the Soviet Union well in advance that the visit would be allowed to interfere as little as humanly possible with Anglo-American relations. The preliminary arrangements made it evident that it was regarded here as considerably below the level of a state occasion. Everything that was arranged seemed to indicate official coolness. B. and K. were not to attend any popular receptions; they were not to drive slowly through a Pall Mall bedecked with flowers and flags and thronged with cheering crowds.

Whatever the Government may have anticipated, there was no mistaking the curious but uncordial attitude of the public. Crowds were very small—40 people in the street outside Claridge's to watch the Prime Minister go in to dine with B. and K. the night of their arrival; about 400 outside the hotel on the peak occasion a week later. No American observer in Britain that week could have felt for one moment that the behavior of the man in the street towards B. and K. was putting a strain on Anglo-American relations.

The famous dinner which the Labor Party gave for B. and K. made, indeed, a remarkable, positive contribution to Anglo-American relations. The British Labor Party, being Socialist, has many times, over the last ten years, been a source of embarrassment—however unintentional—to Anglo-American well-wishers on both sides of the Atlantic. To the unsophisticated, at any rate, the Labor Party is inclined to appear somewhat anti-American and pro-Russian, if only because it is anti-private-enterprise and pro-Socialist. It fell to the British Labor Party, however, to give Comrade Khrushchev the most embarrassing and critical session which he has ever experienced, or is likely to experience, abroad. As a result of the uncompromising and indeed undiplomatic demand which the Laborites made for the release of the imprisoned Social Democrats, observers in countries outside Britain should disabuse themselves, for good and all, of the notion that the British Labor Party wants to be solft towards the Russians. Comrade Khrushchev certainly does not share that notion, even if he did not actually say to Ambassador Malik, as he left the reception in dudgeon, "If I lived in Britain I would vote Conservative!"

West Responds in Kind

In one other respect, it seems to me on reflection, the visit of B. and K. has contributed to the strength of the Anglo-American association. The latest major move of the Russians—to pay visits abroad, win friends and influence people, and generally turn the spotlight on Western emphasis on military programs—has now, apparently, stimulated the West to try to respond in kind.

While B. and K. were still here, John Foster Dulles made the speech which foreshadowed the steps the recent NATO Council meeting took to explore the development of NATO's political and economic unity. A few days earlier President Eisenhower spoke of the need to plan programs of a non-military kind

which would win the respect of the "non-committed nations." George V. Allen, Assistant Secretary of State for Near Eastern, South Asian and African affairs, followed with a speech on the problems to be solved as a result of increased stress on economic aid to countries not associated militarily with the United States. These changes in American thinking on foreign policy made a considerable impact here. And to the extent that they were precipitated by the peace initiatives launched by the Russians, the Russians are to be thanked for them.

In short, one way and another, the B. and K. visit—climax in a series of moves in the Russian peace offensive—has stimulated thinking, on both sides of the Atlantic, about what the West must do to regain the initiative in world affairs. It has put once more into focus that basic identity of interest and purpose, here and in the U.S., which is considered here the keystone of the Atlantic association.

U. S. Documents on Microfilm

THE UNIVERSITY of North Carolina, in 25 feet of cubic space, has assembled a mass of hitherto scattered public documents that contain many of the primary sources of the early history of the United States.

Henceforth researchers and authors can inspect these documents on a roll of microfilm that is equivalent to 8,333 books with a total of two and a half million pages, and all in one small room. Professor William Sumner Jenkins of the University, director of the establishment, spent 20 years, in the 48 States and in Great Britain, photographing these documents, which were found in 300 different archives and libraries. The microfilm product, said Professor Jenkins, "is the first great encyclopedia of the nation's sources, a virtual blood-bank of the vital life-blood of research."

The result is bound to be the first thorough presentation of the documentary materials from which the continuing story of the Republic is derived.

Reprinted from the *New York Times*, with permission.

Little Steps . . . or Shotgun Wedding?

Under the caption, "The 'Totality' of NATO" *LIFE magazine on May 7 said in its lead editorial:*

"THE NATO MINISTERS are meeting in Paris at a critical point in its career. The Soviets have long sought to destroy NATO, and the closer it comes to being the means of actual German rearmament, the more they hate it. The new Soviet look, which has all but banished the fear of war from Europe, is doing more to undermine the NATO military alliance than Stalinism eved did. . . . To stem the decline . . . Secretary Dulles advanced some fresh thoughts about NATO itself. He hopes it will now grow into "the totality of its meaning."

"What is this 'totality'? Though a military alliance, NATO's charter also contains in Article II an invitation to closer political and economic ties among its 15 member nations. . . . Mr. Dulles listed some of the things the NATO nations have in common: religion and morals, democracy and law, freedom of thought, private property and trade. But the question of how to turn these abstract ties into concrete links is something else again.

"At one extreme are Clarence Streit and his fellow advocates of a full federal Atlantic 'union of the free.' . . . The Streit resolution (sponsored by Senator Kefauver) asks for a transatlantic convention to explore the problems of union, a cautious approach which has won it some politically responsible support. But worthy as it may be of theoretical discussion, Atlantic Union is unlikely to get further than that at a time when Western civilization does not feel its back to the wall. Certainly those who fear such a union need not let it haunt their opinions of Article II.

"At the other extreme are a lot of little ways to implement Article II, mostly technical and economic, and mostly explored already by NATO's own council and secretariat with meager results. But this need not foreclose the further exploration that Dulles seeks. Since economic strength underlies military, there is an argument for making NATO a funnel for economic development. North Africa, for instance, needs more public and private capital than France alone can afford; and North Africa is vital to NATO's strategic boundaries.

Suggests "Life" Under-estimates Americans

Mr. Streit wrote the following comment to LIFE:

"I wish to thank you for the compliment your editorial paid me in calling the resolution for an Atlantic Exploratory Convention the 'Streit resolution,' but I must point out that this honor should go to others—notably the bipartisan group of 13 Senators and 13 Representatives that introduced this measure in Congress. If any one man deserves it, he should be Senator Kefauver, the chief sponsor. I did not draft this resolution. Had I done so, its basic provisions, it is true, would have been much the same, but it would have been worded more strongly.

"Your editorial implies that Atlantic Union is 'worthy' of discussion, but adds that it 'is unlikely to get further than that at a time when Western civilization does not feel its back to the wall'—and so meanwhile the best hope lies in 'a lot of little ways' to improve NATO. Is this not a dimmer view of a great civilization than you meant to give? May I ask your readers to say whether they agree that the character of the American people is such that they would accept only half-hearted measures until it is too late to prevent disaster by adequate action, and would reject an Atlantic Union even if a convention of leading statesmen, after exploring the situation, recommended it as the surest way to prevent another world war and another depression?"

These include early court calendars, the files of state mental institutions, governors' letters, municipal treasurers' reports, manuscripts of the original 13 Colonies, specimens being the famous *Massachusetts Body of Liberties* of 1648 and William Penn's *Abstract or Abridgment of the Law* of 1701. Most of these have been out of the reach of students, and some will be entirely new to the leading authorities.

It is even possible—though this is a venturesome supposition—that the microfilm collection will improve the teaching of American history in the schools and turn out new generations of Americans adequately informed about the beginning and evolution of our governing system. If so, the Library of Congress and the University at Chapel Hill, which sponsored the project, and the Rockefeller Foundation, which financed it with $125,000, will share the credit.

Not only have these source materials been assembled on microfilm; they have been so edited and arranged that a specific item may be obtained in a few minutes instead of requiring much time and travel to locate. On the basis of his experience Professor Jenkins believes that "within the span of a lifetime the official records of the universe could be facsimiled and arranged on a thin 35-mm. waistband of microfilm stretching only once around the earth's surface."

De Tocqueville Notwithstanding

De Tocqueville, when he wrote his famous *Democracy in America* (1835-1840), looked with extraordinary prescience into the American future. Many of his prophecies have been borne out by events. But the task just completed at Chapel Hill has proved him wrong in at least one prediction. "I am convinced," he wrote, "that in 50 years it will be more difficult to collect authentic documents concerning the social condition of the Americans at the present day than it is to find remains of the administration of France during the Middle Ages; and, if the United States were ever invaded by barbarians, it would be necessary to have recourse to the history of other nations to learn anything of the people which now inhabits them."

De Tocqueville went on to say that "no one cares for what occurred before his time [a trait unfortunately still highly prevalent]; no methodical system is pursued; no archives are formed; and no documents are brought together when it would be easy to do so. Where they exist little store is set upon them."

But, as the Library of Congress and the University of North Carolina have demonstrated, much of this data was miraculously preserved in some form. Miraculous it is, considering that the proposal by an early American scholar, Francis Lieber, that the Government establish a collection agency for historical documents was disregarded by Congress for more than a hundred years.

European Unity

BRITAIN IN WESTERN EUROPE: WESTERN EUROPEAN UNION AND THE ATLANTIC ALLIANCE. A REPORT BY A CHATHAM HOUSE STUDY GROUP. *Royal Institute of International Affairs, London; N. Y.*, 121 p., $1.50.

The stated main purpose of this compact and up-to-date booklet is to assess the significance of Western European Union (WEU), the latest of the international organizations in Europe which came into being as a result of the London and Paris Agreements of 1954. In making this assessment, the authors have brought together in one booklet so complete an historical account of the highlights of the European unity movement that anyone who has tried to maintain a file of newspaper clippings on this subject can safely throw away most of them.

The Study Group which prepared this booklet (actually written by a rapporteur) comprised politicians, journalists, businessmen, university teachers, and a service representative, all British. In a special preface Donald McLachlan, author of two previous Study Group reports issued in 1950 and 1952, states his personal opinion that WEU was "primarily an expedient to rescue something from the wreckage of the EDC" and that "it is still at the stage of tender infancy" —in fact, "it bears the appearance of an unwanted child." These apt observations perhaps explain why so little has been heard of WEU since its birth 18 months ago.

Most of the booklet is devoted to a description of the efforts to unite Europe, from 1947 down to the defeat of the "Europeanization" statute in the Saar in October 1955.

The authors point out that, for the present, WEU is unlikely to be concerned with anything but two immediate tasks —the rearmament of Germany within a system of safeguards, and the solution of the Franco-German dispute over the Saar. The latter is supposed to be exclusively a WEU function, although recent reports from Europe indicate that the question is still being discussed by high level French and German officialdom. The authors conclude that it is difficult to foresee the future role and development of WEU, and this for three reasons. First, WEU may not wish to try to resolve any major conflict or policy between members until the Saar question is settled. Second, it still has to achieve (along with NATO) the task of controlling German rearmament, and the extent of German cooperation is uncertain. And finally, Russia's opposition to NATO and German participation therein further delay WEU's task.

Nevertheless, the study group points out, WEU was in itself a considerable achievement, particularly in that it brought Great Britain into close association with the Continent. However, this observation is qualified by the statement that since U.S. support of Western Europe is essential in military matters, "in so far as the United States is prepared to consult, decide and act with these nations within and outside NATO, the Western European Union is relatively unimportant." Conversely, if the U.S. reduces its commitments or interests, WEU's role might well change. But if it has been allowed to hibernate, it probably could not suddenly be revived to handle a crisis.

Presumably the group selected WEU for the focal point of its study because of Britain's membership therein. It is to be hoped that its next study will take up a more active and influential organization, such as perhaps the European Coal and Steel Community, with which Britain does maintain an association. The Chatham House group has an admirable passion for detail and has obviously engaged in considerable painstaking research.

—FRANK H. BLUMENTHAL

LETTERS TO THE EDITOR

Second Thoughts at 96

You have caused me, too, to take a "second thought" and to renew once more my small contribution [$10] to your great undertaking. I gave up when the infirmities of age forced me to take refuge in a small rest home, and to narrow my obligations, both financial and mental. I am now 96 years old.

May we all see how God will work in His own way "His wonders to perform." Please accept my humble thanks for your effort in my behalf. May God preserve and strengthen you for your great work.

HELEN M. JUDD

Woburn, Mass.

Contradiction Seen

I read with interest your editorial on the dangers to Eisenhower in the April issue of FREEDOM & UNION. Kindly forgive me for pointing out that if Khrushchev is counting on disunity of the West for his decision that war is not any longer inevitable, your whole argument falls flat.

If Atlantic Union were realized during Ike's second term, this would change Mr. Khrushchev's conclusion back again to Marx's—that war is inevitable—and it will make the danger of war increase, and will therefore not decrease the strain on Eisenhower. I am not arguing against Atlantic Union, but the argument you propose for it this time contradicts itself.

Based on the argument you propose I can have only one conclusion, and that is that investors in the stock market had better be more careful in 1957 unless something is done about Atlantic Union.

H. C. COLEMAN, JR.

Norristown, Pa.

* * *

The contradiction is more apparent than real. The editorial pointed out, a couple of paragraphs before the one cited, that once the Atlantic resolution is passed the Kremlin's "best hope of preventing the Convention from succeeding is to refrain from troubling the peace—and to make substantial concessions in order to remove Western incentive to federate." The reasons for this have been developed in previous editorials, and in chapters 19 and 22 of *Freedom Against Itself*.

It will take time to get an Atlantic Union made but once it is made the Kremlin—whatever view it takes then of the Marxist theory of inevitable war—will, I believe, fear to attack so strong a Union, the more so since aggression would serve only to strengthen the bonds of Union. Meanwhile the creation of the Union will be keeping the Kremlin preoccupied with dangers of revolt in Eastern Europe—for reasons given in "Who Will Win Without War—Through the R-Bomb?" This editorial, in the June 1955 FREEDOM & UNION, goes into this question fully.—C. K. S.

Off To Australia

I have just had the pleasure of reading the April issue of FREEDOM & UNION from cover to cover. It is an unusually fine issue, even for FREEDOM & UNION. I am sending it to a newspaper friend of mine in Australia. If he likes it, I shall send him a subscription.

SAM WARNER

Guilford, Conn.

Isolationists Too Concerned

The isolationists continue to be gravely conerned about the sovereignty of the United States. That should be the concern of absolutists—not of people who pretend to be such great defenders of the Constitution. Note that it is the object of our Constitution, *inter alia*, to "secure the blessings of liberty to ourselves and our posterity"; it is not the object of that great document to preserve national sovereignty.

Those opposed to Atlantic Union should note that the same arguments that they use today were used violently—and equally irrationally—in 1787 and '88 to oppose adoption of the Constitution. In answering the objections to the Constitution which put too much emphasis on (then) State—now National—sovereignty, Madison said*:

"Was, then, the American Revolution effected, was the American Confederacy formed, was the precious blood of thousands spilt, and the hard-earned substance of millions lavished, not that the people of America should enjoy peace, liberty, and safety, but that the government of the individual States, that particular municipal establishments, might enjoy a certain extent of power, and be arrayed with certain dignities and attributes of sovereignty? We have heard of the impious doctrine in the Old World, that the people were made for kings, not kings for the people. Is the same doctrine to be revived in the New, in another shape—that the solid happiness of the people is to be sacrificed to the views of political institutions of a different form?"

The Atlantic Union Committee, and Federal Union, Inc., are doing a lot more for the preservation of constitutional government than those who attack those organizations.

JOHN F. SCHMIDT

Peoria, Ill.

*The Federalist, No. 45

Protest April Cover

I should like to register my protest at the cover on the April magazine. It seems to me that it is destructive in its influence. If I read the times aright, neither side, from now on, is going to be able to impose a solution of the present differences by force. It looks as though we are going to have to live with Soviet communism, whether we like it or not.

This being the case, I feel the creation of such emotions in the general public as our April cover would engender tends to make a reasonable solution of differences impossible. If one is dealing with a voracious vulture, there is no solution but to kill him, I suppose. But we cannot kill him without killing ourselves too, in this nuclear age.

Therefore, I believe we have to shift our hopes from faith in superior force to faith that there is indeed some dignity and decency in all men which can be roused if we ourselves exhibit these qualities toward them. My interest in Federal Union is that it provides the way for an expanding democratic government which could, eventually, become world-wide. If we are going to put up emotional barriers against one half of the world we are only adding to the powder-keg.

JANICE HOLLAND

Washington, D. C.

• • •

The cover of the April issue strikes me as being a little out of taste. FREEDOM & UNION is truly a rather conservative magazine, even though some people feel that its policy isn't necessarily conservative.

Covers such as the April one would maybe give the wrong impression to some new person not familiar with the editorial policy of the magazine. They might give him the idea that the magazine is radical or biased.

This is just one comment and I have made no attempt to analyze any series of covers, but thought I would pass my first impression along for what little it is worth.

The Little Dog Laughed

DAR Dictionary

It is sometimes asked how the members of the DAR manage to be wrong on nearly every important question. The following example may provide a clue to the answer.

The DAR, through its National Defense Committee, has recently issued a statement concerning Senate Concurrent Resolution 12 which provides for delegates from Atlantic countries to meet in a convention to explore and to report to what extent their peoples might further unite for their mutual welfare.

The DAR National Defense Committee opposes this resolution partly on the ground that a convention is a treaty. It quotes sound authority to the effect that a convention is "an agreement between soverign states . . . Broadly speaking it is a treaty."

It is true, of course, that the dictionary does not include this meaning of the word "convention." But note that the DAR has carefully by-passed nine other definitions, including the most commonly accepted one, in order to seize upon a meaning which serves its purpose, happily oblivious to the obvious fact that the definition it has chosen is absurd.

How do these ladies expect delegates to meet in a treaty? It seems extraordinary that any member of the DAR, which meets annually in Constitution Hall, should forget that the founders of our country met in a Convention to create the Constitution.—*Mrs. C. S. Osborn, Sault Ste. Marie, Mich.*

Little Pitchers Have Big Errors

A Massachusetts Firm, reports the *Washington Post & Times Herald*, recently ordered 750 pitchers from Italy, identifying the design by the inscription a certain macaroni manufacturer had added for advertising purposes. Charles Barbo, head of the New England company, cabled instructions.

In due course 16 crates of pitchers, valued at a total of $200, arrived. On the side of each pitcher was this inscription: "Leave out the words 'Enjoy your wine with Prince Macaroni.' "

Select News Service

This extract is from a broadcast by Fulton Lewis, Jr.

Secretary of State Dulles arrived in Paris today, for discussions that are reported by the press as looking toward the expansion of the Nato organization into a sort of new Marshall Plan, with emphasis on foreign economic aid, and improved cultural relations.

It is interesting to note that this is exactly the proposal which was set forth in a joint declaration on December 11, 1954—a year and a half ago—in some public recommendations to the North Atlantic Treaty nations, just prior to a conference they were about to hold in Paris, and you will be interested, perhaps, in the list of individuals who signed that joint declaration—which Mr. Dulles now is supposed to be following:

Harry S. Truman, Adlai Stevenson, General George Marshall, Norman Cousins, President of the United World Federalists; Owen J. Roberts, President, and Will L. Clayton, Vice President, of the Atlantic Union Committee; Clarence K. Streit; Chester Bowles; Senator Hubert Humphrey; Senator Estes Kefauver; Senator Herbert N. Lehman, William V. Griffin, President of the English-Speaking Union; and Edward R. Murrow and Elmer Davis, commentators.

For your information, whether the interpretation of Mr. Dulles' purposes is by design or by ignorance, I am informed by the most reliable sources that the interpretation is completely unture, and the plan he has in mind, in connection with Nato is not any revival of the Marshall Plan, or anything of the sort.

* * *

Mr. Lewis selected with care the 14 names he chose to give to the isolationist Republicans he cultivates. There were 79 American signers to the Declaration to which he refers. Among those whom he carefully omitted are these 14: Vannevar Bush, Governor James F. Byrnes, General William Donovan, Benjamin Fairless, Henry Ford II, Governor Christian Herter, Paul G. Hoffman, Paul W. Litchfield, John J. McCloy, Governor Theodore McKeldin, Philip D. Reed, Charles P. Taft, Thomas J. Watson and William Zeckendorf.

Mr. Lewis was no less selective in his report of the Declaration's purpose; it aimed at trade rather than aid, or a "new Marshall Plan," and this was only one of several proposals it made in non-economic fields.—*The Little Dog.*

—*Lichty, Grin & Bear It*

"In line with our resolution to make this a better world, do we start at the national level, the state level, the municipal level or the husband level, girls? . . ."

Stronger on the inside! A mounted jack-hammer delivered over two million blows against this tire, but didn't break a single Triple-Tempered 3-T Nylon Cord.

NEW 3-T NYLON TUBELESS TIRE by GOODYEAR

Stopped this car 38 feet quicker at 50 m.p.h. on an oil-slicked road!

Safer on the outside! In this spine-tingling test we slicked a section of road with oil—then had two cars hit this slippery stretch at 50 miles an hour and brake at the same instant.

The far car, riding on new tubeless tires with ordinary-type treads, slipped and fish-tailed dangerously. The near car, on new Nylon Custom Tubeless Super-Cushions with Twin-Grip tread, came to a safe, straightline stop 38 feet quicker! You get a margin of safety that can save a life.

This safety-built 3-T Nylon tire costs only a few dollars more than a standard tubeless tire, and your near-by Goodyear dealer will buy all the unused mileage in your present tires.

The new Twin-Grip tread design is also available in a tube-type 3-T Nylon Custom Super-Cushion. Goodyear, Akron 16, Ohio.

MORE PEOPLE RIDE ON GOODYEAR TIRES THAN ON ANY OTHER KIND!

ADAMS 4-2211 — 2700 ONTARIO ROAD, N. W., WASHINGTON 9, D. C.

December 21, 1955

Dear Ed:

After the July hearings on the attached Atlantic Convention resolution, Senator George told me that this measure would be on his Committee's first order of business in January. Since this Convention is patterned on our 1787 Convention, I thought you might wish to refresh your knowledge of the latter now.

To help rescue the records of this convention from the shocking neglect into which they have fallen, our Board recently passed the other resolution I enclose. It pointed out that the collection of these records, including Madison's Journal, which Congress published in 1927, entitled FORMATION OF THE UNION OF THE AMERICAN STATES, was about to go out of print, and urged it be kept available at a lower price. Since then this volume, which was the only such collection extant, has also gone out of print.

Before it did, the generosity of Robert Whitaker, a member of our Board, and his wife, of Kenosha, Wisconsin, enabled us to buy a number of copies for presentation to key men and women, so as to assure that some of the remaining volumes would go to those who could make best use of them.

We take pleasure in sending you separately with our compliments an inscribed copy of FORMATION OF THE UNION OF THE AMERICAN STATES. We would deeply appreciate any comment on this basic document that you could give us that would help rouse public interest in this widely forgotten part of the American heritage.

I attach part of a letter I wrote President Eisenhower, in presenting a copy to him. It tells why I believe even the busiest statesman should find time to study now these records of 1787. I also attach the other enclosures I sent him. I have marked your book as I did his, and added the same illustration to the inside front cover.

I know of no better means for dispelling the current confusion over sovereignty and the principles of free federal government than study of this great book provides. May it serve through you to advance anew the grand line of United States history - and to advance it as memorably now as when Madison, Hamilton, Franklin, Washington and their co-authors wrote FORMATION OF THE UNION OF THE AMERICAN STATES.

Surely our supersonic atomic age calls for exploration, at least, of this time-tested U.S. way to unite the free enduringly, and calls for action on it without waiting for another World War. And surely the Geneva failure makes exploration of the possible formation of a Union of the Atlantic Democracies particularly timely now.

Sincerely,

Clarence

Clarence K. Streit

Some Reasons for Reading FORMATION OF THE UNION OF THE AMERICAN STATES

(From a letter to President Eisenhower from Clarence Streit, Nov. 2, 1955)

FORMATION OF THE UNION OF THE AMERICAN STATES is, I believe, even more relevant to the problems we face in uniting the free effectively than is THE FEDERALIST. The latter puts masterfully the case for adopting a concrete plan for a federal union - the United States Constitution. The Atlantic community, however, has not yet reached the stage the 13 States had reached when THE FEDERALIST appeared. Despite their atomic energy and supersonic planes, the Free States of the North Atlantic are still where the 13 were at the dawn of the steam-electric era, when FORMATION OF THE UNION OF THE AMERICAN STATES begins - united only by alliance, and facing a proposal to call a Convention to explore the possibility of uniting effectively.

In this book one finds how every subsequent step was taken, - including the official credentials of the delegates (who were appointed in all the States except one by the Legislative branch.) The pro and con of alternative proposals - set forth by such statesmen as Franklin, Hamilton, Madison, and Mason, - involve many basic problems in inter-state organization similar to those confronting us today. I have found this book a mine of wisdom on these questions - as it is also, of course, on all the domestic problems which face you, Mr. President, with constitutional issues.

The proposed Atlantic Convention would mark the first attempt by the United States to explore the possibility of uniting with other democracies to some degree by the fundamental federal principles whose birth this book records. It would also mark our first attempt to tackle any international problem by the 1787 convention type of conference, as distinguished from the diplomatic type. The big difference between these two types of conferences is brought out in the marked paragraphs of the enclosed reprint.

The Convention procedure produced the greatest success of any conference of sovereign states in history - our Federal Constitution. Diplomatic procedure has resulted in war after war. Surely the United States should try the procedure by which it was itself constituted. And surely anyone who studies the work of the Philadelphia Convention in FORMATION OF THE UNION OF THE AMERICAN STATES must agree that the procedure of diplomacy would never have produced our Constitution.

In speaking through the country, I have been appalled at the widespread ignorance of the origin, principles and history of our Constitution. Even leaders of the D.A.R., V.F.W. and other organizations that pride themselves on patriotism, have fallen into dangerous confusion. They seek to uphold, in the name of Americanism the concept of sovereignty which the Founding Fathers rejected when they adopted the Constitution. (See quotations from them in my enclosed "King Nation or King Citizen?")

I have nourished my own patriotism on long study of the constitutional history of the United States. I am so confident that the proposed Atlantic Convention is in the true line of our Republic's unique history that I do all I can to get foes, skeptics and supporters of this proposal to see this for themselves by studying the official record which FORMATION OF THE UNION OF THE AMERICAN STATES provides.

I have marked some passages in it which may particularly interest you, in view of the coming discussion in Congress of the Atlantic Convention resolution. . . . .

ADAMS 4-2211 2700 ONTARIO ROAD, N. W., WASHINGTON 9, D. C.

THE BOARD OF FEDERAL UNION, INC.:

BELIEVING "a frequent recurrence to fundamental principles," as Pennsylvania's Constitution said in 1776, is "absolutely necessary to preserve the blessings of liberty;"

IMPRESSED by the light thrown on these principles by the Federal Convention debates in 1787, as reported by Madison and other delegates whose notes are given in full in FORMATION OF THE UNION OF THE AMERICAN STATES, a collection of documents on the origin of the United States Constitution published by the Government Printing Office in 1927 as House Document 398, - the only one-volume edition of this treasury of wisdom in print;

APPALLED to find that in the 28 years since 1927, in which our population rose from 120,000,000 to 160,000,000, only 11,555 copies of this book have been ordered, and orders fell from 258 in the last half of 1954 to only 30 in the first half of 1955;

ALARMED to learn that this fundamental source book may soon go out of print, since the Government Printing Office has less than 100 copies left (hardly one copy for every 2,000,000 citizens); and that there are no plans for reprinting it, and a new edition may involve long delay and be priced much higher than the present $6.50;

NOTING that FORMATION OF THE UNION OF THE AMERICAN STATES is of exceptional interest now in view of the resolution before Congress to call a Convention like the one of 1787, this time to explore the possible formation of a Union of the Atlantic Democracies;

RECALLING that Federal Union, Inc. was incorporated in 1940 as a non-profit membership organization "to promote education in the basic principles of federal union as exemplified in the Constitution of the United States with a view to attaining world order by a Federal Union of Democratic Peoples;"

RESOLVES that: 1. The present deplorable neglect of the documents of the Convention that drafted the United States Constitution should be ended without delay, and adequate steps taken by the proper authorities to popularize them.

2. The collection of them called FORMATION OF THE UNION OF THE AMERICAN STATES should be reprinted at once at a low price and never permitted to go out of print.

3. A shorter paperbound book including at least Madison's Journal of the Convention should be published soon at a still lower price to encourage wider reading.

4. A copy of this resolution shall be sent the President, the President of the Senate, the Speaker, the Secretary of State, the Chairman and Vice Chairman of the Joint Committee on Printing, the Librarian of Congress and the public printer for consideration and action.

October 14, 1955

The New Resolution to Explore Atlantic Union

Exploration Stressed. The new resolution is entitled "Resolution for an Atlantic Exploratory Convention," which is a more accurate name than the old one, "Atlantic Union Resolution." That title led some to fear it committed them to an Atlantic federation, though the resolution's text limited action to calling a Convention to explore the possibility of such a Union. The new name, emphasizing as it does exploration and convention, should eliminate all such misunderstanding, at least among the reasonable and fair-minded.

New Motive Added. A most useful provision has been added to the new Atlantic resolution preamble declaring that "the Nine Power agreement to extend the North Atlantic Treaty and defense system to include the German Federal Republic makes such exploration still more timely." This agreement gives little assurance that Germany, once rearmed on a national sovereignty basis, will not end by turning its arms against freedom.

*

Another welcome addition to the preamble of the revised Atlantic resolution is its final clause, which states that "it is desirable that this problem be considered by delegates who would act in accordance with their individual convictions and make a public report of their joint findings and recommendations." All this was implicit in the previous resolution, but to spell it out has several advantages. It reassures the fearful by underlining further the exploratory character of the proposed Convention. It also makes clearer that the Convention will not be another diplomatic conference, with each delegation—like those at the meetings of the United Nations and NATO—rigidly held to continuous instructions from its government. Instead, it will be like the Federal Convention of 1787, where each delegate was officially named by his State government, but none was under any instructions, and each voted on every issue without a caucus, entirely as his own conscience and wisdom advised him.

*

The procedure followed in the 1787 Convention resulted in the U.S. Constitution—the most astonishing and enduring success ever achieved in human history at a conference of sovereign States. No one who has read, or skimmed, Madison's *Journal* of that Convention—and all too few have done so—will believe that this result could have been achieved had the delegates been instructed by their governments. And yet the resolution for an Atlantic Convention is the first proposal yet made, in this war-cursed century, that we tackle our basic problem of inter-democracy organization by the method that alone has succeeded in this field—the non-diplomatic procedure of the 1787 Convention. It will be hard for our children to under-

stand why we have refused so long to try the method that worked. Can you give them any explanation of this fact that will make our generation seem moderately intelligent?

Exploration Unlimited. The enacting clause is, of course, the most important part of any resolution. It is here that the new Atlantic resolution most closely resembles the old one. The only important changes in it neatly balance, to make it at once more general and more precise—certainly a remarkable example of the art of compromise.

On the one hand, the new resolution further stresses the exploratory character of the Convention by stipulating—instead of merely implying—that its function is "to report" rather than to act. Then, where the old resolution limited it to exploring "how far" the participating democracies could "apply among them, within the framework of the United Nations, the principles of free federal union," the new text removes this limit. It permits the Convention to consider any method, federal or non-federal, of further uniting the Atlantic democracies. On the other hand, the new resolution then spells out much more concretely than the old one did the scope or character of the union to be explored.

All this is summed up in the final words of the resolution which authorize the delegates "to explore and report to what extent their peoples might further unite within the framework of the United Nations, and agree to form, federally or otherwise, a defense, economic and political union."

Dilemma. As it now stands, the text of the Atlantic Exploratory Convention Resolution puts opponents in a dilemma. They cannot oppose it without being in the position of refusing even to explore *any* method of uniting the free more economically, effectively and democratically against the obvious dangers that confront them. Nor can they oppose the Convention's mandate to explore the federal method without taking the position that Americans should join in exploring every means of uniting democratic States except one—the U.S. federal system. To take that position in the name of patriotism will require reasoning too cock-eyed to be cogent.

February 21, 1956

Dear Ed,

Before "Formation of the Union of the American States," went out of print last Fall, the generosity of Mr. and Mrs. Robert Whitaker of Kennosha, Wisconsin, enabled us to send a number of copies of it to leaders whom we thought could make best use of this great and shockingly neglected book, - the only book then still extant which gave Madison's Journal of the Federal Convention of 1787.

Its rare value is reflected in the exceptional response I have had from many of those who received the book, - as you may see from the few samples I enclose.

This book's special importance in world affairs today is brought out in the attached excerpt from a letter I wrote President Eisenhower, with particular reference to the Atlantic Convention resolution.

I sent you an inscribed copy of this book on December 21. The same passages were marked in it as in the copy I sent to President Eisenhower and the others whose answers I enclose. Not having heard from you, I fear the book may have gone astray, though I hope it merely got buried in all the mail pressing for your attention. I am not sure whether it was sent to your office address or to your home in Pawling, but I think it was the latter. I would appreciate your help in trying to trace it if you failed to receive it. Believe me, Ed, you won't want to miss this book; you'll be fascinated by it once you dip in.

Sincerely,

Clarence

Clarence K. Streit

CKS/mje

P.S. I am happy to add that Federal Union, Inc. has made some headway in its efforts to get this basic book back in print, which I explained in my covering letter to you at the time. The Public Printer has informed us that he is bringing out a new printing of 2,000 copies, which should soon be available. Unfortunately, however, he has had to raise the price from $6.50 to $9.50 - because of government regulations, he explained, - instead of lowering it, as we urged, so that it would be available to more citizens. We shall continue to press for a popular edition of this forgotten classic, and to this end have other plans under way which we hope will soon bear fruit. I'd like to get your advice on them when convenient.

FORMATION OF THE UNION Private

Here are a few of the many letters I have received from the 175 key leaders to whom I gave the last copies of Formation of the Union before this great book went out of print last Fall. - Clarence Streit

Dear Mr. Streit: In acknowledging your recent letter to the President, I want to thank you for your thoughtfulness in sending him the volume of documents, Formation of the Union. Your interest in making it readily available is indeed appreciated. With respect to a possible reprinting of the volume, your remarks are being brought to the attention of the Chairman of the National Historical Publications Commission - an organization which has been interested in the publication and dissemination of documents relating to the formation and growth of the United States.

SHERMAN ADAMS.

Dear Clarence: Thank you for the wonderful book, Formation of the Union. I have enjoyed greatly going through it and reading passages, particularly those that you have thoughtfully marked. It does not take much exercise of the imagination to transplant yourself from this modern day to the days when this record was being written. I think that this is the most pleasant and productive way to study history. - THOMAS H. BURKE, Legislative Representative (UAW-CIO).

Dear Clarence: Thank you for sending me Formation of the Union. It must be an answer to a prayer because before I got your letter, I learned of the book and resolved to get it if I could. I have of course gone over Madison's Journals before, and also Farrand's edition of the proceedings, but this seems to be much to the point. Thank you again. SENATOR PAUL H. DOUGLAS.

Dear Clarence: It was kind of you to send me a copy of Formation of the Union of the American States. I know the book, and there is no question that it is, as you say, a fountain of wisdom about the beginnings of our government. - JOHN FOSTER DULLES.

Dear Clarence: I am deeply grateful for the inscribed copy of Formation of the Union of the American States. It will be a valuable and cherished addition to my library. I am taking the liberty of lending the book to my colleagues for advice on how we can best further your idea to prevent the book from going out of print. It is too important a part of our history to be treated lightly. - PHILIP L. GRAHAM, Publisher, Washington Post-Times-Herald.

Dear Clarence: It was very, very kind of you to send me a copy of Formation of the Union. It will be a valuable reference book, and I hope I shall have time to read it soon. May 1956 be a most successful one for you. I trust I'll have the pleasure of seeing you again during that year - several times. All my best. -

GENERAL ALFRED M. GRUENTHER, Supreme Allied Commander, Europe.

✓ Dear Clarence: I have read the greater part of the extremely stimulating volume which you sent to me and found that there was a great deal in our history which I did not know and that I was very much interested to learn. At the present time I am not taking active part in affairs outside the Commonwealth since I have found that trying to do my job here consumes the better part of my time. However, your comments stimulated many thoughts and perhaps the day will come when I can put those thoughts to good use. When I say this, I am not implying that I am a candidate for any job but merely that I will have more leisure time-CHRISTIAN A. HERTER,Governor,(Mass.).

My dear Clarence: I deeply appreciate your kindness and generosity in sending me Formation of the Union of the American States. More than ever during this atomic age is it important for us to refresh our knowledge of our American heritage and the principles upon which our democracy was founded. Again, many, many thanks for thinking of me. - SENATOR LISTER HILL.

Dear Mr. Streit: I am deeply indebted to you for sending me a copy of the impressive book containing the documents dealing with the formation of the Union. It is a most useful book of reference and perhaps I will find time before too long to read it from cover to cover. - PAUL G. HOFFMAN.

My dear Mr. Streit: The volume of documents which you have sent to me is greatly appreciated. Thank you very much. - HERBERT HOOVER.

Dear Clarence: I am very grateful indeed for the volume called Formation of the Union of the American States, which I have wanted to possess ever since you first told me about it. I shall value it not only for the reasons you have sent it, but another accidental one. While this volume was sitting in my office over the holidays, the greater part of my library at home was destroyed by fire. You have given me an excellent foundation volume on which to start a new one. - JOHN K. JESSUP.
Chief Editorial Writer, LIFE.

Dear Mr. Streit: This is to thank you for Formation of the Union. I will read it with much interest. - SENATOR LYNDON B. JOHNSON.

Dear Clarence: You are so thoughtful to send me the marked copy of Formation of the Union. I also appreciate the beautiful inscription. This is a wonderful book to have in my library and I intend to spend some time reading it before the New Year. - SENATOR ESTES KEFAUVER.

Dear Mr. Streit: I wish to thank you for sending me Formation of the Union which I am in the process of re-reading. - SENATOR WILLIAM F. KNOWLAND.

Dear Streit: You have most certainly enriched my library and met one of my daily necessities by sending me that book of priceless documents. Thank you very much. It reminded me again how much I regret that I have been unable within my formula to circulate my deep admiration for you, and for the gallantry with which you pursue your noble objective. - ARTHUR KROCK, New York Times Columnist.

Dear Clarence: The book which you so kindly sent me is an old favorite of mine and I have used it more than you would perhaps suppose. I am particularly glad to have a copy with your generous inscription. - WALTER LIPPMANN, Columnist.

Dear Mr. Streit: Thank you so much for sending me a copy of Formation of the Union. I shall read it with deepest interest and with keen appreciation of your thoughtfulness in making it available. - GENERAL DOUGLAS MacARTHUR.

Dear Mr. Streit: Many thanks indeed for the book of documents on the formation of the Union and for the inscription. I am delighted to have this book and consider it a very vital element in my library. I greatly appreciate your thoughtfulness in sending it to me. - JOHN J. McCLOY.

Dear Clarence: When I returned from a short trip yesterday, I found the very nicely autographed copy of the bound documents recording the formation of the United States. It was mighty nice of you to include me among those to whom this very attractive and useful collection has been sent. I have already found one opportunity to use the contents of this document for a quick reference and I assure you that I shall cherish this volume in my library, especially because of your very gracious autograph. - SENATOR KARL MUNDT.

Dear Clarence: The book, "Formation of the Union," which you were good enough to send me looks a bit formidable, but none the less I am going to read it. Thanks for sending it to me. - DREW PEARSON, Columnist, Commentator.

Dear Clarence: I want to thank you most sincerely for sending me a copy of Formation of the Union of the American States. This is a most interesting and informative volume and one that should be carefully studied by all persons who have a sincere desire to get a more complete grasp of the various philosophies of those who founded this Union. - J. PERCY PRIEST, Chairman, Committee on Interstate and Foreign Commerce, U.S. House of Representatives.

Dear Streit: The other evening at home I found that amazing volume constituting the documents on the formation of the Union, and I am grateful for it, as it will form a very fine addition to my library. - CLARENCE B. RANDALL, Chairman, Inland Steel Company.

Dear Clarence: You have done a tremendous thing in sending me a copy of Formation of the Union. I was most interested and worried on learning from you that this great document was nearly extinct and I certainly never hoped to have one of the few copies available. It was therefore very exciting to open your package and learn the contents, and I can't tell you how grateful I am. It is all in such beautiful print too that I can't imagine a nicer kind of textbook on this earth-shaking event. I do hope, even as do you, that there can be another such event, for it's hard to see how the West can sufficiently galvanize itself to meet the Communist threat without more cohesion. - WHITELAW REID, Editor, New York Herald Tribune.

Dear Clarence: I was very touched by your thoughtfulness in sending around the documents on the formation of the Union. I have put them on my desk and intend now to read them with more care than I have in the past. - JAMES RESTON, Chief Washington Correspondent, The New York Times.

My dear Mr. Streit: I was delighted to find among my Christmas gifts one of enduring usefulness, and I have you to thank for it. It's a splendid book, and I have not seen it before. And I am likewise profoundly touched by your inscription and the citations which you have so thoughtfully marked. - ADLAI E. STEVENSON.

Dear Mr. Streit: The book from the Public Printer is a most interesting document. I have one packed away somewhere with the rest of my books, but inasmuch as this copy has your notations in it, I am very glad to have it. I wish it were necessary for every high school boy to read this book from cover to cover. A great many of the things to which I refer in my memoirs are based on information contained in it.
HARRY S. TRUMAN.

Some Reasons for Reading FORMATION OF THE UNION OF THE AMERICAN STATES

(From a letter to President Eisenhower from Clarence Streit, Nov. 2, 1955)

FORMATION OF THE UNION OF THE AMERICAN STATES is, I believe, even more relevant to the problems we face in uniting the free effectively than is THE FEDERALIST. The latter puts masterfully the case for adopting a concrete plan for a federal union - the United States Constitution. The Atlantic community, however, has not yet reached the stage the 13 States had reached when THE FEDERALIST appeared. Despite their atomic energy and supersonic planes, the Free States of the North Atlantic are still where the 13 were at the dawn of the steam-electric era, when FORMATION OF THE UNION OF THE AMERICAN STATES begins - united only by alliance, and facing a proposal to call a Convention to explore the possibility of uniting effectively.

In this book one finds how every subsequent step was taken, - including the official credentials of the delegates (who were appointed in all the States except one by the Legislative branch.) The pro and con of alternative proposals - set forth by such statesmen as Franklin, Hamilton, Madison, and Mason, - involve many basic problems in inter-state organization similar to those confronting us today. I have found this book a mine of wisdom on these questions - as it is also, of course, on all the domestic problems which face you, Mr. President, with constitutional issues.

The proposed Atlantic Convention would mark the first attempt by the United States to explore the possibility of uniting with other democracies to some degree by the fundamental federal principles whose birth this book records. It would also mark our first attempt to tackle any international problem by the 1787 convention type of conference, as distinguished from the diplomatic type. The big difference between these two types of conferences is brought out in the marked paragraphs of the enclosed reprint.

The Convention procedure produced the greatest success of any conference of sovereign states in history - our Federal Constitution. Diplomatic procedure has resulted in war after war. Surely the United States should try the procedure by which it was itself constituted. And surely anyone who studies the work of the Philadelphia Convention in FORMATION OF THE UNION OF THE AMERICAN STATES must agree that the procedure of diplomacy would never have produced our Constitution.

In speaking through the country, I have been appalled at the widespread ignorance of the origin, principles and history of our Constitution. Even leaders of the D.A.R., V.F.W. and other organizations that pride themselves on patriotism, have fallen into dangerous confusion. They seek to uphold, in the name of Americanism the concept of sovereignty which the Founding Fathers rejected when they adopted the Constitution. (See quotations from them in my enclosed "King Nation or King Citizen?")

I have nourished my own patriotism on long study of the constitutional history of the United States. I am so confident that the proposed Atlantic Convention is in the true line of our Republic's unique history that I do all I can to get foes, skeptics and supporters of this proposal to see this for themselves by studying the official record which FORMATION OF THE UNION OF THE AMERICAN STATES provides.

I have marked some passages in it which may particularly interest you, in view of the coming discussion in Congress of the Atlantic Convention resolution. . . . .

If You Don't Know Our Answer . . .

How to keep both peace and freedom—to keep them securely and be done with this lifelong nightmare . . . and enjoy a life of greater individual liberty and higher standards, spiritual as well as material?

That is the Question. The Answer is to do now between democracies on an oceanic scale what our Fathers did on a continental scale when they established the United States Constitution—form a Federal Union of the Free. We should start by uniting the democracies of the North Atlantic in a great Federal Republic built of, by and for the thing they all hold dearest and have most in common—the principle of government for the sake of individual life and liberty. This Union of the Free would be designed (a) to provide the free with effective common government in those fields where they agree that such government will clearly serve freedom and peace better than separate governments, and (b) to guarantee the continuance of their independent national governments in all the other fields where such separate governments will serve freedom and peace better than a common government.

An exploratory Convention of Delegates, representing the participating peoples (rather than their governments) would work out a Constitution embodying this division of fields of power, the Union's Executive, Legislative and Judicial Departments, its Bill of Rights, etc. This would then be submitted to the people of each country concerned for full discussion and decision.

The proposed convention would be modelled on the Federal Convention of 1787. Its unique procedure enabled it to reach mankind's first successful answer to this age-old issue—the U. S. Constitution, the original Federal Union of the Free. Although this has proved to be the most astonishing and enduring answer to the problem in all history, the American people have never yet sought to explore its possibilities in this jet-atomic age, nor tried to tackle any international question by the 1787 Convention method which produced the greatest success ever achieved at a conference of sovereign States.

The Federal Union of the Free we advocate is—like the United States itself—an interstate government so constituted as to keep *you,* the citizen, free and sovereign. It puts the accent on the sovereignty of the citizen, rather than on national sovereignty; it keeps the latter the servant of the former, and aims to save the citizen from having his life and liberty sacrificed merely to serve the sovereignty of his nation. It holds that supreme sovereignty in the United States—and in any true democracy—is vested equally in its citizens, rather than in the national government, that so-called national sovereignty is really merely a means to serve the citizen, not something more sacred than the people who made it.

In a Federal Union of the Free, as in your nation or state, you elect the lawmakers, and their laws are enforced on you individually. Power is divided between the Union and your national government. A Federal Union's major powers normally are limited to the right to conduct foreign relations, maintain armed forces, issue currency, regulate interstate commerce and communications between member nations, and grant Union citizenship.

Far from "abolishing the nation," Federal Union would guarantee the right of each nation to govern as independently as it does now all its purely national affairs—namely, every field except the few which it agreed itself were common Atlantic affairs. Each nation would remain free to practice democracy at home in its own language, according to its own customs and in its own way, so long as it did not infringe the Union's Bill of Rights for the citizens.

The proposed Union would be designed to grow gradually by federating with other nations as this became practicable, much as the United States grew from 13 to 48 States. Pending its growth into an eventual government of, by and for all mankind, which is far distant, it would be a member of the United Nations.

Because the Federal Union Answer would begin federation with the more experienced and like-minded democracies, and because nearly all of these are situated in the North Atlantic Community—the United States, Canada, Britain, France, the Netherlands, Belgium, Denmark, Norway, etc.—and are already allies in NATO, our Answer is often called Atlantic Union. And because of the title of the book that first gave this Answer, and the stress we lay on action in time to prevent another world war or depression, Federal Union is often known as Union Now.

We cordially invite all those to whom it makes sense to join in giving this Answer as a member of **Federal Union, Inc.**

THE MILLION DOLLAR ANSWER

An answer to a major problem that wins a million dollars in voluntary support from the public may be called a "million-dollar answer," at a time when television has drawn such attention to $64,000 questions. In 1955 **Federal Union, Inc.**, climbed into this "million-dollar" class with its answer to the problem of how to secure world peace with individual freedom—an answer variously summed up as Federal Union of the Free, or Atlantic Union, or Union Now.

Not that its answer won $1,000,000 in support in that one year. The amount received was, instead, $83,934, but this sufficed to bring the support given to **Federal Union** since its incorporation in 1940 up to a grand total a bit above the million-dollar mark.

How Federal Union Got $1,048,393 in 15 Years

In the 15 years and seven months from its incorporation as a non-profit, educational membership association to the end of 1955 **Federal Union** received $1,048,393* to advance the purpose for which it was incorporated: "education in the basic principles of federal union as exemplified in the Constitution of the United States, with a view to attaining world order by a Federal Union of Democratic Peoples." To make known the why and how of its answer, and do further research in the problem, it spent on educational work in those years a grand total of $1,030,435,* including $81,815 in 1955.

Had **Federal Union** gained its million dollars in one gift or in a few grants from big foundations, this would have been widely headlined news. Perhaps even more impressive is the way by which it actually reached this figure. We mounted to the Million-Dollar-Answer level step by step through more than 15 years of struggling to survive, often from month to month, even from week to week. **Federal Union** grew from only an idea, an Answer, largely through myriad dues, contributions, and subscription fees of $1 to $10. Many of these have been repeated for 5, 10, 15 or more years by devoted men and women who would not take *No* for the answer. Less than 20 per cent came in contributions of more than $1,000. By far the largest single contribution in one year was $25,000 given by a woman in 1940 after the fall of France. **Federal Union** has never received a grant from a major foundation. In a world where the majority of new corporations formed each year, profit or non-profit, perish within five years, **Federal Union** has existed for fifteen.

Annual income and outgo have fluctuated sharply. High and low points were as follows:

Income	Expenditure
$101,256 (1941)	$101,709 (1949)
$ 26,098 (1943)	$ 22,346 (1943)

However, when viewed in five-year periods, the financial curve is one of steady growth:

Period	Average Annual Income	Average Annual Expenditure
1939-40*	$34,320	$35,832
1940-45	48,093	46,324
1946-50	73,059	69,945
1951-55	82,555	84,212
1955 (alone)	83,935	81,815

*Pre-incorporation 14-month period.

It will be seen that expenditures last year were slightly below the highest five-year average, while income was slightly higher than the highest such average.

Union of the Free Makes Record Advance

Funds for **Federal Union** are but means to advance its educational work. In 1955 our work, too, attained new heights. Rarely have we gained so much ground within one year. Consider these highlights:

Atlantic Convention Resolution

In February, after a two-year lapse, the resolution for a convention of delegates to explore the possibility of Atlantic Union was re-introduced in both Houses of Congress by an impressive bipartisan group of 13 Senators and 13 Representatives, led by Senator Estes Kefauver. This was a revised version of the previous resolutions; the major changes brought out more clearly the purely exploratory character of the convention and its resemblance to the 1787 Philadelphia Constitutional Convention. During the year those who made public their support of the resolution rose to 94 Members of Congress—17 Senators and 77 Representatives.

Endorsements by Marshall and Others

In May, General George C. Marshall, former Secretary of State and of Defense, gave FREEDOM & UNION a statement endorsing this "prudent" resolution. He said, in part:

> *The subject today is vitally important and the period fateful. All probably agree to the importance of Atlantic unity but few act. . . . Thinking back on the development of our own Federal Union—on the doubts and difficulties which preceded the final union of the colonies, on the remarkable advance in freedom, invention, production and living standards which followed on the solution of the early difficulties, and on the high degree to which the States have continued to maintain their individual personality and institutions—Americans should have a sympathetic understanding of this effort to overcome the limitations of national barriers in the approach to a solution for common problems.*

*The grand totals reach $1,088,435 received and $1,072,241 spent, if one adds the amounts raised ($40,042) and expended ($41,806) in the 14-month period between organization of the first committee on March 28, 1939, and incorporation on May 23, 1940.

Acting in Paris quite independently but almost simultaneously, Robert Schuman, Minister of Justice and father of the Schuman Plan, joined the father of the Marshall Plan; he, too, came out for the Atlantic resolution. In a statement given to Dr. Ralph Epstein, roving correspondent of FREEDOM & UNION, the former French Premier attributed the breakdown of his efforts to unite Western Europe more closely to American failure to explore Atlantic Union.

Our magazine also received other strong endorsements of the Atlantic Convention proposal from Belgian Foreign Minister Spaak, former Belgian Premier Van Zeeland, Canadian Foreign Secretary Pearson, Dutch Foreign Minister Beyen, and Italian Foreign Minister Martino. Never before had any former Secretary of State or the Foreign Minister of any democracy come out publicly for a Convention to explore Atlantic Union.

Hearings by Senate Committee

In late July, despite the heavy competition for time in the closing days of Congress, the Senate Foreign Relations Committee held hearings on the Atlantic Convention resolutions on two days, July 25 and 29. These important gains were made as compared to the 1950 hearings:

1. The hearings in 1955 were held on the Atlantic resolution only, not on a half dozen resolutions in the field of international organization, as in 1950.
2. The hearings in 1955 were conducted by the full Senate Foreign Relations Committee, not by a sub-committee as in 1950.
3. In 1955 Deputy Under Secretary of State Murphy came to the hearings and read a letter from Secretary Dulles giving the Department's views of the matter. In 1950 no State Department representative higher than Assistant Secretary testified at the hearings, and Secretary Acheson remained aloof.
4. In 1955 the State Department's view was constructive and by implication favorable to the resolution. In 1950 the State Department cited a number of reasons against the resolution, none of which it put forward in 1955.

The Secretary's statement at the 1955 hearing was sufficiently ambiguous, however, for the press to interpret it as being opposed to the Convention proposal. On August 22 in a letter replying to one sent by Senator Kefauver (who had written him that supporters of the resolution were willing to make the changes the Secretary had suggested), Mr. Dulles explained his opposition was merely to the "actual text of the resolution," particularly because it made the Convention an initiative by the President instead of by Congress. Secretary Dulles added:

> *However, I did not intend thereby to express opposition to any exploration, pursuant to Congressional initiative, of the possibilities of increased unity between some or all the members of the Atlantic Community.*

Unfortunately by that time Congress had recessed until January 4, 1956. Later I was told by a well-informed member of the Senate Foreign Relations Committee that he was astonished by the ambiguity of the Secretary's statement at the hearing; all signs had led him to believe the statement would be clearly favorable. Had it been, the resolution might have gone through the Senate before it adjourned; certainly this was under consideration in high quarters. Undoubtedly the "Summit" conference in Geneva the same month, and the illusory hope it left served to defer action on the Atlantic Convention. Had the subsequent disillusioning October meeting in Geneva occurred in July, the Atlantic Convention resolution might well have sailed through Congress then.

As it was, Chairman George promised to bring it up in the Foreign Relations Committee soon after Congress reconvened in January. This he did in executive sesssion. After two Administration Senators sought delay, and gained some support from the Democratic side, it was agreed to postpone action until later. There the resolution rests at this writing. Pending a decision in the Senate, the supporters of the Atlantic Convention have not sought action in the House.

On the organizational side, chief credit for the resolution's advance in Congress goes to the **Atlantic Union Committee,** which was set up independently in 1949 to concentrate on having a Convention called to explore the possibilities of Atlantic unification. (See page 12 for more about this affiliate.)

NATO Parliamentary Body Organized

In July, the Big Four conference at the "Summit" in Geneva over-clouded, in the press at least, another conference which met the same week in Paris and which history may longer remember. It was the first meeting ever held by delegations from the parliaments of all 15 members of NATO. It decided to form a continuing body and to meet every year. Edward J. Meeman, editor of the Memphis (Tenn.) *Press-Scimitar,* likened the session in importance to "the first meeting of the Continental Congress," in his eye-witness report in the September issue of FREEDOM & UNION.

The leading role of Senator Wishart Robertson, Speaker of the Canadian Senate, in bringing about the conference was recognized when he was elected chairman. Much credit for this conference also goes to Lester B. Pearson, Canadian Secretary for External Affairs; Halvard Lange, Norwegian Foreign Minister; and Finn Moe, Chairman of the Foreign Affairs Commission of the Norwegian Parliament. Senator Kefauver was the prime mover in assuring the participation of the U.S. Congress; its delegation was led by two other supporters of the Atlantic Convention resolution, Representatives Wayne L. Hays, (D. Ohio) and Leroy Johnson (R. California).

Thus life came at last to an idea to which our magazine has devoted more attention than any other periodical, notably in articles by Patrick Nicholson, our Canadian correspondent, and by Livingston Hartley. Mr. Hart-

ley's first contribution to this subject appeared in FREEDOM & UNION, November, 1951. In 1953 we published his "A North Atlantic Assembly—Its Purpose, Function and Structure" as our Research Report No. 4.

Although the present body is neither a "NATO Parliament" nor a consultative assembly, it does assure permanent regular contact on the parliamentary level, contact hitherto confined in NATO to the generals, admirals, diplomats, cabinet members and chiefs of governments. It is certain to grow in influence from year to year and to serve increasingly to knit together the Atlantic Community.

Major organizational credit for this conference goes to the group—Will Clayton, William H. Draper, Jr., Hugh Moore, Lithgow Osborne and Philip D. Reed—which fathered the "Declaration of Atlantic Unity" in 1954, and to its very active Executive Secretary, Walden Moore. This group published a handsome booklet in 1955 giving the text of this important Declaration, along with the names of 244 NATO leaders in nine countries who were signers, and statements concerning it by the more prominent of them. The pamphlet also lists names, address, purposes and officers of the 11 organizations in the Atlantic unification field that now exist in seven nations: three in the U.S.; two each in France and United Kingdom; and one each in Belgium, Canada, Denmark and The Netherlands. This pamphlet is available from Walden Moore, 114 East 54th Street, New York, N. Y.

Other 1955 developments which should be mentioned are: the ratification of the Paris Accords on the rearming of the German Federal Republic and its entry into NATO; the resignation of Jean Monnet as head of the European Coal and Steel Community and his replacement by Rene Mayer; and Mr. Monnet's subsequent campaign for European unification in the atomic field (often called Euratom).

In the organization field, the **German Committee for Atlantic Union** was most active abroad. It proposed the creation of an Atlantic-wide organization for Atlantic Union. Mrs. Chase Osborn of the **Atlantic Union Committee** played a particularly important role in rousing German interest in our cause.

Deaths of Justice Roberts and Lionel Curtis

Amid all our cause for rejoicing we suffered irreparable loss in 1955 through the death of two of our best-known and best-beloved leaders. On May 16 we lost Owen J. Roberts, aged 80; on November 24 Lionel Curtis died at 83.

Owen Roberts first came out for Federal Union in 1941 while an Associate Justice of the U.S. Supreme Court. In 1946 he helped found FREEDOM & UNION, of which he was a contributing editor until his death. In 1949, Justice Roberts led in founding the **Atlantic Union Committee.** in addition to his well-known efforts for our cause,* Justice Roberts gave $8,000 in the past 10 years to **Federal Union, Inc.** As General Marshall said so discerningly in his statement in our June magazine:

> *Justice Roberts' service to defense as well as to the judiciary were manifold, but perhaps the finest thing he did was the sacrifice he made in resigning from the Supreme Court to devote himself to the cause of Atlantic Union.*

Lionel Curtis was the grand old man of federalism not only in the British Commonwealth but in the world, in years of service as well as age, although his role is much less known to Americans than that of Justice Roberts. Lionel Curtis helped found the Union of South Africa in 1909 after being converted to federalism by reading *The Federalist.* In his monumental book, *World Order,* published in London in 1934-37 he proposed Australia, New Zealand and the United Kingdom unite federally on a basis designed to become gradually universal. In 1939 he read *Union Now,* which I had written without knowledge of his work. We met in New York City and he immediately threw his vast influence behind its proposal for an Atlantic Union; the swift rise of *Union Now* in public consideration through the world owes much more to him than I can say. Lionel Curtis** continued the struggle steadfastly to his death; he lived to see all the evidence 1955 brought to justify the advice he gave our little handful in 1939, quoting Arthur Hugh Clough:

> *Say not the struggle naught availeth,*
> *The labor and the wounds are vain,*
> *The enemy faints not, nor faileth*
> *And as things have been they remain.*

EDUCATIONAL WORK IN 1955

A. Freedom & Union

Our illustrated monthly magazine, founded in 1946, was nominated at the completion of its ninth year for the 1955 Award for Public Service in Magazine Journalism, given by Sigma Delta Chi, the national professional journalistic fraternity. Its sponsor for this signal honor was Vic Reinemer, executive secretary to Senator James E. Murray of Montana.

The award is given each year to a magazine of general circulation for rendering "exceptionally noteworthy public service . . . in the face of anti-social, political and other hampering forces." Selections from the case Mr. Reinemer made for his nomination will suffice as a report on FREEDOM & UNION in 1955. They follow:

1. FREEDOM & UNION, a magazine of general circulation, deserves the Sigma Delta Chi Award because:
   Through the year it kept before the public of the Atlantic Community the basic ideas of freedom and union that formed the United States itself;

*See my tribute to Justice Roberts in FREEDOM AND UNION, June, 1955; and the article, "Owen J. Roberts and Atlantic Union," which I contributed to the eight articles on him which the University of Pennsylvania Law Review published "in memoriam" in its December, 1955 issue. (Now available as a reprint.)

**See "Lionel Curtis—Prophet of Federal Union," in FREEDOM & UNION, January, 1956, pp. 10-11.

it encouraged study of American federal constitutional principles and history; it promoted better understanding and more effective organization of the Atlantic Community; and it crusaded for the calling of [an Atlantic] Convention. . . .

It consistently carried on to an exceptional degree the best traditions of the press as regards not only crusading for important political reforms but maintaining high standards of accuracy and fairness, and keeping controversy on a high plane.

The leadership and service it gave through the year justified . . . tributes [from] Carroll Binder, editor, editorial page *Minneapolis Tribune* . . . Erwin D. Canham, editor, *Christian Science Monitor* . . . Ernest Lindley, Washington correspondent, *Newsweek* . . . Forrest W. Seymour, editor, Worcester (Mass.) *Telegram-Gazette* . . . W. W. Waymack, former editor, *Des Moines* (Iowa) *Register;* . . . [and] Arthur Krock, columnist, *The New York Times.*

[Mr. Reinemer cites these comments. Perhaps typical is Mr. Binder's: "FREEDOM & UNION is performing an invaluable service for all who care about freedom. It makes available information and opinions about developments in that direction which are not to be found in any other periodical."]

2. FREEDOM & UNION has rendered this service and given this leadership . . . despite the indifference, discouragement or skepticism of much of the public and press, and in the face of two powerful deterring forces:

a. The belief that there is no profit to be made in this kind of journalism, a belief that is confirmed by the fact that no other U.S. periodical cultivates this field **and**

b. The fear that if a periodical crusades too much—or even at all—it will be deemed fanatical and/or will lose influence and income.

3. Evidence of the good that FREEDOM & UNION accomplished in 1955: [Here Mr. Reinemer cites FREEDOM & UNION's ideas as advancing through the Atlantic Convention resolution, the endorsements of it by leading statesmen, the hearings on it, the meeting of NATO Parliamentarians, etc., already mentioned on page 12 of this report.]

4. Evidence of "enterprise" . . . : [Here Mr. Reinemer points to our full coverage of the Atlantic Convention hearings and NATO Parliamentarian Conference (September issue), and our exclusive publication of the Dulles-Kefauver exchange of letters on the Atlantic Convention (October issue).]

5. Evidence of "initiative":

a. Called attention to forgotten fact that the United States, as a Federal Republic, was born on March 4, 1789, when the Constitution went into effect, and proposed this be celebrated.

Atlantic Union . . . "Not a Problem—The Answer"

The following excerpt from a letter which a new member, Richard R. Quay, secretary and general counsel of the Chase Brass & Copper Co., Waterbury, Conn. wrote to a U.S. Senator fits into this Report as if it had been especially written for it:

I've been all over the pros and cons of Atlantic Union and until recently was inclined to dismiss the idea as impracticable in the present climate of world opinion. It seemed to me little more than a goal for the long term future, incapable of realization until such time as popular obsession with absolute national sovereignty might, perhaps, have subsided under the impact of successive disasters.

I was finally disabused of that notion about two weeks ago in a conversation with Roy F. Steward, the senior partner of our patent law firm in New Haven. He has been active in the Atlantic Union movement since it began [he was Vice-President of **Federal Union, Inc.**, *in 1955]. My respect for his opinions is by no means confined to his expert field, and it wasn't difficult, therefore, for him to persuade me of the essentially wrong, negative and defeatist character of my attitude.*

Viewed in proper perspective, I now clearly recognize it as representative of the same type thinking that, had it infected St. Paul and a handful of other inspired men, would have consigned Christianity to oblivion. It surely would have made the development and adoption of our own Constitution impossible. It contributed largely, I think, to both World Wars. To sum it all up, I can think of nothing better than a comment of Canon Streeter's of the Queens College, Oxford:

> **I had a great deal of trouble with the problem of Christianity until I suddenly realized that Christianity is not a problem but simply the answer to the problem of life.**

Now why doesn't the same principle apply perfectly to this whole Atlantic Union proposal? Analyzed as a problem, its practical and technical difficulties appear both innumerable and insuperable. Recogonized as the answer to the problem of war and totalitarianism in the atomic age, its forest emerges from the trees, the pieces fall into place, and like Archimedes, having at last found some solid ground on which to stand, one can, at least, begin to believe that it may be possible after all to develop enough leverage to move the cosmos.

b. Played up fact that the Atlantic ocean is now—in time [required] to cross it—221 times smaller than in 1492.

In other points Mr. Reinemer documented his belief in FREEDOM & UNION's initiative, effectiveness of presentation, variety of approaches and breadth of coverage. These points he illustrated by mentioning specific articles, including:

"A Thought On Thinking," by Norman Cousins (October); "Interdependence and Religion," by Canadian Foreign Minister Lester B. Pearson (November); "The Ultra-Conservative and Internationalism," by Father Ralph Gorman (December); "Fallacies of the Tariff" (January); "Atlantica's Economic Future—With and Without Union" (May); and "Facts of Economic Life," by Ambassador Winthrop Aldrich (December). Sigma Delta Chi will announce its annual awards for 1955 later this year. Past awards have gone without exception to mass circulation magazines.

FREEDOM & UNION is celebrating its tenth year of publication throughout 1956; its first issue appeared in October, 1946.

Staff Changes

Staff changes in 1955 were unusually great. To our deep regret Helen Hamer resigned in July. She had been managing editor of FREEDOM & UNION from its founding. She is now executive secretary of the Commission for a National Civic Auditorium and Cultural Center, a body recently established by Congress. She left many enduring marks of devoted service in nine years and earned many compliments by her consistently high-quality work. She will remain on our masthead as a Contributing Editor.

Pierre Streit, my son, and our former European correspondent, was temporarily in the U.S. when the managing editorship became vacant. He filled in as managing editor and brought out the September, October and November issues before returning to Afghanistan for a new television film assigment. C. R. Lyle II, former editorial writer for the Keene (N.H.) Sentinel, then took over as managing editor. Through this period of change Nancy Hamilton, promoted to Assistant Editor in 1955, carried the burden of assuring continuity in the magazine, a responsibility she splendidly fulfilled.

B. "Formation of the Union" and Other Work

Federal Union's greatest single educational achievement in 1955 concerned the world's basic book on federal government and the United States Constitution, *Formation of the Union of the American States.* This collection of major documents was published by Congress in 1927. We were instrumental in calling attention to the shocking neglect into which it had fallen and in getting it reprinted. We also distributed copies to leading statesmen, generals, and other key leaders, many of whom had never heard of it.

1. Reprinting of "Formation of the Union"

Testimony of opposition witnesses at the Senate hearings on the Atlantic Convention resolution forcefully brought home to me once more the dangerously deep and widespread ignorance of Americans concerning the origin, history, and fundamental principles of our Federal Republic. Leaders of various organizations priding themselves on their patriotism have become so confused that they seek to uphold, in the name of Americanism, the concept of sovereignty which the Founding Fathers deliberately rejected when they adopted the Constitution. After the Senate hearings I sent marked copies of *Formation of the Union* to President Eisenhower, former President Truman and eight other top leaders who were in a position to help clarify this confusion. In doing this it was discovered that the volume was in short supply at the Government Printing Office and that it had no plans to reprint a work "so costly" and "so little in demand."

This situation was reported at the meeting of the **Federal Union** Board October 14, upon which the Board adopted a resolution, proposed by Melvin Ryder, stressing the importance of *Formation of the Union,* expressing alarm at its short supply and the lack of plans for reprinting it, and pointing out that the Atlantic Convention resolution now added to its importance. The Board's resolution went on to call for action to stop neglect of the publication, to popularize it, and to reprint a low-price edition at once which should never be permitted to go out of print. The resolution also called for a shorter, paperbound edition at a still lower price to encourage wider reading.

A copy of the resolution was sent to the President, the President of the Senate, the Speaker, the Secretary of State, the Chairman and Vice-Chairman of the Joint Committee on Printing, the Librarian of Congress and the Public Printer. (For text of this resolution, see December FREEDOM & UNION.)

Subsequently it was learned that *Formation of the Union* was not only the "only one-volume edition" of these documents but the sole edition of any kind extant.

On November 17 Carper W. Buckley, Superintendent of Documents, wrote us that plans to reprint this book were being made.* It was out of print by mid-November, however, and was not again available until mid-February. Thus for three months no one who sought to

*Replying for President Eisenhower, Sherman Adams wrote: "Your interest in making it readily available is indeed appreciated. With respect to a possible reprinting of the volume, your remarks are being brought to the attention of the Chairman of the National Historical Publications Commission—an organization which has been interested in the publication and dissemination of documents relating to the formation and growth of the United States."

The Librarian of Congress, L. Quincy Mumford, in answer to the resolution wrote: "I share the desire of your Board to further the distribution, knowledge, and use of the compilation entitled *Formation of the Union of the American States.* I shall be glad to do anything which I might appropriately do to further these ends." He added some helpful suggestions, and has been most cooperative.

learn how the American people had achieved the federal union which made them the freest, strongest, richest people on earth could buy any book that gave the official record of the formation of the United States. **Federal Union, Inc.** not only led in keeping this lapse from continuing indefinitely; it was the only organization to our knowledge that took action to keep these fundamental Constitutional documents available. Our Board's resolution gained editorial support from several newspapers. It has not yet succeeded, however, in getting a cheaper edition of the book. Instead, official regulations forced the Government Printing Office to raise the price from $6.50 to $9.50. **Federal Union, Inc.**, will not rest, however, until the objectives of its resolution are fully realized.

2. Distribution of "Formation of the Union"

When I told our Board on October 14 of the 10 copies of this book which I had given to key statesmen, and the importance of our presenting it to more of them during the Congressional recess, one member, Robert Whitaker, spontaneously offered $1,000 on behalf of himself and his wife to finance this. **Federal Union** was thus able to purchase 165 more copies before the book went out of print.

Before the year ended all these books were presented to key leaders in government, the press and business. I inscribed each one to the recipient personally, and to my covering letter attached a copy of our Board's resolution and a page excerpt from the letter I wrote President Eisenhower in presenting the volume to him. My covering letter also explained that we had marked the recipient's volume in the same way as the one sent to the President—with the cover of the July FREEDOM & UNION —and had indicated the same passages (more than 50) that were emphasized for the President. These included a number showing that the concept of national sovereignty we urge on the Atlantic democracies today is the one that the Founding Fathers urged on the 13 States in 1787. Apart from making such points, our purpose in marking the books was to encourage busy readers to begin to browse in the massive volume. The work of marking each volume was done largely by Mrs. Justin Blackwelder as a labor of love.

The results already achieved have amply justified all this care. We have never enjoyed so good a response to any such project as this one received. Among those who answered with personal notes of thanks—many of them very encouraging—were former Presidents Hoover and Truman; Secretary of State Dulles; Adlai Stevenson; Generals Gruenther, MacArthur and Ridgway; Senators Paul Douglas, Herbert Lehman, Lister Hill, Lyndon Johnson, Estes Kefauver, William Knowland, Karl Mundt, and H. Alexander Smith; Governor Christian Herter; Paul Hoffman; Henry R. Luce; Clarence Randall; Philip Graham; Arthur Krock; Walter Lippmann; Edward R. Murrow; Drew Pearson; Whitelaw Reid; James Reston; and scores of others. There were so many key leaders in various fields to whom we wished to present the book, and so few copies available that there inevitably resulted many very regrettable omissions.

3. Publications

We published three pamphlets and twelve reprints from FREEDOM & UNION in 1955.* Nearly all of them were distributed.

During the year we sold more than 1,000 copies of *Freedom Against Itself,* published in 1954. Our Vice-President, Mrs. Patricia Luce, succeeded single-handedly in getting 24 outstanding leaders to sign a joint statement describing this book as presenting a "bold course of action that deserves the studious consideration of every thoughtful American" and urging the public to buy it. Under the title, "We The Undersigned Urge Every Thoughtful American to Read This Book," this rare endorsement was published as a full-page advertisement in The New York Times Book Review signed by:

4. General Mailings

We sent out a total of some 72,000 letters and other mailings in 1955, an increase of 11,000 compared to 1954.

ADMINISTRATION

A. Organization

1. Board

In 1955 our Board met three times—February 4, April 29 and October 14; twice in Washington and once (April) in New York. The annual mail ballot of the membership in January re-elected the following six members for 3-year terms: F. Joseph Donohue, F. Gilbert Lamb, Mrs. Patricia Luce, Richard W. Norton, Jr., Mrs. Clarence K. Streit, and Robert W. Williams; and Sam Warner for a 2-year term. The following two new members were also elected: Dr. Arthur H. Compton, Nobel Prize atomic scientist, St. Louis, Mo.; and Robert Whitaker, realtor, Kenosha, Wisc.

At the April meeting Mrs. Robert W. (Flora Molloy) Adams was elected by the Board as a member for the part of 1955 remaining after her resignation as our Manager.

The Board elected the following officers for 1955 on February 4: Chairman, Lester B. Vernon; Vice Presidents, Mrs. Patricia Luce and Roy F. Steward; Secretary, Janice Holland; Treasurer, F. Joseph Donohue; Assistant Treasurer, Melvin Ryder. It also named as Executive Committee: the President,* Chairman, Secretary, Treasurer, Assistant Treasurer, and Board members A. Powell Davies and Leo McCormick.

2. Staff

Changes in our administrative staff in 1955 were as great as the ones in the editorial department. Following her re-marriage, Mrs. Adams resigned in May as Manager of Federal Union and Business Manager of FREEDOM & UNION, so that she might devote all her time to her children. Starting with **Federal Union** nine years ago, she showed great ability, industry and character and rose to Manager in a few years. Her loyalty and conscientiousness have stood us in good stead. As a member of the Board now, residing near Washington, her unique knowledge of our affairs remains at our service.

Mrs. Helen Berry Thompson was promoted to Manager of **Federal Union** and acting Business Manager of the magazine. As my personal secretary for more than a year she had proved herself capable of heavier responsibilities and deserving of wider opportunities for her enterprise. I was fortunate in being able to replace her with Miss Marilyn Ellis as my secretary. There were two other good additions to our small team of eight: Donald Manganello was placed in charge of stock room, mimeo and mailing activities, and Miss Jacquelyn Burkholder became general utility girl. Mrs. Peggy Mullen continued in capable charge of membership and circulation records.

3. New Headquarters

After remaining for 11 years at 700 Ninth St., N.W., **Federal Union** headquarters were moved in August to much more satisfactory offices filling the third floor at 2700 Ontario Road, N.W. We had hardly settled there when the second floor, with much-needed extra space at little rent increase, became available. There we are now, in six rooms, much better and more conveniently installed than we have ever been in Washington. Mrs. Thompson deserves full credit for finding these new quarters, for most effectively carrying out the two moves, and for getting us settled in more suitable offices at comparatively little cost. We cordially invite all members, sub-

*The President of **Federal Union** is elected by the membership of the organization—not by the Board—for a 3-year term.

scribers and friends to pay us a visit when in Washington.

B. Finances

The annual financial statement for 1955, as reported by our auditors, Rouart & Rouart, shows the following results, given here to the nearest dollar:

Table 1—Federal Union, Inc., 1955 Revenue and Expenditure

	Budget Estimate	Actual
Revenue	$80,600	$83,935
Expenditure	80,400	81,815
Surplus	$ 200	$ 2,120

This represents an improvement of some $16,000 compared to 1954 and about $4,000 compared to 1953. The relevant figures for those years were:

Table 2—Revenue and Expenditure for 1954 and 1953

	1954	1953
Revenue	$67,311	$79,813
Expenditure	67,856	74,355
	minus $ 545	plus $ 5,458

The following table shows that we did better in 1955 than the average for the past five years, or for any previous five-year average; it also brings out the details of **Federal Union's** steady growth which we referred to earlier:

Table 3—Federal Union, Inc. Revenue & Expenditure Since 1939

5-year Period	Total Income	Annual Average Income	Total Expenditure	Annual Average Expenditure
1951-55	$412,776	$82,555	$421,082	$84,212
1946-50	365,295	73,059	349,728	69,945
1940-45*	269,322	48,093	259,415	46,324
1930-40**	(40,042)	(34,320)	(41,806)	(35,382)

*From incorporation, June, 1940, five years and seven months.
**Pre-incorporation period, April 1, 1939 to June 1, 1940, 14 months.

Compared to 1954, contributions in 1955 rose by $13,287, membership dues and advertising both rose slightly while subscriptions fell by $685 and sales of publications (excluding the magazine) fell by $4,871. The latter item was unusually high in 1954 due to the publication in that year of *Freedom Against Itself*. Sales of that book continued to provide most of the revenue in this category in 1955. Chief expenditures are summarized in the table below:

Table 4—Federal Union, Inc. Expenditures in 1955 Compared to 1954

	1955	1954
General education & Research	$21,577	$16,752
Freedom & Union	33,466	31,440
Administrative	26,772	19,664
	$81,815	$67,856

Moving costs and higher rent for the new offices account for much of the increase in administrative costs.

Full-time staff varied between seven and nine persons during the year. The highest salary paid is $7,500 a year which I receive as editor. Total payroll figures for the last six years are given in the table below:

Federal Union, Inc. Payroll Totals by Years, 1950-1955

Year	Total Payroll
1950	$36,561
1951	42,816
1952	47,346
1953	33,681
1954	29,075
1955	33,822

We ended 1955 with a net worth of $8,527, calculated on the most conservative basis and omitting our $10,000 subscription fulfillment reserve. This figure compares to a net worth of $6,407 at the end of 1954. **Federal Union's** only debts are current bills. In short, **Federal Union** continues to be financially healthy, but needs to grow much stronger. Compared to our Goliath we remain a David . . . with too small a pebble. What has already been accomplished with that pebble is an indication of what **Federal Union** could do with more adequate arms.

C. Fund Raising

In 1955 we spent $4,384 on fund-raising, or five per cent of total revenue. This is a modest amount as compared to other organizations and is under our own seven per cent rate in 1954. Contributions from members of our Board reached a new high in 1955 for a total of $15,936, compared to $14,403 in 1954 and $7,610 in 1953. Death deprived us during the year of several substantial benefactors. We received no grant from the larger foundations but did get some aid from smaller, private ones. No bequests or legacies were received; so far as can be recalled **Federal Union** has never received any.

Business friends contributed two very welcome gifts: an electric typewriter and a mimeograph machine. These have substantially aided operations.

To give me an opportunity to present our answer to world problems in hopes of widening our support in New York City, Jack Chrysler and Nicholas Kelley gave a cocktail party for their friends in the Cloud Club atop the Chrysler Building. Harry Davega gave a lunch in his White Turkey restaurant, Nicholas Doman gave a dinner at the Princeton Club and Mrs. Patricia Luce held a cocktail party in her home. I welcome this opportunity to thank them again, and to express my appreciation of the valuable fund-raising help given by Mr. and Mrs. Pierre Streit, and by Mrs. Adams, Mrs. Thompson and Miss Ellis of our staff.

The Board especially commended Richard W. Norton, Jr., member from Shreveport, La., for devising and carrying out at his own expense a plan for educating in our principles all the Louisiana delegation in Congress, all the members of the Louisiana Legislature, its Governor and other State officials. To this end he sent them each a copy of *Freedom Against Itself* and a gift subscription to FREEDOM & UNION, along with a

personal letter. He also worked actively to interest Louisiana newspapers and organizations of veterans, farmers and women in his State.

LAST WORD

Toward the end of 1955 we got the following letter from James de Fremery of Oakland, California, who began supporting **Federal Union** in 1939. The letter tells its own story of the progress **Federal Union** made in 1955:

> Enclosed is my check for $100. I told you some time ago that I could not go along with you any longer for, although I was in favor of Atlantic Union, I thought the idea impractical and I had other interests to which I was giving all I could spare. However, recently Atlantic Union has made such rapid progress that it really begins to look as though the dream might be realized in the not-too-distant future. So I'd like to climb aboard the bandwagon once more. Good luck to you. I greatly admire your devotion and persistence.

To rest on our laurels now is to lose the momentous race we are in. Our greatest weakness lies in the proneness of many members to let their chain-reaction powers lie idle. Discouraged by past failures to enroll friends as supporters or subscribers, they cease their efforts to make our Answer known and widen our sphere of influence. They let their support sink into passivity. They deprive themselves—and their friends—of some of life's lasting satisfactions.

For is it not satisfying to serve a momentous truth? . . . to open the eyes of friends to the answer they grope for? . . . to persuade them to sacrifice their time and money now so as not to have to sacrifice their children later? . . . to get them to invest their talents and spare funds in an enterprise that has proved its soundness, pays priceless dividends and is destined to rise higher and higher on the Great Board of Human History?

Is it not a satisfaction to overcome difficulties by persevering until at long last the supporter you seek is added to our rolls? . . . Is it not a satisfaction to enlist an important community leader in the Federal Union cause? . . . get people to part with antique ideas that are more deadly than ancient ideas of medicine ever were? . . . Is this not a better satisfaction than is found in hunting big-game or bargain-rate antiques?

Now is the time—as Mr. de Fremery indicates—for all of us to renew our efforts, to refresh our thinking, to rearm ourselves with new materials and ideas, to talk and write to friends, to the press, to key leaders—to tell the world about our Million Dollar Answer, and get others to join and multiply the chain reaction.

One St. Louis member last year multiplied hers by 12, for she enrolled a dozen new members—and showed what any of us can do with a little effort. The effort can be reduced to a quota of one new supporter a month . . . but the result will be great at the end of 1956.

The more of us who follow this Member-a-Month lead the greater will be the progress our next annual report can point to in every field, for success breeds success. And the more you yourself help produce it, the more you will personally "feel like a million dollars."

Federal Union, Inc. and the Atlantic Union Committee

Federal Union, Inc. orginated when readers of *Union Now* spontaneously banded themselves together in cities from coast to coast and overseas to back the plan it proposed for preventing the then-looming World War II. The plan was summed up in the book's sub-title: "A Proposal for A Federal Union of the Democracies of the North Atlantic."

Union Now was published by Harper and Bros. on March 2, 1939 and the first of the local committees formed to support this answer was organized in New York City on the 28th of that month. On that day there also appeared the first periodical of the movement, the monthly *Union Now Bulletin,* published by a group in Washington, D.C., headed by Melvin Ryder (who was elected vice-president of **Federal Union, Inc.**, on February 4, 1956 after serving many years as a member of its Board.) Delegates sent by local committees from Boston to Oakland, California, set up on July 16, 1939 the first national organization. It was called **Inter-Democracy Federal Unionists,** later changed to **Federal Union.**

The **Atlantic Union Committee** is the major organization that grew out of **Federal Union, Inc.** Though completely independent, the two are closely affiliated. The **Atlantic Union Committee** was founded in 1949 largely by long-time supporters of **Federal Union, Inc.**, notably Owen J. Roberts, former Justice of the U.S. Supreme Court who was President of this Committee until his death in 1955. He was succeeded as president by another old **Federal Union** supporter, Elmo Roper.

It was thought best to provide the movement with these two cooperating arms—**Federal Union** concentrating on its basic federal answer to the problem, and on publications, research, etc., while the **Atlantic Union Committee** concentrated on getting Congress to take the first step by inviting other democracies to meet with American delegates in a Convention to explore the possibility of their uniting.

There is this other difference between the two organizations: Whereas members of **Federal Union** naturally also favor the calling of a convention to explore the Federalist answer, members of the **Atlantic Union Committee,** who favor such exploration, are not necessarily committed to the **Federal Union** answer, though many of them personally are.

March 21, 1955

Dear Ed,

Such interest was shown in my letter to President Eisenhower, - which I sent for private background to some press, radio and TV friends on whose discretion I can rely, - that I am enclosing now for the same purpose a copy of a letter I recently sent Senator George.

I am particularly anxious that what I say in it about the Senator's own concern over the economic danger should not be used in any form, except as background information in judging the matter as a whole. All the rest of my letter can be quoted, but as written by me to "a Senator," without George being named in any way.

I also attach a reprint from our magazine giving two articles on the depression danger (the "D-Bomb") which I sent Senator George, - "Against the D-Bomb, What 'Massive Retaliation?'" and (on page 6) "Atlantica's Economic Future - With and Without Union." I develop this subject much more in Part IV of my recent book, Freedom Against Itself. *

I would greatly appreciate any comment you can make on any of this material. If you do deal with the subject, please send me a tear sheet.

We are running as a new feature the "Atlantic Editorial- [or Column-] of-the-Month." Please send us a copy of any you do that aim at more unity among the Atlantic nations or deal with the problems of the Atlantic Community, which we might reprint in full.

With best regards, I remain,

Sincerely,

Clarence
Clarence Streit

I expect to be in New York Friday, also Thursday p.m. and will give you a ring -

* Incidentally, if your paper was among the many which, I'm glad to say, have already reviewed or commented on this book, our clipping service missed it. I would greatly appreciate a copy, if or when done.

A LETTER TO SENATOR GEORGE from Clarence Streit - March 5, 1955 PRIVATE

March 5, 1955

Dear Senator George:

In my attached editorial commentary on the new resolution for an Atlantic Exploratory Convention, the passage on page 2, stressing the importance of the proposed Convention approach - in contradistinction to the usual diplomatic conference - is most important.

It seems to me that it will be impossible to defend, at the bar of future History where every statesman must stand his supreme trial, the continued failure of the United States even to try once to tackle its Atlantic inter-democracy problems by the Federal Convention procedure of 1787 which produced the United States Constitution, the most enduring success that ever resulted from any meeting of sovereign states.

I can understand why the lower State Department officers - who influence so much policy - should be prejudiced in favor of the diplomatic approach, the only one they know. But it does baffle me why the President and Secretary of State and Members of Congress whom History will hold responsible, should continue to let this approach be the only one tried, despite the mounting dangers it has already led to, and despite the attention that Justice Roberts, Will Clayton and others have called to the success which the Convention method achieved.

* * *

Recalling that in our last talk you shared my concern over the danger of another depression, I earnestly hope that you will also read my 2-page article in our enclosed February magazine on "Atlantica's Economic Future - With and Without Union."

You may remember that in my book, "Freedom Against Itself," I stressed these significant differences between the military and the economic roads to Red victory:

1) whereas we recognize that military attack on any of the Atlantic democracies may endanger us, we do not recognize that the economic danger can also spread from them to us by chain reaction;

2) whereas we have set up the NATO machinery, inadequate as it is, to meet the military danger, we have nothing comparable to assure concerted Atlantic action to prevent or deal with an economic break-through - and have not yet begun to explore how best to provide this machinery;

3) whereas experience shows that a military aggression tends to unite the democracies when it occurs in Europe, the record shows that economic depression anywhere on a major world scale tends to divide them worse than ever;

4) whereas the Kaiser and Hitler could win only by war, the Communists can hope to win through depression, too, and seem to be counting mainly on the latter, which involves no risk for them and against which our billion dollar means of massive retaliation are of no avail, but, on the contrary, contribute to the economic danger.

I have yet to see anyone deny any of those four propositions.

But I see no one, either, in the White House, the Cabinet or the leadership in either House of Congress who is yet doing anything at all to meet this danger, or

even to call public attention to it, - except, of course, the Congressional sponsors of the resolution to explore an Atlantic Union.

Otherwise, it is being ignored now as completely, - so far as I can see, - as the situation that produced the Wall Street crash in 1929 was ignored, before that explosion came, by official Washington.

Yet I read in The New York Times today an ominous Geneva dispatch which I hope you will not miss. It is from my successor there, Michael L. Hoffman, who is a most trustworthy, well-informed and far-sighted correspondent, particularly in the economic field. He reports that "the danger of an irreparable breakdown in cooperation among the free nations to maintain order in international trade is acute." Stalin's 1952 forecast of inevitable and mutual destructive commercial warfare returning among the capitalist nations may, Mr. Hoffman fears, prove true in the next four to six months. The economic experts whose views he reports find that "the raw material for an explosion of nationalistic economic rivalry lies ready to hand in every nation."

Recent votes in the House on trade and tax policies make me the more concerned about the economic danger, and the continued delay - nox six years long - of Administration and Congress to begin exploring how to unite the free effectively.

* * *

As I said when we talked, I can understand why the Administration now delays this from fear that support of the Atlantic Convention resolution would interfere with the ratification of the German rearmament accords in Europe, even though I believe the opposite would be true.

There are, however, much worse dangers than delay in ratifying the Paris accords. One of them is delay in tackling the problem of uniting the Atlantic Community effectively.

A strategy that delays the latter from fear of delaying the former not only risks failure in that objective; even if it succeeds in getting the rearmament accords ratified it faces this disaster - German arms being turned again against freedom and the United States as the result of another depression suddenly exploding before effective Atlantic machinery for dealing with it has been set up.

We can not count on improvising the needed unity after depression explodes as we can when aggression strikes the Atlantic nations. We must, instead, fear that it will have the opposite effect, divide them even more . . and thus deliver them one by one to Communism.

It is not as if the present choice were between Atlantic Union and German rearmament. Even if the advance of the Atlantic Convention resolution in Congress failed to advance German rearmament through the Paris accords, as I say it would, even if it resulted in failure to implement these accords, the success of Atlantic Union would simply mean that the Germans would be rearmed on a much more trustworthy and effective basis - as part of the Atlantic instead of merely the European community. It would mean linking them more closely with ourselves, the Canadians and the British than we now hope to link them with the French and Italians.

Surely this would give far greater guaranty of keeping German rearmament on the side of freedom than the Paris accords do, and would therefore at the same time speed and strengthen Germany's contribution to Atlantic defense by reassuring German democrats and youth against the danger of a recurrence of German militarism which now deters them so much.

And, while solving the German problem far better than the present accords can possibly do, Atlantic Union would be providing the means of preventing Communism from winning through economic warfare and depression in the West.

In these circumstances, I feel sure that you will understand, Senator George, why I call your attention again to the economic danger and hope that you will use your great influence to advance the Atlantic Convention answer to it.

With highest regards, I remain,

Sincerely,

/s/ Clarence Streit

[*On Second Thought*]

Against the D-Bomb What "Massive Retaliation"?

THE NEW YEAR is traditionally a time for resolutions and forecasts.

My Forecasts: An Atlantic Union resolution, proposing that the United States call a Convention to explore the possibility of federating the free, will be reintroduced in Congress early in the new session. Except for a shorter preamble it will be substantially the same as the one Senator Kefauver originally introduced in 1949, which attained the support of more than one-fourth of both Houses.

If the Atlantic Union resolution is not adopted this year, then (for reasons given in my book *Freedom Against Itself*) it may well be too late to prevent World Depression II from afflicting the free in 1956 or 1957, or to keep it from advancing Communism immensely.

If Congress does adopt the Atlantic Union resolution this year, then my guess is that a serious economic collapse can not only be avoided but that the combined gross national product of the Atlantic democracies — Atlantica, for short—will vastly exceed by 1965 the rosiest present forecasts of it. And Communism will not only be in retreat through the world, without war, but will be suffering internal difficulties.

Beware the D-Bomb. Depression II would be so helpful to the Kremlin that it might well be called Communism's D-bomb. As it is also a delayed and diabolical bomb, D-bomb describes it trebly. Quadruply, for it is made of democratic disunion.

Bombs are associated with surprise attack, consternation, terror, sudden widespread ruin . . . such as the Wall Street crash in 1929 caused. Certainly the current optimism would help make another depression strike with the panic-spreading effects of a super-bomb.

No Massive Reprisal Possible. The fear of "massive retaliation" is a powerful deterrent to attack with A-bombs or H-bombs. Indeed, Secretary Dulles on Jan. 12, 1954, proclaimed that the basic defensive strategy of the U.S. against such attack is "to depend principally upon a great capacity to retaliate, instantly, by means and at places of our own choosing." But this is no defense against a world depression. No retaliation, massive, instant or otherwise, can work against Communism's best weapon, the D-bomb—let alone deter it.

After the Wall Street crash in 1929, the U.S. sought to give employment and to protect itself against worse depression

—Don Hesse, St. Louis Globe-Democrat
Awake—before surprise economic collapse.

by raising some of its tariff rates a minimum of 31 per cent, and others all the way up to 49 per cent. This Smoot-Hawley Tariff in June, 1931, was a massive blow to many nations, but it did not bother Stalin. His world trade was almost nil anyway.

Three months after the Smoot-Hawley Tariff, the British, partly to defend their own hard-hit trade, suddenly went off gold. This was not merely a massive but an instantaneous measure. At one stroke it served to check all imports into Britain while helping British exports scale all foreign tariff walls . . . except, of course, in Soviet Russia where the government controlled all trade by having a monopoly of all exports and imports, and production, too. But France and other countries promptly retaliated by inventing new barriers to trade, such as quotas, to keep from being flooded with the cheapened British goods.

*

By 1933—less than two years after each of the great democracies had shown its "great capacity to retaliate, instantly, by means and at places of our own choosing" against depression via foreigners—world trade had fallen, unemployment had risen, the governments of the U.S., Britain and France had far greater power than before over their people, and dictatorship had destroyed the German democracy.

The One-Way D-Bomb. Both sides can use the A-bomb or the H-bomb against the other, but the D-bomb serves only dictatorship. Depression does not make for freer government; it does make government more centralized, powerful, tyrannical. Nor is this the only diabolical oddity of the D-bomb.

Loaded for Communism. Depression can make for various kinds of dictatorship. It made Fascists in Italy and Nazis in Germany. But the only type of dictatorship that can now hope to advance in any and every country by depression is the Communist dictatorship. Dictatorships based on race cannot spread beyond their nation except by war. Communism can spread anywhere. No other dictatorship is so designed to profit from depression. Nor does this end the diabolical peculiarities of the D-bomb.

Cost: Not a Red Cent. It cost the U.S. $2 billion to make the first A-bomb. How much the H-bomb has cost the Kremlin no one but the Kremlin knows. But the D-bomb does not cost the Kremlin a penny. Instead, it saves Moscow money.

*

Moscow's most effective contribution to the making of the D-bomb is to cease threatening aggression, reduce the West's fear of attack, lull it with talk of peaceful co-existence. By cutting instead of increasing its war budget it can best advance this stratgey. By so doing Moscow can hope not merely to lessen the stimulus that rearmament, war and cold war have given the economy of the West ever since the last depression, but to weaken and destroy the unity which the threat of Soviet aggression developed in the West.

FREEDOM & UNION'S POLICY

To think, write and act always in terms of all the democratic world, and not of any one country in it.

To mean by "we" (except editorially) the citizens of the coming Atlantic Union or Federation of All the Free, not merely those of any existing democracy.

To speed its coming by helping its people understand better the principles of individual freedom and federal union, and their importance to peace, production, higher living standards and greater spiritual growth and happiness.

To advance it also by helping the people of this Free Atlantic Community to see that they do form a community which they need to govern democratically.

To provide a forum for all views in the vast field of freedom and federation.

To bring out the facts in this field by objective, imaginative research.

To favor calling now a federal constitutional convention, representing the experienced civil liberty democracies, to work out and submit to their people a plan for uniting them in a Federal Union of the Free, or United States of the Atlantic, under a Constitution that would: 1) guarantee their Bill of Rights; 2) give them a free government in those fields where they agreed this would best advance individual freedom; 3) provide that this government shall be elected by, be responsible to, and operate on, the citizens and be federally balanced in its representation of them; 4) secure the right of each nation in the Union to continue to govern all its other national affairs in complete independence.

To seek to extend the Union's free federal relationship to other nations peacefully and as rapidly as this will advance liberty and peace until eventually it grows into a free federal world republic.

To assure that, pending universality, this union shall be a loyal member of the United Nations.

In our time, and nearly always in past history, only imminent military danger has served to bring the democracies even temporarily together. Depression, with rare exceptions, has made instead for worse disunion among them.

Moscow's military menace at its worst united the democracies only in the NATO alliance, in which the Council can merely recommend action, provided it is unanimous, and each ally reserves the right to interpret its commitments to suit itself.

H-Bomb Democracy. To give some assurance of instant massive NATO retaliation as a deterrent against an A-bomb or H-bomb attack, the U.S., it is reported, sought vainly at the December NATO Council session to arrange so that the NATO military chiefs could take the fatal decision themselves. This would preserve democracy by throwing out the basic principle that the military should be subordinate to civilian government—rather than proceed to create the kind of democratic Atlantic government that could act swiftly. Such efforts serve to point up the desperate need of making possible swift joint Atlantic action against the H-bomb threat. . . . But for joint Atlantic action against the D-bomb there does not yet exist even the machinery that NATO provides now against military danger.

Vicious Circular Chain Reaction. Disunion comes dear. The more disunion there is among the Atlantic democracies, the more it makes for depression. And the worse the danger of depression grows, the worse disunion it tends to create.

Only We Can Make D-Bomb. No one would ascribe the 1929-33 depression to Soviet Russia. All would agree that the Atlantic democracies brought that D-bomb on themselves—and that their lack of any political machinery for effective joint action on their common economic problem made that danger much worse for all of them. There is this difference now: Soviet Russia, a negligible factor in 1929, can help speed depression now by fostering disunion among the democracies. But it remains true that any D-bomb that hits them will have been made by themselves.

D-Bomb Secret Safe. Senator McCarthy need not worry lest the Krem-

lin, while he is out of his chairmanship, steal our D-bomb secret. The Communists are only too confident that the "capitalist" democracies will make the D-bomb for them, and with it deliver the free—with all their property intact —to Communism.

*

So strong and certain is the depression-breeding disunion among the "capitalist" countries, as seen in Moscow, that Stalin foresaw it even degenerating into another war among them. In his final advice on Communist strategy—his statement of October, 1952—Stalin reasoned that "the struggle for markets" and the desire to "secure for themselves an independent situation" can be counted on to cause not only the Germans and Japanese but the British and French to "break away" from the U.S. and sink from economic conflict into war with each other. "These comrades are mistaken," he said, who believe "that the progressive people of capitalism have been taught sufficiently by the experience of two World Wars . . . not to permit themselves again to drag the capitalist countries into a war among themselves."

What of D-Bomb Defense? The Kremlin is confident not only that the democracies will inflict depression on themselves, but do this fairly soon. It must rejoice at the widespread evidence that, in the field of international action, the Atlantic democracies remain as unprepared for the D-bomb as Hiroshima was for the A-bomb.

*

True, many Americans are convinced that legislation passed after the last depression makes the U.S. well prepared now to prevent another crash like the 1929 one in Wall Street. One may grant this, yet doubt that the U.S. is prepared to prevent or cope with other kinds of economic crashes. Many a city was prepared to meet block-buster bombs in 1945; none was prepared for another type of bomb, the one that actually hit Hiroshima.

Fatal Fallacy. In the 1930s U.S. political policy was based on the assumption that the U.S. was in so strong a position that by purely national action—the Neutrality Act, "Cash and Carry" —it could keep from being involved in a world war. The U.S. now recognizes that a military attack on any of 14 countries, some as small and distant as Greece and Turkey, can involve it by chain reaction in war. Recognizing this danger the U.S. has helped set up NATO for joint action to prevent it. But the great majority of Americans do not yet recognize the need for even this inadequate type of machinery against a world depression. In the D-bomb field they still nourish the fallacy of the '30s.

—*Low, London Evening Standard*

"Here is where the enemy said he would get in!" This 1949 cartoon still applies.

Microbes and Men. Nearly all American forecasting, as regards the possibility of prosperity, recession or depression, is based entirely on purely domestic factors. The implicit assumption is that in the economic field the U.S. is still so strong that the only danger of depression that need concern it is one starting in the U.S. itself.

*

To reason that disease in a small country's economy cannot be fatal to a large country is to reason that microbes are too small to kill a man.

*

Since the H-bomb itself starts in a very small unit—the atom—and develops its power by chain reaction, it would seem prudent to guard against the danger that the D-bomb may start within a small democracy, yet explode the greatest power.

Ten Forgotten Truths. It cannot be too often repeated that:

1. Marxism powerfully inclines the Kremlin to seek triumph through the "inevitable" economic collapse of the capitalist system rather than through direct Soviet military attack.

2. Manifestly the D-bomb has great advantages for Moscow over the H-bomb.

3. Depression can move by chain reaction from country to country.

4. World depression, being by definition international in scope, cannot be prevented or controlled by national action alone.

5. World depression requires prompt joint international action to prevent or deal effectively with it.

6. This is particularly true in the North Atlantic Community, where the principal economic powers are situated, with their economies closely inter-related.

7. No effective joint machinery now exists for Atlantic action against another depression.

8. To wait until depression comes to begin providing this Atlantic machinery is to forego the possibility of thus preventing depression—and probably the possibility of setting up the machinery, since economic danger tends to divide the free still more, not unite them as does military danger.

9. Federal union provides the most, if not the only, effective machinery for inter-State action against depression.

10. To explore the possibilities of Atlantic Union now involves no risk comparable to that of failing to explore this way to prevent depression and war.

Few when confronted with these ten truths will deny them. Yet nearly all then talk as if they had already forgotten them. Certainly these are not the views that are being shouted from the housetops today.

No Alsop Alarm. Even the Alsops, the columnists most inclined to view with alarm, are not alarmed on the economic side. The A-bomb and the H-bomb leave them no space for the D-bomb. This is not too surprising. Most of us rate least important what we know the least about, and the rich newspaper experience of the Alsops has included much more of war and diplomacy than of economics. Their courageous services to freedom have not yet been in this last field. They were in prep school or college when the last depression broke. The older men who share their valuations have no such out.

David Lawrence's Fear. When the last D-bomb exploded, David Lawrence had already won a name for himself in American journalism. It has since grown much greater, thanks to the outstanding work his *U. S. News & World Report* has long been doing. But his chief fear for the Republic now seems to be that it will not have enough McCarthy security in the A- and H-bomb field—certainly not that it lacks effective international machinery for coping with a world depression.

Niemeyer's 1964 Forecast. The December 10 *U. S. News & World Report* features a long and detailed forecast of developments during the next ten years, entitled "1964—After Ten Years of 'Coexistence.'" It is by Dr. Gerhart Niemeyer, Professor of International Relations at Yale. He was born and educated in Germany, came to the U.S. in 1933, and is now a U.S. citizen.

His year-by-year 5,000-word forecast through 1964 includes no hint whatever of any depression or recession possibly occurring anywhere in the world. It devotes hardly a dozen words to economic conditions.

Depression had brought dictatorship to power when Dr. Niemeyer left Germany. The Kremlin has time and again made clear the hopes it builds of victory through another depression. Yet Dr. Niemeyer's forecast is based on the assumption that the dictatorship we face now is still the German-type which can win only by military and diplomatic arms.

*

Dr. Niemeyer, David Lawrence, and the Alsops are, of course, not alone in their views. In insisting that the more imminent danger lies in the D-bomb, rather than the H-bomb, it is rather I who am in a small minority.

Niemeyer's Merit. The great merit in Dr. Niemeyer's article, I would add, is its chief purpose—to show how the U.S. could become isolated in face of a hostile world in ten years without any war having occurred. Since he overlooks the possibility of depression speeding this result, and explicitly assumes that the U.S. will lower its tariffs, what he really does is show how in the most favorable conditions the present U.S. policy, based on alliances, can completely fail. He sees it failing through the allies gradually being drawn, one by one, away from the Atlantic and into the Soviet diplomatic orbit, as the Kremlin's H-bomb power grows and it becomes more evident that the U.S. will not risk war against it.

*

Nowhere does Dr. Niemeyer directly trace the disaster he foresees to its true source—the assumed failure of the U.S. to replace the Atlantic alliance, which makes this disaster more than possible, with an Atlantic federation. Yet only a Union which would transfer foreign policy from each nation in it to an Atlantic federal government can be relied on to prevent effectively the diplomatic debacle Dr. Niemeyer pictures. To those who read between his lines, his article is a powerful argument for at least exploring Atlantic federation now, before it is too late.

Fairless Forecast. Benjamin F. Fairless, Chairman of the U. S. Steel Corporation, declared in a speech on November 17:

"Even the most conservative forecaster would be bound to conclude that the years immediately before us are rich in their promise of a sound, steady, and healthy growth, not only in the steel industry but throughout the economy generally. My personal opinion is that the year 1955 should be one of moderate gains all along the line; and that business, as a whole, will gather its strength and regroup its forces for a still more rapid expansion in the latter part of the 1950s. And, if we look still farther ahead, the prospects appear so bright that it is sometimes hard to see how we shall manage to measure up to all the demands which will be made upon us."

"We stand today," Mr. Fairless added, "at the gateway of what promises to be a greater change in our mode of living than the so-called industrial revolution has wrought in the past century or so. Most of us cannot even imagine the wonderful new devices and appliances that will become commonplace necessities of our daily life in the next few decades."

*

In his speech Mr. Fairless foresaw some "radical changes" resulting from this scientific revolution—but none that are international in scope or character.

When Unemployment Rises. Should there be "any sudden and widespread increase in unemployment which must unavoidably occur in the course of this scientific revolution that we face," according to the Fairless forecast, "it is entirely likely that control of our National Government could shift back and forth between the forces which seek to uphold our enterprise system and those which favor a collectivist society. We would thus find ourselves in a constant state of transition from inflation to deflation, from control to decontrol, and from repeated frenzies of false prosperity to the inevitable agonies of the economic 'morning after.'"

*

It did not seem to occur to Mr. Fairless that in these conditions of flux within the U.S., Western Europe might also be affected, and might not swing back and forth, but settle on the Communist side as permanently as Russia has. Nor did it seem to occur to him that such a continued advance of Communism might have dangerous repercussions on American freedom and enterprise. Among the things needed "to cope with this scientific revolution," there was no hint that he felt it necessary to create any common government of the Atlantic democracies to deal jointly with this immense common problem.

Not Without Resolution. The fact remains that without Atlantic Union we remain dangerously vulnerable to the D-bomb. But this fact need only be hammered resolutely home now to provide the incentive for timely convoca-

tion of a convention to explore the possibility of safeguarding against Depression II by Atlantic Federation.

*

In the face of the prevailing optimism, implicit and explicit, on the economic side, one must, indeed, "venture" to differ. Yet without venture, without courage, without determination, the dangers we face cannot be met.

Significant "s." The New Year might better be a time for more resolution rather than resolutions.

What a change one letter *s* can make. . . . Consider the difference between *resolution* and *resolutions*. . . . Or ponder the opening words of two Preambles:

"We the People of the United States," as the U.S. Federal Constitution starts, and "We the Peoples of the United Nations," as the U.N. Charter says. The former takes the citizen as sovereign and forms a people, a government, a Federal Union: where States are United enough to deal effectively with any common threat, be it H-bomb or D-bomb. The latter takes the nation as sovereign and forms not a government but a league of governments, nations associated but not united: a "grand" Alliance like NATO . . . irresolute, unreliable, only too liable to fail to prevent either depression or war. All this immense difference wrapped in one often unseen letter *s*.

*

When even one *s* can make a decisive difference, why should any "little man" think that he is too little to matter in great world issues?

*

One forecast is easy: The Atlantic Union Resolution will be adopted this year — *if* its supporters have enough resolution. —CLARENCE STREIT

From - and to - The Four Corners

ONE PAGE, drawn at random, from only one of many reports that are being turned out all the time by all the U.S. agencies now sending Americans abroad, will stir the imagination where it needs stirring. This page gives short biographies of half a dozen Americans assigned recently to give technical assistance in as many countries. It indicates how Americans these days are being constantly drawn from the four corners of the country and scattered to the four corners of the world. Here are excerpts:

"Clinton S. Smith of Memphis, Tennessee, to Egypt as Assistant Malacologist Advisor. . . .

"Leonard H. Starbird of Portland, Maine, to Ecuador as Railroad Maintenance of Way Advisor. . . .

"Henry Milton Stokes of Annapolis, Maryland, to Iran as Assistant Automotive Operations and Maintenance Advisor. . . . Mrs. Stokes, the former Carmen Trinidad Perez of Manila, served during World War II with a guerilla intelligence unit. She will accompany her husband to Iran.

"Clarence Charles Strong of Missoula, Montana, to Afghanistan as a Forester. . . . He is married to the former Marie Tonseth of Anaconda, Montana. Their daughter, Mrs. Merilyn Winship, is a missionary in the Philippines. Their son, Richard Allen, 25, holds the distinguished service award for his service in Korea. Mrs. Strong will accompany him to Afghanistan.

"William Allen Underwood of Woodstock, Vermont, to Jordan as Contracts Administration Advisor. . . . A veteran of World War II, he is married to the former Marie-Ange Hanki of Cairo, Egypt, who became an American citizen in 1950. During the war, she parachuted into enemy-occupied France to help in the French Resistance movement. She will accompany her husband to Jordan.

"Ferdinand Milton Vorbach of Flushing, L.I., New York, to Iran as Procurement and Supply Officer. . . . His wife, the former Jean Marion Reid of Brooklyn, N. Y. will accompany him."

*

What a ferment is this that is going on *crescendo* before our unseeing eyes! Is there left a single village anywhere in the U.S. that does not have today its own human bonds with the distant world . . . at least one hometown boy who is serving, or has returned from serving, or is about to serve in one of the U.S. civilian or armed services in some country his fellow townsmen had never even heard of 20 years ago? How many towns can there be left outside the Iron Curtain where these "envoys extraordinary" have not yet penetrated? What a two-way street is this—and with what traffic in the intangible, the incalculable, the invaluable is it crowded!

There was never anything before in any nation's history of both this nature and scope. There is no likelihood of its ceasing to grow apace. And yet there are still those who talk as if a return to isolationism were still possible —if not just round the corner.—C.K.S.

Salute to Louisiana's Farmers

As an excellent example of alert thinking and forceful action on big issues we give you these two paragraphs from the resolutions adopted by the Louisiana Farm Bureau Federation at its 1954 State Convention:

"*European Union Unwise.* We would warn against the policy of fostering a United States of Europe or other close European unification. Germany tried twice to achieve this end by arms, as did Napoleon before her. A solidary European continent, perhaps under Franco-German or German domination, with the Anglo-Saxon powers excluded, could become as great a menace to our security as the Central Powers were in 1917 and 1940.

"That Continent, already an industrial giant by grace of our Marshall Plan Aid, much exceeds us in manpower and for some purposes in the strength deriving from central strategic position.

"*Atlantic Union Better Strategy.* Any such unification must include ourselves, together with the British nations, as integral—and in the interests of our safety, preferably dominating—participants. Such Atlantic Union regularized in a formal political constitution may not be now within the realm of practical politics, but it is sounder in strategic conception than Pan-Europe alone."

The more farmers who talk in these terms, the sooner we shall have Atlantic Union to solve the farm problem with a far better market.

ATLANTICA'S ECONOMIC FUTURE — WITH AND WITHOUT UNION

THE MAJOR ECONOMIC FORECASTS for 1955 have now been made on both sides of the Atlantic. The optimism for the future is almost unanimous everywhere; it reminds one of the glowing days of 1928 and 1929—early 1929, that is.

The current optimism is easy to understand in vew of past performance, particularly on a long-term basis. The rise in the gross national product of the United States in the past 20 years is spectacular indeed.

Producing $1 Billion a Day. "From not much more than $1 billion a week in 1933," the December *Monthly Letter* of the National City Bank of New York says of the U.S., "the national product in 1953 reached $1 billion a day. If that rate of growth, averaging 9.8 per cent per annum, is projected ahead, we could cross the trillion-dollar mark only ten years hence, in 1964."

*

The *Monthly Letter* is careful to add that the dollar shrank in purchasing power by 4 per cent per annum over the 20 years between 1933-53. It concludes that to continue on this road would be a "dubious" achievement, since it involves dangerous inflation. Even when allowance is made for the inflation in the past, however, the increase in the U.S. national product was impressive — from less than $3 billion a week in 1933 to $7 billion a week in 1953.

*

"The most extravagant estimates of what the future may hold," the *Monthly Letter* continues, "have been prepared by the newly formed 'Conference on Economic Progress,' under the leadership of Leon H. Keyserling who was chairman of the President's Council of Economic Advisers in the Truman Administration." This Conference estimates that the U.S. gross national product may approach $600 billion a year in 1960—or more than $11 billion a week.

Ike's $10 Billion Guess. President Eisenhower in a speech on Oct. 25, 1954, made this guess of the national product by 1964: "Drawing on the richly varied abilities of our entire citizenry, we can foresee that in less than a decade the national output will increase from today's $356 billion to $500 billion. This would equal an average increase of more than $3,000 for every American family of today. And these can be real dollars—dollars of stable buying power, not simply more dollars of cheapened value." It would also amount to a gross national product of $10 billion a week.

Both the President and Leon Keyserling made their guesses on the apparent assumption that national sovereignty would continue to rule the North Atlantic Community throughout the decade as it does now. If that assumption proves true, the conclusion certainly won't.

My Guess. My own guess is that the U.S. share in the increase in the national product—and therefore in the rise in the standard of living—will be far greater in "real dollars" by 1965 than even Mr. Keyserling dreams—but *only provided* that the proposed Atlantic Convention is called in 1955 to work out a plan for "drawing on the richly varied abilities" of the "entire citizenry" of the free Atlantic Community as only a full federal union can. Those who consider this too easy and empty a prophecy should examine the past record where the change from alliance to federation was made.

"Fortune's" Appraisal. *Fortune* Magazine, when it first appraised the idea of Atlantic Federation in reviewing *Union Now* editorially in April, 1939, called it "the greatest political and economic opportunity in history," and explained:

"Gigantic opportunities would be opened up. A rise in the standard of living of millions of consumers would result from the expansion of markets and the consequent lowering of prices for mass-produced goods. Even a relatively slight expansion in their known market would enable U.S. automobile manufacturers (to take only one example) to cut prices, and cars would thus become available to more persons, not only in the other States of the Union but also in what we call 'home.'

"The economic history of the U.S. demonstrates that this process is cumulative and that it would almost certainly result in lower automobile prices than even Mr. Ford has dreamed of. There would be an inevitable revival in shipping and in railroads, and hence in the capital-goods industries behind them. Industrial unemployment might, therefore, almost disappear.

"A genuine union of the democracies, then, opens up a vista of industrial growth to which the only enlightening parallel is the growth of the U.S. itself. At the time the American Union was formed the 18th Century libertarian economists were preaching free trade. And the abolition of tariffs within the borders of the U.S. provided for this doctrine the most spectacular practical demonstration that any economic theory has ever had."

What Union Did in the U.S. Depression and the danger of dictatorship it brought were the sharpest spurs that drove the 13 States to federate in 1789. And these poverty-stricken States actually quadrupled their foreign trade in the first ten years of federal union, with its common currency, common market, common defense force, common foreign policy, common federal government and common citizenry.

*

There are always those who rise to say that there is no analogy between the 13 democracies of America in 1789 and those of Atlantica today. Clearly there are differences between them, but it is by no means certain that the differences, when the balance is struck, do not argue more in favor of union now than then.

*

Many attribute the gigantic economic growth of the American people after they federated to "cheap" or "free" land, the predominating agricultural nature of their economy, rich natural resources, and so on. They forget that all the favorable conditions on which they lay such stress obtained also under the previous League of Friendship. That "grand alliance" possessed precisely the same potentially rich wilderness from the Alleghenies to the Mississippi. It had

the same leaders and practically the same people in it in 1789 as in 1799 . . . and yet it could hardly borrow a penny at home or abroad.

*

How can any reasonable man account for the astonishing economic improvement in the U.S. between 1789 and 1799—except by attributing it primarily to the only basic change that had occurred . . . the change from an alliance of sovereign States to a union of sovereign citizens, with free movement of goods, money and men throughout the federation?

If Atlantic Federal Union is achieved within the next few years, *Fortune*, I forecast, will point with increasing pride to the late Russell Davenport's April 1939 editorial in that magazine declaring that, compared to an Atlantic Union, "the opening of the North American continent was a modest beginning." But what if Atlantic Union is deferred?

European Recovery. Summing up the year-end optimism in Europe about Europe, a Geneva dispatch from Michael L. Hoffman in *The New York Times* of January 16, tells of the good British outlook and adds:

"From Belgium, Italy, Western Germany, Austria, Sweden and even France, long a laggard in economic growth, the reports repeat almost monotonously that production is up and expected to continue rising, agricultural productivity is up and expected to improve, unemployment is down and expected to fall further, prices have been stable and are expected to remain so, real wages are rising and are expected to continue doing so, the balance of trade is better and expected to get better, and so on."

*

These signs of recovery are not so convincing, however, to canny Michael Hoffman as they are to the European experts, and even more to many Members of Congress who see no further need for U.S. aid. He gives more space to the doubts expressed by a minority who "believe some re-thinking has to be done about the validity of the signs and symbols of economic activity upon which, for the past ten years, observers have depended for their evaluation of Western European economic trends.

"It may be that things look so good, they suggest, only because everybody is looking at the wrong things, and judging by the wrong standards. . . . There may be other crises ahead, unseen because they do not send advance warnings in the kind of terms economists have been accustomed to recently."

This makes sense to me, at least, remembering as I do how prone economic experts are to get in ruts, like nearly everyone else, and to what great errors this has led them in the past.

If Union Waits. Should Congress fail to approve this year the Kefauver resolution for a Convention to explore Atlantic Union, I hope economic disaster may still be prevented by calling it by 1956 or 1957. But I, for one, will not be surprised if History then finds that in 1955 we let the last moment go in which depression could have been averted or kept in hand by Atlantic Union.

*

If we have not achieved Atlantic Union by 1960—to say nothing of 1965—my guess is that President Eisenhower's estimate of a U.S. national product of $500 billions then in "dollars of stable buying power, not simply more dollars of cheapened buying power," will remain to mock him as some of President Hoover's views did in 1932.

*

My guess is that without Atlantic Union the U.S. national output in 1965 in non-military goods will be—in 1955 dollars—less than it is now, not more. And not merely the American standard of life but of liberty will have woefully fallen. Previous forecasts make me fear that this will be only too true. For I find my tendency is always, despite my efforts to correct it, to under-estimate the cost of failure to federate the free.

The high cost of survival

1948 Guess. In FREEDOM & UNION of February 1948 I noted a report by John G. Norris in the *Washington Post* that the annual arms budget might reach $25 billions in the 1950s but that "defense chiefs concede that such outlays are unlikely . . . and that a 'reasonable degree of security' can be maintained for . . . $14 to $16 billions . . . half again more than today." And I added my own forecast:

"It is hard to see why the defense chiefs concede it is unlikely they will reach the $25 billion figure in the early 1950s—unless they are counting on the U.S. federating meanwhile with the British and Western European democracies. Otherwise the chances are only too great that the U.S. will be spending much more than $25 billion on defense within five years."

Mr. Norris continued: "Totalling these astronomical estimates, Administration and Congressional leaders want to know whether there is any other way out. Can we have security without a 50 per cent boost in cost?" I added: "The answer is: We cannot have security with a 50 or 500 per cent increase in defense spending on a national or U.N. basis. We can have security with a 50 per cent decrease in cost by Federal Union of the Free—and only by such Union now."

Since 1948. Four years after 1948 the U.S. was spending 400 per cent more on defense—not the "astronomical" 50 per cent increase that Mr. Norris discussed. Last year expenditures for major national security totalled $40,644 million. This year's budget calls for $40,458 million.

This is but one of many examples showing how the highest official experts grossly err in over-estimating the possibilities of national sovereignty, and how badly I err in under-estimating its costs and dangers. Other examples of the latter may be found on pages 196-8 of *Freedom Against Itself*.

*

Against this background one must assess my own pessimism and the current optimism of both the Republicans and New Dealers, and both the Americans and Europeans, as regards the economic future we face in 1956 or 1957 without Atlantic Union.—C.K.S.

WE THE UNDERSIGNED URGE EVERY THOUGHTFUL AMERICAN TO READ THIS BOOK

"The underlying tension of our time lies within freedom itself—within us"

CLARENCE STREIT in *Freedom Against Itself*

IN 1945, Americans dared hope that with the destruction of one tyranny, democracy and decency would prevail for long years.

Instead, we have seen free nations, one after another, disappear behind the dread Communist curtain.

While we have been half-awake and irresolute, Communism has been alert and implacable. Now, as Will Clayton has reminded us: "United *they* stand. Divided *we* fall."

Steadily, the free world has shrunk while the Communist world has expanded. The free peoples invent new machines to develop their world, but political disunity threatens to shake apart its very structure.

Clarence K. Streit's brilliant new book, *Freedom Against Itself*, dissects the forces tending to divide the free world. It presents a bold course of action that deserves the studious consideration of every thoughtful American. "No mere restatement of the author's *Union Now*," to quote the St. Louis *Post-Dispatch*, it is "a fresh approach to the whole question."

We who sign this statement urge you to phone your bookseller at once; he will be glad to send you a copy of the regular clothbound book (published by Harper & Brothers) with a bill for $3.75. Or you can use the coupon below to order a copy of the $1.50 paperbound edition, available only from Federal Union Inc., the nonprofit educational association of which Clarence Streit is president.

700 NINTH STREET NW WASHINGTON 1 DC DISTRICT 7-4171

March 9, 1955

Dear Ed:

Your references in yesterday's broadcast to the fall in the stock market and Professor Galbraith make me think you would be particularly interested in the attached copy of a letter I have written Senator George.

As you will see, he shares my own concern about the economic danger. Few seem to do so, but as he is the former chairman of the Senate Finance Committee, he has weight enough for quite a number.

I gather that Galbraith thought conditions now were more comparable to 1928 than to 1929, which seems to fit in with the view expressed in my book, Freedom Against Itself, that the danger of another depression breaking lies in 1955 or '56. But, as I stress in that book, and in my letter to George, the time to take preventive action is now - particularly in the international field where we are badly exposed to disaster.

Judging from what you said in the same broadcast about the way people worry mainly over their personal affairs, one would think that their interest could be roused more easily in this economic danger to them than in the war danger, the diplomatic game, etc. Yet, I have found that the press, radio and TV continue to concentrate on the latter, and are as chronically bullish on the economic side as they are bearish with regard to war. This unhealthy evaluation adds to my fear that we are headed for the economic explosion on which the Communists are counting.

I hope you can do something about it. I enclose the article on the economic situation I sent Senator George and another one I had sent him earlier on "D-Bomb" (depression danger).

With best regards,

Sincerely,

Clarence

Clarence Streit

[On Second Thought]

Against the D-Bomb What "Massive Retaliation"?

THE NEW YEAR is traditionally a time for resolutions and forecasts.

My Forecasts: An Atlantic Union resolution, proposing that the United States call a Convention to explore the possibility of federating the free, will be reintroduced in Congress early in the new session. Except for a shorter preamble it will be substantially the same as the one Senator Kefauver originally introduced in 1949, which attained the support of more than one-fourth of both Houses.

If the Atlantic Union resolution is not adopted this year, then (for reasons given in my book *Freedom Against Itself*) it may well be too late to prevent World Depression II from afflicting the free in 1956 or 1957, or to keep it from advancing Communism immensely.

If Congress does adopt the Atlantic Union resolution this year, then my guess is that a serious economic collapse can not only be avoided but that the combined gross national product of the Atlantic democracies — Atlantica, for short—will vastly exceed by 1965 the rosiest present forecasts of it. And Communism will not only be in retreat through the world, without war, but will be suffering internal difficulties.

Beware the D-Bomb. Depression II would be so helpful to the Kremlin that it might well be called Communism's D-bomb. As it is also a delayed and diabolical bomb, D-bomb describes it trebly. Quadruply, for it is made of democratic disunion.

Bombs are associated with surprise attack, consternation, terror, sudden widespread ruin . . . such as the Wall Street crash in 1929 caused. Certainly the current optimism would help make another depression strike with the panic-spreading effects of a super-bomb.

No Massive Reprisal Possible. The fear of "massive retaliation" is a powerful deterrent to attack with A-bombs or H-bombs. Indeed, Secretary Dulles on Jan. 12, 1954, proclaimed that the basic defensive strategy of the U.S. against such attack is "to depend principally upon a great capacity to retaliate, instantly, by means and at places of our own choosing." But this is no defense against a world depression. No retaliation, massive, instant or otherwise, can work against Communism's best weapon, the D-bomb—let alone deter it.

After the Wall Street crash in 1929, the U.S. sought to give employment and to protect itself against worse depression

—Don Hesse, St. Louis Globe-Democrat
Awake—before surprise economic collapse.

by raising some of its tariff rates a minimum of 31 per cent, and others all the way up to 49 per cent. This Smoot-Hawley Tariff in June, 1931, was a massive blow to many nations, but it did not bother Stalin. His world trade was almost nil anyway.

Three months after the Smoot-Hawley Tariff, the British, partly to defend their own hard-hit trade, suddenly went off gold. This was not merely a massive but an instantaneous measure. At one stroke it served to check all imports into Britain while helping British exports scale all foreign tariff walls . . . except, of course, in Soviet Russia where the government controlled all trade by having a monopoly of all exports and imports, and production, too. But France and other countries promptly retaliated by inventing new barriers to trade, such as quotas, to keep from being flooded with the cheapened British goods.

*

By 1933—less than two years after each of the great democracies had shown its "great capacity to retaliate, instantly, by means and at places of our own choosing" against depression via foreigners—world trade had fallen, unemployment had risen, the governments of the U.S., Britain and France had far greater power than before over their people, and dictatorship had destroyed the German democracy.

The One-Way D-Bomb. Both sides can use the A-bomb or the H-bomb against the other, but the D-bomb serves only dictatorship. Depression does not make for freer government; it does make government more centralized, powerful, tyrannical. Nor is this the only diabolical oddity of the D-bomb.

Loaded for Communism. Depression can make for various kinds of dictatorship. It made Fascists in Italy and Nazis in Germany. But the only type of dictatorship that can now hope to advance in any and every country by depression is the Communist dictatorship. Dictatorships based on race cannot spread beyond their nation except by war. Communism can spread anywhere. No other dictatorship is so designed to profit from depression. Nor does this end the diabolical peculiarities of the D-bomb.

Cost: Not a Red Cent. It cost the U.S. $2 billion to make the first A-bomb. How much the H-bomb has cost the Kremlin no one but the Kremlin knows. But the D-bomb does not cost the Kremlin a penny. Instead, it saves Moscow money.

*

Moscow's most effective contribution to the making of the D-bomb is to cease threatening aggression, reduce the West's fear of attack, lull it with talk of peaceful co-existence. By cutting instead of increasing its war budget it can best advance this stratgey. By so doing Moscow can hope not merely to lessen the stimulus that rearmament, war and cold war have given the economy of the West ever since the last depression, but to weaken and destroy the unity which the threat of Soviet aggression developed in the West.

FREEDOM & UNION'S POLICY

To think, write and act always in terms of all the democratic world, and not of any one country in it.

To mean by "we" (except editorially) the citizens of the coming Atlantic Union or Federation of All the Free, not merely those of any existing democracy.

To speed its coming by helping its people understand better the principles of individual freedom and federal union, and their importance to peace, production, higher living standards and greater spiritual growth and happiness.

To advance it also by helping the people of this Free Atlantic Community to see that they do form a community which they need to govern democratically.

To provide a forum for all views in the vast field of freedom and federation.

To bring out the facts in this field by objective, imaginative research.

To favor calling now a federal constitutional convention, representing the experienced civil liberty democracies, to work out and submit to their people a plan for uniting them in a Federal Union of the Free, or United States of the Atlantic, under a Constitution that would: 1) guarantee their Bill of Rights; 2) give them a free government in those fields where they agreed this would best advance individual freedom; 3) provide that this government shall be elected by, be responsible to, and operate on, the citizens and be federally balanced in its representation of them; 4) secure the right of each nation in the Union to continue to govern all its other national affairs in complete independence.

To seek to extend the Union's free federal relationship to other nations peacefully and as rapidly as this will advance liberty and peace until eventually it grows into a free federal world republic.

To assure that, pending universality, this union shall be a loyal member of the United Nations.

In our time, and nearly always in past history, only imminent military danger has served to bring the democracies even temporarily together. Depression, with rare exceptions, has made instead for worse disunion among them.

Moscow's military menace at its worst united the democracies only in the NATO alliance, in which the Council can merely recommend action, provided it is unanimous, and each ally reserves the right to interpret its commitments to suit itself.

H-Bomb Democracy. To give some assurance of instant massive NATO retaliation as a deterrent against an A-bomb or H-bomb attack, the U.S., it is reported, sought vainly at the December NATO Council session to arrange so that the NATO military chiefs could take the fatal decision themselves. This would preserve democracy by throwing out the basic principle that the military should be subordinate to civilian government—rather than proceed to create the kind of democratic Atlantic government that could act swiftly. Such efforts serve to point up the desperate need of making possible swift joint Atlantic action against the H-bomb threat. . . . But for joint Atlantic action against the D-bomb there does not yet exist even the machinery that NATO provides now against military danger.

Vicious Circular Chain Reaction. Disunion comes dear. The more disunion there is among the Atlantic democracies, the more it makes for depression. And the worse the danger of depression grows, the worse disunion it tends to create.

Only We Can Make D-Bomb. No one would ascribe the 1929-33 depression to Soviet Russia. All would agree that the Atlantic democracies brought that D-bomb on themselves—and that their lack of any political machinery for effective joint action on their common economic problem made that danger much worse for all of them. There is this difference now: Soviet Russia, a negligible factor in 1929, can help speed depression now by fostering disunion among the democracies. But it remains true that any D-bomb that hits them will have been made by themselves.

D-Bomb Secret Safe. Senator McCarthy need not worry lest the Krem-

lin, while he is out of his chairmanship, steal our D-bomb secret. The Communists are only too confident that the "capitalist" democracies will make the D-bomb for them, and with it deliver the free—with all their property intact —to Communism.

*

So strong and certain is the depression-breeding disunion among the "capitalist" countries, as seen in Moscow, that Stalin foresaw it even degenerating into another war among them. In his final advice on Communist strategy—his statement of October, 1952—Stalin reasoned that "the struggle for markets" and the desire to "secure for themselves an independent situation" can be counted on to cause not only the Germans and Japanese but the British and French to "break away" from the U.S. and sink from economic conflict into war with each other. "These comrades are mistaken," he said, who believe "that the progressive people of capitalism have been taught sufficiently by the experience of two World Wars . . . not to permit themselves again to drag the capitalist countries into a war among themselves."

What of D-Bomb Defense? The Kremlin is confident not only that the democracies will inflict depression on themselves, but do this fairly soon. It must rejoice at the widespread evidence that, in the field of international action, the Atlantic democracies remain as unprepared for the D-bomb as Hiroshima was for the A-bomb.

*

True, many Americans are convinced that legislation passed after the last depression makes the U.S. well prepared now to prevent another crash like the 1929 one in Wall Street. One may grant this, yet doubt that the U.S. is prepared to prevent or cope with other kinds of economic crashes. Many a city was prepared to meet block-buster bombs in 1945; none was prepared for another type of bomb, the one that actually hit Hiroshima.

Fatal Fallacy. In the 1930s U.S. political policy was based on the assumption that the U.S. was in so strong a position that by purely national action—the Neutrality Act, "Cash and Carry" —it could keep from being involved in a world war. The U.S. now recognizes that a military attack on any of 14 countries, some as small and distant as Greece and Turkey, can involve it by chain reaction in war. Recognizing this danger the U.S. has helped set up NATO for joint action to prevent it. But the great majority of Americans do not yet recognize the need for even this inadequate type of machinery against a world depression. In the D-bomb field they still nourish the fallacy of the '30s.

—*Low, London Evening Standard*

"Here is where the enemy said he would get in!" This 1949 cartoon still applies.

Microbes and Men. Nearly all American forecasting, as regards the possibility of prosperity, recession or depression, is based entirely on purely domestic factors. The implicit assumption is that in the economic field the U.S. is still so strong that the only danger of depression that need concern it is one starting in the U.S. itself.

*

To reason that disease in a small country's economy cannot be fatal to a large country is to reason that microbes are too small to kill a man.

*

Since the H-bomb itself starts in a very small unit—the atom—and develops its power by chain reaction, it would seem prudent to guard against the danger that the D-bomb may start within a small democracy, yet explode the greatest power.

Ten Forgotten Truths. It cannot be too often repeated that:

1. Marxism powerfully inclines the Kremlin to seek triumph through the "inevitable" economic collapse of the capitalist system rather than through direct Soviet military attack.

2. Manifestly the D-bomb has great advantages for Moscow over the H-bomb.

3. Depression can move by chain reaction from country to country.

4. World depression, being by definition international in scope, cannot be prevented or controlled by national action alone.

5. World depression requires prompt joint international action to prevent or deal effectively with it.

6. This is particularly true in the North Atlantic Community, where the principal economic powers are situated, with their economies closely inter-related.

7. No effective joint machinery now exists for Atlantic action against another depression.

8. To wait until depression comes to begin providing this Atlantic machinery is to forego the possibility of thus preventing depression—and probably the possibility of setting up the machinery, since economic danger tends to divide the free still more, not unite them as does military danger.

9. Federal union provides the most, if not the only, effective machinery for inter-State action against depression.

10. To explore the possibilities of Atlantic Union now involves no risk comparable to that of failing to explore this way to prevent depression and war.

Few when confronted with these ten truths will deny them. Yet nearly all then talk as if they had already forgotten them. Certainly these are not the views that are being shouted from the housetops today.

No Alsop Alarm. Even the Alsops, the columnists most inclined to view with alarm, are not alarmed on the economic side. The A-bomb and the H-bomb leave them no space for the D-bomb. This is not too surprising. Most of us rate least important what we know the least about, and the rich newspaper experience of the Alsops has included much more of war and diplomacy than of economics. Their courageous services to freedom have not yet been in this last field. They were in prep school or college when the last depression broke. The older men who share their valuations have no such out.

David Lawrence's Fear. When the last D-bomb exploded, David Lawrence had already won a name for himself in American journalism. It has since grown much greater, thanks to the outstanding work his *U. S. News & World Report* has long been doing. But his chief fear for the Republic now seems to be that it will not have enough McCarthy security in the A- and H-bomb field—certainly not that it lacks effective international machinery for coping with a world depression.

Niemeyer's 1964 Forecast. The December 10 *U. S. News & World Report* features a long and detailed forecast of developments during the next ten years, entitled "1964—After Ten Years of 'Coexistence.'" It is by Dr. Gerhart Niemeyer, Professor of International Relations at Yale. He was born and educated in Germany, came to the U.S. in 1933, and is now a U.S. citizen.

His year-by-year 5,000-word forecast through 1964 includes no hint whatever of any depression or recession possibly occurring anywhere in the world. It devotes hardly a dozen words to economic conditions.

Depression had brought dictatorship to power when Dr. Niemeyer left Germany. The Kremlin has time and again made clear the hopes it builds of victory through another depression. Yet Dr. Niemeyer's forecast is based on the assumption that the dictatorship we face now is still the German-type which can win only by military and diplomatic arms.

*

Dr. Niemeyer, David Lawrence, and the Alsops are, of course, not alone in their views. In insisting that the more imminent danger lies in the D-bomb, rather than the H-bomb, it is rather I who am in a small minority.

Niemeyer's Merit. The great merit in Dr. Niemeyer's article, I would add, is its chief purpose—to show how the U.S. could become isolated in face of a hostile world in ten years without any war having occurred. Since he overlooks the possibility of depression speeding this result, and explicitly assumes that the U.S. will lower its tariffs, what he really does is show how in the most favorable conditions the present U.S. policy, based on alliances, can completely fail. He sees it failing through the allies gradually being drawn, one by one, away from the Atlantic and into the Soviet diplomatic orbit, as the Kremlin's H-bomb power grows and it becomes more evident that the U.S. will not risk war against it.

*

Nowhere does Dr. Niemeyer directly trace the disaster he foresees to its true source—the assumed failure of the U.S. to replace the Atlantic alliance, which makes this disaster more than possible, with an Atlantic federation. Yet only a Union which would transfer foreign policy from each nation in it to an Atlantic federal government can be relied on to prevent effectively the diplomatic debacle Dr. Niemeyer pictures. To those who read between his lines, his article is a powerful argument for at least exploring Atlantic federation now, before it is too late.

Fairless Forecast. Benjamin F. Fairless, Chairman of the U. S. Steel Corporation, declared in a speech on November 17:

"Even the most conservative forecaster would be bound to conclude that the years immediately before us are rich in their promise of a sound, steady, and healthy growth, not only in the steel industry but throughout the economy generally. My personal opinion is that the year 1955 should be one of moderate gains all along the line; and that business, as a whole, will gather its strength and regroup its forces for a still more rapid expansion in the latter part of the 1950s. And, if we look still farther ahead, the prospects appear so bright that it is sometimes hard to see how we shall manage to measure up to all the demands which will be made upon us."

"We stand today," Mr. Fairless added, "at the gateway of what promises to be a greater change in our mode of living than the so-called industrial revolution has wrought in the past century or so. Most of us cannot even imagine the wonderful new devices and appliances that will become commonplace necessities of our daily life in the next few decades."

*

In his speech Mr. Fairless foresaw some "radical changes" resulting from this scientific revolution—but none that are international in scope or character.

When Unemployment Rises. Should there be "any sudden and widespread increase in unemployment which must unavoidably occur in the course of this scientific revolution that we face," according to the Fairless forecast, "it is entirely likely that control of our National Government could shift back and forth between the forces which seek to uphold our enterprise system and those which favor a collectivist society. We would thus find ourselves in a constant state of transition from inflation to deflation, from control to decontrol, and from repeated frenzies of false prosperity to the inevitable agonies of the economic 'morning after.'"

*

It did not seem to occur to Mr. Fairless that in these conditions of flux within the U.S., Western Europe might also be affected, and might not swing back and forth, but settle on the Communist side as permanently as Russia has. Nor did it seem to occur to him that such a continued advance of Communism might have dangerous repercussions on American freedom and enterprise. Among the things needed "to cope with this scientific revolution," there was no hint that he felt it necessary to create any common government of the Atlantic democracies to deal jointly with this immense common problem.

Not Without Resolution. The fact remains that without Atlantic Union we remain dangerously vulnerable to the D-bomb. But this fact need only be hammered resolutely home now to provide the incentive for timely convoca-

tion of a convention to explore the possibility of safeguarding against Depression II by Atlantic Federation.

*

In the face of the prevailing optimism, implicit and explicit, on the economic side, one must, indeed, "venture" to differ. Yet without venture, without courage, without determination, the dangers we face cannot be met.

Significant "s." The New Year might better be a time for more resolution rather than resolutions.

What a change one letter *s* can make. . . . Consider the difference between *resolution* and *resolutions*. . . . Or ponder the opening words of two Preambles:

"We the People of the United States," as the U.S. Federal Constitution starts, and "We the Peoples of the United Nations," as the U.N. Charter says. The former takes the citizen as sovereign and forms a people, a government, a Federal Union: where States are United enough to deal effectively with any common threat, be it H-bomb or D-bomb. The latter takes the nation as sovereign and forms not a government but a league of governments, nations associated but not united: a "grand" Alliance like NATO . . . irresolute, unreliable, only too liable to fail to prevent either depression or war. All this immense difference wrapped in one often unseen letter *s*.

*

When even one *s* can make a decisive difference, why should any "little man" think that he is too little to matter in great world issues?

*

One forecast is easy: The Atlantic Union Resolution will be adopted this year — *if* its supporters have enough resolution. —CLARENCE STREIT

From - and to - The Four Corners

ONE PAGE, drawn at random, from only one of many reports that are being turned out all the time by all the U.S. agencies now sending Americans abroad, will stir the imagination where it needs stirring. This page gives short biographies of half a dozen Americans assigned recently to give technical assistance in as many countries. It indicates how Americans these days are being constantly drawn from the four corners of the country and scattered to the four corners of the world. Here are excerpts:

"Clinton S. Smith of Memphis, Tennessee, to Egypt as Assistant Malacologist Advisor. . . .

"Leonard H. Starbird of Portland, Maine, to Ecuador as Railroad Maintenance of Way Advisor. . . .

"Henry Milton Stokes of Annapolis, Maryland, to Iran as Assistant Automotive Operations and Maintenance Advisor. . . . Mrs. Stokes, the former Carmen Trinidad Perez of Manila, served during World War II with a guerilla intelligence unit. She will accompany her husband to Iran.

"Clarence Charles Strong of Missoula, Montana, to Afghanistan as a Forester. . . . He is married to the former Marie Tonseth of Anaconda, Montana. Their daughter, Mrs. Merilyn Winship, is a missionary in the Philippines. Their son, Richard Allen, 25, holds the distinguished service award for his service in Korea. Mrs. Strong will accompany him to Afghanistan.

"William Allen Underwood of Woodstock, Vermont, to Jordan as Contracts Administration Advisor. . . . A veteran of World War II, he is married to the former Marie-Ange Hanki of Cairo, Egypt, who became an American citizen in 1950. During the war, she parachuted into enemy-occupied France to help in the French Resistance movement. She will accompany her husband to Jordan.

"Ferdinand Milton Vorbach of Flushing, L.I., New York, to Iran as Procurement and Supply Officer. . . . His wife, the former Jean Marion Reid of Brooklyn, N. Y. will accompany him."

*

What a ferment is this that is going on *crescendo* before our unseeing eyes! Is there left a single village anywhere in the U.S. that does not have today its own human bonds with the distant world . . . at least one hometown boy who is serving, or has returned from serving, or is about to serve in one of the U.S. civilian or armed services in some country his fellow townsmen had never even heard of 20 years ago? How many towns can there be left outside the Iron Curtain where these "envoys extraordinary" have not yet penetrated? What a two-way street is this—and with what traffic in the intangible, the incalculable, the invaluable is it crowded!

There was never anything before in any nation's history of both this nature and scope. There is no likelihood of its ceasing to grow apace. And yet there are still those who talk as if a return to isolationism were still possible —if not just round the corner.—C.K.S.

Salute to Louisiana's Farmers

As an excellent example of alert thinking and forceful action on big issues we give you these two paragraphs from the resolutions adopted by the Louisiana Farm Bureau Federation at its 1954 State Convention:

"*European Union Unwise.* We would warn against the policy of fostering a United States of Europe or other close European unification. Germany tried twice to achieve this end by arms, as did Napoleon before her. A solidary European continent, perhaps under Franco-German or German domination, with the Anglo-Saxon powers excluded, could become as great a menace to our security as the Central Powers were in 1917 and 1940.

"That Continent, already an industrial giant by grace of our Marshall Plan Aid, much exceeds us in manpower and for some purposes in the strength deriving from central strategic position.

"*Atlantic Union Better Strategy.* Any such unification must include ourselves, together with the British nations, as integral—and in the interests of our safety, preferably dominating—participants. Such Atlantic Union regularized in a formal political constitution may not be now within the realm of practical politics, but it is sounder in strategic conception than Pan-Europe alone."

The more farmers who talk in these terms, the sooner we shall have Atlantic Union to solve the farm problem with a far better market.

ATLANTICA'S ECONOMIC FUTURE — WITH AND WITHOUT UNION

THE MAJOR ECONOMIC FORECASTS for 1955 have now been made on both sides of the Atlantic. The optimism for the future is almost unanimous everywhere; it reminds one of the glowing days of 1928 and 1929—early 1929, that is.

The current optimism is easy to understand in vew of past performance, particularly on a long-term basis. The rise in the gross national product of the United States in the past 20 years is spectacular indeed.

Producing $1 Billion a Day. "From not much more than $1 billion a week in 1933," the December *Monthly Letter* of the National City Bank of New York says of the U.S., "the national product in 1953 reached $1 billion a day. If that rate of growth, averaging 9.8 per cent per annum, is projected ahead, we could cross the trillion-dollar mark only ten years hence, in 1964."

*

The *Monthly Letter* is careful to add that the dollar shrank in purchasing power by 4 per cent per annum over the 20 years between 1933-53. It concludes that to continue on this road would be a "dubious" achievement, since it involves dangerous inflation. Even when allowance is made for the inflation in the past, however, the increase in the U.S. national product was impressive — from less than $3 billion a week in 1933 to $7 billion a week in 1953.

*

"The most extravagant estimates of what the future may hold," the *Monthly Letter* continues, "have been prepared by the newly formed 'Conference on Economic Progress,' under the leadership of Leon H. Keyserling who was chairman of the President's Council of Economic Advisers in the Truman Administration." This Conference estimates that the U.S. gross national product may approach $600 billion a year in 1960—or more than $11 billion a week.

Ike's $10 Billion Guess. President Eisenhower in a speech on Oct. 25, 1954, made this guess of the national product by 1964: "Drawing on the richly varied abilities of our entire citizenry, we can foresee that in less than a decade the national output will increase from today's $356 billion to $500 billion. This would equal an average increase of more than $3,000 for every American family of today. And these can be real dollars—dollars of stable buying power, not simply more dollars of cheapened value." It would also amount to a gross national product of $10 billion a week.

Both the President and Leon Keyserling made their guesses on the apparent assumption that national sovereignty would continue to rule the North Atlantic Community throughout the decade as it does now. If that assumption proves true, the conclusion certainly won't.

My Guess. My own guess is that the U.S. share in the increase in the national product—and therefore in the rise in the standard of living—will be far greater in "real dollars" by 1965 than even Mr. Keyserling dreams—but *only provided* that the proposed Atlantic Convention is called in 1955 to work out a plan for "drawing on the richly varied abilities" of the "entire citizenry" of the free Atlantic Community as only a full federal union can. Those who consider this too easy and empty a prophecy should examine the past record where the change from alliance to federation was made.

"Fortune's" Appraisal. *Fortune* Magazine, when it first appraised the idea of Atlantic Federation in reviewing *Union Now* editorially in April, 1939, called it "the greatest political and economic opportunity in history," and explained:

"Gigantic opportunities would be opened up. A rise in the standard of living of millions of consumers would result from the expansion of markets and the consequent lowering of prices for mass-produced goods. Even a relatively slight expansion in their known market would enable U.S. automobile manufacturers (to take only one example) to cut prices, and cars would thus become available to more persons, not only in the other States of the Union but also in what we call 'home.'

"The economic history of the U.S. demonstrates that this process is cumulative and that it would almost certainly result in lower automobile prices than even Mr. Ford has dreamed of. There would be an inevitable revival in shipping and in railroads, and hence in the capital-goods industries behind them. Industrial unemployment might, therefore, almost disappear.

"A genuine union of the democracies, then, opens up a vista of industrial growth to which the only enlightening parallel is the growth of the U.S. itself. At the time the American Union was formed the 18th Century libertarian economists were preaching free trade. And the abolition of tariffs within the borders of the U.S. provided for this doctrine the most spectacular practical demonstration that any economic theory has ever had."

What Union Did in the U.S. Depression and the danger of dictatorship it brought were the sharpest spurs that drove the 13 States to federate in 1789. And these poverty-stricken States actually quadrupled their foreign trade in the first ten years of federal union, with its common currency, common market, common defense force, common foreign policy, common federal government and common citizenry.

*

There are always those who rise to say that there is no analogy between the 13 democracies of America in 1789 and those of Atlantica today. Clearly there are differences between them, but it is by no means certain that the differences, when the balance is struck, do not argue more in favor of union now than then.

*

Many attribute the gigantic economic growth of the American people after they federated to "cheap" or "free" land, the predominating agricultural nature of their economy, rich natural resources, and so on. They forget that all the favorable conditions on which they lay such stress obtained also under the previous League of Friendship. That "grand alliance" possessed precisely the same potentially rich wilderness from the Alleghenies to the Mississippi. It had

the same leaders and practically the same people in it in 1789 as in 1799 . . . and yet it could hardly borrow a penny at home or abroad.

*

How can any reasonable man account for the astonishing economic improvement in the U.S. between 1789 and 1799—except by attributing it primarily to the only basic change that had occurred . . . the change from an alliance of sovereign States to a union of sovereign citizens, with free movement of goods, money and men throughout the federation?

If Atlantic Federal Union is achieved within the next few years, *Fortune*, I forecast, will point with increasing pride to the late Russell Davenport's April 1939 editorial in that magazine declaring that, compared to an Atlantic Union, "the opening of the North American continent was a modest beginning." But what if Atlantic Union is deferred?

European Recovery. Summing up the year-end optimism in Europe about Europe, a Geneva dispatch from Michael L. Hoffman in *The New York Times* of January 16, tells of the good British outlook and adds:

"From Belgium, Italy, Western Germany, Austria, Sweden and even France, long a laggard in economic growth, the reports repeat almost monotonously that production is up and expected to continue rising, agricultural productivity is up and expected to improve, unemployment is down and expected to fall further, prices have been stable and are expected to remain so, real wages are rising and are expected to continue doing so, the balance of trade is better and expected to get better, and so on."

*

These signs of recovery are not so convincing, however, to canny Michael Hoffman as they are to the European experts, and even more to many Members of Congress who see no further need for U.S. aid. He gives more space to the doubts expressed by a minority who "believe some re-thinking has to be done about the validity of the signs and symbols of economic activity upon which, for the past ten years, observers have depended for their evaluation of Western European economic trends.

"It may be that things look so good, they suggest, only because everybody is looking at the wrong things, and judging by the wrong standards. . . . There may be other crises ahead, unseen because they do not send advance warnings in the kind of terms economists have been accustomed to recently."

This makes sense to me, at least, remembering as I do how prone economic experts are to get in ruts, like nearly everyone else, and to what great errors this has led them in the past.

If Union Waits. Should Congress fail to approve this year the Kefauver resolution for a Convention to explore Atlantic Union, I hope economic disaster may still be prevented by calling it by 1956 or 1957. But I, for one, will not be surprised if History then finds that in 1955 we let the last moment go in which depression could have been averted or kept in hand by Atlantic Union.

*

If we have not achieved Atlantic Union by 1960—to say nothing of 1965—my guess is that President Eisenhower's estimate of a U.S. national product of $500 billions then in "dollars of stable buying power, not simply more dollars of cheapened buying power," will remain to mock him as some of President Hoover's views did in 1932.

*

My guess is that without Atlantic Union the U.S. national output in 1965 in non-military goods will be—in 1955 dollars—less than it is now, not more. And not merely the American standard of life but of liberty will have woefully fallen. Previous forecasts make me fear that this will be only too true. For I find my tendency is always, despite my efforts to correct it, to under-estimate the cost of failure to federate the free.

The high cost of survival

1948 Guess. In FREEDOM & UNION of February 1948 I noted a report by John G. Norris in the *Washington Post* that the annual arms budget might reach $25 billions in the 1950s but that "defense chiefs concede that such outlays are unlikely . . . and that a 'reasonable degree of security' can be maintained for . . . $14 to $16 billions . . . half again more than today." And I added my own forecast:

"It is hard to see why the defense chiefs concede it is unlikely they will reach the $25 billion figure in the early 1950s—unless they are counting on the U.S. federating meanwhile with the British and Western European democracies. Otherwise the chances are only too great that the U.S. will be spending much more than $25 billion on defense within five years."

Mr. Norris continued: "Totalling these astronomical estimates, Administration and Congressional leaders want to know whether there is any other way out. Can we have security without a 50 per cent boost in cost?" I added: "The answer is: We cannot have security with a 50 or 500 per cent increase in defense spending on a national or U.N. basis. We can have security with a 50 per cent decrease in cost by Federal Union of the Free—and only by such Union now."

Since 1948. Four years after 1948 the U.S. was spending 400 per cent more on defense—not the "astronomical" 50 per cent increase that Mr. Norris discussed. Last year expenditures for major national security totalled $40,644 million. This year's budget calls for $40,458 million.

This is but one of many examples showing how the highest official experts grossly err in over-estimating the possibilities of national sovereignty, and how badly I err in under-estimating its costs and dangers. Other examples of the latter may be found on pages 196-8 of *Freedom Against Itself*.

*

Against this background one must assess my own pessimism and the current optimism of both the Republicans and New Dealers, and both the Americans and Europeans, as regards the economic future we face in 1956 or 1957 without Atlantic Union.—C.K.S.

WE THE UNDERSIGNED URGE EVERY THOUGHTFUL AMERICAN TO READ THIS BOOK

"The underlying tension of our time lies within freedom itself—within us"

CLARENCE STREIT in *Freedom Against Itself*

IN 1945, Americans dared hope that with the destruction of one tyranny, democracy and decency would prevail for long years.

Instead, we have seen free nations, one after another, disappear behind the dread Communist curtain.

While we have been half-awake and irresolute, Communism has been alert and implacable. Now, as Will Clayton has reminded us: "United *they* stand. Divided *we* fall."

Steadily, the free world has shrunk while the Communist world has expanded. The free peoples invent new machines to develop their world, but political disunity threatens to shake apart its very structure.

Clarence K. Streit's brilliant new book, *Freedom Against Itself*, dissects the forces tending to divide the free world. It presents a bold course of action that deserves the studious consideration of every thoughtful American. "No mere restatement of the author's *Union Now*," to quote the St. Louis *Post-Dispatch*, it is "a fresh approach to the whole question."

We who sign this statement urge you to phone your bookseller at once; he will be glad to send you a copy of the regular clothbound book (published by Harper & Brothers) with a bill for $3.75. Or you can use the coupon below to order a copy of the $1.50 paperbound edition, available only from Federal Union Inc., the nonprofit educational association of which Clarence Streit is president.

March 8, 1955

Dear Clarence:

Thank you for sending me the material.

Sorry we missed meeting the last time you were in New York, hope we have better luck the next time.

Sincerely yours,

Mr. Clarence K. Streit

Edward R. Murrow
CBS Commentator
481 Madison
New York City

Dear Ed,

The harm done by the confusion over national sovereignty, I'm sure you'll agree, is incalculable. There is urgent need to clarify this subject.

The recent attacks on Judge Harlan give a good peg for this. On the theory that an Atlantic Union means surrendering U. S. sovereignty, abolishing the Constitution, and so on, he has been attacked for being a member of the Council of the Atlantic Union Committee. All this will no doubt be given an even greater airing soon, when his nomination comes up on the Floor of the Senate.

Thus both the national sovereignty issue and Atlantic Union are in the news. Moreover, a resolution to call a Convention to explore Atlantic Union was introduced Feb. 9 in both Houses by a bipartisan group of Senators and Representatives led by Senator Kefauver.

I enclose a letter I have written the NewYork Times on the Harlan affair, since its report brought "Union Now" into the picture. I also enclose an editorial on the sovereignty issue I wrote during the last Presidential primary campaign, when Senators Russell and Kerr raised it.

I also attach some pages I have torn from my newbook, "Freedom Against Itself," which bear on this great subject. Among them I would stress page 211, which brings out how deeply this issue has run through all our history. If you haven't time to read anything else, please read this one page. It is the subject of ~~the~~ a book on which I have been working for 20 years and hope to bring out in a year or so.

I think these enclosures will show you that I have a good deal to say on this subject that is fresh, clear, enlightening, thought-stimulating - and that needs to be aired just now. I would deeply appreciate anything you can do, Ed, to help get our side of this case before the public.

Couldn't we at least talk it over by phone soon?

When we last had lunch together, you said you said you wanted your TV associates to meet with me when they got back from Florida. That was quite a while ago. I hope it won't be much longer.

With warmest personal regards, I remain

Sincerely,

Clarence

Clarence Streit

February 28, 1955

To the Editor of The New York Times:

Your report of the Feb. 26th hearing on the appointment of Judge Harlan to the U. S. Supreme Court began:

"Judge John Marshall Harlan assured the Senate Judiciary Committee today that he regarded the Constitution as supreme. He said he would not surrender the sovereignty of the United States to any world government . . .

"Judge Harlan . . . stated that he was not an internationalist, or a one-worlder, or a 'unionist-now.'"

Hasty readers may have drawn from this - and even more from less careful press reports - the inference that "Union Now" and the movement for an Atlantic Federal Union would "surrender the sovereignty of the United States" to a world government. As the author of "Union Now," and the president of Federal Union, Inc., the educational membership association formed by readers of the book in 1939, I would like to correct this quite erroneous impression which Judge Harlan's opponents, and ours, seek to propagate.

Far from surrendering the sovereignty of the United States to anyone, "Union Now" would have us apply further the principle of sovereignty embodied in the Federal Constitution which created the United States. This principle of sovereignty is that the people, in the citizens equally, and forms the true basis not merely for a democratic State but for inter-democracy government.

"Union Now" proposed that we try to extend this distinctive United States concept of sovereignty to govern our common affairs with other North Atlantic democracies where we and they agreed that this would better preserve our lives and liberties - each citizen's share, in other words, of the sovereignty all democracies lodge in the people. More concretely, the book proposed that the people of the United States, Canada, Britain, France and a few other democratic nations seek to federate now by precisely the same principle of sovereignty which the people of our 13 States established in adopting the United States Constitution.

The only sovereignty the latter surrendered thereby was the Old World concept of it which subordinates the people to the State and sacrifices their lives and liberties to keep the government sovereign.

The people of the 13 States fought a truly revolutionary war to abolish this principle of sovereignty. Through confusion, however, they abolished at first only half of it. As regards their domestic affairs the people of each State made its government subordinate to them. But as regards the foreign affairs they had in common with the other 12 States each clung to the ancient concept of sovereignty. Taking the State instead of the citizen as the sovereign, - much as we have done in forming the present Atlantic alliance, - they formed the alliance of the Articles of Confederation.

Fortunately, the Americans of that generation came to their senses before this confusion in basic principle had led to anything like the danger it is facing us with now. They called the Federal Convention of 1787, and established the sovereignty

of the people of the United States as a whole.

To get this done, George Washington had to denounce the "thirst for power, and the hantling, I had liked to have said monster, for sovereignty, which have taken such fast hold of the States individually." Madison, the "Father of the Constitution," made the revolutionary nature of the change still clearer when he scornfully answered those who told the people they would be surrendering their sovereignty if they formed the proposed Federal Union:

"Was, then, the American Revolution effected . . was the precious blood of thousands spilt, and the hard-earned substance of millions lavished, not that the people of America should enjoy peace, liberty and safety, but that the government of the individual States . . might . . be arrayed with certain dignities and attributes of sovereignty? We have heard of the impious doctrine in the Old World, that the people were made for kings, not kings for the people. Is the same doctrine to be revived in the New, in another shape, - that the solid happiness of the people is to be sacrificed to . . political institutions of a different form?" (The Federalist, No. 45.)

It would seem evident that those who oppose the formation of an Atlantic Federal Union now on the ground that it means surrendering national sovereignty have themselves surrendered the principle of sovereignty which the Federal Constitution established in the United States, and seek to preserve instead the Old World doctrine of sovereignty which Washington and Madison denounced.

Your report also said that Judge Harlan had been attacked for being a member of the Council of the Atlantic Union Committee. As a member of that Committee's national Board, may I point out that this is even more preposterous? Whereas Federal Union, Inc. and "Union Now" aim to bring about a Federation of the Free, the Atlantic Union Committee was founded to work for the calling of another Convention like the one in 1787, this time representing the people of the United States, Canada, Britain, France and a few other democracies, to explore the possibility of their uniting to some degree under the principle of sovereignty that produced the United States Constitution.

The Atlantic Union Committee, headed by Owen J. Roberts, former Justice of the United States Supreme Court, is currently supporting the resolution for an Atlantic Exploratory Convention which Senator Kefauver and a bipartisan group of 30 Senators and Representatives introduced in both Houses of Congress on Feb. 9. It asks the President to call a Convention composed of delegates from the seven nations that sponsored the North Atlantic Treaty "to explore and to report to what extent their peoples might further unite within the framework of the United Nations, and agree to form, federally or otherwise, a defense, economic and political union."

The broad term, "federally or otherwise," deserves note. It would seem to leave opponents in the position of opposing the slightest effort to unite these nations more effectively by any concept of sovereignty whatsoever.

Sincerely,

Clarence K. Streit
President, Federal Union, Inc.

attributed to them in Annex 1. When one views the past 200 years as a whole, and recalls the great contributions to liberty such Germans as Kant and Goethe have made, it would seem fair to rank Germany fourth, among the larger nations, as regards actual individual freedom.

The three major democratic powers, Britain, France and the United States who have produced more than 70 per cent of the world's major inventions and discoveries in the past 200 years, formed together only 6 per cent of the world's population in 1750—about 38,000,000 of its 660,000,000 people then. In 1950 they totalled only 10 per cent of mankind, or 243,000,000 out of 2,400,000,000. When we add to them the other NATO democracies, and also Sweden, Switzerland and Germany, we find that Atlantica, with only 18 per cent of mankind in 1950 produced about 95 per cent of the inventions, discoveries and innovations that since 1750 have transformed the world.

This creative power, in short, has been neither concentrated in any one nation nor spread through many. It has been scattered neither over the planet, nor over all the non-Communist part of it which so many politicians loosely call the "free world." For 200 years this yeast that has raised the world for all the human race has been concentrated in a small fraction of it living in one region—the Atlantic area where there has been the most individual liberty for the longest time.

It would seem evident that the more individual liberty people enjoy, the more they then contribute to free human life in every way, from ignorance and drudgery, from disease and war and poverty, and from the worst of poverties—poverty of heart and mind and spirit.

Atlantica—the Country Without a Patriot

Why does this immense power of the people of Atlantica still pass so unnoticed in the world? Why have the Atlanticans themselves remained so blind to it?

Because they still do not see that they *are* a people, a country—that all their "lands of the free" form together *the* Land of the Free. Though now, at long last, some of them have begun to talk of their "Atlantic Community," they still think too much in terms that are either too small or too big for freedom's reality. When they do not, as usual, think of their nation alone, they speak of the "West," the "free nations," the "free world," and use these words so vaguely as to embrace any non-Communist nation, even though under some dictatorship, or offering little guaranty of individual freedom.

The freest people ignore that not simply their own nation but every free people of Atlantica gave their national government what sov-

ereignty it has *only* to advance individual liberty—their own sovereignty as citizens. When concerned with government within their nation, the people in every country of Atlantica think in terms of themselves and their individual rights. But when they turn to governing their relations with the other free people of Atlantica they abandon these flesh-and-blood realities for fleshless, bloodless, mystic words—symbols that lack the soul every person has.

They put their pride only in the fraction of free Atlantica where they happened to be born, and think it greater than the whole. They center themselves on their own nation and make their dignity depend on its government's freedom from other free people, not on their own freedom as individual men and women. They do this from confusion and habit, much as their forebears once assumed that the sun centered on the earth, when all the time the earth was turning round the sun.

*

Soon after the first Federal Union of the free was peacefully constituted, Benjamin Franklin, the man who had worked longest to achieve it, sent this prayer across the Atlantic on December 4, 1789: "God grant, that not only the Love of Liberty, but a thorough Knowledge of the Rights of Man, may pervade all the Nations of the Earth, so that a Philosopher may set his Foot anywhere on its Surface, and say, 'This is my Country.' "

Since then liberty has grown all around the North Atlantic which Franklin crossed so often in its service, but still the Americans, Britons, Frenchmen and other free people of Atlantica are aliens to each other. When they set foot on the soil of the other nations that know and love the Rights of Man, they still do not say as the dying Franklin prayed they would, "This is my Country!" If we alter Sir Walter Scott's famous question to read today—

> Grieves there a land, with men so dead,
> That to themselves they've never said,
> This is my own, my native land?
> Whose hearts have ne'er within them burn'd,
> As here their footsteps they have turn'd,
> From wandering far from Freedom's strand?

—the answer is, "Yes, there *is* one such land . . . Atlantica."

And so it is that the free have remained blind to "the significant facts of today's existence" which have been brought out here—and to others no less important that we shall bring out.

pioneers who blazed that trail—the American people, who have experienced the blessings of Federal Union for the longest time and on the greatest scale.

The history of no other people centers as does ours in the present issue: Does individual freedom lie in Union of the Free or in their division? Is the sovereign State the master, or is it the servant of the sovereign Citizen?

Three times this issue has moved the American people to the depths and heights, as no other issue ever has. The first time we fought this issue out began with Franklin's proposal of Union in 1754 and continued to the inauguration of the Federal Republic which he lived to see in 1789. Those thirty-five years included eight years of war on our own soil. The second time lasted through the long period that ended in the four years of the Civil War. The third time began with World War I, and still continues; it has already brought us nine years of war.

Twice already the American people, when their leaders and their friends almost despaired because of their confusion, ended with an astonishing new birth of freedom-and-union. More than any other people they honor as their greatest heroes those who did the most to save them when they confused the sovereignty of the State with the sovereignty of the Citizen. And the Americans whom all the world also most esteems—Franklin, Washington, Hamilton, Jefferson, Lincoln—every one of them is honored for his clarity on this issue and his contribution to its solution through Union of the Free.

The American people are very young and inexperienced in the ways of diplomacy, alliances and power politics in which so many Europeans urge them now to lead. But when it comes to the politics of individual freedom, to the problem of uniting people over a large area by free agreement under a common government and keeping them free, they are the oldest and most experienced of nations.

For more than three hundred years their history throws, on Atlantica's present problem, the light of wise discussion and wide experiment. No other people's history can do so much to clear away the confusion into which we Americans and all the free have fallen now. This history badly needs to be seen afresh, in the framework of the present crisis. But that is another book—one on which I have long been working, and which I hope to finish soon. Meanwhile, the study I have made of this history immensely encourages me to believe that once again, as twice before, the American people will confound the skeptics by sailing on, to greater Union of the Free.

the States, are reserved to the States respectively, or to the people."

*

In any free federal union, the people guarantee not only their own individual rights, and the rights of their Union, but also the independent rights of their respective States or nations.

*

It is true that the U.S. Federal Government has been growing in power and the States have been losing rights. This, however, has been part of the general trend throughout the world toward greater centralization in this electric, air, machine age. No non-federal type of government has resisted it so well as have the federal unions. No one State among the 48 has suffered more than the others. And while Americans are impressed by the decline of State Governments, visiting Europeans are astonished by the amount of State rights that remain.

*

One major reason why the U.S. Government has gained such power in relation to the States is that the country has been suffering a series of emergencies—World War I, the great depression, World War II. Emergencies lead inevitably to centralizing power. The way to prevent further loss of States rights is to prevent another world war, another great depression. They were not prevented by nationalism, isolationism, mere alliance, a league of nations. They can be prevented by Atlantic Federal Union. Nothing less can save the basic American concept of sovereignty.

***

The Forgotten Revolution. With all respect to Senators Kerr and Russell, the notion of national sovereignty they are so fearful we Americans will sacrifice by entering an Atlantic Union is the old European notion of sovereignty. That notion grew up when they had sovereigns over there who asserted they had a divine right to rule as they pleased, autocrats who held that they had a right to sacrifice the people through needless wars and ruinous taxation; that man was made for the State.

Surely Senators Kerr and Russell have not forgotten that we fought a war, a revolution, to rid ourselves of all that notion of national sovereignty, and to replace it with the opposite idea: The idea that the State is made for man, and

Kefauver: official power not a fetish to him

that all its so-called sovereignty is really vested not in the government but in the people, equally in every citizen. That is the great American pioneering idea of citizen sovereignty.

*

The Founding Fathers sacrificed none of the revolutionary U.S. concept of national sovereignty, none of their own sovereignty as citizens, when they established the Federal Government. But the present governing generation has been sacrificing this sovereignty tragically, and is sacrificing more of it all the time.

***

Sacrificing U.S. Sovereigns. If you agree that U.S. national sovereignty is not vested in the President or the Senate of the Government but equally in all the citizens, then every citizen who is burdened with excessive taxation is sacrificing that much of his share of the national sovereignty. Every citizen who is drafted into the armed services is sacrificing another big portion of his share of the national sovereignty. And every citizen who is slain in war is sacrificing all the rest of his share of U.S. national sovereignty.

*

Look at the way we Americans are now sacrificing the citizen's sovereignty.

In 1938 the bill for U.S. defense amounted to only $16 a citizen. Now it is $273 for every man, woman and child—17 times as much as it was before the worst war in history. In 1938 no American citizen was subject to draft. Now millions are drafted and subject to draft. In World War I, the U.S. called into the services 4,609,190 men, of whom 53,403 were killed in battle. In World War II, 15,513,657 U.S. citizens were called into the armed services and 293,105 sacrificed in battle their entire share of the nations sovereignty. All this adds up to an appalling sacrifice of U.S. sovereignty.

*

How much more of U.S. sovereignty will be sacrificed by the cost of a third World War, with taxation and inflation already so high?

*

How much more of the citizen's sovereignty will be sacrificed in military service by World War III, with so many drafted now?

*

How many, many more Americans will sacrifice all their share of the national sovereignty in the third World War toward which we are steadily moving, despite all this taxing and drafting —a war in which hundreds of thousands can be killed by a single atomic bomb?

*

We Atlantic Federal Unionists are anxious to prevent needless and more fearful flesh-and-blood sacrifice of national sovereignty than our nation has already suffered. We want to save the real sovereigns of this republic, and of every democratic nation. We are not pacifists; we realize that some sacrifice of liberty and even of life is necessary to preserve freedom. We want to save the citizens from *unnecessary* sacrifice, make them all more powerful sovereigns. We believe this can be done by extending U.S. federal principles around the North Atlantic.

***

Washington Warned. To keep from sacrificing needlessly the sovereign citizens, Americans, in particular, should be ready to sacrifice the power of those who now govern them: The Founding Fathers set the example. They sacrificed the sovereignty of King George III when they set up their independent State Governments. Then they sacrificed some of the sovereign powers of those State governments when they set up the Federal Constitution. George Washington foresaw that this second move would be opposed by those who lost power by it, just as the revolution before it angered the British sovereign. Referring to the proposal to federate the

13 States, George Washington wrote in a letter to Henry Knox dated Feb. 3, 1787:

> "I believe that the political machine will yet be much tumbled and tossed, and possibly be wrecked altogether, before such a system as you have defined will be adopted. The darling Sovereignties of the States individually, the Governors . . . the Legislators . . . whose political consequence will be lessened, if not annihilated, would give their weight of opposition to such a revolution."

Some of the Governors and legislators of the 13 States tried hard to make the people believe that their loss of power was a loss to the citizens. But the people were not fooled. They saw that the Federal Constitution simply transferred some powers which they themselves had given their State officers, to Federal officers whom they retained the same right to elect. They didn't mind lessening the "political consequence" of their State representatives so long as they, the people, gained in the process.

*

The establishment of an Atlantic Federal Union, it must be admitted, would lessen the political importance of the President of the U.S. and of U.S. Senators and Congressmen. Certain powers they now have over the citizens would be transferred to the Executive and Senators of the Atlantic Union Government. But the citizens would remain the sovereigns who elected all these officers.

It is natural that Senators, and particularly those running for President, should not want to lose any power the citizens have given these officers. It is understandable that they should think that sacrificing them means sacrificing all the citizens, that they should be more concerned with the government's sovereignty than with that of the citizen.

***

Coonskin Pioneer. Senator Kefauver represents the pioneer American spirit with more than his coonskin cap. He is willing to sacrifice some of his power as U.S. Senator, and some of the power he would have if elected President, if his fellow citizens find this will help secure their own life and liberty, prevent further sacrifice of their own sovereignty as citizens, give them each more power individually.

He asks you to explore carefully whether you might not reduce your tax burden, lessen military service, and save your family and freedom from extinction by sacrificing instead some of his official power and giving it to some other representative you elect to an Atlantic Federal Union. It is evident from what George Washington wrote to Knox in 1787 that, were the Father of this Country alive today, he would warmly applaud this self-sacrificing stand of Senator Kefauver, but not the view of sovereignty taken so thoughtlessly by Senators Russell and Kerr.

***

To Gain Sovereignty. You would not only sacrifice none of your sovereignty as a citizen but would gain sovereignty through an Atlantic Union. Let Americans consider this: When the sovereign citizens of your State approved the Federal Constitution, they remained not merely the sovereigns of their State but gained citizen sovereignty in another State, a much greater State—the United States—where before they had no vote, no sovereign rights.

Similarly, when you help constitute an Atlantic Federal Union, you retain your sovereign right to govern your State affairs as you please, and your national U.S. affairs as you please, without the interference of anyone in England, France or any other member of the Atlantic Union. But you gain another, greater sovereignty: You become one of the equal sovereigns of the United States of the Atlantic. You gain as much direct voice in handling all Atlantic world affairs, as you gained in American national affairs through the U.S. Federal Constitution, and in your State affairs through the establishment of your democratic State Constitution.

*

Far from surrendering any of your sovereignty as a citizen by constituting this Greater Atlantic Union, you gain sovereignty, power, rights; you gain a vote where you personally have none whatever now—and you gain this citizen sovereignty in the very fields where you need it most, the fields on which peace and war depend.

***

What Powers? What are the fields you would begin to help govern through your representatives in the new Union Government? Its creation would involve no change whatever in the structure or powers of any State Government. Nor would it involve any change in the basic structure of the U.S. Government. It would involve only the transfer of certain powers from the U.S. Government to the Atlantic Union Government. Which powers? At most, only those powers which the people of the 13 Original States transferred from their State Governments to their Federal representatives when they replaced the Confederation with the Constitution.

By this transfer of power they created not only a common citizenship, but a common defense force, a common foreign policy, a common currency and the great common free market which has been the making of American prosperity.

***

How Citizens Win by Union. The citizens of all the 13 States gained in sovereignty not only by becoming sovereign citizens of the U.S., too, but also by all the other transfers of their delegated power from the State to the Union.

*

Consider how much the people have gained in all the 48 States by having a common U.S. defense force to defend their individual liberties and their State rights. What if each State had to uphold the liberty and State rights of its citizens all by itself, be prepared to fight not only Old World dictators but neighboring States? Before the 13 federated, the troops of New York and of Massachusetts were massing on their frontier, threatening war over Vermont. What taxes, military service and war we Americans would suffer now if each of our 48 States had to defend its rights alone!

*

Consider the gain to all the citizens of all the 48 States from having a common foreign policy. Let any American ask himself: What if my State could have a tough policy toward Soviet Russia, while neighboring States could appease Moscow? Before the 13 federated, when Massachusetts closed its ports to British ships, Connecticut welcomed them in its harbors, made the most of this chance to get business—pretty much as the British recognized Red China when the U.S. refused to

. . . while Stalin chuckled scornfully, and attacked the divided democracies in Korea.

*

Consider the gain to all the citizens of the 13 States when federation freed them from the vexation and cost of doing business with 13 currencies. Think of the enormous advantages we Americans now have from having one currency throughout the 48 States!

*

Consider how much American citizens everywhere gained when federation removed the tariffs between their States, and allowed every American to sell whatever he had to sell in the highest market in the whole U.S. and buy whatever he needed to buy in its cheapest market—all without any State Government interfering with his trade. How our American standard of living and mass production would be cut down and down, if our States regained the "sovereign right" to vex the citizens with trade barriers as do the sovereign States of Europe!

***

By every one of the U.S. transfers of power from the State to the Federal Government, the citizens in every State gained immensely, became much stronger, freer sovereigns.

***

How Far Now? How far should we follow now the U.S. example in constituting a great Atlantic Union with the other democracies? In my personal view, we should transfer to it the same powers that the 13 States originally transferred to the Federal Government. We know from experience that this combination creates prodigious power and freedom. We had better take no chances these days in having too little of either power or freedom if we wish to risk the lives of no more of our sons, sacrifice no more of our sovereign rights, and lives. That is my personal conviction. Others believe a Union as regards only defense and foreign policy would suffice for the present.

*

How far we should, and can, go depends of course not only on agreement among Americans but on agreement with the other democracies. The best way to reach agreement on this, and on other obvious problems that Atlantic Union involves, is to send delegates to a convention to thresh these things out with delegates from the other democracies, and have them report whatever agreement they reach back to the people for action by them. That is the way the U.S. Constitution was created through the Federal Convention that met in Philadelphia in 1787. And that is how the Atlantic Union resolution now before Congress proposes to tackle the problem.

***

Anti-Columbus? Whatever one thinks of Atlantic Union itself, one need only read the text of the Kefauver resolution to see that its adoption could not possibly sacrifice any national sovereignty —even of the George III variety which Senators Kerr and Russell are so strangely fearful of losing. Here is its enacting clause:

> Resolved by the Senate (the House of Representatives concurring) That the President is requested to invite the democracies which sponsored* the North Atlantic Treaty to name delegates, representing their principal political parties, to meet this year with delegates of the United States in a Federal Convention to explore how far their peoples, and the peoples of such other democracies as the Convention may invite to send delegates, can apply among them, within the framework of the United Nations, the principles of free federal union.

It is clear that this resolution is expressly limited to calling a meeting to "explore" the possibility of Atlantic Union, and involves no commitment whatever to federation itself, or to the slightest transfer of sovereignty. All the proposed convention could possibly do would be to recommend that the citizens re-delegate to their Atlantic representatives certain powers they have given their national representatives. It would remain for the sovereign citizens to decide whether this should be done. What can they lose by exploring whether they might gain in liberty, peace, prosperity, by extending the U.S. idea of sovereignty across the ocean in the jet-atomic age?

*

*The other sponsors of the Atlantic Pact which the Resolution would have us meet in Convention are Canada, the United Kingdom, France, the Netherlands, Belgium, and Luxembourg. These seven drafted the Atlantic alliance, and then they extended it to some others.

Exploring is a New World tradition considerably older than the coonskin cap. Senators Kerr and Russell have got off on the wrong foot, but surely after second thought they will not campaign on an anti-Columbus platform.

Republican Witness. The Atlantic Union issue did not enter into the Republican primaries. But one witness from that party has testified with great weight to the importance of union in the Atlantic. In his report April 2 on his first year as Atlantic Commander-in-chief, General Eisenhower declared:

"The enormity of the present threat will never be met by half-hearted measures . . . This pattern of events, which points so surely to disaster, can be changed if only the peoples of the West have the wisdom to make a complete break with many things of the past. * * *

"Peaceime coalitions throughout history have been weak and notoriously inefficient. Sovereign nations have always found it difficult to discover common ground on which they could stand together for any length of time. Nevertheless, we were expecting NATO members . . . to work and sacrifice together, over an indefinite period. * * *

"There is power in our union . . . Visible and within grasp we have the capability of building such military, economic and moral strength as the Communist world would never dare to challenge.

*** * * * * Then the Atlantic Community will have proved worthy of its history and its God-given endowments. We shall have proved our union the world's most potent influence toward peace."**

***

Union is the Word. It must be noted that although Gen. Eisenhower in his NATO report spoke of "union" in connection with the Atlantic, nowhere has he urged the case for federation there as he has called for it in Western Europe. "In the political field, these [national] barriers compound inefficiency with distrust and suspicion," he has written,—but he has said this only as regards six continental European nations. He knows, of course, that national sovereignty has the same bad effect between the U. S.

and Britain, and between both of them and the democracies of the Continent. But he always leaves it to the readers to put his twos and twos together, when it comes to the over-riding problem of the political organization of the Atlantic.

*

Gen. Eisenhower, perhaps, does not mean the same thing by union in the Atlantic that Atlantic Unionists do. And, as a neophyte in politics, he may consider discretion the better part of valor there. Two facts remain: 1) He *has* pointed out that such coalitions as NATO have always been "weak." And 2) he has said that the way to power and peace lay in *"union"* of the Atlantic Community.

*

The good old American word, "union," which Gen. Eisenhower has repeatedly used, is one which U.S. diplomats have always carefully avoided, in speaking of the Atlantic. They realize what "union" means in U. S. political history, as must every West Pointer, too, since the Civil War. The State Department uses, instead, such terms as "Atlantic integration," "collaboration," and that hardy survivor of the red-blooded diplomacy of the thirties—"cooperation."

***

Red-blooded. The myriads of sovereign citizens who were sacrificed in World War II proved how red with other men's blood are the results of the diplomacy and politics that fear even to use the word "union," and talk instead only of "unity" and "cooperation." But the citizens who survived have an opportunity now to say whether they want more of this—or more of union in the North Atlantic.—CLARENCE STREIT

Reprinted from June, 1952, *Freedom & Union,* published by Federal Union, Inc. Copies available at 10c each or in quantities: 10 to 99, 8c each; 100 up, 6c each. These notes were used as an address by Clarence Streit, 36-minute tape recordings of which are available at $7.50 each.

THE 13-YEAR ADVANCE OF FEDERAL UNION, INC.

"Union Now"—The Beginning

1939, a memorable year. Nationalism is on the loose. Germany, Italy, Japan terrorize the world. The League of Nations capitulates. Democracy, peace and liberty are in full retreat. Isolationism rules the U.S.; in Europe defeatism is rife. The free world hovers disunited and leaderless on the brink of history's greatest war.

In this setting UNION NOW is published, and some of its readers organize the membership association now known as Federal Union, Inc., to achieve its promise for the future.

The Promise

UNION NOW called upon the Atlantic democracies to practice among themselves the democracy they practice at home. Leagues, pacts, alliances, it said, rest on a worn and alien creed that glorifies diplomats above elected representatives. It dooms the free to hopeless division and will deliver their cities and their sons to destruction. UNION NOW challenged Americans to lead the way to federal union of the democracies. It endowed freedom's creed that the citizen is the Sovereign of the Nation with international scope and a bright new future.

The Progress

1952, thirteen years have passed. Nationalism is on the defensive. Isolationism and defeatism are waning. The U.S. has undertaken building a strong, united Atlantic community. The Atlantic Federal Union proposal is before the U.S. Congress, backed by a fourth of each House, and is figuring in the Presidential campaign. It is endorsed by the Canadian Senate. It is influencing the Councils of NATO. It is gaining popular support all around the Atlantic.

But the free now face a most formidable foe, and the challenge to Union is now the race against war.

As Others See Us

World War II, trial-and-error, various other painful and costly events have contributed incalculably to UNION NOW's momentous advance. So have many organizations and many, many good people. Of Federal Union's contribution this has been said:

"When free men everywhere are united through federal union, in large measure the credit for this achievement will be due to your efforts." SENATOR GUY M. GILLETTE.

"Peace with genuine individual responsibility must continue to be our goal. I know of no organization or association that can compare with yours to bring this about in our time." GEORGE DENNY, FORMER MODERATOR, TOWN MEETING OF THE AIR.

"May God give to our humanity in peril many men as determined, as upright and as faithful as you and your associates in preparing the future that must come." GEORGES BIDAULT, FORMER PREMIER OF FRANCE.

An Invitation To Make History

Looking back and ahead, we of Federal Union believe that the free will have Atlantic Union soon. We believe, moreover, that the free can have it in time to avert war. The Union will be the crowning achievement of our lives and the pride of our children and their children's children.

We invite all those who understand the overriding importance of the Union to peace and freedom to join and support Federal Union, Inc., so that the work so auspiciously begun shall be speedily and successfully accomplished. To join, or to ask for more information, write to:

Dear Ed -

I've been in Europe since early September - finishing a book which is now completed & will be published in April by Harpers. Here is the Table of Contents & a digest of the first chapter of it. The publisher seems very pleased, and I think you will find it of interest. Heaven knows it deals with a great subject - Freedom Against Itself - and gave me another college education in the writing of it. I'm going to be in NYC Feb. 17, 18, 19 and want very much to discuss it and Europe with you. I fear we're heading toward disaster on the economic side, though we can still avert it. Will ask my daughter - a U.N. interpreter - to

(over)

give your office a ring to see if you have any free time.

Best

FREEDOM AGAINST ITSELF

By Clarence K. Streit

Contents

Foreward

Introduction, by Benjamin Franklin, Count de Buffon, Alexander Hamilton, George Washington, John Stuart Mill and Lord Acton.

Chapter

1 This Book As A Whole

Part I. Here Freedom Unites

2 Man's Widening World
Seven Epoch-Makers in 50 Years

3 Since Two Centuries

4 Free Atlantica Widened Our World
Atlantica's 1,001 Inventions
Atlantica Takes the Nobel Prizes
Atlantica - The Country Without a Patriot

5 Industrial Revolution Followed Democratic Revolution
The English Revolution Preceded the Industrial Revolution
America's First Great Inventions Were Political
Science Followed Freedom in France

6 Why Freedom Fosters Invention
Freedom's Two Halves

7 Why Dictatorship Blights Invention
The Special Case of Soviet Russia
The Verdict of the Scientists

8 Liberty the True Mother of Invention
Necessity's Over-rated Claims
War Reduces Invention
Wealth Without Liberty Withered Invention
Geography Did Not Make Atlantica Creative
Nor is Race the Mother of Invention

9 The Cinderella Science
Freedom's Science - the Forgotten Mother Lode
The Fatal Mistake We Let Japan Make
The Prize Science .. .. .. Without a Prize

Part II. Where Freedom Now Requires Union

10 Light, Liberty and the Pursuit of Government
The Case Against the Electric Light 50 Years Ago
Freedom Means Interdependence
When My Uncle Resisted a Widening World
Wider Government, or Oppressive Government, - Which?

Part III. Here Freedom Divides Men and Arms Dictatorship

11 How Freedom Divides the Free
How Freedom Has Splintered the Church
How Freedom Has Splintered Political Parties
How Freedom Has Splintered the West into 57 Nations
How the Free Have Splintered Empires

12 How the Free Have Splintered the World
The Free Have Barred Unity by Arms
Freedom's Four Efforts to Preserve Anarchy
1. Wilson's League of Sovereign Nations
2. The Atlantic Charter .. .. of Anarchy
3. The Anarchy of the United Nations
4. NATO .. .. The Least Excusable Anarchy
NATO's Basic Flaw
Crawling Ahead - When Only Worms Keep on Crawling

13 Where Freedom Fails, Force Unites
Few Nations Have Been Made by Free Agreement
The Free No Longer Expand by Conquest - Moscow Does
The Free Now Lag in Expansion by Federation, Immigration, Procreation
Why Russia Seeks to Expand
Communism is Better Equipped than the Czar to Expand

14 How Freedom Arms Dictatorship
How the Free Encourage Dictatorship to Expand
How the Free Arm Dictatorship Industrially and Militarily
The Record Confirms Our Reasoning
The Soviet Heavy Production Rate is Rising Faster than Atlantica's

15 Freedom is Hardest to Govern
Only Four of 77 Nations Have Stayed Free 150 Years
Why Freedom Is So Hard to Govern
Union - Freedom's Hardest Lesson
Nature No Longer Protects Freedom - Now Only Union Can

Part IV. Great, Growing, Imminent Danger

16 The Danger is Great
My Conclusions from this Study in 1943
Ten Years Have Confirmed these Conclusions

17 The Growing Danger - Its ABC
A. The Rising Debt and the Soaring Cost of Weapons
How Defense Costs are Rocketing, and Why
B. The Growing Inflationary Pressures in Atlantica
Atlantica Reverts to 1750's Political Economics
Political Inventions Began Cutting Costs in 1776
Political Inventions Began Raising Costs in Our Century
Business, Farm and Labor, All Pushing Costs Higher
Soviet Russia Escapes These Pressures
C. Atlantica's Stew of Fear and Mistrust
Illusory "Security" Measures and What They Cost
How "Security" Leads to Depression
Communism's Skeleton Key to the World

18 The Growing Danger - Its XYZ
X. A Third World War Would be Worse than the Second
Y. Depression Now Would be More Dangerous than in 1929-33
Z. Dictatorship's Accelerating Rate of Growth

19 The Danger is Imminent
Recent Trends Parallel Those Before 1929
The Door to Depression We Have Left Open
What the 1929-33 Depression Taught Me
Forestalling Depression by a Lend-Lease Joker
NATO's Neglected Economic Commitments
Disunion and Depression - the Imminent Danger
Moscow Professes Peace so as to Divide Atlantica
Moscow's Achilles Heel Helps Make It Conciliatory
Atlantic Disunion Rewards the Kremlin

20 How Near is the Danger?
The Vicious Spiral of Disunion and Depression
What Time Have We Left?

Part V. To Turn Danger Into Opportunity

21 The Heart of the Danger

22 To Turn Danger Into Opportunity
A Plan to Federate the Free
Cause for Hope in the United States
The Immediate Need - an Atlantic Federal Convention
The Convention's Great Educational Value
What of the United Nations? NATO?
To Supplement British "Gradualism"
To Advance European Union and Peace with Russia

FREEDOM AGAINST ITSELF

By Clarence K. Streit

Chapter 1 - This Book As A Whole

As States are a collection of individual men . . which ought we to respect most, the rights of the people composing them, or the artificial beings resulting from the composition? Nothing could be more preposterous or absurd than to sacrifice the former to the latter . . . This (is) the critical moment for forming . . a Government. . . Henceforward the motives will become feebler, and the difficulties greater. -- Alexander Hamilton, in the American Federal Convention, June 29, 1789.

Never was there greater need among the NATO nations for unity, for wisdom, and for perseverance. Never was there a greater need to see clearly that our lives are bound inextricably together. -- General Alfred M. Gruenther, Supreme Commander of the North Atlantic Treaty Forces, August 31, 1953.

The underlying tension of our time lies within Freedom itself, within us, ourselves, - nowhere else. It is preparing new disaster now. By prompt, right action we can still prevent it, - or keep it under control - and turn it into great good. Today's lament is that political progress lags far behind scientific discovery and technical invention. What we overlook is this:

It is Freedom that is causing this rapid advance of discovery and invention. And it is also Freedom, or rather our faulty grasp of it, that at the same time is halting Man's political and moral progress. We the Free, we are the ones who have long been thus dividing freedom against itself, and bringing depression, dictatorship and war down upon us, and all mankind, again and again.

Let us look at our primary problem afresh. And let us begin by taking, and keeping, the standpoint that men too seldom clearly take and carefully keep, the standpoint of their own individual freedom.

It would seem that either the world is growing mad, or we are. The fault is not in our star, or world, but in ourselves. For generations now our freedom has been working simultaneously to pull men together and to pull them apart. While it unites them through the machines its inventiveness produces, it divides them by the political policies it favors. With its right hand it creates an Atlantic community; with its left it keeps this community a prey to anarchy. Worse, - the machines with which we have formed this community unavoidably serve also to arm dictatorship to destroy freedom and provide the government we refuse to constitute by agreement.

The tension that results from this conflict of freedom against itself has long been tightening from both sides, more and more. It is bringing us nearer and nearer to catastrophe ..... when freedom, - were its house united, - could be bringing everyone an ever higher, freer life.

It is this schizophrenia, this cleavage within freedom, that makes our world now seem so mad. And since freedom has no flesh or blood or personality save that of the individual persons who are free, the cleavage is really in our minds and hearts. We

can cure this madness, but it is high time that we began. It is already in the violent stage.

This book offers no little evidence to support these conclusions, and of the more concrete ones that follow.

Part I. Here Freedom Unites

We find in Part I that the major inventions and discoveries have had, more and more rapidly, this characteristic effect: They give the individual more power, bring people together in a community greater than concerned them before, and in many ways liberate and unite them. This process has been going on now with accelerating speed for 200 years.

What is the yeast that has so expanded man's once static world? We find this yeast has been freedom or, more precisely, a relatively high degree of individual liberty enjoyed by a relatively large number of persons united through a relatively free government, - a combination I shorten into the term, freedom-and-union.

We reach this conclusion by first ascertaining from what area and nations these world-widening machines and innovations came. Study of a list of about 1,000 major inventions, discoveries and innovations since 1750 - the most comprehensive one I know of* - brings out these facts: Practically all of them - 96 per cent - came from the people living in the nations around the North Atlantic ocean. (I call this region "Atlantica" for short, and include in it all 14 members of the North Atlantic Treaty Organization, plus Germany, Sweden, Switzerland and Eire.) Nearly all these inventions and discoveries came from the freest of these peoples - the democracies whose federation was proposed in Union Now.

Next we find the creativeness of the Atlanticans followed on the heels of freedom's advance among them - and because of it. Why has this astonishing creative power of the free Atlanticans passed so unnoticed? Why have the free themselves paid so little attention to the fact that freedom-and-union is the yeast that has caused invention and discovery to expand so wonderfully? Why have we so neglected this mother-lode of power and progress?

Part II. Where Freedom Now Requires Union

For 200 years freedom with its machines has been bringing together its far-flung followers, forming them into a highly inter-dependent Atlantic Community. Once such a community exists, it cannot remain without an effective government. Anarchy's evils always result in government being established either by force or by free agreement.

Part III. Here Freedom Divides Men and Arms Dictatorship

Instead of meeting this political need with the exploring, inventive spirit they have shown in all other fields, the free have been splintering the world into more and more sovereign nations. They have been walling men apart increasingly with new armies, new taxes, new censorships, new currencies, new barriers to travel, trade, production, employment, and other man-made bars to individual life, liberty and happiness. The 800,000,000 people living West of the Soviet Union enter the Jet Atomic Age splintered now into 57 sovereign nations. East of them 1,450,000,000 people enter it divided into only 15 sovereign states.

Where freedom fails to unite, force succeeds. History records few nations that were created by free agreement. Whereas freedom by its nature is divisive, dictator-

ship's nature leads it to expand. Two characteristics of freedom's inventions inevitably arm dictatorship industrially and militarily to fill the need for international government which the free keep on creating and keep on refusing to meet themselves: a) these machines and weapons permit the unskilled to do what only the highly skilled, or no one, could do before, and b) once invented, slaves can soon learn to make and use them.

Freedom's machines have another characteristic that makes them arm dictatorship more rapidly than democracy: The most complex machine is simpler than Man. We can teach people everywhere to pinpoint bombs, but we still find it hard to govern ourselves. Of the 77 sovereign nations on earth, only four - the U. S., the United Kingdom, Switzerland and the Netherlands, - have had even 150 years of unbroken experience in relatively free government. In all four a protecting natural shelter, - mountains, delta, Channel, ocean, - gave freedom the time it needed. But its machines have made such shelters of no avail today.

Freedom's survival depends now on the people of Atlantica learning to spread the knowhow of liberty-and-union through humanity as rapidly as their other knowhow spreads. They may do this by learning first to govern freely but effectively their own Atlantic community. By forming an Atlantic federation they can, moreover, supply through it the shelter from dictatorship which mountains and oceans no longer give.

Part IV. Great, Growing, Imminent Danger

My studies in 1942-43 not only brought out the basic tension the free have themselves created but made me conclude that the danger in it was great indeed. Since then all four of the major forces causing this tension have tremendously increased it, and the resulting danger. In that brief decade 1) freedom's inventiveness has produced the supersonic plane, the atomic and hydrogen bombs while 2) its political divisiveness has produced 14 new sovereign nations and prevented the creation of any international government. At the same time 3) the area united under dictatorship has expanded more than in any decade in centuries and 4) dictatorship has armed itself far more formidably in Soviet Russia than it was in Germany, Japan and Italy, and has quickly learned to make our most advanced weapons.

At this rate how much greater will the tension be in 10 years . . . if it does not meanwhile produce catastrophe? Consider this ABC of one element in this tension, the growing economic strain on Atlantica:

A) We are still adding to the huge load of debt we acquired in two World Wars and the Depression. The biggest factor in it, the cost of armament is soaring fantastically.

B) The practice of seeking to solve economic problmes by artificially increasing costs has become chronic throughout Atlantica. In the past 40 years the free have reversed their previous 19th century policies that cut away man-made obstacles to the free movement of men, money and goods while their machines were removing natural barriers to this trinity of economic freedom. At the very time when mass production and the automobile, airplane and atom came, requiring for their growth an even wider market than the steam age did, we Atlanticans turned back to the thinking of 1750. Organized Business, Labor and Farm interests, which freedom has brought to great power in every Atlantic nation, use their influence to limit the market their fathers freed and raise costs artificially.

The Soviet dictatorship has its own difficulties but it does not suffer these

pressures that afflict all Atlantica. There are 15 States in the Soviet Union - but not 15 currencies, 15 barriers against the movement of goods and men, 15 defense forces devouring taxes. Nor is Moscow hindered by the cost-raising pressures that Business, Farm and Labor bring so freely on Washington, London, Paris, Ottawa.

C) Then there is the witch's brew of fear and suspicion in Atlantica . . the growing mistrust of each other among Americans, Britons and French . . the fever of investigations that divert attention from essentials and destroy the mutual trust which freedom needs to live. Our most powerful weapon, as this study shows, is the great inventive power that lies in union of the free. This weapon is still the monopoly of the free. We need no security measures to keep dictatorship from stealing it. We cannot contrive to get Moscow to copy it. Yet this is the weapon that we ourselves are sabotaging now, - in the name of security.

The costliest thing about our present loyalty-security complex is that it leads to another depression. The spirit of fear and mistrust it spreads can leap from the loyalty and military fields to the economic and monetary ones. The Kremlin aims to steal whole countries now, - with Hungry Depression as its skeleton key. And it has our "security" zealots busy now helping produce this key for it.

The imminent danger now lies in political disunion and economic depression rather than world war, - though the latter danger remains so great that it would be folly to weaken our defenses. We have probably closed the door to depression we left open in 1929. But we have left open the door which Atlantic disunion provides. The people of Atlantica still lack even the most elemental means of dealing with a common economic crisis; they still have no common government.

It would seem common sense to hasten to tighten Atlantic unity from within as Moscow removes the pressure of fear that now holds NATO together. Washington, instead, has threatened - from annoyance with France - to do precisely what the Kremlin most desires - take the heart out of NATO. If the free need to have the means prepared beforehand to meet military attack on any of them, they need to do this on the economic side, too. An attack by General Depression on one of them can also imperil all of them.

Atlantic disunion and depression form a vicious circle. The worse disunity becomes, the greater is the difficulty of nipping depression in the bud. On the other hand, depression makes for worse disunion. History shows that military danger often leads the free to unite, but economic danger nearly always divides them more than ever.

Yet, while the Kremlin is busy undoing its folly which produced NATO, Atlantica's statesmen and politicians continue compounding their own folly. Instead of trying to replace NATO's made-in-Moscow bond, with the internal cement of organic Atlantic Union which they alone can provide, they urge the Kremlin to remove its pressure more rapidly. They make the people think that the way to peace lies in concessions that depend on others, on Moscow or on Paris, - on a united Korea, a united Austria, a united Germany, a united Western Europe, - not on a United States of the Atlantic. At Yalta, Atlantica's statesmen bribed the Kremlin to come where it dearly wished to go . . into position to win China to communism. Now they beg it to prove its "sincerity" by concessions that would speed the descending spiral of disunion and depression, which it already sees is the best way to destroy freedom.

How near is the danger?

When two opposing capstans put a chain under increasing tension, it is impossible

to say at which link and at which moment it will break, but it is easy to see that it is bound to break somewhere, sooner or later, if the strain continues. When, as at present, the break would be a major catastrophe, and it takes so much time to arouse to salutary action those with most at stake, it is safer to err in fearing that one is at the eleventh hour than in assuming that there is still plenty of time.

Part V. To Turn Danger Into Opportunity

I believe catastrophe can still be averted - and this danger turned to great good. To work this transformation we need to keep in mind that the primary source of the danger lies in us, the free, rather than in dictatorship.

Only the free can peacefully end this tension while preserving freedom. They cannot do it by ending their inventiveness; they cannot help but be creative while they continue to be free. They cannot alter totalitarianism's inherent trend to expand until it is truly total. Nor can they keep their machines from being so simple that dictatorship can make and run them with slaves, and use them to impose its government. There is only one thing the free can peacefully do to end the basic tension of our time: They can end their own dangerous divisiveness by constituting an effective free government for their common concerns.

Despite the Machiavellis of Moscow and the divisiveness of depression, I for one believe this will be done. Among my reasons are these two:

1) By great good fortune the key country on which Atlantica now depends for leadership, the U.S., provides in its history the proof that economic danger can persuade free states to federate. It is the exception to the rule that war unites but depression divides. Where war led the people of the 13 Original States to form merely a grand alliance, hard times thereafter produced their present Union.

2) The first step to Atlantic Union is relative easy: All we need do now is to call a Federal Convention where delegates from the peoples of Atlantica would explore the possibility of uniting in a federation. This commits no people to any Union; the time for commitment would come only when the Convention presented them with a Constitution to debate and ratify.

Merely by calling this Convention we tackle the long overdue problem of learning better the principles of free government, so that we can spread this knowhow more rapidly through a world that learns so quickly to turn our weapons and machines against freedom. Both by its debates and the example it would set, this Convention would give our principles a power among the young democracies and behind the Iron Curtain that nothing else could do.

To explore this solution would not hurt, but help, the United Nations, NATO and the unification of Europe. The need of strengthening international organization is so great that we should tackle it simultaneously all along the line and by every reasonable method - on the Atlantic as well as on the universal and the European level, and by the procedures that made the U.S., as well as by those that made Great Britain and the Commonwealth, which now alone are being tried.

The essential is that, before Moscow has entirely removed the pressure that now keeps Atlantica from falling apart, we should thus redouble our efforts to weld the free together from within.

The convulsions that have wracked our generation - two World Wars and a Great

Depression - need not be convulsions of madness and death for individual liberty. They can mean, instead, merely the end of the present worship of Absolute National Sovereignty, and the birth of far greater freedom for us and our children.

None of us can hope to save freedom without some personal sacrifice. No matter what it is we most believe in, it requires some sacrifice. The god of Absolute National Sovereignty demands that we sacrifice our sons to it, our jobs, our individual freedom. For these sacrifices it brings us only greater grief, as our generation knows from experience. Liberty-and-union requires us to sacrifice some of our prejudices, some of the power we have given our politicians, some of the special privileges that some of us have, some of our money, leisure, energy. To those who have made these sacrifices in the past, it has brought greater liberty, richer life.

On Aug. 4, 1789, the beneficiaries of Absolute Royal Sovereignty in France offered to sacrifice to liberty-and-union their privileges and prejudices. But they sacrificed too long to the wrong god, too late to the true one. They sacrificed only when this was their only hope to save themselves, and they lost all they sought to retain. In a few years their heads were rolling from the guillotine.

Abraham saved his son Isaac by unhesitatingly offering to sacrifice even him when he thought God required this proof of faith.

Whose example shall we follow? And how soon? It is for each to decide what he or she holds supreme, the Sovereignty of the States, or the Sovereignty of its Citizens. You know my answer. It is for you now to say which you will put your faith in,- Freedom's Divided House or the Union of the Free.

No.

Dear Ed,

For more than 13 years now we've been trying to call attention to a time-tested cure - which doesn't needs half a million to Harvard - for something alongside of which your two billion dollar cost of the common cold is a . . . minnow.

Why not, some day - or week, month, year, generation or century, (you see how long I hope you live) - give a little time somehow to it?

I've been listening, you see, to your talk tonight. Also listened to your round-up confab with your European and Asiatic correspondents at the turn of the year. I meant to write you, and them, at that time about a blind spot I there detected all round.

Something like the blind spot a lot of members of the French Acadaemy of Sciences had - if my memory serves me right - when Pasteur came trying to persuade them that something - considerably smaller than the famous cloud which Elijah's boy saw - was responsible for a number of diseases.

I never got round to doing it, just as I haven't got round to giving you a buzz about the subject we were considering the last time we lunched. My loss and I like to think (though I should regret to) - possibly yours.

Lunched yesterday with a friend whose son is in Korea and who was lyrical about your TV from there.

He mentioned that you found the boys didn't know what it was all about.

I gave him the enclosed pamphlet, including a letter from - the exception who no doubt proves the rule.

But Ford, Columbus, Socrates, were exceptions once. (To mention too few.)

They proved more than rules.

Are your TV associates still - or again - in Florida?

Why don't we get together again, with or without them?

I plan to be in NYC Feb. 3,4,5, and will ask my secretary there to give yours a ring to see what the situation is.

Meanwhile, I attach our current issue with some thoughts of mine on Dulles that do not seem to have occurred to others, and some reasons why I fear you may have new Koreas to report if the No. 1 task of the time does not get more attention. Our next issue will facts about Bidault you should read, for your broadcast when he replaced Schuman did him, and you, less than justice. You should subscribe!

Best ever,

Clarence

December 2, 1952

Dear Ed:

I made the attached private appraisal of the election for some of our leaders. It includes some confidential reasons why the results pleased me, even before the Dulles appointment (see top of p. 4).

The publishable parts will appear in the December Freedom & Union, which you should receive in a week or so. It also contains an unpublished letter I wrote Eisenhower five years ago that I believe you will find of interest now.

With best regards,

Clarence

WHAT THE EISENHOWER VICTORY MEANS TO ATLANTIC UNION

By Clarence Streit

Conclusion. The election results are, in my judgment, extremely favorable to the Atlantic Union movement and resolution. If President Eisenhower wants Congress to adopt the Atlantic Union resolution, or something like it, he can get this done with relatively little trouble, I believe, particularly if he acts early in 1953 when the prestige of his landslide victory is highest. If he wants to defer it, action on it will be deferred. All depends on which policy he adopts. Weighing the factors, pro and con, I am convinced that there is a very strong hope of his leading boldly in 1953 toward the proposed exploratory Atlantic Federal Convention, especially if all those who desire this push hard for it from now on. Here are some of my reasons:

I. U.S. Political Situation.

1. Danger of Opposition from Taft & Co. is Small. For reasons given in my October Freedom & Union editorial, I did not share the fear that Eisenhower would be the "captive" of Taft and the more isolationist members of Congress. This widely held fear would seem to me completely removed now by such facts as these: a) the landslide character of Eisenhower's victory; b) the fact he ran far ahead of Taftist Senators in their own States; c) the strong confirmation of this supplied by Senator Kem's defeat; d) the election of Atlanticist Senator Cooper (R.) in Kentucky, one of the few States Eisenhower lost; e) the fact that Taft did little campaigning for Eisenhower, especially compared to what Truman did for Stevenson.

The great bulk of the Republicans in Congress would seem certain to follow where Eisenhower leads, at least in the next year or so, because of a) his vast vote-getting power; b) the fact that he led them back to power after 20 hungry years; c) the fact he did this despite their widespread fear he couldn't; d) their party's narrow majority in each House,- contrasting with his powerful hold on the White House; and e) all the jobs the President has to give in his first year.

These circumstances make it equally unlikely that many Republican Senators would follow Taft if he broke with Eisenhower, or that he would be so foolish as to be responsible for any move that could be interpreted as hurtful to his party's chances to remain in power. As the defeated rival for the nomination, Taft is very vulnerable to criticism in his own party if he makes any move savoring of poor sportsmanship. All this offsets his technically strong position as Senate Republican policy chairman.

To focus this now on the Atlantic Union resolution: While seeking the nomination, Taft took a position, at least twice, favorable to an exploratory conference of the NATO democracies, though unfavorable to an Atlantic federation. He wrote this on January 7 in a letter to John Apperson of Memphis. All things considered, I would not be surprised to see Taft join in supporting Eisenhower with his vote if - early in 1953 - the President wanted Congress to approve calling the proposed Atlantic Convention. I would be more surprised if Taft should strongly oppose him on this, and still more surprised if he got even the following 13 Republican Senators all to vote with him against it: Bricker, Hugh Butler, John Butler, Capehart, Dirksen, Dworshak, Jenner, McCarthy, Malone, Millikin, Watkins, Welker, Langer. On

the Democratic side, he could get Byrd and McCarran, but not many more. Eisenhower - as Taft would know - could replace all the Republican defections with the 20 Democratic sponsors of the Atlantic Union resolution who remain in the Senate next year. I know of at least nine others who, I feel sure, would join them in such circumstances; this would make a majority of two-thirds, though only a simple majority is needed for such a resolution.

At the showdowns, Taft will be obliged to go along with the Eisenhower program - particularly in the Atlantic field - or be reduced to leader of a faction. He is now Eisenhower's captive. This situation will change if Eisenhower makes bad mistakes, but in early 1953 Taft will be weak and Eisenhower very strong.

2. Vice President Nixon a Sponsor of Atlantic Union Resolution. This is especially helpful since he should have an influential role as President of a closely-divided Senate. Though never an active supporter of the resolution, he stood his guns when during the campaign the Chicago Tribune tried with loaded questions to get him to recant.

3. Senate Backers of Resolution Increase to 29. Most of the 28 Senatorial sponsors of the Atlantic Union resolution were not up for reelection this year. Only four of the others were defeated, none on this issue. Two of these, Republicans Cain of Washington and Ecton of Montana, were replaced by Democrats Jackson and Mansfield, who backed the resolution as Members of the House. The other two, Moody of Michigan and O'Mahoney of Wyoming, were defeated by Republicans Potter and Barrett, whose views are not known. These losses, however, are offset by the election of three new Senators who are known to favor the resolution: Republicans Bush (Conn.) and Cooper (Ky.), and Democrat Gore (Tenn.). There is thus a net gain of one.

Senator Cooper's election is especially helpful. I have worked closely with him; at one time he told me, "It is high time some Senator got impassioned about Atlantic Union" and "carried on a running fight on the Senate floor for it." A former delegate to the Atlantic Council, highly respected in both the Senate and State Department, well grounded in Atlantic Union and strongly believing in it, he is just the kind of leader the cause has badly needed on the Republican side of the Senate.

Senator Carlson (Kans.), another sponsor, is one of Eisenhower's closest advisers.

4. Senator Kefauver should be greatly strengthened now in the Democratic party and in the Senate. The resolution's chief sponsor already had a strong national following in his party; his many friends will not let it be forgotten that he was the proved vote-getter in the primaries, and a nationally-known figure whom the Truman machine and city bosses blocked at the convention in favor of a relatively unknown candidate who, with all his great qualities, failed as a vote-getter and led the party out of power. The more the defeat is interpreted as a revulsion against corruption, the city bosses and "Trumanism," the more Kefauver will stand out as the Democratic leader most opposed to, and by, all these forces. He is the natural leader of all those Democrats who interpret their defeat as proof that it's time for a change in the Democratic machine, too.

Kefauver's party position is further strengthened by the fact that he did not sulk when defeated, or ask a price, but campaigned ardently for Stevenson, doing far more for him than Taft for Eisenhower. In contrast, his chief rival, Senator Russell, did little for Stevenson and did that little late, and with qualifications

regarding civil rights that will help him only in the South.

Stevenson deservedly won many friends in the campaign and remains the titular head of the party, but he is weakened now by two things: 1) he was not only defeated but led his party out of long-held power, and 2) in 1953 he will hold no political office from which to exercise his leadership. Moreover, he has to cope with a possible rival, Harry Truman, who shares with him the former responsibility and the latter handicap. Senator Kefauver has the great advantage that he is in the Senate, where he will remain continuously in the national spotlight and can make his weight felt in many ways. In international affairs, Eisenhower will need the support of Kefauver and his friends; in domestic affairs, both Stevenson and Truman will need him to uphold Democratic party policies against the combination of Republicans and Southern conservatives. Kefauver has a formidable start toward the 1956 Democratic nomination for President; and as the world moves toward Atlantic Union, the fact that he was the Senator who pioneered for it will heighten his stature.

5. Senate Foreign Relations Committee Situation Improves. The change in the powerful position of chairman of this key committee is a distinct gain for the Atlantic Union movement. Senator Connally, who has retired, was an obstacle to it. His Republican successor, Senator Wiley, is much more friendly, though he is not a sponsor. He showed his sympathy frequently during the 1950 hearings on it held by a sub-committee of which he was a member. Last April he courageously made clear in a public speech that, as ranking Republican on the Foreign Relations Committee, he intended to be as internationalist and bipartisan as Senator Vandenberg ended by being. When Congress meets in January there will be three Republican vacancies on this committee, and one Democratic. Senator Kefauver is high in line for the latter. If he gets it, at least five of the 13 members of this committee will be sponsors of the Atlantic Union resolution. None of the present Republican members is a sponsor, but none of them is hostile and three are quite friendly.

6. In the House: All but 25 of 116 Backers of A.U. Resolution were Reelected. The 25 include Gore, Jackson and Mansfield, who were elected to the Senate; Herter, elected Governor of Massachusetts; several who vainly sought Senate seats; and several who retired or died. The 91 remaining divide: 30 Republicans, 61 Democrats. None of those defeated lost, so far as known, because of supporting the A.U. resolution. Leroy Johnson (R. Calif.), the only Representative known to have been attacked sharply by rivals because of his federalist views, was overwhelmingly reelected - on both party tickets. The views of the many new Republican members are not known as regards A.U. The House, however, usually follows, more than the Senate, the lead of the President who belongs to the majority party. If President Eisenhower led for an Atlantic exploratory convention, any Republican defections in the House would be more than offset by the Democrats who favor this course.

7. The New Speaker Not Opposed. Joe Martin, who no doubt will be Speaker now, told Justice Roberts some time ago in private that he would not oppose the A.U. resolution.

8. House Committee on Foreign Affairs. Its chairman-to-be, Robert Chiperfield, has not been as favorably inclined to the A.U. resolution as his Democratic predecessor, James Richards, who remains as ranking minority member, but he is not hostile. I have known him for 12 years; he would follow Eisenhower's lead, I feel sure. Among the reelected backers of the resolution, four Republicans and six Democrats are on this 27-member committee. It will have five Republican and no Democratic vacancies to fill.

9. Great Gain in State Department. Not only does the election assure the departure of the chief single obstacle to the resolution - Secretary Acheson - but the advent, in all probability, of a friendly successor. The best from an A.U. standpoint would be the likeliest candidate, John Foster Dulles. I have known him well since about 1939; he has been deeply interested since then, and has a thorough grasp of the whole Atlantic Federal Union idea. Both his mind and heart favor it; he came out publicly for the A.U. resolution when running for the Senate in 1949, but has not pushed it publicly from fear, I believe, lest this keep him from becoming Secretary of State and thus being, as he would say, "in position to do more for it." I would expect him privately to encourage any Eisenhower leanings toward Atlantic Union, and if the President wanted the proposed convention called, Dulles - I believe - would surprise even his admirers by the power with which he would uphold this policy. In any event, judging from the past, I would have good access to him and he would give my views a very good hearing. He realizes as few others do the importance history will attach to the creation of this Union.

If Dewey is made Secretary of State, Dulles would be his Gray Eminence. Dulles, however, would be the better choice for Secretary of State, if only because he is experienced in diplomacy and is much more acceptable to both the Taft Republicans and Democrats than is Dewey. John J. McCloy, also mentioned for Secretary of State, told me privately, when I saw him in Frankfort in 1951, that he favored the A.U. resolution. Later he publicly endorsed the idea. Paul Hoffman would also be a great improvement on Acheson, from an Atlantic Union standpoint, though not as much as Dulles.

II. Major Obstacles to Early Action.

If Eisenhower decides not to press in 1953 for an Atlantic exploratory convention, I believe it will be mainly from fear that a) this would interfere with the program he himself pushed as NATO Commander for a European Defense Community and a western European federation; and b) the U.S. public is not ripe for this step.

The former fear would seem the more important. Not only is Eisenhower strongly committed to the EDC and European Union, but work on these projects is now at a critical stage. EDC ratification is pending, and facing strong opposition in Paris and Bonn; it may well be deferred until March, when the constituent assembly of the Schuman-EDC countries is scheduled to deliver its draft of a political constitution for them.

There are powerful elements in these countries that are determined to put this program through and that will use their influence to defer U.S. action on an Atlantic convention until afterward, some because they believe this is the soundest way to Atlantic Union, and others because their chief aim is to make Europe independent of the U.S., not to make an Atlantic Union. There will also be strong voices in the U.S. State Department, Defense Department, and Congress who will support their view.

III. Major Hopes for Early Action.

A. Atlantic Union and European Union.

1. Not "either-or" but "together with." There are good reasons why the exploration of union should go on simultaneously on both a western European and Atlantic scale. There are enough good men available for conventions to work in both fields. The two could help each other. Much of the non-communist opposition in France and

Germany to both the EDC and European Union projects would disappear if the Atlantic convention were called, for this would be the best assurance against its fear that Britain and the U.S. would be left out of the picture, or that the U.S. was aiming to withdraw from Europe. It would also lessen British fear of European Union. All eggs would not be in one basket; if European Union proved too difficult, there would remain the possibility of Atlantic Union - without the risk and loss of precious time entailed by deferring exploration of it until Europe failed. To tackle the problem thus simultaneously would be in accordance with the prudent method by which the scientists achieved the atomic bomb by approaching the problem in four ways at once.

2. Eisenhower's Character. To tackle the problem simultaneously on an Atlantic as well as a European scale fits in with Eisenhower's character and habits of mind, as revealed in his London speech, July 3, 1951: "Any soldier contemplating this problem would be moved to express an opinion that it cannot be attacked successfully by slow infiltration, but only by direct and decisive assault, with all available means. The project (federation) faces the deadly danger of procrastination, timid measures, slow steps and cautious stages. Granted that the bars of tradition and habit are numerous and stout, the greatest bars to this as to any human enterprise lie in the minds of men themselves." Though he was speaking of European federation, his words apply also, not only to Atlantic Union, but to any big problem. They show that he is inclined to tackle such problems as a soldier rather than as a diplomat or politician habitually does.

3. Eisenhower Already Shifting from E.U. to A.U.? When I saw him in Paris in April, 1951, he seemed very favorable to Atlantic Union. High European sources have told me they got the same impression in that period. In July, 1951, he came out strongly for a European federation. I have good reason to believe he did this primarily from the belief this would hasten achievement of his strong desire to bring Germany into the western defense picture, and secondarily to hasten solution of the economic difficulties confronting NATO. I believe he was also led to this policy by the fact that it required no action by Congress and that as a General - not President, he could not lead for an Atlantic Union, as he could for one in Europe.

From July, 1951, to March 1952, Eisenhower pushed hard for the EDC and E.U.; but since April he has pushed less and less in this direction, and increasingly in the Atlantic field. It looks as if he had become aware of the dangers in seeking to achieve European Union first, without at least parallel effort toward A.U.; certainly these dangers have been brought to his attention.

At any rate, it is significant that in his NATO report April 2, Eisenhower put E.U. into an Atlantic framework. He not only gave his accent to the latter, but openly talked of "union" in the Atlantic as the key to peace, and of the "notoriously inefficient" character of "coalitions" such as NATO. During the campaign he said little if anything about E.U. In his Philadelphia foreign policy speech he omitted E.U. from his ten points for peace, though its inclusion would not have cost him votes.

Although he did not talk of A.U. either, he did risk votes by his strong demand for lower U.S. trade and immigration barriers in his New York City speech October 16. In the same speech he stressed Stalin's hopes of winning the world through division among the democracies, and emphasized the need of unity with our allies.

Again in New York on October 21 he said he would "call on the best minds of

our nation to sit down with political and economic leaders" of "our closest allies" to "take a new look" and "help build a new economic alliance" with "a long-term, consistent program" instead of "emergency relief and isolated, piecemeal action," in order to meet the dangerous line of attack indicated in Stalin's message to the October Communist Congress. The move he suggested could lead into an Atlantic Federal Convention as readily as the commercial conference in Annapolis in 1786 led to the Philadelphia Convention in 1787.

4. European Support for A.U. There are many powerful supporters of Atlantic Union both on the Continent and in Britain, and both in and out of the movement to federate western Europe. There is also strong opposition to forming the latter before A.U. is more advanced. All this may come out in the debates this Fall on ratification of the EDC and in the European constituent assembly. If the French and/or German Parliaments should provide strong evidence at this juncture that they would welcome an invitation from the U.S. to explore Atlantic Union, too, and/or that this would help speed EDC and E.U., their action might well have decisive influence with Eisenhower. This would be the more probable if Britain and Canada nudged at the same time toward A.U., and the Scandinavians indicated that Little Europe is no answer for them, and the Swiss made more evident their fears of E.U.

5. European Union Cannot Solve Major Problems, A.U. Could. At best, European Union alone cannot: a) end the dangers in the dollar gap; b) solve the problem of Britain; c) remove the peril in conflicting American, British and French policies in the troubled zone from Morocco to Indo-China (to which even the Atlantic Pact does not apply); d) put enough sure power behind the West to discourage the Kremlin; e) reduce the cost of western military power enough to remove the dangers of inflation, high taxation, economic crash; f) provide the economies needed to develop Point 4 aid enough to prevent Communism fattening on misery in vital areas; g) solve the problems of such countries as Canada and Norway; h) seriously lessen the atomic danger; i) give the psychological lift needed to induce a revolutionary democratic movement within the satellite states. E.U. would help in some of these respects, but not decisively, and it might make matters worse in other respects. A.U. would be much more helpful all along the line.

6. European Union Cannot Thwart Stalin's Present Strategy, which Eisenhower in his October 16th speech showed he considered so dangerous. This strategy, as Eisenhower there stressed, seeks to win by exploiting the divisions within the free world. The proposed E.U. would unite six nations effectively, but leave their Union and Britain and the U.S. as divided as the six nations are now. Since each of the three would then be a more dangerous competitor to the others, this result should encourage Stalin's belief that a struggle for markets will lead the West into war within itself again, with Communism again the gainer. Atlantic Union by ending these divisions in the West would have the devastating effect on the Kremlin of a blow upsetting all its basic calculations and proving Stalin wrong.

7. A.U. Would Help Eisenhower in Korea, both by distributing the burden more equitably and by removing the inter-democracy divisions (as between U.S. and British policy toward Red China) which encouraged both the original attack, and the later intervention of the Chinese Reds. A.U. would also lessen the danger of new Koreas. European Union alone would do neither.

8. Eisenhower Needs A.U. to Fulfill his Economy Pledge. He cannot achieve without it the substantial economies he has promised the U.S., except by dangerously cutting U.S. and Atlantic security, which it is inconceivable he would do. There is reason to believe he knows this, and looks to A.U. to effect these economies.

Confidential: he told me in April 1951, "I believe if we got effective political union in the Atlantic, we would cut our defense costs in half," and when I told that to Harriman - the Democrat in best position to know - he said, after some thought, "Yes, I suppose we could cut our costs by half if we formed a real United States of the Atlantic."

9. Eisenhower is Well Aware of the Advantages of Federalism, as his arguments for European Union prove. He must also know that these arguments apply even more to Atlantic Union.

10. For Eisenhower to Defer A.U. for E.U. Does Not Make Sense. It means he is deferring - and probably worsening - his major headaches in order to cure relatively minor ones, when he can tackle them together.

11. Other Advantages. By getting Congress to approve early in 1953, when his prestige is highest, the calling of an exploratory Atlantic convention, Eisenhower gains these other advantages: a) he acts when action is easiest and has the most psychological effect; b) he avoids the risks of waiting until his honeymoon with Congress is over and the foreign situation becomes more difficult; c) he reaps all the immediate psychological benefits in western and eastern Europe, but he can still defer the Atlantic Convention until European Union is more advanced, if he wishes. (The European constitution is scheduled to be drafted by March, and if the A.U. resolution were through Congress by that time, the Atlantic Convention still couldn't be ready to meet for several months, at least. In short, early Congressional action nails the convention down at the most propitious time, here and abroad, but does not require the convention to meet prematurely.)

B. Ripeness of U.S. Public for A.U. Resolution.

1. Important Distinction. Those who say the public is not ripe for this action usually mean they think it isn't ripe for Atlantic Union itself. But the only issue now is whether it is ripe for a convention to explore the possibility of forming such a Union.

2. There are Many Signs the People are Ripe to Explore A.U. Senators and Congressmen are good judges of such questions. The fact that so many in both parties have publicly backed the A.U. resolution, despite the negative attitude of the Administration, speaks volumes. So does the fact that none asked for removal of his name from the list of supporters, despite opposition attacks. It is noteworthy, too, that few were attacked by rivals on this issue, and none defeated on it.

Another straw: Freedom & Union - which goes to all the important dailies in the U.S. - prominently announced on its September cover that both Nixon and Sparkman were supporters of the A.U. resolution. Only the Chicago Tribune chain - to my knowledge - attacked them for this. In three editorials and two interviews it vigorously sounded the alarm over this situation and the fact, it added, that both Eisenhower and Stevenson were sympathetic. It failed completely to alarm either public or candidates. If Eisenhower moves early toward Atlantic Union it can't be said that the public wasn't forewarned by the Chicago Tribune press.

3. A.U. is a Good Bipartisan Opening for Eisenhower. Since both Nixon and Sparkman are co-sponsors of the A.U. resolution, and since it now has many more known Democratic backers than Republicans in both Houses, there is no danger of its becoming a partisan issue or the football of politics. Instead, it provides a

ready-made basis for Eisenhower to begin his foreign policy in a bipartisan way.

4. Good Press Assured. If Eisenhower comes out for the proposed Atlantic Federal Convention, I am confident - from long and widespread acquaintance with the more important papers all over the U.S. - that he would have strong press support. About the only opposition would come from the Chicago Tribune, Hearst and Knight chains. The idea also has many friends in the radio, TV and magazine fields. How strongly the press can help ripen public opinion for this move is perhaps best illustrated in the very timely article in current LOOK in which Arnold Toynbee gives powerful arguments for Atlantic Union as "the next step in history."

5. Riper for A.U. Exploration than for Lend-Lease in 1941. The Atlantic Union idea has been before the public since 1939, continuously. It has received very wide publicity through allmediums. It has hundreds of eminent supporters in all walks of life. It has had hearings in both Senate and House Foreign Affairs Committees recently enough for most members of both to be familiar with it. No doubt much more could be done, but already the public is better prepared for it than it was for much important legislation, or Executive moves. And the calling of a convention to explore Atlantic Union involves no commitment, whereas Lend-Lease, the Truman Doctrine in Greece and Turkey, the Marshall Plan, the Atlantic Alliance, involved huge commitments, taken with little trouble despite a less ripened public.

6. To Speed Further Ripening for A.U. The best way is early adoption of the resolution to call the exploratory convention. If advantage is taken now of the honeymoon period of the Eisenhower Administration to get this approved by Congress, then enough time as is judged necessary can be taken to prepare for the convention before it meets. The fact that the exploration has been approved by Congress will immensely facilitate and speed preparations for the Convention. Much more education and ripening is needed for public acceptance of an Atlantic federation itself, but the passage of the resolution to explore the subject, the preparations for the convention, and above all the debates of the convention itself, which will be widely publicized, will educate and ripen the public as nothing else could possibly do. And events, the pressure of necessity, will continue to offer the powerful helping hand they have given in past years. As Eisenhower himself has so wisely said:

> "The project faces the deadly danger of procrastination, timid measures, slow steps and cautious stages. . . But difficulties are often of such slight substance that they fade into nothingness at the first sign of success. If obstacles are of greater consequence they can always be overcome when they must be overcome."

One cannot hope for an easier, safer time than the early honeymoon period of the Eisenhower Administration to get Congress to approve exploration of Atlantic Union. Only disaster can make it easier - but it cannot make it safer, too.

Street, Clarence

September 9, 1952

Dear Clarence:

Just a quick note to say my best thanks for yours of the 2nd.

I'm glad you liked our September 1st piece and appreciate your writing to say so. Enclosed is a copy which you are by all means welcome to use in Freedom & Union.

Sincerely yours,

Mr. Clarence Streit

Edward Murrow
CBS Commentator
481 Madison, Avenue
New York City

Dear Ed,

I listened to the latter part of your Labor Day broadcast w ith much more than interest, - with inward applause and heartfelt gratitude that such a high standard for reporting (whether radio or press) should be followed, and broadcast.

In the words of Washington, you have "raised a standard to which the wise and the honest can repair."

You have put in words much better than I could the code I sought to follow when a New York Times correspondent.

Could you send me a copy of it? And could we publish it in our magazine, so its beneficent influence may be a little more widespread, and our readers abroad may see what high news standards free men can set themselves?

I attach our July-August issue, which includes some thoughts of mine on the presidential campaign you probably missed, and that I'd like for you to see. Also, remembering your way of ending your broadcasts, I would invite your attention to the treasury of rare quotations we run in Poor Adam's Almanack (p. 16). This monthly feature has the added advantage for yo u that it ties down each quotation not only to the author and month, but usually to the day and year, also. I'll send you separately a calendar of 12 of these features we once got out; it may help you when you are fishing for a word for the day.

My chief purpose in this feature is to remind our readers that the past, too, is rich and alive, and that every day in the month was a day, also, to our many benefactors who lived before us. As you will see from our enclosed policy statement in Vol. I, No. 1, I seek to give our readers more time perspective.

With best regards.

Clarence

Streit, Clarence

March 19-2021

March 10, 1952

Dear Mr. Streit:

Mr. Murrow left last night for California and has asked me to tell you in his absence that he will be delighted to see you when you are in New York next week. At the moment however, there is a possibility that he will be in Texas and his plans will not be definite until he returns from the Coast on Friday of this week.

He asked if you would call him when you arrive and if he is here we shall arrange a meeting.

Sincerely yours,

Dorothy McDonough
Secretary to Mr. Murrow

February 29, 1952

Mr. Edward Murrow
Columbia Broadcasting Station
481 Madison Ave., New York

Dear Ed:

Recalling gratefully that CBS was the first to put me on the air in 1939 - as early as February, when I made my first Union Now lecture at Swarthmore before the book was published officially in March, I think you will be pleased by the attached draft of a "13-Year Report to Readers of Union Now," telling of the immense progress we have made in that period.

We have tentatively set March 17 as the release date, but may make it later in the month.

I hope this report will inspire you to think of some good way to give it radio and television publicity. I would be glad to adapt it and give it as a talk over the air. I still have a recording of that 1939 CBS broadcast if you want to draw on it.

I would, of course, warmly welcome your personal reaction to the report, and any suggestions for its improvement. It is a long time since we have had a talk; I hope I may see you when I am next in New York - March 19, 20, 21.

A booklet of recent messages about our magazine and work is also attached.

With warmest regards, I remain

Sincerely,

Clarence

Clarence Streit

March-29/10

CKS.ea

P.S. Miss Marjorie Bennett, director of our Speakers Bureau at 537 Fifth Avenue, New York, MU 2-3492, will be glad to cooperate whenever you need good speakers on international federation, freedom, or Atlantic Community affairs.

Yes ordered

FROM THE EDITOR

February 22, 1952.

Dear Ed:

As an old newspaperman, I'm very proud of the enclosure - and of the fact that nearly all those cited are paid 3-year subscribers, though they could get press copies free. I'll be still prouder if you join them.

Financing Freedom & Union is so hard that we do need more paid subscribers . . . and especially welcome 3-year ones. They most help this non-profit enterprise to produce a magazine ever more useful to those who need to be behind the news . . . and ahead of it.

Consider how far the free have gone our way since 1948 - when there wasn't even an Atlantic Pact. Isn't the possibility of achieving Atlantic Union by 1955 big enough to merit the regular watching that only 3-year subscriptions assure? Please use the enclosed slip while it's at hand, to encourage us with a three, two, or one-year lift.

Sincerely,

Clarence

Clarence Streit

Leading Editors, Publishers, Correspondents

Speak of FREEDOM & UNION

W. W. WAYMACK, former editor, Des Moines Register, former U.S. Atomic Energy Commissioner: I consider Freedom & Union, now five years old, an excellent, important and even indispensable contribution to thinking on what is obviously the central task of our time.

SEVELLON BROWN, editor, Providence Journal: I recall well our discussion of the project before you launched Freedom & Union and I warned you what a costly and difficult undertaking it was, for I was once a magazine publisher. But you have turned the trick,and Freedom & Union has made an outstanding contribution to the democratic world.

ERWIN CANHAM, editor, Christian Science Monitor: Many of us are overwhelmed by the present. We must look ahead. And there is no organ more realistically and effectively looking ahead than Freedom & Union.

ARTHUR KROCK, chief Washington correspondent, N.Y. Times: Whatever progress humanity has made toward enduring world order is due to the unselfish efforts of men like Clarence Streit. When he writes, "Danger and difficulty have always been the bread and butter of the soul," he unconsciously pens his own epitaph - one to engender pride in disciples and hope in the oppressed and endangered.

CARROLL BINDER, editor of editorial page, Minneapolis Tribune: Freedom & Union is performing an invaluable service for all who care about freedom with security and justice. It makes available information and opinions about developments in that direction which are not to be found within the covers of any other periodical. More power to it.

EDWARD J. MEEMAN, editor, Memphis Press-Scimitar: Every year of the existence of Freedom & Union has made more clear the need of it. It lifts the torch by which we can find our path.

WHITELAW REID, editor, N.Y. Herald Tribune: I have found much of its material provocative and useful in thinking.

FORREST W. SEYMOUR, editor of editorial pages, Des Moines Register and Tribune: It must be clear to any reasonable and practical man that a larger measure of political unity within the democratic world is the real hope - indeed, the only immediate hope. Freedom & Union is making this hope articulate and keeping it aflame. Tens of thousands of us are relying upon you to carry on.

"For the great Republic, for the principle it lives by and keeps alive, for man's vast future" – Lincoln

HAROLD HINTON, Washington correspondent, N.Y. Times: Its high literary quality, coupled with its intellectual prodding to us all, is what I would have expected of Clarence Streit and his distinguished collaborators.

HERBERT ELLISTON, editor, Washington Post: I turn to Freedom & Union with great interest every month.

MARSHALL FIELD, JR., editor and publisher, Chicago Sun-Times: Many congratulations on the fine job you are doing.

MANCHESTER BODDY, publisher, Los Angeles Daily News: Founding a new magazine is one of the most difficult undertakings in the whole realm of communications. To bring one to robust, effective maturity as you have done with Freedom & Union in the short space of five years is little short of miraculous.

ERNEST LINDLEY, Washington correspondent, Newsweek: You have been a trail-blazer for a good many years now.

FRANK AHLGREN, editor, Memphis Commercial Appeal: I can hardly believe Freedom & Union is only five years old. Its dynamic force seems to have been a part of the publishing picture for a longer period than that.

JOHN H. CRIDER, editor, Boston Herald: No great idea, however remote of fulfilment, has ever captured the minds of men or, indeed, even survived without the bold and courageous championing by a true believer. I have watched Clarence Streit fight this battle from the time he returned from Geneva not too cynical from the failure of one of man's great hopes to embrace another, even bolder dream. Freedom & Union has reflected the great zeal with which its editor pursues his goal.

LANSING WARREN, Paris correspondent, N.Y. Times: Freedom & Union is becoming indispensable to one who is directly occupied with international affairs.

THOMAS L. ROBINSON, publisher, Charlotte (N.C.) News: I believe the best testimonial to the success of your far-sighted policy is the progress toward a federal union of the free since that first edition of the magazine appeared. Atlantic Union has become a household word, thanks largely to the efforts of your magazine.

FRED C. CHRISTOPHERSON, editor, Sioux Falls (S.D.) Argus-Leader: Congratulations to Freedom & Union for distinguished leadership in the promotion of humanity's finest ideals.

DAVID ROBERTS, travel editor, Cincinnati Enquirer: An excellent job throughout. In my opinion it has done more than any other single enterprise to join together and concentrate support for the idea of a democracy of free nations.

PAUL C. SMITH, editor, San Francisco Chronicle: May this challenging magazine continue to get its message across to an ever-widening circle of citizens.

[*On Second Thought*]

Five Years Back and Ahead

FIVE YEARS AGO FREEDOM & UNION began. Let us now look back, and ahead.

*

This magazine was born to explore, develop, apply practically, teach and disseminate the way of life embodied in its name.

*

The individual and society—what is their true relation? How are they to be fitted best together; practically, theoretically? This is man's eternal basic problem, all the way from the cave to the cosmos. He faces it in the two sexes and the family they form, in the tribe, the nation, and the eventual world republic.

*

Union without freedom is tyranny, and has always been tyranny, from the cave family through to totalitarian communism. But to seek to save freedom without union is to betray it to its other enemy, anarchy.

*

Freedom *and* union together—that is the thing.

*

Taken separately, human freedom and human union are two gods doomed to devour the men who worship each alone.

*

To see freedom and union not as two irreconcilables, but as a couple, as two great truths to be married freely and fruitfully—this is the way of life that leads to man's vast future. It is the mother lode of more and more golden ages. It is the philosophy that FREEDOM & UNION was named for, and means to make ever clearer and more practical in the years to come.

In the period since we began championing Atlantic Union as the great practical application of its philosophy today, what strides have been made toward this goal! We already have an Atlantic Pact, an Atlantic Council, and an Atlantic Command headed by the man most sought in both parties for the U.S. Presidency.

*

And now, on the eve of our fifth anniversary, comes the Ottawa declaration of intention to develop Atlantic unity in the non-military fields, the basic importance of which we have always stressed—and talk of federation.

*

When we started, even the Atlantic area deemed it much more important to peace that a nation should profess to be "peace-loving" than that it should love freedom, and practice it.

*

Many in 1946 considered the world community so advanced that the Acheson-Baruch Plan for a U.N. atomic authority still held the stage as the practical thing to push, despite Soviet hostility. There seemed little evidence that people then recognized even the existence of any community of spirit or of special interest among the democracies of the North Atlantic.

* * *

On this page in October 1946, we cited George Washington's "high idea of the utility of periodical publications," and added:

"Men far less burdened than Washington complain now that there are too many magazines. . . . And yet, how many magazines today take for their special field the one that made George Washington desire them spread throughout the land of the free . . . the prob-

lem, the conflict, the cause of liberty and union?

"There is no end of periodicals that aim to stimulate industry, engineering, science. Not a few seek to improve morals or to inform the mind with facts and figures. . . . But in all the multiplicity of magazines, how many do you find devoted principally to information, opinion or discussion of the principles of freedom and union? . . .

"Since 1788 the principles of liberty and union have spread far beyond the strip of western Atlantic coast they then held. They now rule democracies all around the North Atlantic . . . Scandinavia, the far-flung British Commonwealth, Eire, Holland, Belgium, France, Switzerland. They have made that central waterway what the Mediterranean was in the time of Rome, the civilizing sea. The creative energy that liberty releases has led the men of this new Atlantis to invent many marvels. From their sea of civilization steamships, railways, motorcars, airplanes and electrical instruments have spread around the globe, and made, they say, the whole world one.

"In many ways the world, of course, is now only on its way to being one. Not only to each other are the Abyssinians, Afghans, and Albanians still remote. For some time to come they and many others will be neighbors by virtue of the alphabet rather than the airplane.

"If there is any area where a group of nations already forms one world, enough to give some solid hope that they might possibly succeed in forming freely an effective common government, the nucleus of the future world republic, that area is that one that rims the Atlantic. Here lies the Atlantis that is not lost, that has not yet found itself, that is a community already but not yet a state. . . .

"The land of the free is divided in a dozen Atlantic countries, but no magazine today concentrates on serving liberty and union even through this area, seeks to speed the step from community to country even here . . . reaches one in 10,000 of the small fraction of mankind that has known freedom for a generation, even 30 years."

*

To meet this urgent need was another reason why F&U was born five years ago . . . on the 170th anniversary of constitutional free speech.

*

Like William Lloyd Garrison, we came "determined to be heard," but no less resolved to seek to remain as broad-minded, fair, and good-humored as Lincoln in our "firmness in the right."

*

Financially, we began "on a shoestring," to scale mountainous obstacles. But politically, morally, spiritually, we began among "them thar hills" where there is much more gold than mining, or prospecting.

*

Some of our many friends in the publishing world to whom we turned for expert advice before launching F&U, shook their heads at our "temerity" in starting a new magazine under any circumstances . . . but advised us very helpfully.

*

We have never ceased to benefit from labors of love—and not only from contributors like Count Sforza, the Italian Cabinet Minister, who, when we asked him for the article that appears on page 28, wrote it "as my contribution of labor and love to your magazine. I do not expect anything else but your lasting friendship."

*

We have profited too from labors of love by subscribers who got and gave other subscriptions (and still do)—thus rescuing us from the magazine-killing cost of building up circulation—by staff members who helped in many ways to make both ends meet for F&U, and by many others.

*

In friends, too, we began not with a shoestring but with a string of pearls, an endless string of pearls.

*

We wish we could express our gratitude to each of our friends. Without them, this non-profit enterprise would have gone to join all the other magazines born in the past five years—some with resources we envied—which are no more.

*

When it suddenly dawned on us that F&U would be five years old, it was too late to ask all our readers and friends to help us mark this anniversary with their comment. And so we invited a representative group of them to do so.

*

A number of Cabinet members, high military officers, party leaders, business and organization executives, and others whose names we would like to mention replied with private messages. To quote one world-known figure: "You may be certain that I shall continue to read your magazine with interest. I prefer, however, that my name should not be associated with any private publication, in view of my position as ———."

*

With gratitude and pride we present in the following pages some of the comment sent us for publication.

*

Spurred by this evidence that F&U has been of some influence on events and men in its infant years, we shall continue in the momentous years ahead to carry on the spirit of the American, English, and French Revolutions. That spirit put man above the state, linked law with liberty, equality, fraternity, created the Bill of Rights, produced representative democratic government, constituted the federal union answer to the interstate problem, challenged the Divine Right of absolute sovereignty with the concept of citizen sovereignty, and has already raised the standards of human life far beyond the level that once made kings majestic.

*

That spirit has been overthrowing autocrats for generations. We mean to do our bit to help it overthrow the totalitarian tyrants of today, without another world war.

*

On the basis of the solid progress achieved in the past five years by our principles and practical policies, and of something still more solid—our faith in the philosophy of freedom *and* union—we are confident that in the next five years the Atlantic democracies will cross the Rubicon separating alliance and federation, war and peace. In 1956 may we be living in the Union of the Free, the nucleus of the eventual Republic of Man.—CLARENCE STREIT.

Reprinted from October, 1951, Freedom & Union. Subscription rates: $4 a year, $7 for two years, $10 for three years.

August 31, 1947

Dear Ed,

I would greatly appreciate this favor:

We are planning to publish in pamphlet form the series we have just concluded, "Free Enterprise Makes for Peace." To our knowledge, no other work shows, as this does, that the Marxist line that capitalism inevitably means war and marxism means peace is the reverse of the truth.

We wish to include in the pamphlet some comment that will help get it read more widely by men of your influence. If you have been reading this series as it appeared in Freedom & Union, and if you believe your friends should read it, please say why in a sentence or two that we can quote.

We enclose a couple of papers from the series to refresh your mind. If you haven't read the series and wish to see the whole thing, we shall be glad to send you the other papers.

An early reply will be extremely helpful.

With best regards,

Sincerely,

Clarence

[Freedom's Crisis]

Free Enterprise Makes For Peace

FREE ENTERPRISE has one powerful argument in its favor that few of its advocates seem to see: It is much more conducive to peace than is the alternative, communism, or even democratic socialism.

In this respect especially the free need to learn that individual liberty is essential to the achievement of their ideal of peace. They can be counted on to cling to their other liberties as being good in themselves.. But they tend increasingly to regard individual liberty in the economic field both as an evil in itself and as a positive danger to peace.

Yet the more one studies free enterprise & marxism in relation to world peace, the more essential the former seems—at least at the present stage of world development—and the more dangerous appears the trend toward the latter. One of the greatest forces behind this trend is hunger for peace. Broadly & deeply humanitarian in their make-up, the idealists who have always dominated the leadership of western socialism are sincerely convinced that capitalism inevitably means war, and socialism peace.

Perhaps they have come to believe it so unquestioningly because their adversaries have questioned it so little themselves. They have preferred to attack socialism as inefficient and defend the profit system as more productive. They have talked initiative, incentive, opportunity. These things, as James Parton remarks in a stimulating article in *Export Trade and Shipper,* "mean little to Europe's masses," have none of the glamor of the marxist catchwords, "full employment," "security," "peace." Yet the greatest of these is peace, and—whatever may be true of the other two—free enterprise has the best of this argument.

Why does socialism, despite the pacific ideals of its supporters, make for war more than free enterprise? One key to the answer may be found in that favorite socialistic term, *nationalization.*

Marxists do not talk of the internationalization or worldization of coal mines, steel mills, or anything. They cannot aim at such objectives first, because there is no world or even international government. They cannot possibly start the socialist experiment with world ownership of the means of production, or even international ownership of any one industry. The prerequisite to British ownership of railways was the existence of the United Kingdom government. Were Scotland & England still two kingdoms, there could only be today Scottish ownership & English ownership of railways.

The marxists insist that the economic determines everything. They overlook the fact that the possibility of establishing any marxist economy is itself determined by a purely political factor—the existence & confines of government. Socialism being possible only within the limits of a sovereign state, and the world being divided now into a quantity of national states, the socialists in each of them are inexorably driven to nationalize.

Whatever nationalization may mean in jobs, efficiency, production or distribution of wealth, it is bound to mean arming the national government with new powers. The aim, of course, is to use these powers to benefit all the people of the nation. But it is very hard to do this without using them *against* others.

EVEN WHERE it is not merely the intention to bring the economy of a nation under the direct control of its citizens by nationalizing it, but where the strongest practical guarantees exist, as in Britain, that the citizens will remain free to exercise this control, the danger of the state using its powers nationalistically against others remains.

One instance may show why. Suppose that the British nationalize their automobile industry, which cannot compete with American automobiles except with the help of tariffs & subsidies. What British party would then dare seek office by opposing these? What candidate would lay himself open to the charge of ruining an industry, however artificial, when all the voters—and not merely a few greedy "profiteers"—owned it? Who will oppose measures directed against foreigners that are "needed" to preserve "full employment," when the voters are not only workers in but owners of the industry threatened?

All the arguments in favor of raising barriers to imports and subsidizing or dumping exports become far stronger when the industry passes from private to national ownership. They increase in power with every industry nationalized.

Not all nationalization, of course, affects foreign relations. Nationalization of the British railways, for example, doesn't. It is only where an industry has strong outside competitors, or depends for survival on its exports, or on imports of raw materials, that its nationalization involves dangers to peace. Far from eliminating the competition for markets and for control of sources of supply which occurs under private ownership and—the marxists say—leads to war, nationalization of such industries merely makes this competition more certain & more dangerous. It wraps it thereafter directly in the national flag, changes it from a dubious to a very legitimate matter of governmental concern, charges it highly with emotion, feeds it with all the prejudice & passion of previous wars, and keeps it constantly armed not only militarily, but with all the nation's economic, monetary, financial & political power.

THE COMPETITION of free enterprise can also, of course, lead to war—but only by an industry getting the government to fight for its interests. While this can happen under free enterprise, it is bound to result under socialism. Far from removing the real danger in international economic competition, socialism makes it certain & constant.

However democratic socialism might be once a world government exists, to attempt to make socialism precede world government is to destroy both the freedom & the peace that its advocates seek to gain. So long as the world is divided into sovereign nations, the establishment of socialism must make for war, rather than for freedom, peace & international government. For it divides the world into nations more abysmally than ever, gives each nation more direct cause for conflict with others, and arms it with more means of fighting them. By comparison, free enterprise with all its faults is much to be preferred by those who seek to develop internationalization.

This brief article, of course, merely scratches the surface of a fearfully neglected field. But the importance of free enterprise to peace will become only clearer as we go deeper.

—COMMON SENSE, JR.

[Freedom's Crisis]

Free Enterprise Makes for Peace

V — A SUBSTITUTE FOR WAR

ONE OF THE many unremarked ways in which free enterprise makes for peace is the relatively safe outlet that it gives to power-hungry men. The love of power leads to war more than does the love of profit.

It has often been noted that business competition under free enterprise, particularly under extreme *laissez faire,* is much like war. Those who deplore this are usually the kind who also lament the lack of a peaceful outlet for man's pugnacious spirit. They overlook the fact that free enterprise is itself a substitute for war.

So long as men hunger for personal power, society must provide them with some safe form of satisfaction. Regulated free enterprise provides not only the safest but the most productive answer. With all its faults, it does allow an infinite number of outlets for ambitious, domineering, dictatorial-minded men. This type is as certain to exist in any country, America or Russia, and in any society, Christian or Moslem, *laissez faire* or Marxist, as is the kindly, tolerant saint.

Despite the excesses of the lords of *laissez faire,* the English prospered more when the ambitious worked off their energies in business competition than when feudal lords fought the Wars of the Roses. What would have happened to the American experiment in Federal Union had political power been the only outlet for the "ruthless business barons?" Thanks to the opportunities given them by free enterprise, they left us railroads, steel mills, pipelines—not cities ruined by war.

The freer a government keeps economic enterprise—and that means checking monopoly power—the more the ambitious will be drawn to this field. Here they cancel each other out and spend their energies vying to get more profit by making cheaper, better, goods.

What happens when the major economic outlets for ambition are removed and all power is centered in the state, as the Marxists urge? Inevitably, the attention of the most dangerously ambitious men is glued on the one big prize available—control and increase of the state's monopoly of power. Men who might have contented themselves with trying to monopolize steel and then coal, seek to dictate to the nation, and its neighbors. Conspiracy to restrain trade gives way to conspiracy to overthrow the dictator, and foreign governments. Result: civil and foreign war.

So it was in the centuries before Turgot, when each feudal state governed absolutely the economy of its serfs. So it is now, in the all-out Marxist state. The first victim in Stalin's purges in the '30s was the Marxist theory that Marxism is the way to peace. Multiply the Stalin-Trotsky struggle sixty-fold, envenom it with nationalistic prejudices, raise the prize to world power for a world Stalin. Then you begin to see what it would mean to peace if every nation scrapped that substitute for war—free enterprise.

—COMMON SENSE JR.

(To be continued)

"Laissez. . .faire"

ANNE ROBERT TURGOT

Born France May 10, 1727

M. DE GOURNAY, FORGOTTEN author of the celebrated maxim, *laissez faire, laissez passer* (let goods be made freely, let them pass freely through frontiers), was born in May 1712, and died in 1759. Many of his principles were put in practice by his great disciple, Turgot, though even he failed in his efforts to establish free trade between the French provinces.

Now it is the fashion to misinterpret *laissez faire,* turn from the extreme of business bossing government back to that of government bossing business, and restore on a huger scale the evils that kept mankind poor before Turgot began to free private enterprise. Here are the conditions in France and Europe that led to the cry, "Laissez faire!"—as pictured by Turgot in his eulogy of de Gournay:

"M. de Gournay had not imagined . . . that, in a kingdom where the succession to the crown itself had been established only by custom and where the death sentence was still left to the judge's discretion, the government would deign to regulate by specific law the length, width and number of threads in each piece of cloth.

"Nor had he imagined it would fill four volumes in quarto with such important details—plus any number of statutes dictated by a spirit of monopoly whose sole object was to discourage industry and concentrate trade in a few hands by multiplying its formalities and expense, requiring 10-year apprenticeships in trades that could be learned in 10 days, excluding from them those . . . born outside certain limits, forbidding the employment of women in the making of cloth, etc.

"He had not imagined that all the cities in a kingdom ruled by one prince would look on each other as enemies, forbid employment within their walls to certain Frenchmen whom they called *foreigners,* prevent the sale and free passage of goods from a neighboring province—fight for trivial interests against the general welfare of the State. He was no less astonished to see the government busy itself with regulating the price of each commodity. . . .

"These principles [of his] which are called a 'new system' seemed to him merely maxims of the simplest common sense. All his so-called *system* was based on this maxim, that in general every man knows his own interest better than does another man to whom this interest means nothing at all. From this, M. de Gournay concluded that when the interest of individuals is precisely the same as the general interest the best thing to do is to leave each man free to make what he wishes (*laissez* chaque homme libre de *faire* ce qu'il veut). . . .

"M. de Gournay concluded that the only objective of the Administration should be . . . to give all branches of commerce the precious freedom they had lost through the prejudices of centuries of ignorance, the tendency of government to favor particular interests, and a misguided desire for perfection."

[Forum of Freedom]

How Can We Prevent World War III?

THE FOUR LEADING VETERANS GROUPS GIVE THEIR ANSWERS

As the month of May brings back Memorial Day . . . who has a better right than veterans to be heard on how to prevent another war? And so Freedom & Union put this question to the American Legion, American Veterans Committee, American Veterans World War II, and Veterans of Foreign Wars. We believe this is the first time their programs for peace have been presented in a forum.

Paul H. Griffith

National Commander, American Legion

THE AMERICAN Legion's formula for the prevention of World War III lies in an American "Peace Through Strength" program.

It means strength in fighting power; strength in firmness of foreign policy, and strength in Americanism in the national dedication to the American ideals of freedom, justice and opportunity for all.

The backbone of the "Peace Through Strength" program must be the nation's preparedness to cope with any eventuality. In an atomic age, such preparedness must include universal military training for national security. This nation must at all times be possessed of youth trained in the scientific, technical and specialist know-how of modern warfare because future national defense must be geared to repel potential lightning-like attacks. There never again will be time to prepare to fight if sudden attack comes. The new weapons of warfare have given offense a tremendous head start. Defense must be brought up to date. It cannot be done overnight. The nation that is not ready to fight in the next war never will have a chance to fight.

Universal military training is designed to give the nation's young men the rudiments of scientific defense which they never would have time to learn if another war should catch them unprepared. This training, therefore, is not only the best insurance for the nation's security but also the best insurance for its young men to survive modern combat.

With such universal training as the basis of future national security, and with the maintenance of an adequate armed force, America also can bring its most effective contribution toward making the United Nations an organization that eventually could close the door forever on future wars. The U.N. can not succeed unless it is backed in its cradle days by an America strong enough to make effective her desire for peace.

It is idle to talk of a firm foreign policy, a waste of breath to condemn appeasement, unless the nation's policy is backed by strength. We never will be able to say what we mean at international conference tables unless we can mean what we say. We can give meaning to our words only by having a military punch behind them.

We also should continue to maintain all-out support of the U.N., with this nation subscribing to a foreign policy which is neither hostile nor subservient to any power on earth—and which scorns appeasement.

—Chase-Statler Photo

Comdr. Griffith: Peace by strength

Once the U.N. is firmly entrenched, once the family of nations is in accord on handling international disputes, once peace is guaranteed, then we can turn toward relaxing our military guard. Until that day arrives, it would be pure folly to rely on diplomatic phraseology to preserve the peace, or to forestall another world war.

Finally, we must have a rebirth of fundamental Americanism in this country. We must as a nation and as individuals go back to the [illegible] of our founding fathers in freedom, justice and equality of opportunity for all. On this foundation our nation has grown to be the greatest and most prosperous in all history. We need to build up the bulwarks of our way of life to repel the tide of foreign philosophies assailing our shores. By ridding ourselves of such un-American elements as Communism, Nazism, Fascism, Nipponism and every other foreign "ism," we can present a solid American front against war and for enduring peace with justice and liberty for all.

Charles G. Bolte

Chairman, American Veterans Committee

THE AMERICAN Veterans Committee (AVC) as an organization of veterans of the second World War is vitally concerned with the problem of preventing a third World War. AVC's fundamental views on the foreign policy of our country were set forth by the delegates to its first national convention last June. They adopted by a virtually unanimous vote an international affairs platform which provided: "As veterans we know that without world peace and understanding we cannot reach our other goals. We support a strong United Nations as the basis for world understanding. We recognize that the unity of the Big Three is essential to a strong U.N. We believe in the development of world government through the U.N. . . ."

Today, nine months after these words were written, it is apparent that the U.N.

Freedom & Union

700 NINTH STREET, NW WASHINGTON 1, DC TELEPHONE: DISTRICT 4171

May 4, 1948

Dear Ed,

You helped create Freedom & Union with your Charter subscription more than a year ago, and I trust you have been pleased with it, and with all the progress it has made toward one of its goals - an Atlantic Union of the Free. As this idea becomes practical politics and enters increasingly into the news in coming months, Freedom & Union will have an increasingly valuable service to perform. No other magazine has its background in this field.

We don't like to lose a Charter subscriber, least of all yourself, just when we can give more value for your money - and will need your subscription as much as ever. (I'm sure I don't need to convince you that it takes more than one year to get a new magazine on its feet.) I like to think that this will bring us your renewal. Certainly, I would greatly appreciate your continued encouragement.

Sincerely,

Clarence

Clarence Streit

mac - photo renew
CBS. change

P.S. A number of friends are renewing for three years at our special $10 rate, which saves a lot of bother - and is most helpful to us. If we advance as much in that period as we have since 1945, what satisfaction they and we shall have in 1951! May I share it with you, too?

You will be interested to know that Chairman Eaton has just invited me to testify May 12 at the hearings on the structure of the U.N. and U.S. relations to it that the House Committee on Foreign Affairs is holding.

July 8, 1960

Mr. Ed Sullivan
502 Park Avenue
New York, N.Y.

Dear Mr. Sullivan:

As Mr. Murrow will be away for the whole of this month at the political conventions, I am answering your letter to him concerning the Boys' Club Pro-Celebrity Day in his stead.

Mr. Murrow has unfortunately strained a tendon in his hand and has been told to give it a long rest. In the circumstances, I regret that he will be unable to join you on August 8.

Yours sincerely,

Sheila Hogg
Secretary to Mr. Murrow

ED SULLIVAN

NEW YORK CITY

July 7, 1960

Dear Edward:

I hope no news is good news! Haven't heard from you relative to your playing in the Boys' Club Pro-Celebrity Day, August 8th at The Huntington Crescent Club, Huntington, L.I., N.Y., benefit Boys' Club of Queens.

Not much hope for a successful event if you are unavailable. 50 top pros of the P.G.A. will be on hand; tee off from one tee only with ten minute intervals between foursomes. Please try and make it. Let me know!

Sincerely,

Ed

Dear Edward:

This year, our Boys' Club Pro-Celebrity-Day will be held on Monday, August 8th, at The Huntington Crescent Club, Huntington, L.I., N.Y.

I sincerely hope your schedule will permit you to play. Your pro will be one of the top 50 money-winners of the P.G.A. tour.

All proceeds are going to The Boys' Club of Queens.

Please try to come. The prestige of your appearance will do much to make the tournament an overwhelming success.

Sincerely,

Ed

Dear Ed,

Could you do me a tremendous favor, in a hurry?

That's a fine way to start a letter, but ---

I'm doing a Christmas book for McGraw-Hill and I'd like to have you rush me a particular Christmas holiday recollection of your own - either when you were a youngster or, perhaps, a Christmas experience in your broadcasting career. It would be credited, of course, to you.

This means a great deal to me and I would appreciate it deeply.

Sincerely,

Ed

August 18, 1958

Dear Ed,

The network has proposed that on Sunday, September 21, our show be used as a springboard or representation of the exciting fall schedule on the CBS TV Network.

While the network and I are well aware that you hardly need any advance publicity, Edward, naturally I'd love to have you on our September 21 show, for my own selfish purposes. I'd like to do the interview type of thing that was done so successfully by you before. So please, Edward, remembering our old foxhunting days together, say yes. Otherwise you have put me in a hell of a situation and God will not forget it.

Your loving uncle

ED

(Dictated to Sheila Hogg)

Date September 16, 1958

Mr. Ed Sullivan
485 Madison Avenue
New York, New York

I hereby agree to render my artistic and professional services on "THE ED SULLIVAN SHOW", a television show advertising Lincoln-Mercury & Eastman Kodak products and/or services, to be broadcast over such television facilities as you may elect, on the following terms and conditions:

Date(s) and Time(s) of Performance: 9/21/58 8:00 - 9:00 PM

Rehearsal: To be advised

Dress or Costume: OWN

Compensation: TWO HUNDRED AND TEN DOLLARS AND NO CENTS. ($210.00) Payable to: EDWARD R. MURROW

In full payment for my services and the rights and privileges granted you hereunder, you shall pay me the compensation specified on the face hereof not later than 10 days after the work week during which my services will have been rendered, subject to the deduction of such taxes and withholdings as are authorized or required by law. There shall be no obligation on your part to produce or broadcast the program or to use my services or materials, if any.

Additional terms: I will render my best services in this engagement and at rehearsals and will abide by all reasonable rules and regulations of the sponsor, its advertising agencies, Columbia Broadcasting System, Inc., and the producer of the program. You, the sponsors and their advertising agencies may open and answer mail addressed to me relating to the program, provided that all such mail relating to me and intended for me, or copies thereof, shall be turned over to me within a reasonable length of time.

I agree that from three weeks prior to my contracted date of appearance on THE ED SULLIVAN SHOW, I shall not appear, perform, or render any services in connection with any other television program; nor shall I render any services of permit the use of my name or likeness during this period, in connection with any radio program, or any other activity which advertises or promotes any products or services competitive to the products or services of the sponsor above-named. I agree that for a period of seven (7) days following my engagement hereunder, I will notappear, perform, or render any services in connection with any other television program, provided however, that if my compensation for this engagement shall be less than $500.00, the provisions of this paragraph shall be applicable only during the actual rehearsal and broadcast period.

The program hereunder may be originally broadcast either live or by recording over the facilities arranged by and for you. The term "recording" as used here in shall mean and include any recording or recordings made, whether before or during a broadcast transmission, by electrical transcription, tape recording, wire recording, film, motion picture film, or any other similiar or dissimiliar method of recording television programs, or parts thereof, whether now known or hereafter developed. Your right to make such recordings shall be without any obligation on your part to pay me any additional compensation. All recordings, as between you and me, shall be and remain your sole property with full right in you and your assigns to broadcast, license to be broadcast and/or exhibit in

any media and recordings and excerpts therefrom at any time and from time to time for purpose of file, reference, audition, sales, promotion and publicity, and for delayed, repeat and supplemental broadcast purposes, provided, however, that the broadcast and/or exhibition of said recordings for delayed, repeat and supplemental purposes shall be subject to the restrictions contained in the AFTRA Code in effect at the time such recording is made, except as AFTRA may otherwise permit in writing. I will, if required by you, for any reason whatever, re-enact the performance, in whole or in part, in connection with any recording of all or any portion of the program (which you may deem desirable) , provided that such reenactment of my performance shall take place within seven days after the original breaccast of the program at a time which does not conflict with any other bonafide commitments, and provided, further, that you shall pay for my services in connection with such reenactment such additional compensation as may be required by the said AFTRA Code.

You, CBS, the sponsors and their advertising agencies shall have the right, and may grant to others the right, to disseminate, reproduce, print and publish my name, likeness and biographical material concerning me for publicity and promotion and for advertising and purposes of trade, but not for the endorsement of any product or service.

I shall indemnify Producer, CBS, the sponsors and their advertising agencies, and all stations broadcasting the program, or any recording against any and all claims, damages, liabilities, costs and expenses (including reasonable attorney's fees) arising out of the use of any materials, ideas, creations, and properties (herein called "material") whether or not required of me, furnished by me in connection with this engagement, and any ad libs spoken or unauthorized acts done by me in connection therewith. You shall similarly indemnify me in respect to materials furnished by you, and acts done or words spoken by me at your request. Each of us will give the other prompt notice of any such claims and/or legal proceedings (and shall send a copy of such notice to AFTRA) and shall cooperate with each other on all matters covered by this paragraph.

If this agreement requires, as an express additional provision, that I furnish materials (herein called "required materials") in connection with my performance hereunder, I shall submit such required materials to you at such time prior to performance thereof as may be reasonably designated by you, and such required materials shall, as between you and me, unless otherwise expressly provided in this agreement be and remain the property of you.

If the broadcast of any program hereunder is prevented by governmental regulation or order, or by a strike, or by failure of broadcasting facilities because of war or other calamity such as fire, earthquake, hurricane, or similar acts of God, or because of the breakdown of such broadcasting facilities due to causes beyond your reasonable control (such as the collapse of the transmitter due to structural defects), you shall be relieved of any responsibility for the payment of compensation for the program so prevented; provided that in such case Producer shall reimburse me for all out-of-pocket costs necessarily incurred in connection with such program. In addition I shall be paid the full applicable rehearsal rate for all hours rehearsed prior to notice of cancellation. The same consequences shall ensue if the program time is preempted by a Presidental broadcast and notice of cancellation for such purpose is given Performer promptly upon such notice having been received by Producer. Where the program time is preempted to broadcast an event of public importance (other than a Presidential broadcast) or where the program is cancelled or prevented for any reason other than those stated above, or where insufficient advance notice has been given under the preceding sentence, Producer shall pay Performer his full contract price for the program so cancelled or prevented.

I agree that the time and date of performance(s) and/or rehearsal(s) as scheduled above may be changed provided such change does not conflict with any of my existing contractual commitments.

Notwithstanding any provision in this agreement to the contrary, it is specifically understood and agreed by all parties hereto:
(a)That they are bound by all the terms and provisions of the applicable AFTRA CODE OF FAIR PRACTICE FOR TELEVISION BROADCASTING. Should there be any inconsistency between this agreement and the said Code of Fair Practice, the said Code shall prevail; but nothing in this provision shall affect terms, compensation, or conditions provided for in this agreement which are more favorable to members of AFTRA than the terms, compensation or conditions provided for in said Code of Fair Practice.
(b) That the artist is covered by the provisions of Paragraph 102 of said Code entitled "AFTRA Pension and Welfare Funds."
(c) That Performer is or will become a member of AFTRA in good standing, subject to and in accordance with the Union Shop provision of said Code of Fair Practice.
(d) All disputes and controversies of every kind and nature arising out of or in accordance with this agreement shall be determined by arbitration in accordance with the procedure and provisions of the said AFTRA Code of Fair Practice.

This agreement, when executed by Performer and Producer, shall constitute the entire understanding between them and shall be construed according to the laws of the State of New York applicable to contracts fully to be performed therein.

Very truly yours,

Artist

THE ED SULLIVAN SHOW

Dear Ed,

With reference to our telephone conversation/telegram, as part of a 10th Anniversary celebration program to be broadcast on Sunday, June 22, 1958, we are planning to use an excerpt of a kinescope (television) recording of a performance given by you on the above program of Oct. 16, 1955.

1:00 Minute Interview -Edward R. Murrow-Ed Sullivan

We should like very much to include this excerpt of your performance on the Anniversary program, and we would appreciate it if you would indicate your consent to its use by signing and returning to us the attached carbon copy of this letter.

To give this 10th Anniversary program the importance it deserves, we also need your consent to the use of your name and likeness in publicising this broadcast.

Thank you very much for your cooperation and permission.

Sincerely,

Ed Sullivan

Dear Mr. Murrow:

The Friars are honoring Ed Sullivan with a Testimonial Dinner at the Waldorf Astoria, Thursday evening, March 15th at 7 P. M.

I know you must be aware of the Testimonial Dinners that the Friars Club, over a period of 50 years have given. I perhaps, need not remind you, that they have included such men, from George M. Cohan, to Will Rogers and Caruso, et al, all the way down to our last few years, one to Jack Benny, Bob Hope, George Jessel and Martin & Lewis.

As you know these dinners have not only been delightful affairs with the attendant wide publicity and television coverage, but also serve the purpose of helping the Friars do much of their charity and welfare work.

We would deem it a great honor to have your presence on the dais, to make this occasion the most memorable and thrilling evening in the annals of Friar history.

Please write us of your acceptance.

With kind regards and best wishes, I am,

Respectfully yours,

Mr. Edward R. Murrow
CBS, 485 Madison Avenue
New York, New York

Dear Mr. Murrow:

We are honoring Ed Sullivan with a spectacular Testimonial Dinner at the Waldorf Astoria, March 15, 1956.

We have assembled the outstanding names in Show Business, Industry and Arts for our Honorary Committee, and we will deem it a privilege and honor to have your name also on this Honorary Committee.

Please inform us as soon as possible as to your disposition.

The proceeds of this affair will go to the Friars Relief Fund for indigent members of the theatrical profession, as well as to Ed Sullivan's favorite charity.

With kindest personal regards, I remain

Sincerely yours,

Jack Benny

CBS NEWS SPECIAL

"Harry S. Truman, 1884 - 1972"

as broadcast over the

CBS TELEVISION NETWORK

Tuesday, December 26, 1972

7:30 - 8:30 PM, EST

PRODUCED BY CBS NEWS

REPORTER: Walter Cronkite

EXECUTIVE PRODUCER: Burton Benjamin

THIS IS RECYCLED PAPER

WALTER CRONKITE: Harry S. Truman, 33rd President of the United States, is dead. He entered the White House ill-prepared, humble and afraid. "If you fellows ever pray," he told reporters, "please pray for me." Years later, he reminisced with CBS News Correspondent Edward R. Murrow.

MURROW [1957]: Well, Mr. President, in a period of three months, you became President; the war in Europe ended; Japan surrendered; the nuclear age began; the United Nations was created. No man in history ever rode such a tiger in such a short time. How did you manage it? How did you keep your equilibrium?

TRUMAN: All my life, whenever it comes time to make a decision, I make it and forget about it and go to work on something else. And when these things came before me as President of the United States, I made the decision on them and went into the next thing. You never have time to stop. You've got to keep going, because there's always a decision just ahead of you that you've got to make.

CRONKITE: This hour might be called Harry S. Truman on Harry S. Truman. Much of it is in Mr. Truman's own words, based on a conversation he had in 1957 with Edward R. Murrow. Some of the conversation was broadcast in 1958, some is being broadcast tonight for the first time, in this hour on the 33rd President of the United States.

ANNOUNCER: This is a CBS NEWS SPECIAL: "Harry S. Truman, 1884-1972".

CRONKITE: Harry Truman was born in this house in Lamar, Missouri. When he was six, the family moved to Independence, where Harry grew up; worked at odd jobs; became a history buff; married his childhood sweetheart, Bess Wallace; lived in this house; and entered politics, a candidate of the Pendergast machine.

When FDR, worn down by war, died in office, his hand-picked Vice President of little experience inherited the Presidency - and the world's problems.

Peace in devastated Europe. No President had so much to do in so short a time. In his first term alone, the decisions he made altered the world. He signed the United Nations charter: first proposed at Dumbarton Oaks, later amended at Yalta to include the veto, and finally hammered out at San Francisco.

With Secretary of State James Byrnes he sailed for Europe and his first meeting with the Allied war leaders at Potsdam, Germany. Behind him, the war's topmost secret was about to be revealed. In the New Mexico desert, the first atomic bomb was soon to be exploded. At this conference to plan the peace, fateful decisions - and, in retrospect, errors - were made. Truman felt he must keep the Yalta agreements; he believe Stalin would also. Here was laid the groundwork for the Iron Curtain, a divided Germany, a divided Korea. Here Truman learned that the Alamogordo test had been successful. From here the unconditional-surrender ultimatum was issued to Japan.

When Japan ignored it, Truman decided to use the atomic bomb. Truman announced it from the cruiser Augusta on his way home from Potsdam.

TRUMAN [1945]: A short time ago, an American airplane dropped one bomb on Hiroshima and destroyed its usefulness to the enemy. We are now prepared to destroy more rapidly and completely every productive enterprise the Japanese have in any city. We shall destroy their docks, their factories and their communications. Let there be no mistake: we shall completely destroy Japan's power to make war.

CRONKITE: Three days later: a second bomb, and the war with Japan ended. Peace was signed aboard the battleship Missouri in Tokyo Bay. For the first time in 14 years, there was no fighting in Asia. General Douglas MacArthur was chosen by Truman to head the Japanese Occupation.

Next, in the face of open opposition by the military, Truman unified the Army, Navy and Air Force into one Department of Defense.

When Britain had to withdraw its aid from the Government of civil-war-torn Greece, Truman acted promptly. He asked Congress for - and got - $14-million to help Greece fight its Communist-led rebels, thus setting a precedent for U.S. intervention around the world to halt Communist imperialism.

Called "the greatest innovation of the 20th century," the Marshall Plan gave temporary economic aid based on each country's individual needs. It was offered to all Europe, but only the Western countries accepted. Later, Truman introduced Point Four: technical aid to underdeveloped areas.

Truman promptly recognized the newly independent state of Israel - making as many enemies among Arab partisans as friends among supporters of a Jewish state.

A new Soviet threat: all roads to Berlin, deep in the Russian Zone, were blockaded. Truman immediately ordered an airlift to supply and provision the city. The blockade and airlift lasted 11 months.

At home: political troubles. The Democratic party thought Truman could not win. But there was no other candidate.

HOUSE SPEAKER SAM RAYBURN [1948]: Harry S. Truman having received the majority of all the votes cast, I therefore declare him the Democratic nominee for President of the United States.

CRONKITE: "Give 'em hell, Harry," shouted from the crowd, set the campaign's tone.

TRUMAN: I accept the nomination. Senator Barkley and I will win this election and make these Republicans like it, don't you forget that. If you give the Republicans complete control of this government, you might just as well turn it over to the special interests and we'll start on a boom-and-bust cycle and try to go through just what we did

in the twenties and end up with a crash, which in the long run will do nobody any good but the Communists.

CRONKITE: Truman - almost alone - had no doubts. In a whistle-stop campaign, he confounded pollsters, politicians, commentators and newspapers - especially one. Mr. Truman had his moment of triumph.

TRUMAN: And along about 12:00 o'clock I happened to wake up for some reason, and the radio was turned on on the National Broadcasting Company and Mr. Kaltenborn [laughter] and Mr. Harkness were reporting the situation as it then developed. And Mr. Kaltenborn was saying, "Well, the President is a million votes ahead in the popular vote. We have yet to hear from . . ." [Laughter]

CRONKITE: In his second term, Truman signed the North Atlantic Treaty. Like Hamlet, his troubles came in battalions: Communist North Koreans invaded South Korea. Truman sent U.S. troops to the rescue as a "police action" to defend "the principles of the United Nations." Despite the beginnings of friction with General MacArthur over purpose in Korea, he flew to Wake Island that fall to discuss policy and award the General a medal for the Inchon landing maneuver which had turned the tide in Korea. But friction worsened. The question of ultimate authority was raised. Truman relieved MacArthur of duty.

For Truman, two terms were enough. By then he had made enemies among industrialists, taxpayers, Congressmen, the press, the military and the mothers of soldiers. He campaigned vigorously for Adlai Stevenson but was not surprised when Eisenhower won. He played his part in inauguration and then, with his wife and daughter Margaret, went home happily to Independence.

TRUMAN [1953]: I can't adequately express to you my appreciation for what you are doing. This is the first time I ever had the experience of being sent home in a blaze of glory.

CRONKITE: Mr. Truman was interviewed by Edward R. Murrow for the CBS News series "See It Now". It was photographed at Amorada [sic - should be Islamorada] Florida in 1957, broadcast in 1958.

MURROW: Mr. Truman, would you think that the phrase "Give 'em hell, Harry" helped you considerably in 1948?

TRUMAN: I don't know whether it did or not. I don't know who originated that, but I always told them when they would say that to me in a crowd that I never did give anybody hell. I just told the truth on them and they thought it was hell.

MURROW: Mr. President, you have talked frequently about the necessity for professionals in public life and in politics. What are the essential qualifications of a successful politician?

TRUMAN: It's just as necessary for a man who understands politics to be in a position of operating the government, which is founded on

politics. A free government is a government by politicians, and a politician is a public relations man who knows how to get along with people. I think the most honorable title that can be given to a man is to say that he is a politician, and I've always said that the great statesmen you read about were all politicians or they would never have been statesmen. They become statesmen after they're in their graves.

MURROW: Let's go back to your early childhood. What was the first job you had?

TRUMAN: I imagine I must have been about twelve or thirteen. I got a job washing windows and mopping floors and wiping off bottles for a drug store at home. An old fellow by the name of Jim Clinton ran the drug store and I used to go up and open up the store and mop the floor and straighten everything out, and we had a great many people in our home town who would not go into a saloon. There were a dozen saloons around the Square at Independence, and they'd come in for their early morning eye-opener behind the counter and would put a dime on the prescription case and pour their own, and then go on out. And, of course, I wasn't supposed to have anything to do with that, but I saw it, and I found out that there were a great many of our leading citizens who were great uplifters publicly, but they liked to do just like the old men who went in the saloons openly. And I got quite a kick out of that at twelve or thirteen years old. And I'll never forget the first three silver dollars I got in payment for that first week's work. That's the most important money I ever earned.

MURROW: Where did your military service begin?

TRUMAN: I had joined the National Guard in the organization of Battery B on June the 14th, 1905. I was a charter member of the Battery and a private, and they gave me a nice, beautiful blue uniform with a red cord around the shoulders and red stripes down the breeches legs, and I took it out and showed it to my old grandmother whose house had been burned by the Federals in the Civil War, and she looked at it, and said, "Well, Harry, that's a very beautiful uniform, but that's the first time a blue uniform's been in this house since the Civil War. Don't bring it back here." And I didn't.

MURROW: Well, speaking of uniforms, I am told that at one point just before we got into World War II, you went to see General Marshall and asked to go back in the Service. Is that right?

TRUMAN: Yes, that's correct. I was a Senator at that time and had been a Colonel of Field Artillery since 1927. This was in 1940 or '41, and I went down to see the General and told him that I'd spent my time since I'd been in the Reserve Corps training these young men in field artillery and teaching them how to shoot, and that I'd like very much to go back into the Service in command of an artillery group, and I felt like I owed it to the country. The

General pulled his spectacles down on his nose like that, and he said, "Mr. Pres-- Senator, how old are you?" And I said, "I'm 56." He says, "Senator, you're too damned old. You go on back and stay in the Senate." I says, "I'm four years younger than you are." He said, "Yes, but I'm already in." So, I went back and stayed in the Senate.

MURROW: What did you do immediately after your discharge in 1919?

TRUMAN: I went back to the farm and stayed there for most of the next three or four years except that Eddie Jacobson and I decided to open a-- a men's furnishing store on West 12th Street, and did. And I furnished the money and Eddie furnished the brains, and we had a wonderful business the first year and a half, and then Mr. Mellon began his wringing out process by making high money just as we're going through now, and I went busted as one of the little businessmen. I never forgot it.

While that process was going on, I was elected judge of the county court for the Eastern District of Jackson County with four other fine men in the county in the race in the primary. One of them was already a county judge. One of them was a leading banker. One of them was a leading contractor, and I was a busted merchant. But I made a campaign on the basis of seeing as many people as possible in the county, and I defeated all four of them and became the county judge for the Eastern District. Then I got into a political fight and was defeated in 1924 by a nice old man who was a harness maker in Independence and had made a set of harness for my brother and myself when we were kids for a pair of little red goats we drove to a wagon. And then in 1926, I was elected Presiding Judge of the County Court of Jackson County by 16,000 votes; and then four years afterwards I was elected by 55,000, and when I ran for Senate, I carried the county by a hundred and thirty-two thousand, so they didn't feel badly about the manner in which I'd carried out of the business of the county.

MURROW: Mr. President, I must be a bad reporter because I have neglected to ask you when you learned to play the piano.

TRUMAN: Well, when I was about, oh, I guess I must have been eight or nine years old, we succeeded in raising enough money to buy a piano and then I began to take a few piano-- piano lessons from Mrs. E. C. White, who was a pupil of Leschetizky. I got a viewpoint on good music which was a wonderful asset to me as-- in an educational way, but when I was about fifteen or sixteen years old, I decided that it was a sissy thing to be a piano player, and I quit.

MURROW: How was it that the "Missouri Waltz" became rather your unofficial theme song, Mr. President?

TRUMAN: I hate to go into the details on that, but the "Missouri Waltz" was composed by a man from Iowa in 1914, and is called "Hushaby My Baby". It's a ragtime song, and if you let me say what I think, I don't give a damn about it, but I can't say it out loud because it's the song of Missouri. It's as bad as the "Star Spangled Banner" so far as music is concerned.

MURROW: Well, sir, I assume it would be true to say that you achieved national prominence through the Truman Committee. What would you say its major accomplishments were?

TRUMAN: Well, that committee was organized for the purpose of helping the United States Government to win the war - to be an asset to the Commander-in-Chief, the President of the United States, and to General Marshall, who was the organizer of the Armed Forces of the United States, and it was handled in just that way.

We made investigations of construction programs, and when things were in a tangled condition and action could not be had on the construction of, we'll say, training planes and engines for training planes and for fighter planes and for tanks, we'd look into the matter without the idea of headlines or publicity, and try to correct the situation.

MURROW: Do you have the feeling, Mr. President, that occasionally the Congressional power of investigation is abused or stretched too far?

TRUMAN: Yes, I've-- I've always thought that there are times when the investigative power of the Congress of the United States, both in the House and the Senate, has been abused. It's a power that's absolutely essential, however, to get intelligent legislation, and the objective of the investigation is for the purpose of legislation. Legislation came about as a result of our own investigations in this special committee, legislation that was of great benefit to the country.

MURROW: Isn't it true that the first time you heard of the atom bomb was when Secretary of War Stimson asked you to call off an investigation of Oak Ridge?

TRUMAN: I had started an investigation at Oak Ridge and at Pasco, Washington, and the Secretary of War called me up and said that he wanted to talk to me about that, and I told him I'd come down and see him. He said, "No, I'm coming down and see you," and he came down and sat down in my office and said, "I want to say to you, Senator, that this is one of the most important things that's ever been done in the history of the world. We can't afford to have a public investigation of it, and I'd appreciate it very much if you would call off your dogs and not have the investigation." I said, "Mr. Secretary, if you tell me that, I know it's true, and I'll call them off." And I did.

MURROW: You were prepared to nominate Jimmy Byrnes for Vice President, weren't you?

TRUMAN: Yes. Jimmy called me from Washington and said the President had decided that he'd like to have him for Vice President, and asked me if I would nominate him, and I told him that if the President wanted him I'd do the best I could. I didn't know I'd be any asset to him as a-- as a nominator, but then if that's what he wanted, I'd try to do it. And I found out afterwards that there had been a meeting in the White House a week before that in which it had been decided that the Senator from Missouri was the favorite of the President, but I didn't know about that and never found it out. And a short time after Byrnes had called me, just before I left for Chicago, Senator Barkley called me and asked me if I'd nominate him, and I told him I couldn't nominate two of them, that I'd told Byrnes I'd nominate him.

MURROW: Had you prepared a speech in nomination of Mr. Byrnes?

TRUMAN: Yes, I had a good speech ready. I think it would have nominated him.

MURROW: You never heard directly from Mr. Roosevelt, himself, that you were his choice?

TRUMAN: Not until Thursday afternoon when the Vice President was to be nominated the next day. They had a meeting of all the Democratic party leaders in the Blackstone Hotel, and asked me to come over, and Bob Hannegan had placed a call for the President, and the President's question - as soon as it was connected - the phone was between twin beds, and you know the President really didn't need a phone; all he needed to do was to raise the window. I could hear every word he said. He said, "Bob, have you got that fellow lined up yet?" Bob said, "No, Mr. President, he's the contrariest man I ever had anything to do with." "You-- Bob, you tell him that if he wants to take a chance on losing the election and perhaps losing this war, that's his responsibility," and he hung up. Well, I was sunk. I didn't know what to do hardly. I walked around the room, and finally told him I'd do it, and I'd told all my friends that under no circumstances would I be a candidate, but when the President made a statement like that, I had to do something about it, and I couldn't find anybody to nominate me. I finally found my colleague, Bennett Clark, who was the Senior Senator from Missouri, and he agreed to nominate me.

MURROW: Would-- Would it be fair to say that some of your subsequent disagreements with Mr. Byrnes may have stemmed from the fact that he had the feeling that he might, or rather that he should, have been the Vice Presidential Nominee?

TRUMAN: Well, I don't know. There might be something in that, but-- I never really thought that was the case. I think that Jimmy had a superiority complex in reference to the Junior Senator from Missouri, and that he felt maybe I was not capable and did not know exactly what ought to be done, and that it was his duty to take it over and do it like it ought to be done. But when a fellow becomes President, he really knows where he's going, and I had to tell Mr. Byrnes that I was the President and he'd have to act as Secretary of State at my direction. And I think that's the principle thing that caused the disagreement.

MURROW: You have been quoted as saying that you never liked yes-men around you.

TRUMAN: I don't. I don't want men around me that won't tell me the truth, and as they see it, because you can't operate if you have a bunch of men who put you up on a pedestal and say everything you do is right, because that can't be possible.

MURROW: Exactly-- Exactly what did you feel when you were told that you were President?

TRUMAN: Well, I was shocked, of course, because I had hoped to serve out my term as Vice President and go back to the Senate. I had the most pleasant time in my political life in the Senate of the United States. And of course I was shocked when I found out that I had become President of the United States in the midst of the war which was not over yet - the war with Germany and with Japan was still going on - and it was overwhelming almost for-- to step right in and take charge of a situation with which I was not completely and entirely familiar, although I tried the best I could to inform myself on the subject, and my special committee gave me a lot of information behind the lines that I otherwise wouldn't have had. But I was not familiar with foreign affairs because I was not on the Foreign Relations Committee of the Senate.

MURROW: Mr. President, when World War II ended, we then proceeded to dismantle the greatest military machine that had ever been constructed. I know that you were concerned about it. General Marshall was concerned about it. Was there anything that you could have done that you didn't do to prevent it?

TRUMAN: Nothing whatever, for the simple reason that every mama and every papa and every kid's grandmother in the country wanted him home at once, and every kid wanted to go home at once, and we did the best we could. We tried to have a discharge program on a merit basis. That is by points, and the thing began to break down, and we just had to face it and let it happen, but it was a disastrous thing to do.

MURROW: You moved immediately to recognize Israel after it was created, didn't you?

TRUMAN: That's correct.

MURROW: Do you have any regrets about that?

TRUMAN: Not the slightest. I just carried out the agreements that had already been made on the subject, and I've never been sorry for it because I think it's necessary that there be a State of Israel. Israel can be made into an industrial state which will supply the industry for all these food-producing countries, and there can't be anything then but peace. And when you get modern machinery and know-how to work those pieces of land that are still as rich as they ever were, with their tremendous oil reserves, there isn't any reason in the world why that shouldn't be a center of the civilization of the world again as it was in the beginning.

MURROW: Of course, one precondition of that would be that the Arabs would have to recognize that Israel is there to stay.

TRUMAN: Of course, and it's going to stay there no matter what they think or what they do, because the Israelites will take care of themselves as they always did in historic times. But the thing is that they ought to be peaceable, loving neighbors. They're first cousins anyhow, and there's no use in shooting each other over that.

MURROW: At what point in that '48 campaign did you feel that you had it won?

TRUMAN: Well, I thought I could win that campaign after the acceptance speeches of Senator Barkley and myself in Philadelphia at that convention - the night the convention adjourned. The reception which we received at that convention showed me that the people could be convinced, and I left that convention fully of the opinion that if I could see enough people I'd win that election. And that's what happened. And I wasn't being egotistical about it, because I had been through half a dozen campaigns before that on the same basis, where I didn't have a Chinaman's chance to win the election.

MURROW: You also said, I think in 1948, that you didn't have a very high opinion of pollsters.

TRUMAN: I still don't.

MURROW: You still don't? Why not?

TRUMAN: Well, I'll tell you why. I can take you down the street here and we'll promiscously stop a half a dozen people and ask them a question and without thinking they'll answer you. They'll go home and think about that, probably, and in all probability they'll change their minds, so that, when a man goes into the polls on Election Day - or a woman, particularly - you never know what she's going to do, and I don't think any pollster can find out. I think the best poll there is is the count after election.

MURROW: Do you have the feeling that newspapers influence votes very much?

TRUMAN: Not now. I think in the past they did.

MURROW: Do you feel that during your political career there has been very much distortion in the reporting of political news?

TRUMAN: I don't think there's been an intentional distortion, but the-- a fellow can't help but express his opinion when he's discussing things political, and of course, the vast majority of the sources of the news were slanted in the other direction, and editorially I didn't expect anything else. But the men who report the news - the working press, I call them - make an honest effort to report the thing as it happens. I think if there's any distortion, and there is a great deal, the distortion happens with the blue pencil and the news editors in the office. I don't know enough about the radio and television business to make a comment on that. I'm talking about newspapers now. I never had any complaint because it didn't make any difference what they said about me-- if I could keep the people from believing it, it didn't make any difference.

MURROW: Well, Mr. President, what is your feeling about so-called Madison Avenue influence, the tendency to have campaigns taken over by advertising agencies?

TRUMAN: Well, it's just like selling soap, and it's not right. It doesn't work. You can't sell human beings. Slavery's gone out of fashion. People usually understand what those people are talking about,and they don't fool anybody but themselves. All my experiences as candidate for office, I never did have money enough to run. In the campaign of 1948, the train got stopped in the station on several occasions because we didn't have the money to pay the fare. When I campaigned for the Senate, both times, we never did have money enough to meet the necessary expenses. We had no chance at all in those campaigns to talk over the radio or anything of the kind, and we won just the same. I'm not so sure that people have the respect for the big money that everybody thinks they have, because they like to vote for a poor man sometimes.

MURROW: In the 1948 campaign you were apparently quite prepared to risk your future political career on the matter of Civil Rights.

TRUMAN: That's correct, and I did.

MURROW: Do you think it helped you?

TRUMAN: I don't know whether it helped win the election or not, but it was right and we won the election. You'll have to draw your own conclusions on that.

MURROW: Mr. President, in your opinion, how long will it take to implement the Supreme Court's decision on segregation?

TRUMAN: I think it will take some time. It's a matter to some extent of education and understanding our position in the world. I think there are just as many wise men south of the Mason and Dixon line as there are north of it in proportion to the population, and eventually those wise men will prevail. We can't have one face at home and another one abroad.

MURROW: What did you fail to do as President that you would like to have done most, Mr. President?

TRUMAN: Well, there are a great many things that I would have very much liked to have accomplished while I was President of the United States. I think the two most important that I was not able to accomplish were a health program and an educational program for the people of the United States. The ordinary man with a family and a middle bracket income is not able to have the hospitalization and the medical care that the fellow who has a great income can afford. And on the educational proposition, it's my opinion that equal education means, in the end, equal opportunity for everybody no matter what his race, color or creed may be. And if he has the educational background to understand the history of the human race, and what happens when certain things are not done, he'll be more likely to join in with an effort to create a situation where we'll have equality of opportunity for every citizen in this great republic of ours. And we must do that for the simple reason that we can't be the leaders of the free world and draw a color line on opportunity; and that was the two things that I did not get finished.

MURROW: Which act of yours do you think will be regarded by historians as the most important in your Administration?

TRUMAN: Well, the-- the action that was taken with the Berlin Airlift, and the Greece and Turkish thing, and the Korean affair. I think you'll find that that established beyond a doubt that the President has the power to meet an emergency when it comes up, and he should take the bull by the horns and meet it when it's necessary.

MURROW: But in terms strictly of the Constitution, Mr. President?

TRUMAN: That's Constitutional. That's in his capacity as Commander-in-Chief, as set out in the Constitution of the United States.

MURROW: I was rather expecting that you might have suggested it would have been the dismissal of General MacArthur in terms of re-establishing or rather establishing again the control of the civilian over the military.

TRUMAN: That was only following a precedent. If you remember, James K. Polk had the same sort of trouble with some of his generals in the Mexican War; and Abraham Lincoln had to fire General after General. McClellen, particularly, stands out as an example in comparison with the MacArthur thing. And the Constitution provides that the President is the Commander-in-Chief of the Armed Forces of the United States, and he-- when he acts as Commander-in-Chief, he's got the right to hire and fire Generals any place he pleases, and there was nothing new about that at all. That was only the establishment of a precedent. When the Commanding General of the Far East was insubordinate, he got relieved the same as any other General would under the same circumstances.

MURROW: How did you decide to remove General MacArthur, and whom did you consult, Mr. President?

TRUMAN: Well, General MacArthur had been becoming rather insubordinate as the Pro Consul in Asia, which he considered himself, and when he disobeyed orders directly, it became necessary to find out the best thing to do about it. MacArthur had been making statements on policy in the government, which he had no right to do. The policy is made at headquarters in Washington by the President and his Cabinet. That is, the foreign policy of the United States is made entirely by the President with the assistance of the Secretary of State. General MacArthur sent an article to Dave Lawrence's magazine, and didn't send a copy to the White House or to the President. I happened to find it in the press room of the White House, and I suppressed it because it was not in line with the policy of the United States Government. And I sent him word that he couldn't do a thing of that kind, and then he was willing to have the matter withdrawn. And a short time after that, he did the same thing over again, completely contrary to orders, and he had acted that way in several instances not only with me but with President Roosevelt. And I stood it as long as I could, and I made up my mind the best thing to do with him was to give him the McClellan treatment - that was, to retire him. General Marshall said he hoped I'd postpone the situation until he had had a chance to read the-- the messages over the last two years, and he also

made the statement that he had matters pending before the Congress which might be affected by it. General Bradley said he ought to be fired. He's a good military man. Averell Harriman, the Ambassador, said if he were in my place, he'd have fired him long ago. I had my mind already made up, but I didn't tell them. And then I told them to come back in two days, or the next morning, I forget which it was. And they came back, and General Marshall had read all the messages by that time, and he made the statement to me. He said, "Mr. President, you ought to have fired him two years ago, or at least six months ago," he said. And I then discussed the matter with the other people. Dean Acheson still thought it was poor politics and bad business to fire him. And then I issued the order, had General Marshall write the order out, himself, in longhand, which was to be forwarded to Frank Pace, who was Secretary for the Army, and who was then in Korea. We couldn't reach Frank Pace at all, and General Bradley came over to see me early Monday morning. This all happened on Friday - Thursday, Friday and Saturday. General-- General Bradley came to see me and said that some Tribune reporter had obtained a leak in the Pentagon and he thought the whole thing would be released. "Well," I said, "send a direct message to the General and tell him he's relieved. But inform him also that if we'd have been able to get hold of Frank Pace, we'd have had it delivered in person." And that's how the whole thing came about. I never had anything personal against the General. He's a great military man, and it's a terrible thing when you have to do that to a man who's been in the military service for 51 years, but he brought it on himself, and it had to be done.

MURROW: Some of your critics claim that some of your controversial decisions were prompted by petulance.

TRUMAN: Oh, I never acted when I was out of sorts, because a man does some things that he ordinarily wouldn't do. I think about the only time that I ever acted when I was really out of sorts was when I told a music critic where to get off when he said some mean things about my daughter. If I had thought about it a while, I probably wouldn't have done it.

MURROW: Much of the criticism, perhaps the major criticism, of you has been aimed at your continuing loyalty to friends even when they were in trouble. And particularly, I remember your attending Mr. Pendergast's funeral.

TRUMAN: I imagine that was the truth, but I've always felt that a man's career is based on his friendships and his loyalty to those friends. I always believed in loyalty to friends unless they did something radically wrong, which required prosecution or something like that. I never fronted for any of them when they got into trouble with the law, but I always felt that when a fellow was in trouble was the time that he needed his friends most, and then's when they should stick with him.

MURROW: In 1952, the Republican slogan was "Korea, Corruption and Communism." What about communism in the government?

TRUMAN: I don't think there was ever enough communism in the government to create that comment for the simple reason that there are-- there is complete loyalty with the vast majority of the more than two million employees of the United States government. And in all their hunting around, and in all the charges that were made, there was never a single one of the demagogue, -gogic charges proved, that they never found a single Communist in the place where the demagogue said it was. That demagogue's McCarthy, if you want to know who I'm referring to.

MURROW: Speaking of demagogues, what's the best way to deal with them?

TRUMAN: With ridicule. Ridicule is the best thing in the world for a demagogue because he is a monumental egotist or he wouldn't be one, and when you can stick pins in him and let the wind out and get people to laughing at him, he's through.

MURROW: Do you believe the government has any right to inquire into the political affiliations of government employees who are in non-sensitive jobs?

TRUMAN: I think the government employees ought to have exactly the same liberties that the first ten amendments of the Constitution guarantee, and I have said time and again that I thought the Un-American Activities Committee in the House of Representatives is about the most un-American thing in America.

MURROW: Did you refer to Alger Hiss case as a red herring?

TRUMAN: No. The situation was such that I was trying to arrange some very important matters with the Congress, and in order to prevent the consideration of those things, these charges were made that the government was lined with Communists. And somebody asked me if that wasn't a red herring to keep from putting my program over, and that's where the conversation came from. I didn't initiate the thing at all. Some questioner in the audience- and he was only there once - asked that question, but he asked a question that fitted the bill exactly, in my opinion.

MURROW: I wonder if you would like to give your impressions of some of the people you've had to deal with.

TRUMAN: Fire away.

MURROW: First, Churchill.

TRUMAN: Churchill was one of the most agreeable men I ever met. He's a hard bargainer. He likes to argue about everything, but when it comes right down to brass tacks, he's always on the right side. It would take a little more time to do business with him than it did with the others, but when he got through you knew very well that the British would keep their agreements, which they always do.

MURROW: What-- What about General DeGaulle?

TRUMAN: General DeGaulle was hard-- a hard person to talk to. He had a very hard time making up his mind, and I never was right sure that he'd intended to keep the agreement after he made it up, because I had to force him to get out of Italy with the French troops, if you remember.

MURROW: What about Molotov?

TRUMAN: The Russians are a peculiar people with whom to negotiate unless you're personally faced with them, unless they're sitting in front of you. You never could tell what Molotov wanted or what he believed. He is one of the pigheadedest men that ever I've come in contact with, and whenever I wanted him to perform, I called Stalin up and told him what I'd like to have done, and then Molotov would do it. Otherwise, he wouldn't act at all. Stalin, at Potsdam, that's the only place I ever saw him, made a very agreeable impression upon me. He was easy enough to get along with, and he was-- it was easy enough to make an agreement with him. Of course, I didn't know at that time he had no intention of keeping them.

MURROW: Mr. President, I remember that you told Stalin at Potsdam that we had the atomic bomb.

TRUMAN: Yes.

MURROW: Did he seem to be impressed at that time?

TRUMAN: No. I don't think he quite understood what I was talking about. I told him that we had discovered a tremendously powerful explosive which had come to a final conclusion by an explosion in New Mexico, and that we proposed to use it to end the war with Japan, and he smiled and said he was very happy to hear it. And then the conversation ended, and I went my way and he went his. This was after the-- one of the conferences at Potsdam.

MURROW: Well, when the bomb was dropped, the war was near to ending anyway. Was this the result of a miscalculation of the Japanese potential? Was our intelligence faulty in this area?

TRUMAN: It was done on the theory that the-- our troops were expecting to invade Japan in a very short time through the Tokyo plain, and on the southwest side of Japan also, and it was estimated that if would take about a million-and-a-half men to make that invasion - and in all probability there'd be a half a million of them casualties and 250,000 of them killed. And when we had this powerful new weapon, I had no qualms about using it, because a weapon of war is a destructive weapon. That's the reason none of us want war and all of us are against war. But when you have the weapon that will win the war, you'd be foolish if you didn't use it.

MURROW: What about the decision to go ahead with the hydrogen bomb?

TRUMAN: If it were possible to make a more powerful explosion than the one of the first atomic bomb, it seemed to me that with all the background and material, and all the money that had been spent, it was our duty to go ahead and carry the thing to its logical conclusion. And that was the reason it was done.

MURROW: There has never been in history a new weapon no matter how terrible that was not used.

TRUMAN: That's correct. I hope it will never have to be used because I hope we'll keep the peace in the world and it won't be necessary. If the world ever gets into a turmoil, however, it will be used. You can be sure of that.

MURROW: What was the most difficult decision you had to make as President?

TRUMAN: The most difficult decision I had to make while I was in office was Korea.

MURROW: Any regrets?

TRUMAN: Not the slightest. Not the slightest in the world. The reason that I was able to make the Korean decision, I remember Munich and the League of Nations, and we had just established the United Nations. The United States passed a resolution which had recognized the Republic of Korea, and had-- it had been established, and when the Republic of Korea was about to be overcome by aggressions started by the Communists, backed by Russia, and-- and what later became Communist China, it seemed to me that the proper thing was to establish the United Nations as a going concern, and that's what I tried to do. And that-- but that was the most difficult decision I had to make during my whole Administration of eight years.

MURROW: Were you surprised when Red China entered the Korean War?

TRUMAN: Yes, I was. Yes, I was, because I had been assured in October by the Commanding General of the Far East of the United States Forces that they would not do it.

MURROW: What about the decision not to bomb north of the Yalu, Mr. President?

TRUMAN: That was one of the decisions that was made in-- in the hope that that would prevent the bringing on of a Third World War.

MURROW: Is it true that you offered General Eisenhower the Presidency at Potsdam?

TRUMAN: No, no I didn't offer him the Presidency. I told him that a great many people who had been in his position had been willing to run for the Presidency, but it was my opinion that a man at the top with a military reputation could only have that reputation smeared if he went into politics, because being the Commanding General of the Armed Forces of a nation is entirely different from being the head of the State in a political job.

MURROW: So it would be fair to characterize it as being almost an offer, and a warning simultaneously. Was that it?

TRUMAN: It could be taken as that. I gave him wise counsel, and he wrote me the best letter on why a military man shouldn't be President of the United States that's ever been stated, and it's still in existence.

MURROW: And--

TRUMAN: He didn't write the letter to me. He wrote it to a newspaperman in New Hampshire. But he gave me a copy of it, and I've still got it, and I never used it on him at all.

MURROW: Is it your feeling as an historian that military men enter the White House under a basic handicap?

TRUMAN: Yes. They've been educated along one line, and a man to be President of the United States has to understand the whole picture. And the only way he can get the whole picture is by varied experience, and he doesn't get that in the military. You can take the historical members of the profession who've been Presidents of the United States. There was Zachary Taylor and General Grant and the present occupant of the White House are good men. They're honorable men. They want to do the right thing, but they've been educated in a manner that's like a horse with blinders on: he only sees one direction right down the road.

MURROW: Why don't more people of real ability enter politics?

TRUMAN: Thin-skinned. They're afraid somebody'll throw a brick at them and they won't be able to catch it and it'll hit them.

MURROW: Do you think that's the primary reason?

TRUMAN: That's the primary reason. They don't like to be in a rough and tumble verbal fight. They are afraid that something will come out that may cause them injury or hurt their business or something of the kind. But there are an immense number of people who are not afraid and who do take a hand in politics and who are willing to take it on the chin when the going gets rough.

MURROW: What about toughness under criticism?

TRUMAN: Oh, well, if he's got a thin skin, he's got no business being in the Presidency. He must understand his own ideas of what's right and wrong, act on those ideas, and if the newspapers and the means of communication don't like what he does, let them say what they want to say, and then if he's in the same disposition I am, he'll get up and tell them where they're wrong, and never let them browbeat him. You never want to let an outfit of any kind - any kind of special provilege outfit or any kind of an outfit whether special privilege or not, tell you what you ought to do. You've got to make the decisions and always hope that they're right.

MURROW: And this is as true in the field of foreign policy as anywhere else?

TRUMAN: The President makes the foreign policy. He has more power in the foreign policy than in any other part of the government because nobody can direct and make the foreign policy but the President himself. He has the Secretary of State and a wonderful coterie of experts in that line. He has the Central Intelligence Agency. He has the National Defense Department and the Commerce Department, all of whom have foreign relations outside the country. But their-- those things must be coordinated, and the President has to make the final decision on what will be done no matter what it is, or how small it may be.

MURROW: It is true, isn't it, Mr. President, that historically greater progress has been made when we have had what is called a strong President in the White House, a man who is prepared to do battle with the Congress?

TRUMAN: That's correct, that's correct. A President who doesn't have a fight or two with Congress is not considered a very strong man. It's necessary, and it's all right. There's nothing wrong with it. It's not a personal matter. It's a matter of-- of the Congress always trying to infringe the Presidential rights, and a good strong President-- the Congress will accuse him of trying

to infringe the Congressional rights, and in each case there's always some good accomplished, because the final result will be in the interests of the people, and the fact that we have those division-- that division of powers makes it much more safe for the people than it would otherwise. The only efficient government is a dictator's government, and a free government can't be as efficient as one where one decision meets the whole situation, and it's not good. I think our government is the best one that's ever been organized in the history of the world, and I know something about the governments of the world.

MURROW: What essentially is the relationship or should be the relationship between the President and the people?

TRUMAN: I've made the statement many a time that there are about fifteen million people in the country that can afford to have a representative in Washington to look after their interests in addition to the Congressmen and Senators that they have there, and they're called lobbyists. There's nothing wrong with them. They have a perfect right to do that, but there are a hundred and fifty million people that can't afford that. They have but one man in the government to look after their interests, and that's the President of the United States. He is the lobbyist for a hundred and fifty million people, and when he ceases to be that, those people are in a pretty bad way so far as the government of the United States is concerned.

MURROW: Mr. President, in your view what are the qualifications for a successful President?

TRUMAN: Well, the first and most important requisite is that he must be a fundamentally honest man - intellectually and every other way, and an intellectually honest man will usually succeed in any-- any line of business he takes up. If he understands people and has a policy - he has to have a policy, and he has to have a policy that's based on high principles for the welfare and benefit of the whole country - and now for the welfare and benefit of the whole world, since we're the leaders of the free world. It's quite a-- a number of assets that he has to have, and I don't mean to imply that I had all those assets, but I wished I had had them. I think I did have intellectual honesty, otherwise, I don't know about it. We'll have to wait and see what history says about the rest of them.

CRONKITE: History's view of Harry Truman would be incomplete without recalling him as the Man from Independence. Like this small Missouri city where he grew up, he seemed to symbolize an older, simpler America - confident, solid and secure. Independence welcomed him home to this Victorian house on North Delaware Street in 1953. And Independence helped him build the Truman Library, a massive tribute to his Presidential years. It seemed fitting that

on the most American of holidays - the Fourth of July - Harry Truman and Independence celebrated there together.

TRUMAN: I didn't make a regular prepared speech for this occasion....

CRONKITE: Here he was - 82 years old - in 1966.

TRUMAN: Celebrating the Fourth of July is not a new thing to Independence. We've been doing it for a long time. I'm going to read you a paragraph or two from every speech I made. Now, if you don't like it, you can just close your ears up.

CRONKITE: Mixed with the familiar Trumanese, there was a hint of sadness when he spoke about leaving the White House.

TRUMAN: When I got out of that place, I didn't have any place to go or anything to do, so I told two or three of my good friends I wanted to stay right here in this part of the world and that I was expecting to put a library here with all the information regarding all the Presidents so that they'd be available for people who wanted to find out what the facts were. Well, this building was the result. I raised the money for the building; the people of Independence gave me the site to put it on. I appreciate very much what you've done here. This is a wonderful turnout and I'm highly complimented and very much pleased that you did it. And you'll now hear some people who can make you a good speech.

CRONKITE: The years took away some of the Truman jauntiness and softened his vinegar temper. But they never completely mellowed him. "They're trying to make an elder statesman of me," he once said, "but they'll never succeed. A politician isn't a statesman until after he's dead."

Even after he faded from the front ranks of political power, he enjoyed giving advice to old Democratic friends. President Lyndon Johnson admired his toughness, once said of Truman, "That little fellow was pretty much always on the right track." It was partly this appreciation of Truman that led Johnson to Independence for signing of the Medicare Bill in 1965. It was also recognition that Truman was the first President to propose such a law. Twenty years earlier he had pleaded its cause before an uncooperative Congress. Medicare, a milestone for Johnson, was the realization of one of Truman's fondest ambitions.

There were other salutary moments. At a United Nations luncheon in Kansas City in 1966, two old gentlemen exchanged forgiving smiles, blurring memories of past personal bitterness.

And in March, 1969 another old enemy came to make peace. President Nixon, quick to mend fences, visited Independence. It was easy to forget he had once infuriated Truman with disloyalty charges against his Administration. Now - for the Truman library - he

brought a peace offering: Truman's old White House piano - and a familiar tune.

TRUMAN: Thank you very, very much.

WOMAN: Aren't you going to play something?

NIXON: I'll play something for the President. I play everything by ear.

[Piano playing: "Missouri Waltz"]

CRONKITE: Mr. Nixon probably had forgotten that Truman said he never liked the "Missouri Waltz" in the first place. History will not record what Truman thought of this Republican rendition of it.

In 1968, when he was almost 84, Truman gave one of his last news conferences. This was at Key West, Florida where, during his presidency, he so often flaunted his famous sportshirts. He was asked about today's young people, and he had this to say:

TRUMAN [1968]: I think they're the greatest thing that we've got and always have been.

REPORTER: There seems to be a great deal of criticism, though, that they've changed - that they're-- now they're more radical than they used to be.

TRUMAN: You'll find it's just not true. I still think they've got good sense. Most of them have. And they'll vote right.

REPORTER: Mr. Truman, tell us a little bit about your day. What do you do during the day? Do you read?

TRUMAN: Well, this is the most important thing I've done since I've been down here. I read, walk and enjoy myself. And I knew damn well that if I didn't get you out of the way you'd intercept me some day. I've had plenty of experience with you.

REPORTER: Thank you, Mr. President. That was very kind.

TRUMAN: I want to say that I appreciate the fact that you wanted a press conference with me. It was a grand thing for you to do and I'm very thankful for it.

CRONKITE: And in the warm Florida sunshine at the Key West Naval Station, the elderly former President once more went on parade, just as he had done so often as Commander-in-Chief during some of the most difficult years of our history. The scene somehow served to remind us that there was something in Harry Truman - Mr. Citizen from Independence - which made average citizens feel that, indeed, they could be more than average.

ERIC SEVAREID: Harry Truman looked, dressed and sounded like the most ordinary, conventional person in the world. You could throw a stone into any big crowd of middle class Americans and hit a man just like him.

And a lot of people felt their hearts sink when he was sworn in as President, following Franklin Roosevelt with all the grandeur and sweep, that aristocratic voice and face, that Harvard background.

But what Truman became (by any accounting) - one of the more impressive Presidents we have had - is a matter of rejoicing for those who still believe in some old American propositions: that general freedom and relative classlessness will bring to light the human gold that lies in all the common clay; that there is something special in the most ordinary man; and that America is the place where the special is most likely to turn up.

The Truman story is a reaffirmation of what this country was supposed to be, of the kind of men who made it; and it confronts one with the fact that by the sheer law of probabilities there must be tens of thousands of men in this land who could live up to the Presidency.

He was not brilliant and he was not eloquent. Those are the preeminent qualities for other settings, like a university. But he had something else: the prime necessity for men who would lead and govern other men. The Romans, who invented political administration, called it "gravitas" - patience, solidity, breadth of shoulders and weight of judgment.

The last time I talked privately with Harry Truman his mind was not on Korea or the U.N. or the Atlantic Alliance or the Marshall Plan. It was on several hundred elderly people in Missouri long ago, who had been railroaded by their relatives into mental institutions under a defective law. Judge Truman got them out. I think he was prouder of that than of anything he ever did.

In Harry's sight, as (so we are taught) in the sight of God, the most obscure have as much divinity in them as the most famous. His own world fame never changed that conviction and never changed him in the slightest.

ANNOUNCER: This has been a CBS NEWS SPECIAL: "Harry S. Truman, 1884 - 1972".

Copy to Roosevelt

Mr. Philip C. Brooks
Director, Truman Library
Independence, Missouri

Dear Mr. Brooks:

At the direction of Mr. Murrow and Mr. Friendly, we are shipping two prints (16mm) of all of the film shot during President Truman's interview with Mr. Murrow at Islamorada, Florida from February 8 - 15, 1957.

The film was shot by two cameramen, Charles Mack and Martin Barnett, in 35mm original negative. There was a total of 42,000 feet shot during this interview of which some 5,000 feet was extracted and used on the SEE IT NOW program of February 2, 1958. Prints of this show were furnished to the Truman Library shortly after the broadcast. Thus, the footage we are sending you represents all of the remaining material unexpurgated and unabridged.

The individual reels shot by Charles Mack were originally odd-numbered 1 - 43; those by Barnett, 2 - 40. Since we are able to get four of the original 35mm reels on a single 16mm reel, the prints are marked Mack, Reel 1 (contains original reels 1,3,5,and 7); Barnett Reel 1 (contains original reels 2,4,6, and 8). The original reels 1 - 41 contain the actual interview while reel 43 is exterior scenery and scenes of President Truman and Mr. Murrow sitting on the dock.

When you run the material through you will find that you can follow the original transcript from reel to reel and any material missing will be contained in the original SEE IT NOW program. I am sorry to have made this appear more complicated than it perhaps really is but, if upon receipt of the prints you have any further questions, I would be most happy to answer them.

Sincerely,

Palmer Williams
Associate Producer

P.W.

September 28, 1960

Dear Sam:

I have your letter of September 23rd. We shall take steps to fulfill the terms of the agreement as soon as possible. You will appreciate that a certain delay is inevitable, but it will be done.

So far as I know no additional income has been received, but I will make a check.

I have the feeling that in last night's "debate" the winner was the stop watch.

Sincerely yours,

Judge Samuel I. Rosenman

September 23, 1960

Mr. Edward R. Murrow
Columbia Broadcasting System, Inc.
485 Madison Avenue
New York 22, N. Y.

Dear Ed:

When President Truman was in town last, he spoke to me about the following, and I told him that I would be in touch with you and ask you to take care of it.

Paragraph 17 of the agreement of January 22, 1957 between CBS and President Truman provides that CBS should furnish him without charge two prints of all of the film taken of the interview, complete with sound track, other than the specific portions thereof disapproved by him. The contract provides that title should remain in CBS, but that he and/or the Library should have the right to retain permanent possession -- for its own use and not to permit any broadcast or commercial use thereof.

He would like to obtain these prints.

Could you follow this up for him and see that they are sent out there as soon as convenient?

I assume that there has been no additional income derived from these interviews which would entitle President Truman to any further proceeds. Is that correct?

With kindest regards,

Very sincerely yours,

Samuel I. Rosenman

SIR:AHS

HAPPY "75" MR. PRESIDENT!

Tune: "MISSOURI WALTZ"

Down in old Missouri on a certain bright May morn
There a little darlin' Truman baby boy was born.

His mammy and pappy, oh my, they were happy,
For somehow they just knew,
What this baby would do!

For his mammy dear would hold him close, and fondly say,
"You'll grow up to be our president, I know, someday."

His mother's words guided,
And her faith provided
The light to show the way!

Now, in old Missouri there's a library so fine,
Filled with gifts and treasures that will grow richer with time.

A tribute to Truman; the world's greatest human,
And all who come to see; oh how thrilled they will be.

For our nation's history passes by their very gaze,
And they learn the meaning of those wartime troubled days.

His story forever,
In glory forever,
Inscribed in this one place.

Tune: "C A DOUBLE R-I-GAN SPELLS CARRIGAN"

H-A-double R-Y,
He's the guy we toast today.

We wish him the greatest birthday ever;
Does he ever age at all? No, never!

H-A-double R-Y,
Young in heart and mind:
He's the kind you'll always find
Ahead of all the rest;
Oh, Harry is, the best!

Tune: "WE'RE JUST WILD ABOUT HARRY"

We're just wild about Harry,
'Cause we know Harry is great;
We're quite sincere when we all cheer,
This favorite son of our state!

Our Harry's gone down in history,
As one who changed the world's fate;

And so we shout about Harry,
A leader of all men,
Has a gifted pen,
No one's smarter than
Harry!

Tune: "YELLOW ROSE OF TEXAS"

There's a guy from old Missouri,
That good old "show-me" state.
Became our president and
Acquired the title "great!"

With his brilliant mind and know-how
Of what makes people tick,
He guided us through wartime
And turned the "atom trick."

And when Harry left the White House,
All the people missed him, why?
There's no one to fill his shoes,
Tho others may try.

All of us are proud to know him
And give this mighty toast:
A happy, happy birthday to
The guy who is "the most!"

Dear Mr. Murrow—

I am sorry to be so long in thanking you for the gorgeous red roses you sent me while I was ill, but there were some notes I insisted upon writing personally and I am just able to start them. Your lovely flowers

gave me many hours of pleasure and I deeply appreciate your thought of me.

Please remember me to Mrs. Munson. I often think of the happy time we had with both you and in Colorado.

Most sincerely

Bess W. Truman

Truman

March 12, 1957

Dear Sam:

This is in further reference to our conversation at lunch today about a television program for President Truman. These are my own ideas, but I think it a type of program that might interest the President, and which the officials of CBS would be inclined to give careful and, I hope, favorable consideration.

The working title might well be, "Pivots of History."

Mr. Truman would select initially twenty six events in the history of this country upon which history has in fact pivoted. He would open the program live (which could be done from Kansas City) for about five to eight minutes he would recount the state of the nation, the issues agitating the public mind, the relations between this and foreign countries as the "pivot" approached. Let us take for example, the Monroe Doctrine which he might well choose as a "pivot." He should briefly outline the American posture at that time in regard to Europe and Latin America. He should tell, as only he can do, something of the personalities and foibles of the principal characters, with perhaps a little-known anecdote or two about Monroe in order to make him a human, believable, almost living character.

After this prologue, we would proceed directly to an authentic dramatization based upon impeccable historical research with everything from costumes to text checked by reputable historians.

At the end of the dramatization, President Truman would return for about five minutes to delineate the extent to which our history has pivoted on that decision, and perhaps to draw a parallel between that and subsequent decisions; for example, the Truman Doctrine for Greece and Turkey, or current Administration policy in regard to the Middle East.

The objective would be to give the viewer not only detailed and authentic information about a major incident which shaped the course of American history, but also a sense of the continuity of our development in relation to the rest of the world. The viewer would be made aware, without preachment, of the origins of basic American policy and practice and of the consequences

that have followed upon these decisions.

There is bound to be high drama coupled with very considerable humor in almost any "pivot" the President selects. It is a fact, of recent history at least, that in time of crisis and uncertainty all peoples dig deep into their history, folklore, and past accomplishments in an effort to gain a sense of purpose and accomplishment; even the Russians did it in the late war.

I am convinced that there is a market for this type of program, the climate of opinion is right for it, and I venture to think that it is something the President would enjoy doing.

As I have said, this is purely a personal suggestion, but if the President should be disposed to pursue the matter, I would be glad to discuss it with him when he is here on April 1st. If the idea has merit we could then move towards some formal and financial consideration of it, both by Mr. Truman and by CBS.

As ever yours,

Judge Samuel Rosenman

May 6, 1957

The only honest answer I can give you on the Truman project, as I can see it at this moment, is a discouraging one as far as getting it launched this coming fall is concerned.

I don't really see any practical place to put it other than Sunday afternoon for reasons as familiar to you as to me. I don't think it is a nighttime operation. On the other hand, it seems to me too important to bury in a Saturday time.

As you know, we have football on Sunday afternoon on most of the network up until 5 o'clock until approximately January 1. From 5-6, we have THE SEVEN LIVELY ARTS and SEE IT NOW once a month. From 6 on, we have the regular schedule.

Prior to 5:00, we have certain other Public Service programming which I think we undoubtedly will have to keep on a regular basis.

As you know, I have great enthusiasm and I think it would be a proud and important thing for CBS to do; but in view of the above complications, I just don't see how to do it this season.

January 10, 1958

Dear Mr. President:

We have finally made a start on our most difficult editing task. It is our plan to present the first hour from 5:00 to 6:00 PM Eastern Standard Time on February 2.

The title will be "From Precinct to President" and the subtitle will be "Some Reflections by Harry S. Truman." We will make it clear in our advance notices and on the air that this is in no sense an interview or commentary on current events.

At present it rather looks as though the material will break down into three sections dealing with your early recollections, your days in the Senate, and your remarks regarding the Presidency with particular reference to the relationship between the executive and legislative branches.

Both Fred Friendly and I have re-read the transcript several times and it is full of rich and rewarding material. We still haven't a clear idea of how much we will be able to compress into this first hour, but we shall do the editing with such skill as we possess and with real affection.

Sincerely,

The Honorable Harry S. Truman
Federal Reserve Bank Building
Kansas City 6, Missouri

TRUMAN BIRTHDAY MESSAGE. Recorded 4/27/59.

Mr. President:

As you know, reporters are not historians - they merely make scratches on paper, or utter words into a microphone while ~~on the~~ at a dead run. They are not always right, but they would like to be. I have known at least one President and one Prime Minister who were disposed upon occasion to question the legitimacy of certain reporters.

Having recently returned from a quick trip to England, France and Germany, I must report to you that you are rapidly being "discovered!" A very considerable number of people - not all of them historians - said with overtones of pride of discovery in their voice: "Your President Truman will loom large in the history of the free world." Being a reporter and not an historian, I refrained from reminding them that I had ~~said~~ told them that first years ago.

You may recall, Sir, that once when we were "striking a blow for liberty" this reporter contended - perhaps at undue length - that most of the people he had met whose names made headlines - were blessed with wives who were better men than they were. From this doctrine you did not dissent. Therefore I trust you will not find me lacking in discretion, discernment,

~~XXXX~~ respect or affection if, upon the occasion of your seventy-fifth birthday, I anticipate somewhat the verdict of future historians, and bow deeply in the direction of Mrs. Harry S. Truman. For those who give you credit are also greatly in her ~~XXXX~~ debt.

Truman, Harry S.

September 23, 1957

This is in reply to your memorandum of September 13 regarding a Truman film.

Since the Truman film will be a SEE IT NOW program originally broadcast on CBS Television the rights about which you inquired are governed by an agreement between CBS Television and Jefferson Productions, Inc. Under this agreement, Jefferson has the right to proceed with preparation of the movie. The income derived from the movie would be split 75% to CBS and 25% to Jefferson until CBS has recouped its cost of producing the program less:

(a) $85,000 plus

(b) any program payment by a sponsor in excess of $85,000.

Thereafter the income would be divided 75% to Jefferson and 25% to CBS.

It would be necessary, of course, to obtain a formal agreement with Mr. Truman and appropriate agreements covering music or any other elements used as well as agreements covering the outside footage.

In the light of the fact that CBS would in any case participate in the proceeds as well as the volume of negotiation and legal work which would be involved, I would recommend that we ask Spence Harrison to designate some member of his setup to work on the matter (perhaps Merritt Coleman). I believe that the distributor would be the most likely source for the additional financing.

from: Mr. Murrow September 13, 1957

Fred and I are inclined to think that the subject of the Truman film is an outstanding hour of film which we are tentatively planning to do in January, February or March. But there is in addition to this, the basis for a full length movie if it were to be beefed up with existing footage that could be purchased on the outside.

My questions are (1) Can we proceed contractually with preparation of the movie and (2) What arrangements can or should be made for financing purchase of outside footage.

I don't know what this would amount to, but something in the order of one hundred thousand bucks. Fred and I are prepared to participate in the financing of this film if a proper deal can be worked out.

May 10, 1957

Dear Sam:

Hubbell Robinson, our VP in charge of television programming, has today apprised me that he sees no real possibility of launching the "Truman project" this autumn. The only available time appears to be on Saturday, and Robinson expresses the view, with which I concur, the project is too important to bury in Saturday time.

Robinson says, "As you know, I have great enthusiasm and I think it would be a proud and important thing for CBS to do, but I just don't see how we could do it this season."

I am sorry and disappointed, but there appears to be nothing further that I can do. Hope the delay in discovering this decision has not interfered with possible alternatives. My own enthusiasm for the project is unabated and if I can personally help in making alternate plans you have but to command me.

Sincerely yours,

Judge Samuel Rosenman

April 1, 1957

Spent a couple of hours with Mr. Truman this morning. Explained that it was purely exploratory conversation and I was in no position to speak for the Company. We talked at length about the possibility of his doing about six shows a year of the type outlined in my letter of March 12th, copy attached. He was eager and willing, prepared to devote much time to the project, etc. but did not wish it to be shopped around various advertising agencies, if that can be avoided.

He is vigorous, alert, and rarin' to go! I told him I would inquire whether or no the Company wished to make him a proposal. How do you wish the matter handled from here out?

Corb. T.

March 1, 1957

Dear Mr. President:

Since returning from London I have had an opportunity to view enough of the film we made to report to you that both picture and sound are excellent, and I am thoroughly delighted with the outcome. Such shortcomings as there are must be credited entirely to me; for example, I noticed when you mentioned the name of Charlie Ross I failed to ask you what you regarded as the essential qualifications for a White House News Secretary. Also, I think, at some subsequent date we may want to go into a little more detail about the relationship between the president and congress, but these are minor matters which we can film sometime at your convenience either here in New York or when our cameras come out for the ceremonies on May 8th. I do feel very strongly that we have the essentials of what we set out to do, namely, a visual document for history which will help to illuminate and inform your grandchildren and mine.

The trip to London was hectic but interesting, and I venture to enclose a brief broadcast I did from there in an effort to summarize my impressions. The one thing that is not included therein is the fact that British officials do not make the distinction so frequently made here between Mr. Dulles and the President, they are disposed to place the blame squarely at Mr. Eisenhower's door.

We are still developing some of the still pictures taken in Florida and will send a set of them out for you and Mrs. Truman and also send some to Margaret. They will serve to remind me of a most memorable experience which was enjoyable from beginning to end.

Our check for the agreed amount is enclosed. Sam Rosenman tells me he will forward to me your travel and other incidental expenses.

Sincerely yours,

The Hon. Harry S. Truman

January 24, 1957

Dear Sam:

I was certainly happy to have your letter of the 21st, and you can be sure that Mrs. Truman wants to go fishing whenever she has the opportunity. We will probably have to carry her on the boat but I'll bet she will catch more fish than anybody on it.

I am glad you liked the statement on the President's Message but it has to be read as a whole to appreciate just exactly what I was trying to do.

Acheson was disturbed over the statement because he thought there was a chance for some disagreement between us but there isn't, of course.

I think that Florida trip is going to be a grand one. The Frisco Railroad President is turning over his business car to us so we won't have to change trains and the Chrysler people called and said they have a car waiting down there for me to use so everything is all right.

If you have an opportunity to get in touch with Mrs. Downey again tell her to reserve a couple of rooms for proposed visitors. I think Bill Hillman and Dave Noyes want to come down - then there is a chance that Tom Evans may take a notion to come down and I know the Doctor is going to come down and take the cast off Mrs. Truman's foot.

I am looking forward to a grand time on this trip.

Sincerely yours,

Dear Mr. President:

I have your letter of January 24th, and we are all looking forward to the trip.

I just spoke with Ed Murrow, and he thinks that it would spoil the project if we got a lot of people down during the filming. I would suggest that they come after Friday, February 15th, because Murrow has to complete his work by then since he has a "Person to Person" show to do in New York that night.

I assume that you will want Bill and Dave to go over the editing, and of course they can do that at their leisure when the film is developed. If you will let me know when after the 15th Bill and Dave and Tom want to come down, I will try to arrange it with Mrs. Downey.

In the meantime, we are arranging for Mrs. Truman to do some fishing -- cast on her foot or not.

Very sincerely yours,

Telephone: Matecumbe 3511

January 19, 1957

The Honorable Samuel I. Rosenman
575 Madison Avenue
New York, N. Y.

Dear Judge Rosenman:

In a telephone conversation with Mrs. Downey yesterday, she requested that we advise you regarding the rates for your party of six. She feels that a special rate of $15.00 per couple per day would be satisfactory to all concerned and deems it a great privilege to have you.

With regard to the six cameramen who will be accompanying you, we will be able to accommodate them here at the Inn at the rate of $30.00 per day, i.e. $5.00 per person per day.

Our dining room prices run approximately as follows:

Breakfast	$1.25 (average)
Luncheon:	
Sandwiches	.85 to $1.50
Regular luncheons	1.50 " 2.50
Dinner	3.25 " 6.00

You mentioned to Mrs. Downey that there is a possibility you all would like to do some bone, reef and deep-sea fishing. We have contacted Captain Dick Williams who, in our opinion, is the finest bone-fishing guide on the Keys and an exceptionally nice young man who was written up quite extensively recently in Sports Illustrated, and find he will be free on February 11 and possibly for a half day on February 12, 13 and 14. Bone-fishing is done from a skiff which accommodates two persons plus the guide. All tackle and bait are furnished by the guide. The charge is $40.00 per day.

Reef and deep-sea fishing are done from a large boat, usually accommodating six persons. The charge for this is $65.00 per day. These guides also furnish all tackle and bait.

All fishing guides are in great demand during February and March; therefore if you could give us a definite commitment as to which of the above dates you would like to do some fishing, whether bone or otherwise, we shall be happy to make a definite reservation for you. However, if a definite reservation is made, you will be responsible for payment whether you fish or not, provided the weather is favorable. If not, it is automatically cancelled by the guide. If your plans for fishing are too flexible at this time, of course we shall do everything we can to obtain guides for you when you arrive but we shall have no assurance that they will be first-rate.

We hope the above information will be helpful to you but if there are any questions to which we have not given you the answers, please let us know.

We look forward with a great deal of pleasure to having you and your party with us and shall do everything in our power to make your visit an enjoyable one.

Sincerely yours,

OLNEY INN

Dear Mrs. Christensen:

Thank you very much for your letter of January 19th.

The rates are perfectly satisfactory.

I will let you know in a day or so about the fishing.

I suppose Mrs. Downey told you that President and Mrs. Truman will arrive on the 10th of February in the morning. Mr. and Mrs. Murrow and Mrs. Rosenman and I will arrive on the 9th in the evening. I do not know when the cameramen are arriving, but I will find out and let you know.

We are all looking forward to being with you.

Very sincerely yours,

SIR:AHS

December 11, 1956

Dear Sam:

I sent you a telegram in reply to yours, copy of which I am enclosing.

I hope Ed Murrow had a chance for his interview with Chou-En-Lai.

To tell the honest truth the week of February 11th suits us much better than the January date.

Mrs. Truman tells me that the lady who ran Olney Inn has some wonderful cottages about half way between Miami and Key West and she ought to have them open by that time. Mrs. Truman is trying to get in touch with her now. If that is the case that ought to be an ideal place. We would ship our car down on the train on which we come down and unload it at Miami and then drive down to this place that belongs to the Olney Inn lady. Of course, that is all in contemplation and I don't know exactly how the thing will work out.

If you have any further information on the situation as it is developing I hope you will let me know about it as soon as you can.

Sincerely yours,

Honorable Samuel I. Rosenman

Dear Mr. President:

I have your letter of December 11th, and I think the place you mention would be very good.

I would suggest, however, that it would be much cheaper to hire a drive-yourself car at Miami than to pay for shipping your car down, unless you expect to drive home.

With kindest regards,

Very sincerely yours,

SIR:AHS

Dear Ed:

President Truman would prefer the second week in February, starting February 11th. I have sent him a copy of your letter, asking him whether the "basis of the announcement" is satisfactory to him.

As soon as he tells me where he would like to do the filming, I will be in touch with your office.

With kindest regards,

Very sincerely yours,

Sam

Samuel I. Rosenman

SIR:AHS

December 7, 1956

Dear Sam:

I suggest that we might do the prolonged interview with Mr. Truman during the second week of January, starting filming January 7th or alternatively, the second week in February, starting filming February 11th.

I suggest that the announcement be made and the signing be done in Kansas City just before we start shooting, and that the basis of the announcement should be that we are attempting for the first time to prepare a "visual document of history" which will present Mr. Truman in his own words discussing not only his own political career but his philosophy of politics and foreign affairs.

We will do the filming, as we discussed, at a place convenient to Mr. Truman.

As ever yours,

Judge Samuel Rosenman

Dear Mr. President:

I shall be sending you in a day or so a memo with respect to the various comments you made on the Murrow contract. In the meantime, I want you to know that I spoke with Murrow today. He is just as enthusiastic as ever. He is leaving tomorrow for Rangoon where, confidentially, he expects to make arrangements to have an interview with Chou-En-Lai.

Murrow suggests that we definitely set our project for the second week in January, which would be the week of January 14th, or the second week in February, which would be the week of February 11th. He is willing to go wherever you and Mrs. Truman wish. He suggests that he pick you up in Kansas City, at which point the contract would be signed with appropriate publicity, and then proceed to the place you select.

I hope that these periods will be satisfactory to you.

With kindest regards,

Very sincerely yours,

CIRCLE 7-8300

July 26, 1956

Judge Samuel I. Rosenman
Rosenman, Goldmark, Colin & Kaye
575 Madison Avenue
New York, New York

Dear Judge Rosenman:

The National Broadcasting Company would like to film a "Conversation with Harry Truman" sometime after the election this year for inclusion in our series entitled "Conversations with Distinguished Persons". The film would be a philosophical and historical conversation between Mr. Truman and some younger person of his choice.

As you may be aware, we have already broadcast about eighteen of these "Elder Wise Men" programs over the past three years including conversations with Herbert Hoover, Jawaharlal Nehru, Eamon De Valera, Pablo Casals, Paul Tillich and Sean O'Casey. We are attempting, as best we can to make a permanent record of those persons who have by word or deed truly formed our times.

If you have a few moments to spare next week, I would very much like to come to see you and get your advice on this matter. For the last several years I have been the producer responsible for this series. You may reach me at Circle 7-8300.

Cordially yours,

Robert D. Graff

COLUMBIA BROADCASTING SYSTEM

Office Communication

to: MR. MURROW cc: Mr. Van Volkenburg, Mr. Mickelson
Mr. Cowan, Mr. Harrison

from:

May 15, 1956

Judge Rosenman has agreed that Mr. Truman will go before the motion picture cameras with you at a price of $25,000 instead of the $40,000 which was the basis of our earlier negotiations. It is understood that Mr. Truman will be available for a filming sometime after the Presidential election in November. I understand that our Legal Department is working on the contracts and they can be authorized now to change the figure from $40,000 to $25,000.

I am not clear about the point covering Mr. Truman's expenses. I hope the Rosenman office will consider the $25,000 to include any expenses incurred by Mr. Truman in connection with the filming, but, on the other hand, it may be too firmly established already that we were to absorb these costs. I think we should feel Rosenman out on this.

Samuel I. Rosenman

SIR:AHS

CBS TELEVISION

Office Communication

to: Mr. Murrow cc: Mr. Brauner

from: Mr. Woodard March 29, 1956

At Mr. Brauner's request I have reviewed the draft of the proposed agreement between CBS and President Truman, submitted to you by Judge Rosenman. It is a good contract, but the Judge's draftsman, like all lawyers, including myself, was apparently thinking primarily of his own client (President Truman, in this case) when he wrote it. As a result, the contract appears to be somewhat more favorable to Mr. Truman than was probably intended, and, in addition, a good deal of re-writing is indicated.

My comments in this memo are directed only to substantive points which I believe should be raised for your consideration. I would suggest that "language" problems be left for the lawyers to resolve after the substantive points have been settled.

Following are my comments, numbered to correspond with the paragraph numbers in the contract:

1. If you have any personal scheduling problems, the "on or about" 11/19/56 may give you some trouble.

What the parties intend time-wise is not clear. I suspect that what you mean is that each interview will continue for such period of time as you think necessary, but "not more than four hours" etc. If you think such language will look too harsh, you may wish to employ language such as: "It is contemplated that the interviews shall be held for approximately four hours per day, or such shorter period as Mr. Murrow may elect, but in any event for not more than four hours on any one day and not more than two hours at any single session".

Do you intend to tape these interviews as well as film them?

2. I take it he means a written transcript.

I would suggest that some schedule be arranged for the screenings - e.g. within two weeks after we notify him that the film is available for screening.

203

I take it you have agreed to the absolute right of approval.

On the basis of the language of this paragraph as now written, in my opinion Mr. Truman could disapprove film months after approving it, and we would be obligated to destroy it. I believe that the way to resolve this problem without bringing it up is to provide that notice of disapproval will be given by not later than ____ days after screening.

3. (a) This is pretty rough. I imagine that we will have to go along with something of this sort, but suggest that

(i) Mr. Truman be required to act reasonably; and

(ii) We spell out in the contract some of the uses which are satisfactory; e.g. broadcast on programs such as "See It Now" or "Omnibus", broadcast as a series or single program, direct projection exhibition by educational or charitable organizations, etc.

(b) Are there to be any restrictions or qualifications on his disapproval rights? Any exceptions such as direct projection exhibition by educational institutions or publication in certain types of publications?

(c) I suggest that Mr. Truman's approval "not be unreasonably withheld".

4. Our obligation to exploit should be limited to radio and television, and perhaps phonograph records and publications. We are not equipped to use much, if any, efforts in the other fields mentioned.

I have some problems with the "profitable exploitation". I rather imagine that you will want to use this material initially on the network. Chances are fair that such use would be sustaining. If so, we wouldn't be using our "best efforts...to bring about profitable exploitation of the material", since putting it directly into syndication would mean we could get profits immediately, with more return than we would get after network sustaining broadcasts.

5. Does he get a right of approval as to the 90 minute program too? If so, we should again provide that he will notify us of his disapproval, specifying what it is that he disapproves, within ____ days after screening.

Approval should not unreasonably be withheld.

Are we obligated to broadcast the program? If we are, I suggest that the six month period be suspended for any period during which network broadcasting is restricted, suspended, etc., and that such obligation be cancelled if we find it necessary to discontinue network broadcasting.

7. If, as a result of the exercise by Mr. Truman of his disapproval rights, we are in a position where in our opinion we do not have sufficient material for programs satisfactory to us having a running time of at least ____ minutes, our obligation to pay $40,000 should be reduced to ____.

9. I take it that we have the right to deduct all costs. If so, the language used should be expanded. In addition, however, there are several costs, which can aggregate to a large amount, which this language would expressly exclude. I refer to items such as print costs, shipping and insurance costs, advertising costs, film laboratory costs, taxes and similar costs. These are all continuing costs - particularly in syndication.

10. (a) (ii) I consider it highly advisable to agree upon a sustaining price now, particularly if we intend to assume an obligation to broadcast in six months. I would assume that the price for each run would be less than the price for the preceding run.

This paragraph again raises, by implication, the question of our right to broadcast sustaining at all. I rather imagine that it is quite likely that we would want to make more than one network broadcast of the program and/or the material, and that subsequent broadcasts may be sustaining.

(iii) As you know, we may "syndicate" locally, regionally or nationally, and the distribution fee varies accordingly. If they will agree to our standard fees (35%, 25% and 10%, respectively), this is merely a matter of language.

(iv) We customarily get a 35% distribution fee for foreign syndication.

11. (a) The language is not clear - are we entitled to deduct all costs of producing the programs, including e.g. talent costs, or just the cost of including the material?

I take it that you agreed to the limitation on the source of cost recoupment.

(b) What is other program material? Your services as narrator? Interviews with persons replying to Mr. Truman? Background material for Mr. Truman's remarks?

(c) Right to deduct costs?

10, 11, 12 and 13 - I see no reason why at least the original production costs of the "material" (including payment to Mr. Truman) should not be applied against proceeds derived from the exploitation thereof in any media.

14. We usually get "net loss carryover" rights, and I consider it particularly appropriate where the payment period is so short. In this connection, it would be to our pecuniary advantage to pay annually.

17. I suggest that Mr. Truman's approval "not be unreasonably withheld".

The last sentence raises one problem. In selling the material for sponsored broadcast, the sponsor will undoubtedly want the right to promote the broadcast, and, in connection therewith, to at least mention and probably advertize his products. Is this permitted? If it is, it should be expressly so stated in the contract, as the language presently appearing in this paragraph is extremely unsatisfactory in this respect from our viewpoint.

18. There will be union problems here if any of the material is used on programs under AFTRA jurisdiction, or live programs under AFM jurisdiction.

20. This raises the question of an indemnity. Customarily in this situation, we have full indemnity from each person involved. Although I am an admirer of Mr. Truman's (or perhaps because I am one) in my opinion it would be a very good thing if we could get an indemnity from him. I suspect from the presence of this paragraph in their draft that we would encounter considerable resistance to any suggestion of an indemnity.

I consider it quite likely that we would be unable to get standard broadcaster's liability insurance covering Mr. Truman in this situation. Although we carry such insurance covering all of our programs, I am not sure that it would cover Mr. Truman, especially in this situation where, if he made a statement giving rise to liability, he would, presumably, quite likely know it when he made it - or at least be deemed to have known it.

This suggests two points:

(i) if we can't get the insurance on terms satisfactory to us, it should be no breach on our part and all of our rights should remain unaffected;

Mr. Murrow March 29, 1956

(ii) if in our opinion an unreasonable risk of legal liability would arise from the use of the material or a substantial portion of it, so that we do not have satisfactory programming with an aggregate running time of at least ____ minutes, our obligation to pay the $40,000 should be reduced to ____.

I realize that relationship-wise it might be preferable not to suggest point (ii) to Mr. Truman.

I am returning to you herewith Judge Rosemman's draft of the agreement.

I shall be pleased to discuss any of these points with you at your convenience.

C.C.W.

CCW:bm
Enc.

AD:ESL(6)
3/13/56

, 1956

Honorable Harry S. Truman
Federal Reserve Bank Building
Kansas City, Missouri

Dear Mr. Truman:

The following shall constitute our agreement:

1. You agree to participate in a series of interviews to be conducted by Edward R. Murrow, and to permit us to record such interviews and to take motion pictures thereof. Such interviews shall be held at _____ _____, or at such other place or places as we shall mutually agree upon, during a period of about six (6) consecutive days commencing on or about November 19, 1956, unless another period shall be mutually agreed upon. The interviews shall be held for not more than four (4) hours on any one day and not more than two hours at any single session, and you will cooperate with us in scheduling the sessions.

2. We will furnish to you, within _____ days after completion of the interviews, three (3) copies of a complete transcript thereof. We will also have screened and played for you in New York and/or Kansas City, as you elect, at such times as you designate, all or any portions selected by you of the films and sound recordings of the interviews. You

shall have the absolute right to disapprove the use of any portions of the transcript, films and/or sound recordings, and we agree to keep confidential forever such portions thereof as you shall have disapproved and, if you so request, to destroy all copies of any portions thereof designated by you. Within _____ days after the material is screened for you, you will give us written notice of any portions of the transcript, films and sound recordings that are disapproved by you. All portions of the transcript, films and sound recordings not so disapproved by you shall be deemed approved; such portions are hereinafter sometimes referred to as "the material".

3. The material shall be our sole and absolute property, subject to the provisions of this agreement. We shall have the right to broadcast, publish, distribute, license the use of, and otherwise exploit, the material by any means which we, in our business judgment, consider appropriate; provided, however, that:

(a) We shall not utilize the material, or authorize any use thereof, in a manner deemed either by you or by us to be inconsistent with the dignity of your position or the character of the material; and we shall comply, and require our licensees to comply, with any determination made by you, of which you notify us in

writing, that a use thereof would contravene this condition.

(b) Before utilizing the material, or authorizing any use thereof, in any medium other than television, radio and phonograph records, we shall give you written notice of any such proposed use thereof and will not make or authorize such use thereof if you shall have notified us in writing, within ten (10) days after receipt of our notice to you, that you disapprove such proposed use.

(c) In offering for sponsorship any radio or television programs based upon any of the material, we will accept as sponsors only reputable national or local advertisers approved in writing by you, and in granting licenses to others to broadcast any such material we will require as a condition of such license that the licensee agree that such programs may be sold for sponsorship only by reputable national and local advertisers.

4. Without limiting the generality of paragraph 3 hereof, and subject to the conditions therein stated, we shall have the right to use and to license others to use all or any portions of the material in the production of radio and

television programs, in motion pictures for theatrical and home use, in the manufacture of phonograph records and wire, tape and other forms of recordings, and in books, pamphlets and other publications. Except as provided in paragraph 5 hereof, nothing herein contained shall require us to make any of the aforementioned uses of the material. We agree, however, that we will use our best efforts, consistent with our business judgment and with the terms of this agreement, to bring about profitable exploitation of the material.

5. We shall cause to be made a motion picture film based upon and utilizing the material, suitable for presentation on a ninety-minute television program in the series entitled "SEE IT NOW". We shall screen that film for you at least two (2) weeks in advance of the first telecast thereof, and shall not include therein any portions of the material or any other matter which shall not have been approved by you in writing. Such motion picture film, as approved by you in writing, is hereinafter sometimes called "the program". We shall cause the program to be broadcast at least once within six (6) months after your approval thereof over the facilities of our television network, in the evening hours that are included in the "network option time" defined by our contracts with our affiliates.

6. We agree to furnish to you first-class transportation from Kansas City to the place of the interviews and return, and all your hotel and living accommodations and meals at the place of the interviews. We also agree to furnish such round-trip transportation from the places of their residences and hotel and living accommodations and meals at the place of the interviews to such other persons, not exceeding _____, whom you wish to have accompany you. If you or any of such persons shall pay the cost of any of the aforementioned items, we agree to reimburse you or him therefor within ten (10) days after receipt of a written statement itemizing such expenditures.

7. As full compensation for your services hereunder, and for the rights granted by you to us under this agreement, we agree to pay to you:

(a) The sum of $40,000, of which $20,000 is paid to you upon the execution of this agreement, and the remaining $20,000 will be paid within ten (10) days after completion of the interviews.

(b) Sums equal to 50% of the net profits, if any, as hereinafter defined, derived by us from the program and from the exploitation of the material by any means (except through the manufacture and sale of phonograph records); and

(c) Royalties on all phonograph records manufactured and sold embodying the material or any portions thereof, as provided in paragraph 12 hereof; and for the purposes of this agreement the term "phonograph records" shall include tape and other sound reproducing devices sold for home use.

8. We understand that the firm of Rosenman Goldmark Colin & Kaye has rendered and will render legal services to you, and will act as consultants to you, in connection with this agreement and the performance thereof. We agree to pay them the reasonable value of such services, as billed by them, in an amount not exceeding $5,000.

9. As used herein, the term "cost of the program" shall mean the aggregate of all payments made by us hereunder under paragraphs 6, 7(a) and 8 hereof, plus the actual unreimbursed cost to us, determined in accordance with sound accounting practice, of photographing, recording, producing and editing the program and preparing it for broadcasting. We shall furnish to you, within _____ days after approval of the program by you, an itemized statement of the cost of the program, which statement shall be final for all purposes of this agreement unless you give us written notice, within ninety (90) days after receipt thereof, that you object thereto. If you give us such notice

and your objections are not resolved by agreement, the difference between us shall be determined by arbitration pursuant to paragraph 21 hereof. We shall be entitled to recoup the cost of the program from the proceeds derived by us from the program and from the exploitation of the material by any means, prior to the payment to you of any sums on account of the net profits therefrom as provided in paragraph 7(b) hereof.

10. (a) As used herein, the term "proceeds from the program" shall mean the aggregate of the following amounts:

(i) With respect to any sponsored broadcast of the program over the facilities of our television network or over any of our owned television stations, the net program charges (as distinguished from charges for time and facilities) paid to us by the sponsor or sponsors; and

(ii) In the event that we fail to obtain a suitable sponsor for any broadcast of the program over the facilities of our television network or over any of our owned television stations, then, with respect to any such broadcast on a sustaining basis, such sum as shall be mutually agreed upon between us in writing in advance of such broadcast; and

(iii) With respect to any licenses to broadcast the program locally over television stations in the United States not owned by us which are granted by us in the "syndication" of the program, as that term is used in the television industry, the net amount paid to us for such licenses, less a distribution fee of _____% thereof; and

(iv) With respect to any licenses granted by us for syndication of the program by others, or to broadcast the program over other networks in the United States or over the facilities of television stations in foreign countries, the net amounts paid to us for such licenses.

(b) All proceeds from the program remaining after the recoupment of the cost of the program shall constitute net profits to be divided between us in accordance with subparagraph (b) of paragraph 7 hereof.

11. In the event that we should produce radio and/or television shows (other than the program) based upon or utilizing any of the material, the proceeds therefrom and net profits thereof shall be computed in accordance with the provisions of paragraph 10 hereof, except that:

(a) We shall be entitled to deduct from the

proceeds of such shows, in determining the profits therefrom, the actual cost incurred by us in making such shows from the material, it being understood that the cost of any such radio or television shows shall be recouped by us, in determining net profits for the purposes of this agreement, only out of the proceeds derived from such shows.

(b) If portions of the material are combined in a single show with other program material, the proceeds from such show and the cost thereof shall be allocated to the material in the proportion that the running time of the portions of the material used in such show bears to the total running time of the entire show.

(c) With respect to any distribution by us of transcriptions for radio shows, the proceeds from such shows shall be the net amount paid to us therefor, less a distribution fee of _____% thereof.

12. In the event that we manufacture or license the manufacture of phonograph records embodying portions of the material, the royalty payable to you under paragraph 7(c) hereof shall be _____% of the retail list price in the country of manufacture of all such records sold and paid

for. If any such record embodies portions of the material as well as other material, such royalty of _____% shall be reduced in the proportion that the playing time of such other material bears to the total playing time of the record.

13. In the event that we should utilize or exploit the material by any means or medium not specifically enumerated in paragraphs 10, 11 or 12 hereof, the net profits thereof shall be computed by deducting from the gross proceeds derived from any such means or medium only the actual costs incurred by us in connection with the utilization or exploitation of the material by such means or medium. In the event that we shall license others to utilize or exploit any of the material by any means or medium, the net amounts received by us for such license shall be included in net profits for the purpose of paragraph 7(b) of this agreement.

14. Within forty-five (45) days after the expiration of each quarter-annual period during which we derive any proceeds from the program or from any exploitation of the material, we agree to furnish to you an itemized statement of such receipts and any expenses and deductions allocable thereto. We agree, concurrently with the delivery of such statements, to pay to you any sums thereby shown to be due to you.

15. We agree to maintain full and complete records of all transactions had by us in connection with the material, which records shall be subject to inspection by your duly authorized representative at any time during regular business hours.

16. No sums derived by us from the exploitation of any of the material in foreign currency shall be deemed to be a part of the receipts from the material until they shall have been transmitted to and actually received by us in the United States. In the event of an embargo or restriction on the transfer of such funds to the United States, we will, upon your request, and if permitted by the laws of the country in which such funds are derived, deposit your share of the proceeds to your credit in any bank or other depositary designated by you in such country. Such deposit shall, for the purpose hereof, constitute payment to you of the amount so deposited.

17. You grant to us the right to use, and to authorize others to use, your name, voice, photograph and other likenesses and biographical data concerning you, for purposes of trade and advertising in connection with the exploitation of the material pursuant to this agreement. We agree that all advertising and promotional material issued by us in connection with the use of any of the material hereunder

shall be subject to your prior written approval. We further agree that in granting licenses to others to use the material in any medium or form, we will include a condition that each licensee agree that all advertising and promotional material issued by it shall be dignified in character and consistent with your position and with the nature of the material. In no event shall we authorize or permit the use of your name, voice or likeness in any manner that might be construed as an endorsement by you of any commercial product or service; and all licenses granted by us shall contain a condition that the licensee will not authorize or permit any such use of your name, voice or likeness.

18. We shall furnish to you, without charge, two prints of all film taken of the interviews and of the program, complete with sound track, and two prints of each other television program and two transcriptions, on tape or record, of any radio program which we shall cause to be made in which the material or any portion thereof is utilized. You agree that none of such prints or transcriptions shall be utilized for broadcasting or for any commercial purpose.

19. You may, by notice in writing, designate one or more agents to act on your behalf in the exercise of any right of approval or disapproval granted to you by this agreement. You may by such notice, from time to time,

change the designation of such agent or agents.

20. We agree to obtain for you an insurance policy, similar to our standard broadcaster's liability policy, protecting you against liability in amounts of not less than $_____ to one person and $_____ in the aggregate. We shall pay the premium on such policy, which shall be included in the cost of the program.

21. Any controversy or claim arising out of or relating to this agreement or the breach thereof shall be settled by arbitration in New York in accordance with the rules then obtaining of the American Arbitration Association, and judgment upon the award rendered may be entered in any court having jurisdiction thereof.

22. This agreement shall bind and enure to the benefit of our successors and assigns, and your heirs, executors, administrators and assigns; but neither of us shall assign this agreement without the prior written consent of the other. All rights granted to you hereunder shall survive your death and may be exercised by your executors or by any agent designated by you under paragraph 19 hereof, if so stated in the instrument designating such agent.

23. For any purpose of this agreement, any notice shall be sufficient if given by registered mail, postage

prepaid, addressed to you at

and to us at 485 Madison Avenue, New York 22, N.Y.

24. This agreement shall be construed in accordance with the laws of the State of New York.

If the foregoing is in accordance with your understanding of our agreement, will you please so indicate in the space therefor provided below, whereupon this letter shall become a binding agreement between us.

Very truly yours,

COLUMBIA BROADCASTING SYSTEM, INC.

February 29, 1956

Dear Sam:

I have just had an opportunity to discuss the Truman project with Mr. Paley. As you know, it has always been our intention to present the television version of the film after the autumn elections. In view of this, and also because the longer "Visual Document for History" should cover the widest possible sweep of Mr. Truman's experience, Mr. Paley suggests that we ought to defer the filming until after the November election. I very much hope that you and Mr. Truman will agree to this. I am sure it would increase the effectiveness, both of the original television presentations, and the historical film.

As I explained to you during our last conversation, I had not previously had a chance to discuss an appropriate fee with Mr. Paley. It is his feeling that a fee of $25,000 would be appropriate.

Perhaps you would be good enough to let me hear from you after you have had a chance to talk to Mr. Truman.

As ever yours,

Dear Ed:

As I told you on the phone, President Truman's commitments are such that the best period for him is between March 20th and April 1st. As I told you, it is impossible for Dorothy and me to make it during that time and I am writing the President to that effect; so that we will be unable to join you.

He suggests as an appropriate place Camel Back Inn, Phoenix, Arizona.

I understand that you are going to check your own commitments and see how they fit.

I am notifying Judge Clark that you must decline his invitation.

With kindest regards,

Very sincerely yours,

Sam

Honorable Harry S. Truman
1107 Federal Reserve Bank Bldg.
Kansas City 6, Missouri

Dear Mr. President:

I am enclosing herewith copy of a letter which I sent Ed Murrow after talking with him on the phone.

Unfortunately the one period when Dorothy and I cannot make it is between March 22nd and April 1st. The reason is that we promised our son and daughter-in-law that we would take our sole grandchild during that time while they take their short vacation. We would hate to have them call off the whole trip for which they have planned and look forward to. They do not return until April 1st. I therefore suggest that you and Mrs. Truman and the Murrows carry on the project without us.

If it were possible to do it starting April 2nd, we could join you; but I realize the impelling reasons which prevent it.

I will communicate with you as soon as I hear from Ed Murrow. We have to get the contract worked out in the meantime.

With kindest regards,

Very sincerely yours,

Samuel I. Rosenman

Dear Ed:

I have spoken with President Truman, and he is quite willing to enter into the project we discussed.

I am writing this to you in advance of your return so that you will get in touch with me as soon as possible.

I hope you had a wonderful trip.

Very sincerely yours,

Samuel I. Rosenman

SIR:AHS

CBS TELEVISION

Office Communication

to: Mr. Paley

from: Mr. Murrow

cc: Messrs. Friendly, Seward

October 4, 1955

Yesterday I had a long conversation with Mr. Truman in Kansas City. I suggested to him the possibility of doing a long visual document for posterity -- perhaps ten hours of film which could be boiled down to an hour-and-a-half or two hours -- the only footage to be used in addition to himself would be existing footage which might be used to give change of pace, such as newreel clips of Potsdam or the meeting with MacArthur could be played over his voice describing these episodes. We discussed this project in some detail and the former President became increasingly enthused about it, particularly when I tried a discourse on the value of similar treatment of men like Lincoln, Jackson, and Jefferson if such films were available.

The "story line" for this interview could not be developed until we have digested both volumes of his memoirs; but I should like to make him a proposition as soon as may be. He wants a vacation in spring, and we talked of possibly doing this job coincident with that vacation in Jamaica, Key West, or some other place where he would be free from distraction and where we could shoot an hour or two a day.

He wants money, although I refrained from discussing figures with him. When I suggested that the continuing sale of this film for educational purposes over decades, and indeed centuries, would pay for the maintenance of the Truman Library, he replied by saying that the government would take care of that, he was interested in the maintenance of an old guy named Truman and his family.

Having no idea of the sales potential, either current or in the future, may I nevertheless suggest that we consider offering him something in the neighborhood of $50,000 plus a percentage of the secondary rights.

If you feel the idea has merit, I think we should write him a fairly definitive letter before his enthusiasm wains or his spring commitments become too heavy.

September 14, 1955

Dear Mr. Murrow:

I was pleased to talk with you in Chicago the other day, and when you are ready to make the setup here in Kansas City, I shall be glad to perform for you as best I can.

I expect to be in Arkansas on the 23rd, 24th, and 25th of September, and will probably be in St. Louis on the 27th and 28th of September. Then on October the 4th or 5th, we will be leaving for New York to meet Margaret, so the setup should be made on some of the dates when I am not out of town.

Sincerely yours,

Harry Truman

NEW YORK 17, N. Y.

January 2,1951.

Mr.Edward R.Murrow
CBS
New York City

Dear Ed:

Your new show is wonderful. More power to you. Although the world picture stinks, I still believe that there is hope for peace without appeasement. In that belief, I am trying, so far as an individual citizen can, to leave no stone unturned. If the enclosed material strikes you as useful toward that end, a mere mention by you would help tremendously to get the case before the people. The subject is certainly hot enough.

The pamphlet tells its own story, but to save time, you can get the high spots from the release. In a way this is a sequel to my recently published book, Faith Purpose andPower. The book made a plea for a constructive long-range policy. The pamphlet deals with the immediate problems - especially those that will form the agenda of the four power conference.

As ever,

Jim

Sorry you couldn't carol.

"SPEAK UP - NOW OR NEVER!" - JAMES P. WARBURG

RELEASE FOR MONDAY MORNING JANUARY 8, 1951.

"There is a sensible middle course between the over-ambitious global containment policy - which has failed - and the defeatism of Joseph Kennedy or the illusory isolationism of Herbert Hoover. Our Government's "Europe-first" policy is basically the correct policy, but unhappily it has been so badly carried out, so little explained, and so impaired by attempted appeasement of the isolationists and "Asia-firsters" that it has become discredited in the minds of many, who would otherwise give it their wholehearted support."

This is the contention of James P. Warburg, in his latest pamphlet - "Speak Up - Now or Never" - published today by the Current Affairs Press, of New York City. The author holds that the American people are united in their desire for peace and their willingness to sacrifice for its attainment; but that they are confused as to the means of attaining peace "by a strangely confused yet cocksure leadership" - by "a President, who expresses jaunty confidence that we are 'in fine shape to meet the crisis', while his Secretary of State labors to arouse us to a sense of danger." "Oddly enough", Mr. Warburg says, "it is the Secretary of State who is denounced by members of Congress for being "soft" toward communism".

One element of confusion arises, according to Mr. Warburg, from our Government's failure to consult the people when far-reaching decisions are made - or even to inform the people what these decisions mean, why they are taken, and what commitments they involve. In this way, he contends, "our Government has taken us into a tangle of global commitments far exceeding our power to fulfill."

A second element of confusion is seen in the fact that our present policy is shaped to a world which existed in 1945 but which ceased to exist in 1949. "Our short moment of world supremacy has passed", says Mr. Warburg. "We now live in a world of divided power in which peace is attainable only through negotiation and collaboration."

Our Government maintains that war is not inevitable and that a peaceful settlement is still possible, even though difficult. At the same time, says Mr. Warburg, "our Government contends that the means for negotiating that settlement will not exist until we have acquired military power equal to that of the Soviet Union. To say this is to assume that dictators, who understand no language other than that of force, will refrain from a resort to force until their opponents are as well armed as they."

Mr. Warburg holds that common sense repudiates any such assumption. "Common sense tells us", he says, "that we need all the military power we can muster against the possibility of war, but that, if we still seek to avert war, we must negotiate for peace <u>while we are building that power</u>.

Pointing out that "negotiation is not the same thing as 'appeasement', Mr. Warburg outlines certain major issues in Europe, Asia and the Middle East, which could perhaps be negotiated, if we were willing to make the attempt. He points out a number of "concessions" which could be made on either side, without expecting either side to make any concessions which would weaken its position in the event of war. He sees Germany as "the key log in the cold war log-jam" and puts forward an alternative to our present policy

"which would strengthen our defense of Western Europe, while at the same time removing the greatest provocation to Russian attack and opening the door to a German peace settlement." This section is of particular interest in view of the approaching four power talks.

The pamphlet ends with an appeal to citizen action. "We need unity as we have never needed it before. But unity cannot be created by exhortation; it can be attained only through common understanding of the danger we face and of the means by which we seek to avert it. Common understanding cannot be created by 'salesmanship' which evades issues, ignores dissent and appeals to emotion rather than reason."

"Loyalty at a time like this," says Mr. Warburg, "demands outspoken dissent from those who are convinced that present policies lead to disaster, and that alternatives exist which hold forth a greater promise of achieving a just and honorable solution. It is not such dissent which is treason, but the attempt to suppress it, or the faint-hearted willingness to accept suppression."

James P. Warburg has been a persistent dissenter from certain aspects of our postwar foreign policy. He has written unnumerable pamphlets, articles and books on this subject during the past five years.

Carl Sandburg described his "Last Call for Common Sense" (1949) as "the greatest pamphlet of our time".

Here are a few comments on his "Faith Purpose & Power", published in September 1950.

St. Louis Post-Dispatch: Reasoned criticism of our foreign policy has become such a rare commodity that Mr. Warburg's annual book of complaints comes as a fresh breeze. His calm, cool and often deadly criticism is a useful contribution.

Miami News: If there be such a thing as "must" reading, this honest and timely book is it. No better bargain for two dollars.

New York Times: James P. Warburg must be America's most persistent pamphleteer. There is a lot of hard sense in nearly everything he says. His batting average of prophecy has been high. This strong and stimulating case should stir the public and increase the demand on Government for more positive and creative policies.

Lewiston (Me.) Journal: A trumpet call to the American people for a positive policy. Provocative and sincere. It has the virtue of not only telling what ought to be done but of pointing out steps to the accomplishment.

Bridgeport Herald: To the extent that few others have reached, he examines our foreign relations with honesty and detachment. In the best sense of the word, he is the ablest pamphleteer of our time.

The American Friend: Order it. Study it. It makes sense.

Baltimore American: In Warburg there is something of Nehru and Lincoln. He is devoid of malice and hate. His humanity is deep and he writes with a simplicity and power of expression that have the breath of greatness.

The Daily Worker: Frantic retreat from reason.

With the permission of Farrar Straus & Co., the original publishers of FAITH PURPOSE AND POWER, we have published a special paper-bound edition, available at $1.00.

Dear Jim:

I am most reluctant not to do anything you ask me to do, but in this business I feel I just have no choice except to say I can't sign anything except the stuff I write or mumble myself.

I am for London on the 17th; any chance for seeing you before then? I crave to have conversation with you. Can you suggest a suitable date when we can lunch?

As ever yours,

LET'S TALK ABOUT THE REAL ISSUE

By

JAMES P. WARBURG

SP

The "great debate" over sending troops to Europe has been almost wholly irrelevant to the *real* issue of foreign policy with which we are confronted.

That issue is posed by the forthcoming meeting of the Council of Foreign Ministers, for which the agenda is now being prepared.

Bluntly stated, that issue is this:

MORE BY LUCK THAN GOOD MANAGEMENT, WE APPEAR TO HAVE MANEUVERED THE RUSSIANS INTO A POSITION IN WHICH THEY MAY AGREE TO A GERMAN PEACE SETTLEMENT ON OUR TERMS—IF, THEREBY, THEY CAN PREVENT THE RE-ARMAMENT OF WESTERN GERMANY.

DO WE WANT A GERMAN PEACE SETTLEMENT ON OUR OWN TERMS, IF WE CAN GET IT? OR HAS THE COLD WAR BECOME AN END IN ITSELF?

Whether the impending conference re-opens the door to a European peace settlement, or slams it shut for good, will depend very largely upon whether our Secretary of State goes to the meeting with an affirmative or negative attitude. If Mr. Acheson goes seeking a German settlement, he may succeed where his predecessors have failed. If he goes merely seeking to win a propaganda battle and to justify sticking to his plan for German rearmament—which General Eisenhower has clearly failed to endorse—then the last, best hope of peace may be lost.

IF, WHEN YOU HAVE READ THIS STATEMENT, YOU FIND THAT YOU ARE IN AGREEMENT, THE BACK COVER WILL TELL YOU HOW YOU CAN TAKE A HAND IN SEEING THAT THIS GREAT OPPORTUNITY IS NOT LOST.

The Current Affairs Press
25 Vanderbilt Avenue, New York 17.

LET'S TALK ABOUT THE REAL ISSUE

JAMES P. WARBURG

The "great debate", which has been filling the Congressional Record, the front pages and the airwaves, seems to me almost wholly irrelevant. The question of sending troops to Europe prior to the outbreak of war should have been debated two years ago, when the Atlantic Security Program was proposed to Congress and to the people in a regrettably misleading manner. This program actually involved two commitments, only one of which was frankly disclosed when the Treaty was placed before the Senate.

It was made clear that the Treaty committed us to go to war with an aggressor against the European signatories. It was not made clear that the Administration intended to go beyond the Treaty and commit the United States to fight the aggressor along the line of the Elbe river in Central Germany.

In urging the Senate to make clear, when it ratified the Treaty, that we were not undertaking to defend our allies by necessarily holding any particular line or frontier, I ventured to point out the dangers which seemed to me inherent in any such additional commitment. These were: *first,* that we should thereby commit ourselves to a pre-announced strategy in a possible war with Russia; *second,* that a commitment to hold up a Russian invasion in Central Germany involved building up a force, which as yet did not exist, precisely where it would be most likely to provoke rather than to deter attack; and, *third,* that to build up such a force we should either have to double our then existing combat strength and send most of it to Germany, or else rearm the Germans themselves.

Senators Connally, Vandenberg and other members of the Foreign Relations Committee replied that the suggested clarification was not necessary, since no such second commitment was contemplated. They relied upon the unequivocal assurances of the administration witnesses that no substantial American forces would be sent abroad in advance of war and that the United States would in no circumstances permit the rearming of Germany.

Shortly after the Treaty had been ratified, the administration sent up its Military Aid Bill and, in urging this measure, stated that its purpose was *to prevent Europe from being overrun,* in the event that an invasion

should be undertaken. To accomplish this purpose, the Bill provided merely a paltry one billion dollars.

This was the time when the "great debate" should have taken place. This was the time to make up our minds whether or not we could and should undertake the commitment, and, if so, to recognize clearly that it meant raising and equipping a powerful new combat force for European garrison duty. This was the time to ventilate the misgivings which are now belatedly expressed *after we have committed ourselves to the military defense of Western Europe's frontiers.* The issue of sending troops to Europe is no longer debatable except in terms of whether or not the United States shall go back on a solemnly given promise. That is why I say that the current "great debate" is irrelevant.

There is, however, a much more important issue before us, which, so far, has not been debated at all. There is an opportunity before us—perhaps our last—to extricate ourselves with honor from the stultifying position in which we now find ourselves. This opportunity will arise at the meeting of the Council of Foreign Ministers, for which the Deputies are even now preparing the agenda.

The issue we shall face at that meeting—the issue we should be debating now—is whether we want a peace settlement in Europe or the continuation of the arms race and the cold war.

Unless I misread the signs, this impending meeting of the Council of Foreign Ministers will either signal the beginning of a process which leads to the reunification of Germany, the healing of the great scar across the face of Europe, and the ultimate making of a European peace settlement—or else it will finalize the partition of Germany, the partition of Europe and the probability of eventual conflict.

The outcome lies very largely in our hands. It will be decided at least as much by the President and the Secretary of State, *before Mr. Acheson goes to the conference,* as by what happens at the conference itself.

Let us recall at least the high-spots of the history which leads up to this meeting of the Council of Foreign Ministers.

Five and one-half long years ago, a war-weary world entrusted the formulation of a European peace settlement to this body, composed of the highest representatives of the so-called "Big Four"—the United States, Britain, France and the Soviet Union. During the first year and a half of its existence, the Council succeeded in making peace treaties with Italy, Hungary, Romania and Bulgaria. Our then Secretary of State,

the Honorable James F. Byrnes, proceeded on the theory that it would be best to approach the European peace settlement peripherally—that is, to reach agreement first where, presumably, it would be the easiest, leaving the difficult core of the problem, in Germany and Austria, for the last.

As I saw it then, and still see it now, this was a mistake. The postponement of any attempt to reach a German settlement prevented an early realization of the serious defects in the Potsdam Agreement for the four-power government of Germany and permitted these defects to create wholly unforeseen and extremely serious difficulties. Even worse, the postponement of discussion of a German settlement obscured for much too long the basic disagreements which existed not only between Russia and the Western powers but also among the Western powers themselves. The result of Mr. Byrnes' peripheral approach was a rapidly deteriorating picture within Germany which, in turn, contributed to the exacerbation of the tensions among the occupying powers. It was not until December, 1946, that the Council finally decided to take up the German problem and then it did no more than arrange for a conference to be held at Moscow in March, 1947.

In January, 1947, General Marshall became Secretary of State. The long-brewing crisis in Greece was at that time coming to a head. Just before Secretary Marshall left for Moscow, President Truman reached the decision to intervene in Greece and Turkey. His sudden enunciation of the belligerent yet ambiguous Truman Doctrine coincided with Secretary Marshall's arrival in Moscow. This pronouncement was intended to strengthen the Secretary's hand in negotiating a German settlement by giving evidence of what the Secretary himself described as "the assumption of a military posture." My own belief at the time was that the announcement of this major departure in American foreign policy created the worst possible auspices for the Moscow Conference. Be that as it may, the Moscow Conference failed, but in failing, it at least served to bring out clearly the hitherto obscured basic disagreements. These were, in major essence, two.

The first concerned reparations out of current German production. The Russians had been taking, and insisted upon their right to continue to take, a large part of the product of their zone of occupation in payment of the reparations to which they claimed title under the Yalta and Potsdam Agreements. (The French, incidentally, were doing much the same thing on a very small scale.) Britain and the United States contended that,

under the Potsdam Agreement, reparations out of current production could be taken only when and if Germany as a whole should have an export surplus, and not while German exports were still insufficient to pay for the needed imports of food, as they were at the time. Actually, through the breakdown of the Potsdam plan, a situation had arisen in which the United States and Britain were pouring money into one end of Germany while Russia was drawing it out at the other. No compromise was reached on this problem at the Moscow Conference.

The second major point of disagreement concerned the terms upon which the now frozen zonal barriers might be lifted and unification brought about, both economically and politically. The Russians insisted upon a strongly centralized unitary government. The Western powers favored varying degrees of decentralization. The negotiating position of the West was seriously impaired by disagreement between the United States and Britain on the one side and France on the other, France fearing even the federal republic favored by London and Washington and seeking to create merely a loose confederation of German states. Fundamental to this deadlock was the Russian belief that a strong unitary government would be more susceptible to Russian influence, and the Western conviction that a strong central government would not only be dangerous *because* it might become a Soviet-dominated dictatorship but also because a centralized Germany, even if not dominated by Russia, might one day again become a military menace. In addition, the West sought clear guarantees of political freedoms for the individual, while Russia opposed such guarantees, fearing that they would create a barrier to Russian influence. Here again, the Moscow Conference found no solution.

The Council of Foreign Ministers held one other meeting, in December, 1947. This was a perfunctory affair, which took place only because neither the Russians nor the Western powers were willing to assume the onus of refusing to meet. In the preceding summer the cold war had become a hard reality, when the Kremlin refused to cooperate in the Marshall Plan and the Marshall Plan, instead of ending the cold war, became an instrument in that struggle. By December, Washington had reached the conclusion that agreement with Russia had become impossible and that the only thing to do was to create a West German state and make it self-supporting at the earliest possible date.

Thus ended, for the time being, the attempt on the part of the Council of Foreign Ministers to carry out its mandate of making a European peace

settlement. Apart from any assessment of individual blame, the record is not one to be regarded with pride by any of the participants.

The past four years—from the Moscow Conference to the present—have constituted a period in which all thought of a peace settlement has been subordinated to the endeavor of each side to "win" the cold war. During this period the Kremlin has ruthlessly sought to expand the orbit of its power, in Asia as well as Europe; the West, under the leadership of the United States, has sought to arrest Soviet expansion. The result has been the vicious circle of a rapidly mounting arms race which, if continued, will lead to a war in which there can be no victory, and after which there can be no just, and therefore enduring peace.

The problem of Germany is still the central problem of a European peace settlement. Through bankruptcy of statesmanship the "Big Four" walked over a *Pons Asinorum* of their own making into a power struggle which now threatens the entire world with disaster. Through a revival of statesmanship—if there is to be such a revival—the "Big Four" now face what is probably their last opportunity to discharge the responsibility which they assumed in 1945 and abandoned in 1947.

Much water has flowed under the German bridge in the interval. The clearly predictable consequences of accepting a divided Germany in the pursuit of cold-war victory, rather than the pursuit of peace, have come to pass. When the West created a West German Republic in its own image of "political freedom" and "free enterprise", it became inevitable that Russia would create an East German state in its image of totalitarian dictatorship. It also became inevitable that Russia would attempt to oust the Western powers from Berlin—a clearly foreseeable trap into which we stumbled, and out of which we fortunately extricated ourselves by the brilliant improvization of the famous Airlift. When the coup d'etat in Czechoslovakia frightened the West into forming a military coalition, later supplemented by the adherence of the United States and Canada through the Atlantic Treaty, and when this treaty was augmented by an American undertaking not merely to go to war, if Western Europe were attacked, but to fight that war on the line of the Elbe river, it became inevitable that each side would try, sooner or later, to rearm the Germans under its control. With both sides seeking to woo German allegiance, there could be no hope of helping the Germans to develop political maturity. With both sides seeking to rearm the Germans in order to fight each other on the soil of the German fatherland, there could be no

expectation that the Germans would, at long last, learn to become a "peace-loving people".

Looking back over this period, it seems almost incredible that a truly well-intentioned nation like ours should have participated in this folly, no matter what the provocation. It seems equally incredible that a nation so experienced as Britain should have been willing to follow our lead. One might have expected the French attitude toward Germany to be charged with emotion born of the bitter experiences of the past. Yet the French, in spite of their early obstructionism and their original demands for unjustifiable annexations of territory, have for the past year contributed the one voice of sanity and reason. The French have not only correctly foreseen the danger and the futility of German rearmament; they have put forward, in the Schuman Plan, the one piece of constructive statesmanship developed by the West throughout this dismal period. It remained for us, last September, to undermine the Schuman Plan by our hasty and ill-considered demand that German forces be included in the Western defense establishment.

The Schuman proposal, to pool the coal and steel production of Western Europe—along with that of "any other nation desiring to participate"—was the first imaginative suggestion not only for healing the cleavages within the West, but for breaking down the barriers between Eastern and Western Europe. So long as there was no talk of German rearmament, the Germans welcomed the proposal as offering their only chance of rejoining the European family of nations. Negotiations were begun. And then, under the influence of Korea, we blundered in with our sudden suggestion of German rearmament. At once, the old-line German politicians and industrialists saw their opportunity. "If they need us as a fighting force", they said, "why should we give up control of our coal mines and steel mills?" Until General Eisenhower put at least a temporary quietus upon the idea of rearming Western Germany, the Schuman Plan was dead as a dodo. Whether or not it comes to life again—and whether or not it comes to life in its original form or as a giant restrictive cartel—depends upon what happens when the Council of Foreign Ministers convenes after its four year vacation.

This brings me to the decision with which we are now confronted. As already stated, that decision is whether we do or do not wish now to seek a European peace settlement.

The Council of Foreign Ministers is not about to resume its function because we desired a meeting. Quite the contrary is the case. The Council

is about to meet because the Russians stated, last October, that they would not tolerate the contemplated rearming of Western Germany and demanded a meeting of the Council to discuss a renewal of the Potsdam pledge against remilitarization and the carrying out of the Potsdam Agreement for the creation of a peaceful and united German nation. Our first inclination was to rebuff this proposal as a piece of "effrontery". The French inclination was to welcome a meeting. The official British reaction was indecisive. Since October, there has been a voluminous exchange of diplomatic notes, in which the Western powers have tried to broaden the agenda for the meeting so as to include all the various existing causes of tension, while the Russians have sought to confine the discussions as closely as possible to Germany. The Russian notes have been couched in the now familiar language of distortion, vilification, and assumed Kremlin infallibility. The Western replies, particularly those drafted in Washington, have borne the equally familiar hallmark of weary patience maintained with increasing difficulty. They have breathed an atmosphere of "We'll go through it all again, if we must, but, of course, no good will come of it".

This atmosphere must be changed before our Secretary of State goes to a meeting which may well open or close for good the door that leads to a peaceful settlement. Certainly nothing can be expected of the conference, if we go to it without an affirmative plan of our own. If we go simply in order to defeat the Russian plan, whatever it may be, we shall continue along the present road to disaster.

As a matter of fact, we know what the Russian plan is. The Russians told us all about it last October. Strangely enough, the Russian plan looks very much like our own plan for a German settlement before we abandoned hope of reaching a settlement, in 1947.

The Russians have proposed the unification of Germany. This was our aim from 1945 to 1947. At that time two obstacles stood in the way: reparations and disagreement as to the terms of unification.

But, last October, the Russians proposed—and I quote their language—"the removal of all hindrances to the development of a peaceful German economy". Now, if this phrase means anything at all, it means that the Russians are willing to forego further reparations, probably because they think they have extracted about everything they can extract from their puppet state. If true, this removes one of the two barriers that stopped us at Moscow four years ago.

The Russians have also indicated—less clearly, because this is obviously a bargaining point—that they may be ready to permit free elections and the

maintenance of the political freedoms in the whole of a unified Germany. This could be true if, from the Russian point of view, a democratic Germany (in the Western sense) appears as less of an evil than a rearmed Western Germany. The hypothesis makes sense to me because the Politburo, while perhaps not too sincerely alarmed over the inclusion of 250,000 Germans in a Western defense force, may in fact be very much alarmed over the possibility that, once rearmed, the Germans might slip out from under NATO control and go off on military adventures of their own. In this respect Russian fear of Germany is rather similar to French apprehension. Neither is, in my judgment, unfounded.

Be this as it may, it is, to say the least, possible that the second great obstacle encountered at Moscow may also now be removed.

Why, then, has our Government been so reluctant?

It has been reluctant because the attainment of its own aims in Germany now runs counter to its program of pursuing the cold war until it has built the much discussed "situations of strength" from which it wishes to negotiate. The truth is that our Government is caught between two contradictory policies, one of which it must give up or change. It wants to make Western Europe defensible against Russian invasion *before* it negotiates a peace settlement. To do this, our Government thinks it must rearm Western Germany. On the other hand, our Government wants to arrive at a peace settlement based upon a unified, peaceful and democratic Germany. This is irreconcilable with seeking to integrate the rearmed half of Germany—two-thirds would be more accurate—in an anti-Soviet coalition.

The solution seems to me quite simple. More by accident than design, we have now maneuvered the Russians into a position where they are apparently willing to unify Germany on *our* political terms, to give up reparations, to sign a peace treaty, to end the occupation and withdraw occupation forces. *In other words, the threat of German rearmament has apparently given us the very "situation of strength" we needed to attain our ends.* Then why not negotiate and find out whether this is true? And, if it is true, why not give up German rearmament in order to obtain the kind of peace settlement we have vainly sought for five years?

As I see it, by foregoing German rearmament, we should not be giving up anything of real value to us in any case. Rearming Western Germany would not add to the strength of a West European defense, because the conditions on which West Germany might fight for the West would be precisely those conditions which would make France unwilling to fight. This

has become abundantly clear in recent months. Furthermore, rearming Germany would actually add to Russian military strength, because it would make willing allies out of such presently unenthusiastic satellites as Poland and Czechoslovakia. On the other hand, rearming Germany would almost certainly eliminate what hope remains of helping the Germans to become a peace-loving people; it would utterly destroy what little value there may have been in our democratic teaching. And, finally, rearming Germany and building up a huge army along the Elbe river would be the most provocative thing we could do—the one course most likely to bring on a Russian invasion before we were ready to meet it. It did not take General Eisenhower long to come to these conclusions.

Because our proposal to rearm Germany was, in itself, a foolish proposal—for the reasons just stated—I said, a moment ago, that we have attained our ends more by luck than good management. Shall we now be so unwise, so stubborn, so concerned with saving face as not to take advantage of this stroke of good fortune?

Shall we now pursue the cold war as an end in itself, forgetting that we reluctantly embarked upon it only as a means toward reaching a peaceful settlement?

I submit that the number one item of the President's instructions to Mr. Acheson, when he goes to the conference, should read:

You are authorized to make it clear that, if a settlement of the German question can be reached under which a freely elected All German Government will be enabled to guarantee the political freedoms to all German citizens, under which a just and honorable peace treaty may be negotiated, demilitarization assured and occupation forces gradually withdrawn, then the United States will gladly withdraw its suggestion for the inclusion of German forces in the North Atlantic Treaty Organization.

If our Secretary of State were to begin the discussions with a statement of that sort, defining precisely what we mean by "political freedoms", the Council would at once buckle down to the problem which lies at the heart of its assignment. If real progress were made toward reaching agreement on Germany, the Council would then find it infinitely easier to move forward on the question of the long-delayed Austrian Treaty. This, in turn, would open the way to a discussion of the withdrawal of Russian troops from Hungary, Romania and Bulgaria; and, finally, to a general discussion of the gradual reduction of all armed establishments.

If, on the other hand, Mr. Acheson follows the past pattern of the peripheral approach—seeking to begin with a discussion of the Austrian

Treaty or the troops maintained by or in the Soviet Satellites, and leaving the initiative, so far as Germany is concerned, to Mr. Vyshinsky—then I should say that the chances of a constructive outcome will be slim. We shall then, in all probability, witness merely another sorry spectacle of procedural wrangling and propaganda speeches, in which the relatively polite rebuttals of the West will be no less indicative of moral and intellectual bankruptcy than the slanderous vituperations of Andrei Vyshinsky.

The objection may be raised that a German peace settlement at this time, which would in effect "neutralize" Germany in the cold war, would "lay the great workshop of Europe wide open to Soviet aggression or subversion."

So far as military aggression is concerned, I am not suggesting that we abandon our commitment to defend Western Europe. As an alternative to German rearmament, I proposed some months ago that we and the British agree to maintain—not in Germany, but in France and the low Countries—an Anglo-American garrison of at least twenty divisions, provided that this force would be at least matched by our Continental allies. This army would be no further from the Rhine than the Russian army would be from the Oder. It would be a far more reliable force than one which included Germans. It would be far less provocative because it would not include Germans, and because it would not be built up, as is now contemplated, right up against a Russian army across the Elbe river.

As for political subversion of a "neutralized" Germany, why should we fear that Russian influence would be stronger than that of the West? Wendell Willkie once remarked that he could not understand why so many Americans made the assumption that, where democracy and communism come into contact, communism is likely to win. Why should we assume that a truly free German people—by which I mean a people freed not only from foreign coercion but from renascent native reaction—should be susceptible to communist conspiracy? This danger will be real only if a free Germany becomes a land in which the masses are discontented, which means, if the government pursues policies that allow the rich to become richer while the poor grow poorer. If Western influence is directed toward true democracy, why should we fear that the German people will fall for the false promises of the East?

The assumption that a "neutral" Germany will necessarily fall prey to the Kremlin is defeatism of the most dangerous variety.

Let me make certain that I have made my major point unequivocally clear.

No matter what the Russians have done or failed to do in the past—no matter how untruthful their often repeated allegations as to our motives and actions—no matter how churlish the behavior of their negotiators—there is now *apparently*—and I repeat, *apparently*—a real chance that a German peace settlement can be achieved.

A German peace settlement is fundamental to a peace settlement in Europe. A European peace settlement is a prerequisite for the establishment of enduring peace throughout the world.

Even if a kindly history should absolve us of all blame for what has happened up to this moment, history will not forgive us if we fail—through stubbornness, or pride, or stupidity—to make the most of this opportunity.

May it be given to those harassed and overburdened men, in whose hands rests not only our future but the future of all mankind, to seize upon this moment and to make it the turning point toward peace.

Perhaps I am an optimist. Perhaps, in calling this pamphlet "Turning Point Toward Peace?"—even with the questionmark—I am attaching undue significance to certain signs of reawakened courage and common sense.

Yet it is a fact that the American people have, within the last month, become aroused, as they have not been aroused since Pearl Harbor, to the dangers which confront our nation. It is a fact that, in both Houses of Congress, the representatives of the American people are not only asking questions but suggesting answers.

Undoubtedly it would be over-optimistic to conclude—because we have at last aroused ourselves from the state of apathy in which we have been drifting toward war—that we are now safely on the road to peace. But the fact is that we are now facing, for the first time since the war, the two major questions which will probably determine the future of mankind. We are facing the economic challenge of our time, which is to find a way of conducting a successful worldwide war upon hunger, want and human misery. We are facing the political challenge, which is to find a way of so organizing world society that violence and the threat of violence may be forever banished from this earth.

We have not found the answers to these questions. But we have, at long last, begun to seek the answers. That is no justification for complacency, but it does seem to me sufficient reason to view the future with hope.

J. P. W.

February 22, 1950.

A Man From Mars Takes a Look

(Introduction to two lectures on the need for an affirmative policy toward peace, delivered in January, 1950, at the New School for Social Research in New York City.)

If the proverbial Man from Mars were to pay us a sudden visit, in order to make a report on the doings of our nation in the field of foreign affairs, he would probably begin by trying to answer the following question:

"Is American foreign policy based upon the assumption that war with the Soviet Union is highly probable, if not inevitable? Or is it based upon the belief that there is still a reasonable chance of making and preserving a just peace?"

The answer may be obvious to us, but it would not be immediately evident to a man from another planet.

In trying to understand American policy, the Man from Mars would first have a look at our national budget. He would find that we are spending, in one way or another, about seventeen billion dollars a year on preparation for war, as against about four billion dollars a year on constructive efforts to build the peace. Taken by themselves, these figures would suggest to him that our policymakers are acting on the assumption that war is very likely, if not inevitable.

Our visitor would then examine *how* we are spending the seventeen billion dollars a year on preparedness, and this would puzzle him still further. He would find that less than half of this huge sum is being spent to maintain and equip combat forces—that more than half of it goes to the maintenance of a swollen overhead "defense establishment."

Looking, next, at some maps of this unfamiliar planet the Man from Mars would find that, in one direction, our country is separated from its potential enemy by three thousand miles of Atlantic Ocean plus several hundred miles of West European territory, whereas, in the opposite direction, less than a hundred miles separate our Alaskan Territory from the Soviet Union. He would find that, to defend our

Atlantic frontier, we had recently undertaken to rearm the West European countries and had promised, in the event of war, to help them hold off a Rusian invasion somewhere in Central Germany or, at worst, at the Rhine. He would perhaps be somewhat shocked to find that, in spite of this commitment, we have only two divisions of combat troops in Germany and that we possess in all only about ten divisions which we could send to Germany if Russia were to launch an attack. Considering that Russia could attack with fifty to a hundred divisions and that Western Europe has only about a dozen divisions of its own with which to oppose an invasion, this arrangement puzzles our friend from Mars. However, he is even more startled to discover what we are doing on our Pacific frontier. He finds us acutely worried about an island, called Formosa, lying off the Chinese coast some five thousand miles from our shores, but apparently not in the least disturbed about the safety of our own Alaskan Territory. He would learn that the Governor of Alaska had recently complained that two Russian airborne divisions, launched from nearby Siberia, could easily capture his whole Territory. This would really cause our Martian friend to rub his eyes, because, from Alaska, it would appear that Russian bombers could easily reach our vital centers of production.

Speaking of these vital centers, our visitor would look in vain for any major program of dispersing our production, or of protecting our civilian population against what he finds are here referred to as the "modern weapons of mass destruction." These weapons—atomic bombs, hydrogen bombs, and such—are, of course, hopelessly antiquated from the Martian's point of view. Nevertheless, he wonders how we intend to protect ourselves against them. He is reasonably sure that we, on this planet, have not yet discovered—as people have on other planets—that victory and defeat in a truly modern war have become indistinguishable from each other. He figures that, if we knew war to be utterly futile, not to say suicidal for victor and vanquished alike, we would not be preparing for war.

Assuming our ignorance of these facts, which have long been axiomatic on his own planet, our friend from Mars is unable to understand why—if we are preparing for war—our preparations should be so obviously inadequate to insure victory, or even to insure our own reasonable safety. This leads him to study what we Americans have been thinking and saying.

His conclusion from this study is even more baffling. He finds, from a careful analysis of our press and the statements of our officials, that we are not preparing for war at all but, rather, *that we are preparing for war to prevent war.* He concludes that what we *think* we are doing is to prevent Russia from starting a war by making ourselves so strong that military adventure against us will look unattractive. This still does not explain our puny combat forces, nor a wide-open Alaska, nor our undefended cities, but it gives him a glimmering of what we are up to. He thinks: "Maybe this idea has worked before on this curious planet." And so he studies a bit of Earth history.

Our troubled friend finds plenty of evidence that weak nations on this Earth have been attacked by strong nations, but very little evidence to show that preparation for war has worked out as an actual insurance against attack. He is particularly impressed by the discovery that, in 1941, Germany suddenly attacked a rather thoroughly prepared Russia. He studies German documents and finds that Germany finally decided to launch her long-contemplated attack upon Russia *precisely because Russia was preparing a defense* and because it seemed wise to Hitler to strike before the Russian preparations could be completed.

This would indicate to our Martian that any Earth nation, which seeks to prevent war through preparedness for war, had better prepare as fast as possible and as secretly as possible, so as not to provoke attack before it is ready. But here again he is puzzled, because this curious American nation seems to be making its preparations with a great deal of publicity and in a most leisurely manner, pausing every now and then to examine whether it can afford this or that item in its military budget.

"Perhaps," he thinks, mopping his brow, "these peculiar people are really betting on peace after all. But—if they are—why don't they do something about it? Why are they spending so little of their thought, energy and ingenuity—not to mention resources—on finding a way to make peace and preserve it?"

"Why," he says, "don't they move toward disarmament under world law and world law enforcement?"

"Why don't they really tackle the problem of applying the technological knowledge they possess to the elimination of hunger, poverty, disease

and ignorance? Don't they know that most of the human misery in their world is technologically obsolete?"

Finally, our friend from Mars comes to this rather sad conclusion about us, and this is what he decides to report to his superiors.

"American foreign policy, which you asked me to evaluate, seems to be a straddle between hope and fear. The American people appear to be hoping for a peace which they have not been able fully to envision, and half-preparing for a war which they do not dare fully to contemplate. This procedure seems hopelessly inadequate for the conditions which exist on the Earth, although other Earth peoples seem likewise to be following it. So far as I can see, the result will be that eventually these poor Earth inhabitants will drift into the same sort of catastrophe which finally depopulated planet S-23."

And so, shaking his head, he mounts his rocket and goes home.

Bidding farewell to our friend from Mars, let me now come down to Earth and state in one sentence what I think is wrong with our present foreign policy:

We are permitting fear of war and preparation for war so to preoccupy our minds and so to preempt our resources that we are prevented from making our maximum effort toward peace.

Granted that in the existing circumstances we must remain strong, we cannot afford to allow the existing circumstances to prevail indefinitely. Nor can we ignore the fact that there is a point beyond which preparation for war to prevent war defeats its own purpose. We are, I think, perilously near that point.

If our Government yields to the pressures which will cause us to devote still more of our own resources to the arms race—if our Government retreats from its avowed determination not to rearm Germany, or to divert Western Europe from recovery to rearmament—if our Government yields to the advice of those who would embroil us in futile military adventures in the Far East—then we shall very quickly pass beyond what airmen call "the point of no return."

If, on the other hand, we make up our minds to shift the emphasis to affirmative action toward peace, I am convinced that we can still achieve peace.

The longer we wait, the more difficult becomes the required change of direction.

If we believe that peace is still possible, the time has come for bold, imaginative and positive action toward peace.

(The substance of the two lectures, which followed this introduction, was a statement of the need for: (1) a comprehensive, overall approach, through the United Nations, to the world economic problem; and (2) the unequivocal recognition of the inadequacy of the present United Nations structure and a program for amending it.)

Turning Point Toward Peace?

The end of January, 1950, saw the low point in American post-war policy. The decision to develop and manufacture the hydrogen bomb was "the inevitable next step" in a policy of seeking peace by preparing for war. Various forms of pleas for a more affirmative leadership toward peace poured into the White House from many different groups and individuals in almost every part of the country. One such petition was circulated by the author and sent to the President on January 31, with the signatures of over 160 citizens from 28 different states in the Union. Among the signers were leading educators, clergymen, lawyers, editors, writers and businessmen.

On February 2, Senator Brien McMahon of Connecticut made his now famous speech. His proposal aroused the hopes of multitudes of anxious citizens. Likewise it encountered sharp criticism on the grounds of impracticability, and a blunt rebuff from the Administration. Secretary of State Acheson described it as a statement of our goal "without any instructions as to how to get there."

Feeling that the Senator's speech did contain very definite and valuable constructive proposals, but that these proposals were tied to a proviso which rendered them inoperative, the author utilized the occasion of the "Point Four" Conference, held on February 11, by the Post-War World Council, to make the following statement.

Senator McMahon's Peace Bomb

I.

Is it a Plan or Just a Hope?

The speech delivered in the United States Senate on February 2, 1950, by the Honorable Brien McMahon, may well go down in history as the turning point in post-war United States policy. On the other hand, it is also quite possible that its echoes will die away within a few weeks or months, if the flame of hope which it kindled is allowed to flicker and die out.

For the first time since the cold war began, one of the major architects of United States foreign policy stood up and denounced the sterility of the present negative approach to peace—denounced as hopelessly outworn the ancient motto: "He who wants peace had better prepare for war." This was the beginning of hope.

But Senator McMahon did more than merely repudiate the idea that security can be attained through maintaining the greatest arsenal of destructive weapons. He put forward a constructive proposal for an affirmative approach to peace. Was this proposal a workable plan for peace? Or was it merely the expression of a desperate anxiety that a workable plan for peace should be developed?

Briefly stated, Senator McMahon proposed that, if the Soviet Union would accept effective international control of atomic energy, the United States should declare itself willing to cut its military expenditures from fifteen to five billion dollars a year, and to contribute the ten billion dollars so saved to a worldwide economic recovery program, channeled through the United Nations. The Senator envisaged a cooperative program, to which other nations would likewise contribute—a program lasting perhaps five years and calling for a total contribution of fifty billion dollars from the United States. The present European Recovery Program, the Point Four Program, atomic energy development and, presumably, all other programs of economic rehabilitation and development would be combined in this single overall plan. Under it, all nations, including the Soviet Union, would be eligible for assistance.

This proposal falls into two parts: the proposal itself, and the conditions upon which it was put forward. Let us consider each separately.

II.

The Concrete Proposal.

The plan itself recognizes and squarely meets several major defects in our present foreign aid policies.

By implication, it recognizes the futility of all *military* aid as opposed to *economic* assistance. Explicitly, as to economic assistance itself,

Senator McMahon's proposal corrects three major errors in our present procedures:

1. We have so far been attempting to deal with isolated parts of the world economy without an overall concept or plan. For example, we are trying desperately to "integrate" Western Europe by one major effort, while making another wholly separate effort to raise the living standards of the so-called underdeveloped areas of Asia, Africa and the Middle East. We have so far overlooked the fact that parts of Western Europe are actually much more closely "integrated" with parts of Asia, Africa and the Middle East than they are with each other.

Senator McMahon's plan recognizes the need for a single, coordinated, worldwide effort, applied at whatever may be the points of maximum leverage on the world's economy.

2. We embarked, in 1947, upon a wholly negative concept of extending economic and military aid wherever needed to contain Soviet-communism. We then tried to switch to a positive approach, when Secretary Marshall, in launching his well-known project, declared: "Our policy is not directed against any country or doctrine, but against hunger, poverty, desperation and chaos." Our attempt to make this switch was frustrated by Molotov's famous walk-out, which doomed the Marshall Plan to become primarily an instrument in the negative cold war. (It is beside the point of this discussion to speculate upon what would have happened, if Russia had accepted Secretary Marshall's invitation.) In January, 1949, President Truman made a second start toward an affirmative policy, when he enunciated the Point Four principle. This declaration of principle remains as yet unimplemented and the legislation now before Congress would, if enacted, constitute only a very small first step in its execution.

Senator McMahon's proposal carries the affirmative emphasis over into the whole of our foreign economic assistance effort. It restores the original Marshall Plan concept.

3. We have been operating, in our foreign aid programs, almost wholly outside the United Nations. The basic tenet of our policy has been to strengthen the United Nations; nevertheless, we have acted unilaterally in Western Europe, in Greece and Turkey, and in China.

President Truman's Point Four program will apparently attempt to channel at least some of the proposed technical aid through the United Nations, but most, if not all, of the needed capital investments are expected to flow unilaterally from the United States to the participating countries, in accordance with bilateral bargains made outside of the United Nations.

Senator McMahon's proposal recognizes the need for channeling the whole program through the United Nations.

These are three major contributions to the making of an American policy that might lead to enduring peace. There is a fourth contribution implicit in the Senator's proposal.

Because we have committed so large a part of our resources to military preparations and to European aid, we have arrived at the crisis in Asia, feeling impoverished. Our budget is heavily out of balance. Taxes are already burdensome. Therefore, whatever we do in Asia must, we think, be done without spending any substantial funds from our Treasury. This led President Truman to speak of "our vast imponderable resources" and to think in terms of technical advice rather than financial assistance. Since then, however, it has become clear that technical advice without substantial help in carrying it into effect would be of no great usefulness, and so we have built a Point Four program on the hypothesis that private investors can be induced to provide the necessary capital. To a very great extent, I believe this hypothesis to be an illusion, especially in the initial stages of the program.

Senator McMahon's proposal would make aid to the underdeveloped areas an integral part of an overall program financed largely by government contributions channeled through the United Nations. This would in no way preclude private investment. It would, on the contrary, create the only conditions in which private capital might be willing and able to make an important contribution.

We see, then, that the McMahon proposal might, if reduced to a practicable plan, cure precisely those defects from which our past efforts have suffered, and from which the Point Four program will suffer, if we pursue our present course.

III.

The Self-negating Proviso.

Let us now consider the conditions upon which this extremely interesting proposal has been put forward.

The whole plan rests upon the assumption that the United States can save ten billion dollars a year (two-thirds of its present military budget). This assumption, in turn, rests upon Russian acceptance of a modified Baruch Plan for the international control of atomic energy.

Various commentators have pointed out that this point of departure negates the whole proposal and makes it merely a clever propaganda maneuver. They have pointed out that, if Russia would not accept the Baruch Plan when we had an atomic monopoly, she would certainly not accept it now; in other words, that the Baruch Plan is out of date.

This criticism seems to me wide of the mark. It is true that the Baruch Plan is out of date. But I can find no conclusive evidence in the Senator's speech to suggest that he would object to modifying it, so long as it remained an enforceable plan fortified by the right of inspection. The real difficulty lies elsewhere.

The Acheson-Lilienthal report, from which the Baruch Plan derived, was a revolutionary document. It said, in so many words, that there was no way to prevent the construction and probable use of atomic weapons, short of establishing a World Authority capable of enacting, administering and enforcing law. The Baruch Plan was, in effect, a plan for the establishment of world government in the field of atomic energy.

Now the amazing thing was this: we, the United States, were willing to put forward this far-seeing proposal and to abide by it, *but without recognizing the revolutionary nature of our own proposition.* It never occurred to us that the principle, which we recognized as valid with respect to atomic weapons, was equally valid with regard to *all* weapons. We talked about government under law with respect to "A" bombs, but went on talking about international anarchy with respect to TNT bombs. This

is something like a community which decides to outlaw murder by the use of firearms, enacts a law to that effect and hires a policeman to enforce it, but leaves murder by knives, hatchets and poison to the discretion of individuals. For what, pray, is any attempt to control so-called conventional armaments by treaty between sovereign nation-states, other than leaving the use of such armaments to the discretion of the individual governments?

The trouble with the Baruch Plan—even if brought up to date—is that it deals only with one type of weapon. It outlaws *one method* of waging war. What we need to do is to outlaw *all* weapons of aggression. What we need to do is to outlaw *war itself*.

The puzzling thing about Senator McMahon's proposal is that he did not make *this* the condition—if there was to be a condition—for the adoption by the United States of an affirmative policy towards peace. It would be less puzzling, if Senator McMahon had not himself sponsored a resolution, now before both Houses of Congress, which would make the development of the United Nations into a world federation the avowed aim of American policy. In signing his name to this resolution, Senator McMahon recognized that there can be no peace without a world organization capable of enacting, administering and enforcing world law, in such a way as to prevent aggression by any nation against another with *any* weapons of force—from hatchets to "H" bombs.

Why not, then, combine two bravely taken positions of wise statesmanship into one? It seems to me that, were he to do this, Senator McMahon would have a theoretically impeccable plan.

It is true that the proposals thus modified would still not be a practicable plan, because the Russians would hardly accept world government with regard to *all* weapons any more readily than they would accept the enforcement of law with regard to one type of weapon. This brings me to the final observation I should like to make concerning the Senator's proposal.

IV.

The Plan Made Realistic.

If the policy suggested by Senator McMahon is a wise policy for the United States to pursue, why must it be made conditional upon any Russian action?

The obvious answer is that we cannot afford to cut our military expenditures by ten billion dollars a year, unless there is an effective agreement to disarm; and that, unless we can save the ten billion dollars out of our military budget, we cannot afford to spend them on economic reconstruction.

The first half of this answer must be accepted as correct. Disarmament by example will get us nowhere.

The second half of the answer seems to me open to question. Suppose we take for granted that no effective disarmament agreement is possible at the present time, and that we cannot, therefore, count on any substantial saving in our military budget. Is it so certain that we cannot afford to go ahead nevertheless with the constructive program put forward by Senator McMahon?

To begin with, we should not be talking about a net increase of ten billion dollars a year in our expenditure. The money we are now spending in Western Europe and in other parts of the world for purely economic aid—excluding military assistance—comes to at least four billion dollars a year. If these existing programs were integrated, as proposed, in the new overall plan, we should be adding only six billions to our annual expenditure. Thus, the five year program would cost us thirty—not fifty billions. Furthermore, it seems reasonably certain that, with or without the overall McMahon plan, we shall have to spend considerable sums in Asia and the Middle East during the next five years, if we intend to hold our own in a continuing cold war. It is, therefore, fair to say that the adoption of the McMahon plan *without any conditions whatever* would probably not add more than four or five billion dollars a year to our expenditures.

Can we afford such an increase?

I should like to put the question to you in reverse: Can we afford *not* to undertake such a plan? The last war cost us over one trillion four hundred billion dollars. *It cost us more per week than this program would cost us per year.* No one knows what the next war would cost.

Clearly we *can* afford it, if the program can reasonably be expected to get us off the greased slide that leads to atomic war and on to the long and arduous road that leads to peace.

I, for one, believe that Senator McMahon has outlined a plan that can reasonably be expected to lessen the existing tensions, to strengthen the United Nations, to put the United States into an unassailable moral position and to improve the lot of mankind. I believe that the United States should embark upon such a plan without making its decision subject to whatever the Kremlin may or may not be willing to do at the present time.

Secretary of State Acheson has said that the only agreements that can be made with the Kremlin are agreements which rest upon existing facts. Let us, then, present the Kremlin with a fact far more powerful than our decision to develop and manufacture ever more horrible weapons of destruction. Let us present the Kremlin with the fact that the United States is determined, in spite of its military burdens, to commit an act of faith—to dedicate its great strength to constructive cooperation with all the world's peoples in a worldwide crusade against hunger, poverty, disease and ignorance. Let us present the Kremlin with the fact of a challenge not only to its military power but to its purposes, which are the ultimate roots of its power.

V.

Should We Let Russia Participate in the New Overall Plan?

The condition I would attach to Senator McMahon's proposal is one that we shall not be able to impose until we, ourselves, have accepted it. That condition is that only those nations shall be eligible to participate in the plan whose peoples have made known their will to accept the rule of law—not merely in the field of atomic weapons—but in the whole field of

international relations, to the degree necessary in order to outlaw force, or the threat of force, as a method of settling disputes.

Once we declare our own willingness to transform the United Nations into an organization capable of enforcing peace under law, we shall find ourselves in company with the entire non-Soviet world. We shall then be in a position to proceed with our overall cooperative plan hand in hand with the majority of the world's peoples.

When the rulers of the Russian people decide that they, too, wish to participate on these terms, then, at long last, the arms race can come to an end, and all the world's peoples can be released from the burden which lies so heavily upon them, and from the overhanging threat of annihilation which beclouds their lives with fear.

It would, I think, be foolish to think that this can happen in the immediate future as the result of any sort of negotiations. A regime which maintains itself at home by the use of force cannot readily renounce force as an instrument of foreign policy. In the long run, however, even such a regime can be brought to realize—by "demonstration of fact"—that those peoples, who devote their energies to peaceful cooperation, will outstrip the peoples whose governments pursue only the sterile aim of widening the orbit of their own arbitrary power.

The alternatives with which we are faced today are not whether we should or should not "talk to the Russians". The alternatives we face are whether or not to do—in spite of the Russians—what needs to be done and what, in our hearts, we know we should do.

Freed from its self-defeating proviso, Senator McMahon's proposal can become a mighty weapon for peace.

Freed from its own myopic, penny-pinching fears, our Government can use this proposal to end the long nightmare in which we have been living.

Initiative on "The Hill".

Our Department of State has maintained the position, first clearly stated by Secretary Marshall on May 5, 1948, that "the problems today presented to those who desire peace are not questions of structure." In other words, the Department has maintained the position that the United Nations, as at present constituted, would be capable of enforcing peace, if the Russians would allow a just peace to be made, and if the Kremlin would permit the United Nations machinery to function.

The realization that this stubbornly held view is based upon an illusion has been dawning upon large segments of the American public and, recently, upon great numbers of Senators and Congressmen. In the House, 112 Representatives sponsored a resolution (HCR 64), which would make the development of the United Nations into a World Federation the avowed aim of American policy. This federation would be "open to all nations and would have defined and limited powers adequate to preserve peace, through the enactment, interpretation and enforcement of world law." In the Senate, the identical resolution was sponsored by 19 Senators. There has never been so wide a legislative sponsorship for any move initiating a new foreign policy principle.

After extensive hearings in January, the House Foreign Affairs Committee reached a clear majority in favor of recommending the passage of the resolution. It is expected to report shortly. In the Senate, hearings were held during the month of February by the Subcommittee on Foreign Relations. On February 17, I was invited to testify before this committee. The following is the text of my testimony:

"I am aware, Mr. Chairman, of the exigencies of your crowded schedule and of the need to be brief, so as not to transgress upon your courtesy in granting me a hearing.

"The past fifteen years of my life have been devoted almost exclusively to studying the problems of world peace and, especially, the relation of the United States to those problems. These studies led me, ten years ago, to the conclusion that the great question of our time is not whether

One World can be achieved, but whether One World can be achieved by peaceful means.

"We shall have World Government, whether or not we like it. The question is only whether World Government will be achieved by consent or by conquest.

"Today we are faced with a divided world—its two halves glowering at each other across the Iron Curtain. The world's two superpowers—Russia and the United States—are entangled in the vicious circle of an arms race, which more and more preempts energies and resources sorely needed to lay the foundations of enduring peace. We are now on the road to eventual war—a war in which the conqueror will emerge well-nigh indistinguishable from the vanquished.

"The United States does not want this war, and most authorities agree that Russia does not want it. Indeed, why should Russia prefer the unpredictable hazards of war to a continuation of her present profitable fishing in the troubled waters of an uneasy armistice? Yet both the United States and Russia are drifting—and, with them, the entire world—toward the abyss of atomic conflict.

"Mr. Chairman, I am here to testify in favor of Senate Resolution 56, which, if concurrently enacted with the House, would make the peaceful transformation of the United Nations into a world federation the avowed aim of United States policy. The passage of this resolution seems to me the first prerequisite toward the development of an affirmative American policy which would lead us out of the valley of death and despair.

"I am fully aware that the mere passage of this resolution will not solve the complex problems with which we are confronted. Our recognition of the inadequacy of the present United Nations structure, and our declared determination to strengthen that structure by Charter amendment, will not alone overcome the Russian obstacle. But it will, at long last, chart our own goal and enable us to steer a straight course toward a clearly-seen objective. Moreover, it will unite us in purpose with the vast majority of the peoples of the non-Soviet world.

"Until we have established this goal, we shall continue to befog and befuddle our own vision by clinging to the illusion that the present

structure of the United Nations would work, if only the Russians would let it work. That has been our position to date.

"Until we establish this goal, we shall continue to ask other peoples to unite with us only in the negative purpose of stopping Russia. Fear-inspired negative action makes poor cement for unity.

"Once we shall have declared a positive purpose—once we shall have cemented the united will of the free peoples in a common aspiration—we shall be in a far stronger position to deal with the obstacles presented to the realization of that purpose.

"Mr. Chairman, I prefer SR 56 to other resolutions now before you for two major reasons:

"First: SR 56 goes to the root of the evil in the present state of international anarchy. It recognizes that there is no cure for this evil short of making the United Nations into a universal organization capable of enacting, interpreting and enforcing world law to the degree necessary to outlaw force, or the threat of force, as an instrument of foreign policy. It states the objective in unequivocal terms.

"Second: SR 56 does not commit the United States to any specific next steps to be taken toward the attainment of the objective. In the present state of world affairs, it would seem to me unwise to commit ourselves to any fixed plan of action, without first exploring all the possibilities.

"In contrast to SR 56, other proposals before you seem to me either to set a goal short of what is needed to ensure peace, or to foreclose the ultimate attainment of a universal organization by an over-eager acceptance of half measures, on the theory that half a loaf is better than none.

"Limitations of time prevent my going into detail, but I should like to state specifically the conviction that any *exclusive* partial federation, such as the Atlantic Union, would not only serve to harden the existing cleavages in a divided world, *but would create new and dangerous cleavages within our half of the divided world.*

"I should like to make clear, Mr. Chairman, that I do not minimize the many and complicated problems which will remain to be solved, once SR 56 is enacted. In due course we shall have to define more closely what

we mean by world government and by what steps we propose to get there. I have given considerable study to these problems. I believe them to be soluble—but not by the adoption of any hastily conceived formulae, and —above all—not without exploring patiently and carefully what is in the minds of other peoples, who, while friendly to us, do not share our historical background nor our particular political or economic prejudices and predilections.

"If we seek peace under law by common consent, we cannot expect to impose our imprint upon the world. We must be prepared to accept some sort of a composite pattern, in which we may preserve for ourselves the things we cherish, but in which others may be equally free to do the same. We may or may not be able to find a common pattern with the present rulers of Russia. We most certainly can, and must, find a common pattern not only with the peoples of Western Europe but with the peoples of Asia, Africa, the Middle East and Latin America. Perhaps a shorthand device for stating the point would be to say that we must find a common pattern with Nehru, before we can even think of trying to find a common pattern with Stalin.

"Secretary Acheson said the other day that the only agreements which can usefully be made with the Kremlin are those which rest upon established fact. I think this is true, and not only with respect to Russia. But, as to Russia, the trouble has been that we have been letting the Kremlin create the 'existing facts'.

"One of your colleagues made a speech the other day, which seemed to me to leap straight for the jugular vein in our present foreign policy. Senator McMahon proposed that we create some facts of our own.

"One of the facts, which your colleague specifically proposed to create, would, in my judgment, be far more powerful than our recent decision to develop and manufacture hydrogen bombs. Senator McMahon proposed that we present the Kremlin with the fact of our determination to dedicate our strength to a worldwide, cooperative crusade, waged through the United Nations, against hunger, poverty, disease and ignorance. This is the sort of bold affirmative action in the economic field which could, if pursued, create the climate for the attainment of our political objective—namely, the establishment of a world community living at peace under law.

"Without detracting from the imaginative courage of Senator McMahon's proposal, I regret that, in his first presentation, he has attached it to a self-negating proviso. His plan, so right in itself, would become operative only if a disarmament agreement were first reached with the Kremlin under which the United States could save ten billion dollars a year out of its military budget. This is extremely unlikely.

"Moreover, even if the Russians were to accept a modified Baruch Plan, this would not suffice, because, at best, such a plan would outlaw only one type of weapon and one method of waging war. It would, in effect, establish World Government in the limited field of atomic energy, but it would leave the use of all other types of weapons to the discretion of nation-states dwelling in a state of international anarchy.

"A few days after the Senator spoke, I ventured to put forward an alternative, in which Senator McMahon's worldwide Marshall Plan would not be conditioned upon anything the Kremlin might or might not be willing to do. Under this alternative, we should not wait for Russia. The benefits of the McMahon plan would become immediately available to those countries which made known their will to accept supra-national authority—not only in the field of atomic energy, but in the whole field of international relations—to the extent necessary in order to establish peace under law.

"Obviously, the proposed alternative condition—agreement to outlaw *all* weapons and war itself—is one which we cannot impose until we ourselves have accepted it. But, once we have accepted it, by adopting the concurrent resolution now before you, we shall be in a position to proceed with Senator McMahon's cooperative plan, hand in hand with the majority of the world's peoples.

"Thus we should present the Kremlin with two vital new facts not of its own making:

"1. The united determination of the majority of the world's peoples to establish a rule of law and thus eventually to free themselves from the burden of armaments and the spectre of atomic war; and

"2. The steady progress of the massed forces of humanity embattled in a common crusade against hunger, poverty, disease and ignorance.

"The first of these new facts would, for a time, be static. The avowed aim could not be realized without Russian cooperation.

"The second of these new facts would be dynamic. It would demonstrate how free peoples, devoting their energies and resources to cooperative effort, outstrip those peoples whose governments hold them in the shackles of a police-state, concerned primarily with the perpetuation and aggrandizement of its own power.

"Taken together, these two facts would exert a mounting pressure toward cooperation upon the Kremlin. It is true that a regime, which maintains itself by force at home, cannot readily renounce force as an instrument of foreign policy. Yet even such a regime can, in the long run, be brought to accept new facts which alter its conception of its own self-interest and self- preservation.

"The creation of one such new fact has been boldly proposed by a member of your committee. The creation of the other lies in your hands today.

"In order not to trespass upon your time, Mr. Chairman, I have left a number of gaps in the presentation of the suggested modification of the McMahon proposal. To fill in these gaps, I ask leave to have included in the record of my testimony the paper, already referred to, which was delivered last week at a conference of the Post War World Council in New York."

The two great issues are now before the American people. The decision lies in our hands.

If this pamphlet has helped you to clarify your own thinking, perhaps you may wish to send copies to some of your friends.

"POINT FOUR"

OUR CHANCE TO ACHIEVE FREEDOM FROM FEAR

and

What YOU Can Do About It

An analysis of American post-war policy, the reasons for its failure, and the potentialities of the "Point Four" Program as an instrument of affirmative leadership toward peace. The current legislative proposals for carrying out "Point Four" and the need for a broader approach than that presently contemplated. What the ordinary citizen can do to support a broader "Point Four" Program and a more positive American policy toward peace.

With a foreword, entitled *Call to Action,* by Dewey Anderson and Morris L. Cooke. 64 pages, paper bound—25 cents.

REARMING GERMANY

HOW STUPID CAN WE BE?

A paper, prepared for the American Political Science Association, discussing the likelihood of American acquiescence in the rearmament of Germany, its dangers and its futility. The strange history of the Atlantic Security Program, and a warning lest the military logic of this program carry us beyond the point of no return on the road to war. 12 pages, paper bound—10 cents.

GERMANY AND WORLD PEACE

I.

PAST MISTAKES.

The problem of Germany in relation to the establishment of enduring world peace is one with which most of us have been familiar, if not actively concerned, throughout our lifetimes. Those of us who served in two World Wars and who were acutely conscious of the tragic mistakes made after each conflict cannot escape from a sense of repetitive failure. Yet I, for one, do not feel that there is any immutable fate which, in the sense of the ancient Greek tragedies, has fore-ordained a continuation of repetitive disaster. I am convinced that, if we have the common sense and the courage to recognize our mistakes in the past, we shall be able to avoid re-enacting them in the future.

Let me, then, begin by listing what seem to me the outstanding mistakes we have made, or toward the making of which we have contributed, with respect to Germany. In doing so, I shall not delve back beyond the limits of my own first-hand memory.

WORLD WAR I.

My category begins with our repudiation, in 1919, of the basis of a just peace laid down in the famous Fourteen Points of President Woodrow Wilson. It is true that, between the enunciation of the Fourteen Points and the German surrender, the Germans had imposed the disgraceful Peace of Brest-Litovsk upon the Russians, showing clearly what kind of a victor's peace they would have made with the Western Allies, had they been able to win the war. As a matter of retributive justice, this action on the part of the German militarists would have justified a treaty even more harsh than the Peace of Versailles. But, from the point of view of preserving our own moral position and of making a peace which could reasonably be expected to endure, it seems to me that we should have been

wiser to adhere to Wilson's original concept of "peace without victory." Even though the Treaty of Versailles contained provisions for later amendment, which are all too often forgotten because they were not utilized, it is clear, I think, that the impossible reparation clauses imposed upon the Germans not only sowed the seeds of German irredentism but created the basis for the economic catastrophe which befell the Western world in 1929-1932. The idea that the Germans could be forced to pay for the entire cost of the war not only imposed an impossible burden upon Germany, but threw out of true perspective the whole question of inter-Allied war debts, leading to false expectations throughout the Western world, to the rise of economic nationalism, the strangulation of world trade and the eventual collapse of the Western economic system.

The second major blunder in which we participated consisted in aborting the revolution which would have taken place in Germany after the surrender of November 1918, had it not been for Allied intervention. Under paragraph V of the Armistice Agreement, the Allied Armies of Occupation threw out the Workers and Soldiers Councils, which had taken over local authority in many parts of Germany, and restored to power the ousted officials of the Kaiser's Germany. The Western Allies were so frightened of the Bolshevik Revolution in Russia—which, at the time, they were trying to help overthrow by military intervention—that they became frightened of *any* revolutionary trend in Germany, for fear lest it follow the Russian pattern. Thus a democratic revolution was strangled at birth, when the only hope for a peaceful Germany rested upon its completion. The failure of the Weimar Republic was, of course, in large measure due to German Social-Democratic weakness and betrayal. But the Western Allies made failure certain by lining up with what they conceived to be "the forces of law and order" against those very elements in Germany which might have produced a peaceful democratic development. As a result, the Junker-industrial-military clique, which had ruled the Kaiser's Germany, was restored to power and lost no time in plotting the resurgence of an aggressive warrior nation.

BETWEEN THE WARS.

On the whole, the period from 1920 to the rise of Hitler is not one in which the United States can be blamed primarily for the errors of Western diplomacy. It is true that our high tariff policy and our insistence

upon the repayment of the Allied war debts contributed to the collapse of world trade. It is true that our repudiation of the League of Nations contributed to the breakdown of that structure. But the United States was not primarily responsible for the dissension between France and Britain, nor for the structural defects inherent in the League of Nations, nor for the fatal policy of appeasement with which the West European nations met the rising threat of fascism. Our mistakes during that period were mostly sins of omission or errors committed here at home; they consisted in following the will-o-the-wisp of the isolationist illusion, in going on a gigantic orgy of speculation, and thus touching off a worldwide economic depression. There was perhaps one moment at which we might have performed a constructive action and at which we failed to do so; it is just barely possible that, if the World Economic Conference of 1933 had succeeded, instead of ending in failure, Hitler might never have come to power and World War II might have been averted. My own view—much as I deplored the failure at the time—is that it was then already too late to avert the rise of fascism.

There was another moment—after the disgraceful betrayal of Czechoslovakia at Munich—when overt aggression by Hitler might have been averted, if the United States had declared that, in the event of war, it would at once stand by the side of the nations resisting Axis aggression. I, for one, publicly advocated precisely this action at the time, but it is probably true that it would have been quite impossible for our government to obtain public support for such a declaration at that moment. Nevertheless, I believe that such a declaration would have served a more useful purpose then, in 1939, than when we finally made it, ten years later, in the Atlantic Treaty. In summary, I would maintain that our mistakes with regard to Germany in the period between the wars were negative rather than postive, arising out of our failure to recognize our changed position in the world and the increased responsibility which that position entailed.

WORLD WAR II.

During the Second World War, the first mistake we made with regard to Germany was, in my judgment, the announcement in January 1943 of the policy of unconditional surrender. The pledges of a just peace contained in the Atlantic Charter, of August 1941, were in many respects

analogous to the pledges of a just peace contained in Woodrow Wilson's Fourteen Points. The Casablanca demand for unconditional surrender seemed to conflict with these pledges and to foreshadow their abrogation. While it is doubtless true that President Roosevelt was the author of the Casablanca statement, as recently stated by Winston Churchill, there is another side to this story which should, in justice to President Roosevelt, be known. Those of us, who were in charge of propaganda warfare against Germany, strongly protested against the unconditional surrender formula as playing directly into the hands of Dr. Goebbels. In May, 1943, I submitted a paper to the President, urging the modification of this formula, because, as shown by prisoner interrogation, the Nazi propaganda machine was most effectively using it to convince the Germans that they had no alternative other than to continue the war until German victory could be achieved. The President was not unfavorably inclined toward a revision and even did some careful editing of the suggested draft. Then Mr. Churchill arrived on one of his visits and, a day or so after his departure, we were told that the President now considered a revision of the formula inappropriate. Mr. Churchill is no doubt justified in saying that Mr. Roosevelt invented the formula, but it seems to me only fair to record that Mr. Churchill was the one who apparently insisted upon sticking to it.

The second great war-time mistake, as regards Germany, was made at Yalta, where it was actually decided to throw overboard the just peace pledged in the Atlantic Charter and to permit both Poland and Russia to annex parts of Germany. This decision logically led to the later annexation by France of the Saar, even though Russia, Poland and France were all bound by the Atlantic Charter Pledges against territorial annexations. Thus, as in 1919, the victorious coalition destroyed its own moral position toward the German people, and thus history began fatefully to repeat itself.

Our third war-time mistake was our failure to develop any sort of a coherent plan for the actions to be taken after German surrender. On the credit side of our ledger stands the fact that we were consistently determined not to repeat the mistake of World War I reparations, nor the mistake of trying to collect war debts from our Allies. On the debit side stands the incredible nonsense of the Morgenthau Plan which, though not adopted in the final analysis, nevertheless poisoned the directive (JCS 1067) under which General Eisenhower had to operate, as well as the Potsdam Plan for the four power government of Germany.

During the period, in 1944, when the battle over post-surrender plans was raging in Washington, I was one of those invited to suggest ideas. The plan which I presented rested upon these assumptions:

1. That only a reasonably prosperous German nation would be a peaceful German nation. (This was in opposition to the Morgenthau school of de-industrialization.)

2. That a reasonably prosperous German nation would be essential to a reasonably prosperous, and, therefore, peaceful Europe.

3. That a divided Germany could not be reasonably prosperous. (This was in opposition to the partitioning of Germany advocated by Mr. Sumner Welles and others.)

4. That it is basically not the possession of an industrial war potential *but the will to use it for war* that makes any nation a threat to peace; and that the all-important security question, as to Germany, would be how to destroy the German will to aggression.

5. That the moral regeneration and re-education of the German people would be primarily a problem which the Germans must solve for themselves; that they must be kept under surveillance until they had demonstrably solved it; but that the sooner the victorious Allies cleared out of Germany and placed this responsibility squarely upon the Germans, the sooner would there be any hope of regeneration.

6. That, once Germany had been thoroughly disarmed, her direct war-plants destroyed, and all military or para-military organizations broken up, the proper task of the victorious Allies would be to see to it that the German people had an opportunity to evolve their own social and political structure, without once again falling into the clutches of the Junker-militarist-industrialist clique which had dominated the German past. That any political or social structure imposed by the conquerors, no matter how excellent, would last only so long as the conquerors maintained it by force. In other words, that the German people must be allowed to work out their own long-deferred revolution and that we must neither seek to prevent such a revolution, as we had in 1919, nor attempt to impose a revolution from without, as Napoleon had done a century before.

This idea of permitting a revolution to occur in Germany—of letting the German people themselves take care of their war criminals to the greatest extent possible—of permitting a certain amount of bloodshed and disorder in the interests of the catharsis to be achieved—all this seemed highly dangerous and unwise to the men who were trying to work out our post-surrender plans. Again, as in 1919, our policy-making was haunted by the spectre of a communist revolution in Germany—as unlikely then as it had been twenty-five years earlier.

That was in 1944, before the Normandy invasion and a year prior to the fateful decisions of Yalta. Once it had been decided at Yalta to divide Germany into four zones of occupation, after first amputating an undetermined amount of territory in the East, and then to attempt the four power rule of Germany by an Allied Control Council, it seemed to me even more obvious that we were headed for disaster. It is hard enough to conceive of a single conquering nation successfully imposing a revolution upon a vanquished people. It was to me altogether inconceivable that four conquerors should succeed even in reaching agreement as to what sort of a revolution they desired to impose. Yet that is precisely what was attempted under the ill-fated Potsdam Agreement of August, 1945.

THE POTSDAM AGREEMENT.

Having stated this background of rather fundamental dissent from our officially adopted policy with regard to Germany, with which you may or may not agree, the following observations will, I hope, seem at least consistent with the beliefs I have expressed.

In the first place, I submit that the Potsdam Plan for the four power government of Germany could not have worked out successfully, even if there had been no Soviet Union involved in the arrangement. It could not have worked out satisfactorily, because no prolonged military occupation could have succeeded in creating a peaceful and democratic Germany; because no four occupying powers could have agreed upon a diagnosis of the German malady, much less upon a cure; and because the Potsdam Plan was contaminated by the Morgenthau theory of making the Germans peaceful through permanent impotence.

In the second place, the four power plan was foredoomed to failure by two major blunders of Western diplomacy committed at Potsdam.

These were: Western acquiescence in an excessive land-grab by Russia and Poland; and Anglo-American failure to establish a complete and workable understanding with France.

The Yalta Agreement to establish the Curzon Line as the frontier between Poland and Russia and to "compensate Poland" for the loss of its eastern provinces "by accessions of German territory in the north and west" was bad enough because it repudiated the Atlantic Charter pledge of no annexations. A reasonable case could have been made for a frank statement that these pledges would have to be somewhat modified in the interests of a peaceful Europe. A reasonable case could have been made for eliminating the strategically provocative enclave of East Prussia, and for the transfer to Polish sovereignty of the coal mines and industries of Upper Silesia, in order to give the new Poland an economy properly balanced between industry and agriculture. In my judgment, there was no justification whatever for allowing Poland to annex the agricultural regions of Lower Silesia, Pomerania and part of Brandenburg. Had Poland been given Upper Silesia and all of East Prussia it would have been amply compensated for the loss of the Polish Ukraine to the Soviet Union. But, at Potsdam, the Russians demanded possession of half of East Prussia for themselves and were granted this demand for no other reason than that they insisted upon it. Having negotiated this steal for themselves, the Russians then insisted that Poland be further compensated by taking over the breadbasket of Eastern Germany; and again the British and American negotiators agreed, taking refuge behind the formal stipulation that the final settlement of Germany's eastern frontier would have to await the signing of the peace treaty.

The result of this major blunder was, first, that some nine million Germans were expelled from their homes and crowded into the western rump of Germany; and, second, that the new truncated Germany was deprived of an area which had formerly supplied the German people with about 25% of their foodstuffs. This meant that the new Germany would have to import about half of its total food supply, instead of roughly one quarter. In other words, by agreeing to the Russo-Polish land-grab in the East, we made it certain that the Germany of the future would either have to live on Western charity, or else become an even more formidable producer and exporter of manufactured goods than it had ever been before. Thus, at the very outset, we coppered our own bet of staking

the creation of a peaceful democratic Germany upon the limitation and control of its industrial production.

The second major blunder made at the beginning of the four power experiment was Anglo-American failure to reach a solid understanding with France. Had the Russians had their way, France would have been excluded altogether from the occupation and management of Germany. At Yalta, however, both Roosevelt and Churchill insisted—rightly, I think—that France be included. Accordingly, the French were given a zone of occupation, carved arbitrarily out of the Anglo-American zones, and a seat on the Allied Control Council. But the French were not invited to attend the Potsdam Conference, at which the Control Council's frame of reference was decided, and they were never thereafter brought in as a signatory of the Potsdam Agreement. In part, this was no doubt due to the contemptuous attitude of Russia toward France, and in part to the hyper-sensitive, chip-on-the-shoulder vanity of General de Gaulle, who was then the French chief of state. But, in even greater measure, the resulting confusion was attributable to an almost incredible lack of foresight on the part of the British and American Governments.

As a consequence, France was placed in a position to obstruct the action of the Allied Control Council—since all its decisions had to be unanimous—without herself being bound by the provisions of the agreement under which the Control Council operated. In addition, the failure of the Potsdam Conference to settle Germany's western frontier, combined with the amputation of the eastern provinces and the forced migration of their populations into the overcrowded western rump, created the very pressures best calculated to arouse French fears. It is therefore not surprising that France, from the very beginning of the German occupation, assumed a dog-in-the-manger attitude, obstructing and vetoing every attempt to manage Germany as an economic and political entity, unless she could first obtain a satisfactory settlement of the Franco-German frontier. If the Allied pledge against annexations was to be jettisoned, France considered herself entitled to annex the Ruhr arsenal in order to protect herself against another German invasion. Failing that, she wanted, at the very least, to see the Ruhr politically separated from any new German nation.

While it is almost certain that the Western Allies would, in any case have encountered serious trouble with Russia in carrying out the dubious

plan concocted at Potsdam, the fact is that, during the first critical months of attempted four power management, it was France—not Russia—which made progress impossible. French obstructionism provided the original excuse for Russian violation of the Potsdam Agreement and, to a large extent, prevented a timely recognition of the basic disagreements which remained to be ironed out with Moscow. Later on, the mounting difficulties with Moscow overshadowed and obscured the unresolved differences which existed between France, Great Britain and the United States—many of which still exist today.

One might say that France should have been satisfied with the guarantees to her security provided by the United Nations Charter, or that French fears of German military resurgence were exaggerated. The fact remains that fear of Germany was so deeply ingrained in the French people as to constitute a factor not to be ignored or over-ridden. British and American failure to take account of this factor produced a long series of misunderstandings and irritations, in the course of which France has been granted some concessions to which she was *not* entitled, without ever being given the guarantee of security to which she *was* entitled.

Anglo-American acquiescence in French annexation of the Saar illustrates this point. This was a concession, contrary to the solemn pledges of the Atlantic Charter and of the United Nations Declaration, which stultified the hitherto relatively clean position—in respect to annexations and "aggrandizement"—of the Western Allies. The annexation of the Saar did nothing to increase French security. On the contrary, it directed German revisionism, which up to that point had been focused on Russia and Poland, against France and the Western Allies as well. Moreover, it became an obstacle to the integration of Western Germany in a West European union.

SUGGESTED REVISION (1946).

In 1946, after an extended visit to the four zones of Germany, I wrote a series of articles later followed by several pamphlets and a book, urging a re-examination of our whole Germany policy. The three major points of which I endeavored to convince our State Department were:

1. That we should insist upon re-opening the question of Germany's eastern frontier, with a view toward seeking a return to Germany—not of Upper Silesia or East Prussia—but of the agricultural eastern provinces.

This was actually attempted by our then Secretary of State, James F. Byrnes, but completely bungled by the loose language employed in his famous Stuttgart speech. By not specifying the precise territory he had in mind, Mr. Byrnes created the impression that he was demanding a return to Germany of the Upper Silesian arsenal as well as of the agricultural provinces. This led to an instant Russo-Polish rebuff.

2. That we should unequivocally deny the French demand for annexation of the Ruhr and Saar, or even for the political separation of these areas from Germany; because, without them, a Germany already stripped of Upper Silesia, could never be anything other than a permanent slum in the heart of Europe. On the other hand, I urged upon our authorities *the creation of a European Coal Authority to allocate the production and distribution of coal throughout Europe;* this, I maintained, would give the French the guarantee of security to which they were entitled, because, if the allocation of Ruhr coal were placed in the hands of a supra-national authority, the Ruhr could never again become a German arsenal. This suggestion fell upon barren ground, although it has now again become relevant, since a similar proposal has been put forward by the French Government.

3. Finally, I endeavored to persuade our authorities that the Potsdam Plan was certain to fail—for reasons which I have already indicated—and that it should be superseded by a new agreement, under which the direct four power management of Germany would be ended and supplanted by a prolonged period of observation and control, exercized by civilian commissions and an internationally recruited police force. This suggestion likewise made no headway.

This brings us to the spring of the year 1947, when the United States embarked upon the Truman Doctrine of containment and when Secretary Marshall, then newly appointed, went to Moscow for the last real four power conference on Germany. As you know, this conference ended in a complete deadlock. As I see it, from then on the problem of Germany ceased to be a problem in and of itself; from then on, Germany has been merely one of several battlegrounds in a cold war between Russia and the West; from then on, the real problem of Germany in relation to world peace has been obscured and lost sight of in the frantic maneuverings of a sterile power struggle.

THE COLD WAR.

The frame of reference of today's discussion does not permit an analysis of our whole cold war policy. I can only conclude this part of my paper, which deals with an attempt to analyze our mistakes with regard to Germany, by briefly discussing what I conceive to have been our two major errors on the specifically German battlefield since March, 1947.

Our first cold war mistake in Germany was to accept, as more or less final, the separation of Eastern and Western Germany and to proceed on the assumption that Western Germany could be made into a bulwark against Russia. We did not, it is true, go to the extent of following Herbert Hoover's advice, which was to make a separate peace with a new West German state. But we did take the initiative in creating a West German Republic, thereby making it possible for the Russians unfairly but effectively to lay upon the West the onus of having formally partitioned the German nation. Furthermore, the manner in which this move was undertaken (in combination with a currency reform applied to the Western Sectors of Berlin) provided the Russians with an excuse to carry out the obvious counter-move. It required no prophetic gift to warn, as I did more than six months before the Russian blockade of Berlin, that the creation of a West German state would provoke a Russian attempt to oust the Western Allies from the German capital. Yet we stumbled into the clearly foreseeable Berlin crisis without the slightest idea of what to do when it arose. The brilliant improvization of the Airlift did eventually get us out of the dilemma, and even gained us an unexpected propaganda victory, but the Airlift did not, and could not, solve the Berlin crisis, which, as you know, is still with us today. Moreover, the creation of the West German Republic was followed by the inevitable counter-creation of the East German puppet state, thus freezing the partition of Germany and the partition of Europe.

Our second cold war mistake in Germany was the consequence of the unfulfillable commitment we undertook in the military defense program which accompanied the Atlantic Treaty. By the Treaty itself we undertook to try to prevent a Russian attack upon Western Europe through making it clear that we should regard such an attack as an act of war against ourselves. So far, well and good. But, under the military assistance program, we undertook—very irresponsibly, I think—to defend the

frontiers of Western Europe against invasion, in the event that an attack should occur in spite of the deterrent provided by the Treaty.

This meant, in effect, that we were undertaking to hold off a Russian invasion of Western Europe somewhere in Central Germany. Yet it was abundantly clear that we had no intention of doing any of the things which would be necessary to make the fulfillment of this pledge possible. The West European nations had less than dozen divisions, and not even these were fully trained or equipped. The billion dollars of aid we proposed to furnish would, at best, equip four modern armored divisions. We ourselves had a total combat force of only ten divisions and no intention of sending all our troops to stand guard at the Elbe or the Rhine. The only way in which it seemed possible, even in theory, to make Western Europe defensible against fifty to a hundred Russian divisions thus became the rearmament of Western Germany. For the past six months we have been uncomfortably sitting on the horns of this dilemma. The military men say that there is no way of carrying out their assignment, unless German infantry is included in a Western defense force. The political men—or those of them who have retained a modicum of common sense in spite of the cold war hysteria—recognize that rearming Germany provides no answer at all. For one thing, there would be no guarantee that the Germans would be willing to be remilitarized, or that, if rearmed, they would necessarily fight on our side. For another thing, the rearming of Germany would almost certainly destroy the already dubious fighting morale of France.

Until the whole aspect of the German future was dramatically changed by the French proposal of May 10, the following was the sad state to which our German policy had brought us:

1. In our preoccupation with the cold war against Russia, we had lost sight of the fact that there could be no peace without a united Europe, and that there could be no united Europe without a united Germany. Because the cold war had become an end in itself, we were more concerned with integrating Western Germany in the defense of Western Europe than with uniting Germany and thus laying the foundations of lasting peace.

2. We had reached the point of seriously considering German rearmament—which would destroy whatever hope there might be of the development of a peaceful, democratic German nation—as the only means by which we might fulfill the unfulfillable commitment of the Atlantic Security

Program. Instead of recognizing that the only way to protect Western Europe from being overrun by Russia was to prevent the outbreak of war, we were considering an illusory method of winning a war with Russia—namely by rearming the Germans—and thereby running the grave risk of provoking the very conflict we sought to prevent.

3. In our anxiety to create in Western Germany a bulwark against communism, we had neglected land reform, the reform of the school system, and the protection of the German people against the revived power of the industrial monopolists, thereby helping to recreate those very features of German society which had, in the past, produced an aggressive authoritarian state. By our eagerness to see what we call free enterprise re-established in Germany, we had abetted the elimination of governmental controls from the German economy, thus fostering the re-emergence of a class society with the emphasis upon profits rather than full employment. In our haste to "get things going", we had allowed denazification to become a farce.

When Secretary Acheson went to Europe early last month he took with him nothing but the dismal determination to persuade the leaders of the Atlantic community to adhere steadfastly to the hazardous experiment of containing Russia by "integrating" with a Western Germany which could neither be defended nor trusted to manage or defend itself.

II.

THE RUHR PROBLEM.

When Mr. Acheson became Secretary of State, in January 1949, an agreement had just been signed by Britain, France, Benelux and United States, concerning the future of the Ruhr area. This so-called Ruhr Agreement was then still subject to ratification by the respective governments. Presuming upon a friendship of long standing, I ventured to suggest to Mr. Acheson that this agreement be re-studied and revised.

THE AGREEMENT OF 1948.

You will recall that the Agreement, as signed in December 1948, and subsequently ratified, provided for the establishment of an International Ruhr Authority to "assure disarmament and demilitarization of Germany;

to further recovery of the countries of Europe, including a democratic Germany; and to promote that intimate association of their economic life which in the last analysis alone can assure a peaceful and prosperous Europe." The method by which the Authority was to carry out its three-fold function was through "allocating coal, coke and steel from the Ruhr as between German consumption and export", that is, consumption by other European countries. The language of the Agreement indicated clearly that the intention was to make the allocations consistent with the operations of the Marshall Plan for the recovery of the sixteen nations of Western Europe.

My comments were the following:

"1. The Agreement is good in that it does not fall into the error of attempting a political separation of the Ruhr from Germany, which would inevitably cause active revisionism.

"2. The Agreement is good in that it puts a final quietus on the ridiculous Morgenthau proposal to destroy the productivity of the Ruhr area by removing the industries and flooding the mines.

"3. The Agreement is good in that it attempts at least some integration of German productivity with the needs of Europe.

"On the other hand:

"1. The Agreement imposes upon Germany the duty to accept the permanent regulation of its production in accordance with the needs of Europe, *without imposing a similar obligation upon any other European country*. This is neither wise nor just. It will, in the long run, provoke passive, if not active, resistance. It may well produce a more dangerous form of revisionism than even the political amputation of the Ruhr area.

"2. By perpetuating the emphasis in demilitarization upon the limitation of production, rather than upon the demilitarization of the German mind, the Agreement perpetuates the fundamental error of past occupation policy.

"3. By leaving undecided the question of who is to own the Ruhr mines and industries, the Agreement opens the door to a recapture of control over the German social structure by the very elements which have, in the past, made Germany a warrior nation.

"4. By its acceptance of a divided Germany and a divided Europe, the Agreement becomes merely an implementation of the Marshall Plan for Western Europe and fails to contribute in any way toward a reintegration of the entire European economy.

"5. In so far as the Marshall Plan is in great danger of becoming wholly submerged in the cold war against the Soviet Union, the Ruhr Agreement itself is likely to be interpreted and carried out as an instrument of the cold war. This would have one of two consequences:

"Either—in spite of the assurances to France contained in the Agreement itself—Germany will become involved in the creation of a 'defense force' for Western Europe;

"Or—and this is more likely—Germany will be kept demilitarized, according to promise, while the rest of Western Europe turns its production to rearmament. This would have the effect of making Western Europe dependent upon Germany for most of its peacetime requirements, and would place Germany in a highly favorable position to compete for the export markets so badly needed by the other European countries. Since this would be intolerable, the long-run result would most likely be the recreation of a European steel cartel along pre-war lines. In other words, we should again see a dividing up of markets and a system of quota production designed not to raise living standards throughout the world, but to limit production in order to protect profits. This danger is directly related to the probable return of the German steel industry to private ownership.

"In summary: the Ruhr Agreement is a belated attempt at a constructive solution, stultified by failure to face the real issues, and distorted by the exigencies of the over-riding cold war context."

ALTERNATIVE SUGGESTION (1949).

Let me now recall a few basic facts about the Ruhr, before we discuss the alternative.

Three factors gave the Ruhr area of less than a thousand square miles its original importance: a fabulous deposit of high-grade coal; easy access to the near-by iron ore of Luxembourg and Lorraine; and cheap river transport, later augmented by an intricate network of railways and canals.

Capital investment in plant facilities and the development of a compact force of highly skilled labor completed the picture.

In spite of war damage, the Ruhr was still the most important single industrial area in Europe. Its pre-war output of hard and soft coal exceeded 120,000,000 tons per annum. Its steel capacity was more than 20,000,000 tons. In the past, the Ruhr not only formed the core of German industrial development and of German war-making capacity; it also directly affected the industrialization—or lack of industrialization—of other countries. The brains of the Ruhr coal and iron masters wove a spiderweb of restrictive monopoly over the whole Continent. German steel barons—aided by their counterparts in France, Belgium, Luxembourg and England, and financed largely by American capital—extended the tentacles of their power beyond Europe into Latin America and other distant parts of the world. Similar developments occurred in the heavy chemical and electrical industries.

The result of this intricate, German-dominated cartel system was not merely the extension of German economic power over large parts of the world, but the retardation of industrial development in many other countries. To a large extent this explains why France never modernized her factories, never adopted mass production methods, and fell hopelessly behind Germany in industrial development.

This background led me to the conclusion that two aspects of the Ruhr problem had to be considered: first, how to utilize its great productive capacity in the best interests of a peaceful world; and, second, how to sterilize the Ruhr's destructive centrifugal potential.

Viewed in this light, it seemed to me that the Agreement of 1948 fell far short of the requirements. It failed to harness the Ruhr to the best interests of a peaceful Europe, because it presupposed a divided and far from peaceful Europe, attempting to utilize the Ruhr as the cold arsenal for a continuing cold war. It failed to sterilize the Ruhr's destructive potential, because it created the very conditions that would lead back to monopolistic control and the creation of restrictive cartels.

My memorandum to Mr. Acheson therefore suggested that it would, in the long run, prove impossible to establish one principle for German coal and a different principle for French coal, or Belgian coal, or—eventually—for Polish coal. We could not expect to make Germany into a permanently second-class member of the European family.

The situation would be very different, I maintained, if the Ruhr Authority were to be set up as the precursor of an *All-European* Coal Authority, and if the Allies now said to the Germans: "You will have to accept a second-class status until you have demonstrated your moral regeneration, but, in the end, we are all going to impose upon ourselves the same obligations toward each other and toward the European community, which we are now imposing upon you." It would be better yet, I said, if, instead of promising to do this at some future date, the countries of Western Europe would forthwith establish an Authority to handle the allocation of *all West European coal,* stating as they did so, that the door would always remain open to the nations of Eastern Europe as well.

This much, I thought, could be done even within the framework of a cold war policy. In fact, it would provide a more effective cold war policy while, at the same time, creating the means of eventually liquidating the cold war. Instead of playing into Russian hands by proposing an unjust and intolerable permanent status for the German people, we should be frustrating the Russian appeal to German nationalism by clearly pointing out the road along which a regenerate Germany might once again find its way back into the family of nations. At the same time, instead of confronting the Russians with a closed door in the Ruhr, we should be indicating the only way in which the Russians might some day gain admittance to an All-European, instead of merely a West European Coal Authority. If such an Authority were to come into being, the control of coal—and hence of steel production and armaments—would be vested in a supra-national group which could make preparation for war by any nation well-nigh impossible.

THE FRENCH PROPOSAL (1950).

Nothing came of this proposal at the time, but you will note its striking similarity to the proposition recently advanced by Mr. Schuman.

The French proposal goes further in that it provides for the supranational control of steel as well as coal. This may entail technical difficulties, especially in view of the fact that some European steel industries have been nationalized, while others have not.

What interests us here is the American reaction to the French proposal. Secretary Acheson issued from London a formal statement hailing

the objectives of Franco-German rapprochement and European integration and welcoming the French initiative in that direction, but he noted that "the proposals must await the availability of details." The significance of the latter phrase was perhaps explained in a Washington dispatch to the *New York Times* by its diplomatic correspondent, James Reston. This unusually well-informed and reliable reporter stated that "Washington had some misgivings" when the text of the French proposal was received, because the proposed organization would be "open to all countries who wished to participate in it", and because the proposition was to furnish coal and steel "to all countries" on "equal terms".

"This at first raised one or two questions here", Mr. Reston reported. "Secretary Acheson had gone to Europe convinced that the cold war was here to stay and that the Western nations must organize together to fight that war. But did Mr. Schuman agree? Was he trying to organize the West to fight the cold war, or was he making some kind of general offer designed to liquidate the cold war?"

Mr. Reston went on to report that these questions were answered in "various official telegrams to the State Department and the French Embassy". The upshot of these answers, as reported by Mr. Reston, was that Mr. Schuman shared Mr. Acheson's desire to unify the Western nations, that his first aim was to bring together Germany and France, but that he meant what he had said about the new supra-national organization being "open to all who wished to participate;" on the other hand, the French explained that it appeared extremely unlikely that the communist nations would wish to give an international authority the power to direct their coal and steel production.

What better illustration could there be of the extent to which we have become the prisoners of our own past mistakes?

The French proposal, before Mr. Schuman was forced to give this explanation, would have put the Russians on the spot. If the Poles or Czechs should wish to join the European Coal and Steel Authority, they would have been exluded not by the West but by the Kremlin. If the Authority worked out well over a period of time, it seems fairly obvious that *all* the European nations would eventually wish to participate, and, if they actually did join, a great step would have been taken toward making a shooting war unlikely—if not impossible—and the cold war would have been all but liquidated. The great virtue of the French

proposal was precisely that it *might* operate toward ending the cold war, and yet, that, if it failed to do so by reason of Russian intransigeance, it would vastly strengthen the Western position in the cold war, by clearly throwing the onus for its continuance upon the Kremlin.

The cold war warriors in the Department of State were apparently unable to recognize the subtle virtue of the French proposal. They had to be assured that Mr. Schuman "was trying to organize the West to fight the cold war" and not "making some kind of general offer to liquidate it." Perhaps, had Mr. Acheson been at home, instead of in London, these questions would not have been asked by Washington. Mr. Acheson is not one who would fail to understand subtlety or to play up to the finesse of a subtle partner. On the other hand, perhaps even Mr. Acheson had reached the point where it seemed to him "politically impossible" to approve any proposal which might conceivably end the cold war, for fear lest it be denounced in Congress as appeasement or the product of master spies.

At any rate, this appears to be the point to which our negative foreign policy has carried us. The communiqué on Germany, issued on May 14 by the Big Three Foreign Ministers, made no mention of the Schuman proposal, indicating that it was being referred back for study. On the other hand, the communiqué did get our German policy back on the rails by clearly reaffirming our recently obscured and apparently forgotten objective of bringing about the unification of Germany, and by unequivocally repudiating the idea of making a separate peace with the present West German state.

III.

A LOOK INTO THE FUTURE

In spite of the rather long history of dissent, which I have here recorded, I feel for the first time that the future is not without considerable hope. If the French plan is adopted—if a European Coal (and perhaps steel) Authority is created—and if this is done with the sincere desire to make it not merely a West European, but an All-European Authority—the first step will have been taken toward rectifying some of the major mistakes of the past. Even then, there will remain many difficult problems, both with regard to Germany and with regard to the

overall context of foreign policy in which a German solution may eventually be reached. We have gone a terrifyingly long way down the wrong road, within Germany and in the worldwide context of which the German problem is only a part.

We need, in my judgment, not merely to take a new look at the kind of Germany we have been helping to create; we need even more to re-examine the kind of world we have been helping to create. The negative policy of stopping Russia—without knowing what we should do if we had Russia stopped—is not a policy worthy of the United States of America. Nor is it a policy that could conceivably lead to enduring peace. We have been letting Moscow pipe the tune to which we have been dancing. Being relatively rich in dollars and poor in constructive ideas, we have been trying to fight ideas with dollars; and now, with the dollars beginning to run out, we have confided our last best hope of peace into the hands of scientists, instructed at all costs to keep us "ahead" of all other nations in the development of ever more horrible weapons of mass destruction. If we pursue this course much longer, we shall either provoke the war we seek to prevent, or else end up by becoming more and more like our totalitarian enemy. We have already reached the point where to suggest, as I have suggested, that the cold war is not an end in itself, is to invite the accusation of being an appeaser or a fellow traveller.

Yet, if I may hazard a guess at the future, I think that we have already passed the low-water mark in our period of hysterical paralysis and intellectual and moral bankruptcy. Surely, if France, which has suffered a far more severe traumatic experience than we, can now rise above its deeply ingrained fears to constructive leadership toward peace, we, the people of America, can do no less. I hope, and even venture to believe, that we shall do far more.

New York City

Dear Ed:

The attached letter to President Truman has been framed by a group including: Henry B. Cabot, of Boston; Harry W. Schacter, of Louisville; Norman Cousins, editor of the Saturday Review of Literature; Stanley M. Isaacs, New York City Councilman; Hugh Satterlee, attorney; Robert E. Sherwood, historian and playwright; and myself. We have had the help and advice of a considerable number of others in different parts of the country.

I am writing you on behalf of this group to invite you to join us in signing this appeal for a greater emphasis upon affirmative leadership toward peace.

It is not our present intention to create any formal organization. Our plan is merely to obtain fifty to one hundred signatures of leading citizens across the country to this letter, and then, after sending it to the President, to release it for publication. Should we decide to supplement the news release by running the letter as an advertisement, your signing the letter would in no way commit you to bearing a share of this or any other expense.

I hope very much that you will be willing to join us in this effort to assure the President that a more affirmative leadership toward peace would enjoy wide public support. Since we are anxious to proceed as quickly as possible, we should be grateful for a prompt reply. A form is enclosed for your convenience.

Very sincerely yours,

Jim

_____

I wish to sign the Open Letter to President Truman transmitted to me by your letter of January 20, 1950.

Signature_____

Dear Mr. President:

We, the undersigned citizens, are heartened by the affirmation, in your State of the Union Message, of your belief that the danger of war is receding. We applaud the courage and confidence with which you look into the future. Nevertheless, we are deeply concerned over what appears to us the discrepancy between your affirmative attitude toward building the peace and the preponderantly negative emphasis in the foreign policies we are at present pursuing.

We recognize, Mr. President, that, until universal disarmament becomes possible under world law and world law enforcement, we owe it to ourselves and to the rest of the free world to maintain sufficient military strength to discourage and, if necessary, to ward off aggression. We feel, however, that preparedness for war cannot of and by itself prevent war. We feel that there is a point beyond which preparedness for war may actually provoke conflict; and that, in any case, preparedness for war to preserve peace will defeat its own purpose if the preparedness effort so preempts our energies and resources as to stand in the way of our making the maximum contribution of which we are capable toward building the peace.

We are reassured, Mr. President, by your steadfast determination to hold down our military expenditures and by your resistance to pressures which might drive us into a steadily mounting arms race with the Soviet Union. We wholeheartedly support your Administration's expressed determination not to permit the rearmament of Germany for the sake of the illusory addition that German rearmament might bring to West European security. We applaud your resistance to advice which might drive us into futile military adventures in the Far East.

Nevertheless, Mr. President, we feel that there is need for more affirmative action on the part of the United States to end the conditions in which military preparations must play so large a part in our total foreign policy effort. Therefore, we respectfully urge you to do two things:

1. <u>To take more affirmative leadership toward halting economic warfare among the world's hard-pressed peoples, by bringing them together in a broad cooperative plan of reconstruction and resource development</u>. You have undertaken one such action in Western Europe, the beneficial effects of which are now jeopardized largely because that action was isolated and not sufficiently geared to the economic problems of the world as a whole. In your Inaugural Address a year ago, Mr. President, you pointed out the need for dealing in a similar manner with Asia, Africa, the Middle East, and Latin America. You have urged the Congress to enact your proposals which would assist technical aid programs for the underdeveloped parts of the world. In your State of the Union Message you have now frankly told us that, in addition to technical assistance, the success of your program will demand "the movement of large amounts of capital from the industrial nations, and particularly

from the United States, to productive uses in the underdeveloped areas of the world." In contrast to this bold concept, the legislative proposals now before Congress seem to us merely a first, small step toward the realization of your purpose. Can we not proceed more vigorously, Mr. President?

2. To take the leadership in halting the arms race and in bringing about those conditions which will make eventual universal disarmament possible. Many feel that this can be done only by transforming the United Nations into a limited form of World Government, and that a serious attempt should be made to obtain universal consent to Charter revision. A concurrent resolution is now before Congress to make such a transformation the avowed aim of American foreign policy. The resolution has been sponsored by 104 Representatives and 22 Senators. If the sponsors of this resolution are right, do they not deserve the official support of your Administration? If they are wrong - if, in your judgment, there exist other less drastic and more effective methods by which the same ends may be achieved - should we not energetically pursue such other methods?

We feel, Mr. President, that you are moving from a policy, the primary aim of which was to stop Russia, toward a policy, the primary aim of which is affirmative leadership toward peace. We not only applaud this shift in emphasis, we urge you to accelerate the process of change. We urge you to narrow the discrepancy between our aims and the as yet inadequate means suggested for their realization.

We are certain, Mr. President, that, in pursuing this course, you will have the support of the American people. We are convinced that, in pursuing more energetically the affirmative goals which you, yourself, have outlined, you will accomplish not merely your positive purpose of laying the foundations for lasting peace, but that you will also achieve, as a by-product of your affirmative leadership, the negative purpose of defeating the threat of totalitarianism. Finally, we believe that, by affirmative action in fulfilling the promise of democracy at home and abroad, you will create the conditions in which, at some time in the future, a general settlement of our differences with the Soviet Union may become possible.

Respectfully,

ROOM 2720

NEW YORK 17, N. Y.

December 1, 1949

Dear Ed:

Very little information has as yet been made available to the public on the broader implications of President Truman's "Point Four" Program. Yet I think you will agree with the thesis of the enclosed study that the future role of the United States in world affairs will be largely determined by what happens, or fails to happen, to this program in the next session of Congress. This, in turn, will depend to a great extent upon the state of public opinion.

In order to make the essential facts available, I have undertaken to publish and distribute this pamphlet. If you are in sympathy with this effort, I hope you will find it possible to use some of the material provided, or to call its availability to the attention of your listeners.

For your information, the publication date is December 7, 1949. Prior to that date, a first edition of ten thousand copies will have been sent out free to a selected list of writers, editors, commentators, educators, clergymen, and public servants, as well as to every member of the Eighty-first Congress. A second printing will be offered, through public advertisement, at 25 cents a copy. (see Times of Dec. 7)

Very sincerely,

Jim.

Mr. Edward R. Murrow

RELEASE: WEDNESDAY MORNING, DECEMBER 7, 1949.

CHANCE FOR PEACE SEEN BY WARBURG

Urges Citizen Support of Broader "Point Four" Program

New York City. December 7. James P. Warburg, whose books and articles have been sharply critical of American post-war foreign policy as too negative and too fear-inspired, today launched a campaign urging public support for the one aspect of President Truman's foreign policy which he thinks could "reverse the present drift toward disaster."

"There are few moments in history", he said, "when citizen action in one nation can decisively influence the course of world events. You and I are living through one such moment now."

Warburg's "Call to Action", asking for militant citizen support for a broadened version of President Truman's "Point Four" program, carries the endorsement of two qualified experts on resource development and conservation: Morris Llewellyn Cooke, the well-known consulting engineer whose advice has been sought by successive national administrations, and Dewey Anderson, Director of the Public Affairs Institute of Washington, D. C.

A three-column advertisement in today's New York Times, headed: "Our Chance to Achieve Freedom from Fear - and What You Can Do About It", announces the publication of a 64-page pamphlet in which Warburg presents his case. Lauding the basic idea of aid to the world's underdeveloped areas put forward by President Truman in his Inaugural Address last January, Warburg says: "The way out of the cold war in which we are floundering - the way out of the depression toward which we are heading - lies in carrying out this wise and statesmanlike utterance. But where", he asks, "is the 'bold new program' to give these words life and meaning?"

The Administration proposal now before Congress (The Technical Assistance Act of 1949) is characterized by Warburg as "neither bold nor very new". It is, he says, "too narrow in scope, too restricted in function and too niggardly in means to carry out more than a small part of the President's purpose." As it stands, it is "merely another example of the bargain-basement diplomacy which has not only squandered our resources but weakened the ties of friendship between us and the nations we have sought to help. This pattern of penny-wisdom", Warburg contends, "has wrecked our loan to Britain, has contributed to the failure of our policy in Asia, and is in danger of wrecking the most constructive post-war effort we have undertaken - the Marshall Plan." If carried out in this spirit, Warburg holds that "Point Four will merely build another one of those half-bridges that lead nowhere."

But the President's purpose can be carried out, Warburg maintains, if the proposed Bill is amended. "Whether it is amended - whether 'Point Four' becomes a milestone in the world's progress toward

peace, or merely another brave intention wrecked by penny-pinching, timidity and lack of vision - that is up to us as citizens."

Since effective citizen action demands "a certain amount of citizen homework", Warburg has packed into his pamphlet the information (including the text of the current Bill and an indication of the needed amendments), which he thinks the citizen needs in order to make up his or her mind as to whether the effort he suggests is worthwhile.

The technical experts, Mr. Anderson and Mr. Cooke, have written a foreword in which they say: "Only a positive declaration of our faith in mankind and a practical application of that faith through well-considered international economic measures will meet the need of these days. In it are the hopes for attaining peace... We commend this analysis for your reading, your thoughtful consideration and appropriate action."

* * * * * * *

Additional Information

1. A first edition of ten thousand copies is being sent out to a selected list of educators, clergymen, writers, editors, commentators, foreign policy group leaders, etc. as well as to every member of Congress and a considerable number of Government officials. This is being done partly by me and partly by the Public Affairs Institute of Washington, D. C.

2. A second printing is being offered, by public advertisement, at 25 cents per single copy, 23 cents each for ten copies, 21 cents each for fifty copies, and 20 cents each for one hundred copies or more.

3. The question: "Can we afford the program recommended?", is answered on page 34 of the pamphlet. This, or any other part of the pamphlet, may be quoted.

4. Any further information desired may be obtained by calling MUrray Hill 4-0163.

James P. Warburg

"POINT FOUR"

OUR CHANCE TO ACHIEVE FREEDOM FROM FEAR

and

What YOU Can Do About It

Fellow Citizens:

Whatever our individual circumstances, we all have one thing in common—over all of us hangs the fear lest forces beyond our control destroy whatever security we have been able to achieve for ourselves and our families.

There is a way for us to lighten this burden of fear. There is a way to lessen the danger of war and to prevent an economic collapse here at home.

There is a way to reverse the present drift toward disaster.

Almost a year ago ***the way out was indicated by President Truman,*** in these words:

> "More than half the people of the world are living in conditions approaching misery. Their food is inadequate. They are victims of disease. Their economic life is primitive and stagnant. Their poverty is a handicap and a threat both to them and to more prosperous areas.
>
> "For the first time in history, humanity possesses the knowledge and the skill to relieve the suffering of these people . . .
>
> "We must embark upon a bold new program . . .
>
> "We should make available to peace-loving peoples the benefits of our store of technical knowledge . . . and, in cooperation with other nations, we should foster capital investment in areas needing development. . . ."

The way out of the cold-war in which we are floundering—the way out of the depression toward which we are heading—lies in the carrying out of this wise and statesmanlike utterance.

A year has passed since these words were spoken.

Where is the bold new program of action to give these words life and meaning?

The Administration has placed before Congress a so-called "Point Four" proposal. It is neither bold nor very new. It is too narrow in scope, too

restricted in function and too niggardly in means to accomplish more than a small part of the President's purpose.

This proposal is molded in the pattern of bargain-basement diplomacy which has wrecked all our best-intentioned efforts—the pattern of trying to make one dollar do the work of two—of sending out a little boy to do a man's work. This pattern of penny-wisdom has wrecked our loan to Britain, has contributed to the failure of our policy in Asia and is in danger of wrecking the most constructive post-war effort we have undertaken—the Marshall Plan.

This bargain-basement diplomacy has not only squandered our resources but weakened the ties of friendship between us and the nations we have sought to help.

As it stands, the Administration's "Point Four" proposal will merely build another half-bridge that leads nowhere.

But the President's purpose can be carried out if the proposal is amended. Whether it is amended—whether "Point Four" becomes a milestone in the World's progress toward peace, or merely another brave intention wrecked by penny-pinching, timidity and lack of vision—that is up to us as citizens.

There isn't much you and I can do about this if we act merely as individuals. **But, if we act together, we can see to it that a timid little plan becomes a truly "Bold New Program".**

That is our great opportunity—to make "Point Four" the turning-point in post-war history.

Effective citizen action will demand a certain amount of citizen homework. To make this homework as easy as possible, I have tried to pack into a pamphlet of three chapters (62 pages) the information I think you need to make up your mind whether the effort is worth-while. You will find in this pamphlet, first of all, a brief discussion of the possibilities of citizen action; next, an analysis of our present foreign policy and a statement of why I think it has not led to peace; and, finally, the constructive alternative which could be developed out of the President's "Point Four" proposal. You will find also the text of the pending Bill and a specific indication of the type of amendments which I think are needed.

There are few moments in history when citizen action in one nation can decisively influence the course of world events. You and I are living through one such moment now.

JAMES P. WARBURG.

New York City,
Dec. 1, 1949.

(The foregoing statement has appeared as an advertisement for the second edition in the *N. Y. Times.)*

A Call to Action—

American citizens have the power to shape their own political destinies. Nowhere is this power more in need of proper expression right now than in the formulation of a sound foreign economic policy. For in these next two years—1950 and 1951—our Congress and our Government must decide the fate of the Marshall Plan and establish its immediate successor.

Some form of international economic cooperation is here to stay as the foundation of our foreign relation. But *what* form it will take is still undecided. Will the Marshall Plan blend neatly and fully into a much-broadened concept of Point Four, the "Bold New Program" of President Truman's heartening challenge, one which not only takes into account the needs of the underdeveloped areas of the world, but which is premised on the interdependence of all nations? Will our new economic policy develop a program of mutual aid administered through United Nations agencies to the fullest extent possible, a program which enables governments to improve the welfare of their people? Will this economic policy be the expression of the best thought and loftiest aspirations of the American people?

Only a positive declaration of our faith in mankind and a practical application of that faith through well-conceived international economic measures will meet the need of these days. In it are the hopes for attaining peace.

It is this big effort that we Americans are urged to make by James Warburg's pamphlet. As persons, we can do much or little according to our individual strength. But as a collection of like-purposed people we can exert the deciding influence on our Congressmen and Senators and on our Administration in Washington. This pamphlet extends an invitation to all people of good will to act in effective concert right now. We commend this analysis for your reading, your thoughtful consideration and appropriate action.

DEWEY ANDERSON,
Director, Public Affairs Institute,
Washington, D. C.

MORRIS L. COOKE,
Consulting Engineer.

ACKNOWLEDGMENTS

In preparing this pamphlet—especially the last chapter—I have benefited greatly from consultation with many others. In particular I wish to acknowledge a debt of gratitude to all those who participated in a most illuminating week-end conference arranged by the Post-War World Council and the Foundation for World Government. The varied experience and the diverse points of view brought to bear upon the problem of world wide resource development on this occasion are largely responsible for whatever merit this presentation may possess.

I am indebted to the editors of Harper's Magazine for permission to reprint, in the section of Chapter Two subtitled "Bargain-Basement Diplomacy", a substantial portion of an article of mine which appeared in a recent issue of their publication. Also I wish to acknowledge gratefully the permission of the Woodrow Wilson Foundation to reprint, in the Appendix, Beatrice Pitney Lamb's summary of the United Nations Report on Technical Aid Programs.

J. P. W.

Chapter One

THE CITIZEN IN TODAY'S SOCIETY.

I.

"WHAT CAN I DO?"

In recent years I have been privileged to participate in many interesting discussions with all sorts of groups throughout the country—groups which had come together primarily because of a common anxiety and a common desire to help find the way out of the dangerous cold-war morass in which we are now floundering. Almost invariably these discussions came down to a single question:

"But what can the ordinary citizen do?"

It is easy enough to give a superficial answer to this question. It is easy enough to say: "Keep yourself informed. Learn to understand the problems with which our nation is confronted and to form your own opinion about them. Test that opinion in discussion against the opinions of others. Write to your Senators and Congressman. Join organizations which are working for the creation of an informed public opinion and a constructive approach to the world's problems."

All this is sound advice, but it fails to answer the question satisfactorily.

Take the simple injunction to keep yourself informed. It is perfectly true that we in this country have better access to information than any other people on this earth. But the very wealth of material available makes it difficult for us to select and concentrate. Books, magazines, newspapers, motion pictures, radio and television compete for every minute of eye and ear time. Weekly news magazines condense for us the events chronicled in the daily press, and these digests are in turn digested by ever shorter summaries, until eventually our vast resources in informational material come to us in the form of head-line paragraphs. Moreover, we are being trained to accept opinion without studying fact. Commentators and columnists present us with neatly packaged opinions on current issues, brightly phrased and ready for us to repeat as our own

when occasion arises. It is not easy to keep informed. It is perfectly possible to do so, but I, for one, find that it takes me about two hours every day to do my homework.

Unless you are informed, you cannot, of course, form your own opinions. Unless you do form your own opinions, you either cannot participate at all in the making of national policy, or else you limit your participation to the more or less blind support of someone else's opinion. If you choose the latter course, you are a ready-made victim for propaganda. That is precisely what the vast majority of us are today.

Because most of us do limit our participation to the backing of someone else's opinion, without really having an opinion of our own, a strange thing is happening in this country. We still have "government by consent of the governed", but the consent of the governed is increasingly obtained by appeal to emotion rather than by appeal to reason. This makes it extremely difficult to make any reasoned criticism of our Government's policies effective.

For the past three years we have been indoctrinated with the dogma that Russian aggressive expansionism and Russian unwillingness to cooperate constitute the sole obstacle to the establishment of enduring peace. The acceptance of this dogma by our policy-makers has provided the rationalization for their preponderantly negative foreign policies. Their propaganda of fear has produced reluctant public acceptance of the need to shore up any rickety remnant of the past as a bulwark against communism. Their propaganda of fear was used to gain public acceptance of even the one constructive element in our post-war policy, the Marshall Plan.

Ever since this trend developed I have devoted my entire time to an effort to set the very real Soviet menace in its proper context—to bring about a realization that a large part of the world crisis through which we are living has nothing to do with Russian expansionism or communist conspiracy—and to gain support for a more serene and more constructive approach to the complex world problem. This effort has been essentially an appeal to reason. As such I must say that the appeal has had more than a fair hearing. Many of the criticisms I have put forward as a private citizen have been widely and fairly reported by the press and radio. They have been patiently listened to by many audiences. I have had the

privilege of laying my suggestions before high Government executives and of testifying before legislative committees.

The lesson I have learned from this experience is that you cannot hope to alter a fear-inspired negative policy solely by an appeal to reason.

Logically, it ought to be true that, if you think a policy is wrong, the thing to do is to show why it is wrong, and then, if possible, produce a better alternative. If you see a man turn off into a road that you know ends in a dangerous wash-out around the corner, you first of all stop and warn him. The warning will be more effective if you can also produce a road-map and show the man by what other, safer road he might reach his destination. But, when you are dealing with a fear-inspired negative policy, it does not work that way. You are not dealing with a man who wants to get to a certain destination; you are dealing with a man who wants to get away—a man who is pursued, or thinks himself pursued. Telling him that the wash-out ahead is dangerous will not stop him, unless you can also tell him where he can hide safely and ambush his pursuer.

But the minute you fall into this trap, you are lost altogether. The minute you say to yourself that you can stop this frightened fugitive from killing himself only if you also tell him how to hide or ambush his pursuer, you are accepting the very premise that you seek to destroy. You are not making the man realize that his fear is exaggerated or unfounded. You are merely turning him from flight toward aggression.

When fear is in the saddle—when a great and powerful nation has lost the inspiration of a high purpose—when its government's policies consist alternately of inaction through paralysis of fear and feverish activity inspired by recurrent paroxysms of panic—then something more is needed than reasoned criticism. That "something more" is the eloquent advocacy of an act of faith.

What you and I must do, if we wish to preserve our ability to exercise a voice in the making of our country's foreign policy, is to mobilize hope as the counter-agent to fear. We need to look at the world anew, to re-assess the needs and aspirations of our fellow-men, to re-evaluate the extent and limits of our effective power to meet those needs and aspirations—and then to dedicate ourselves to the making of a promise that can and will be fulfilled. We must find the faith to believe that we shall

discover the road to peace, not merely through our power of resisting that which is evil, but through our power of creating that which is good.

I am certain of one thing. There is a wealth of common sense and courage in the American people. There is more than sense and courage. There is a deep and sincere longing to help and a willingness to sacrifice. At present these gifts are being squandered. What we need in Washington are men who will lift their eyes from the in-pouring telegrams and from the military maps on the walls of their offices, and who will look, instead, into the steady eyes and steadfast hearts of the American people.

We, as citizens, can help the harassed and overburdened men in our nation's capital to lift their eyes from the papers that litter their desks to a clearer and broader vision. We can do this by letting them know that we understand what has been wrong and that we also understand what is needed to set us right.

What We Are Up Against

The free world stands or falls on its belief in government of the people, for the people and by the people. Obviously, there can be no government *by* the people unless the individual citizen participates actively in the making of major policy decisions. We know this. And yet we are forced to recognize that, in our own free society, there is a steadily diminishing participation by the individual in the decisions made by our society as a whole. Our problem, then, is to overcome this trend and turn it into the opposite direction. To do this we must understand the factors which operate in our favor as well as the obstacles which stand in our path.

The factors which operate in our favor are, first of all, the high level of common sense, courage and cooperative impulse in our society; next, the inextinguishable optimism of the American people; and, finally, the ingenuity of the American people in finding ways to accomplish by group action purposes which cannot be achieved by individuals acting alone. The "pressure group"—which may in itself serve either social or anti-social purposes—is perhaps the most characteristic product of this cooperative ingenuity.

There can be no doubt whatever that pressure groups have played an important part in our history. For instance, the battle of two such

pressure groups—the interventionist "Fight for Freedom Committee" and the isolationist "America First" organization—served to clarify this nation's attitude in the recent war. More recently the "Committee for the Marshall Plan" played an important part in mobilizing public support for this undertaking. Innumerable other examples could be cited. They show that this is a technique which works—a technique by means of which we, as citizens acting together, can affect national decisions which we are powerless to influence as mere individuals.

If enough of us pool our common sense, our courage and our desire to help, and agree upon a common purpose, there is no reason to assume that we shall be powerless to influence policy toward that purpose. If we hit upon a program, or an idea for a program, which corresponds to the prevailing sentiments of the majority of the American people, we shall soon attract a powerful following. We shall be given the most effective sort of help from the most unexpected quarters. We shall find ourselves rolling up a snowball of public opinion.

If, on the other hand, we organize for a purpose which does not correspond to the sentiments of a large proportion of our fellow-citizens, we shall fail—and the chances are that we shall deserve to fail. I say this because I profoundly believe that, if the American people are given the facts, the American people as a whole are wiser than any group of Americans that tries to do their thinking for them.

And now, before we get down to specific cases, let us have a look at the obstacles to the maintenance of citizen participation in our free democracy.

The chief obstacles are Big Business and Big Government. To recognize this fact is not to condemn either Big Business or Big Government as evils to be eradicated by turning back the clock, but merely to face an acute problem for which we must find a solution.

Big Business is the child of the power-driven machine and the invention of the financial device known as the corporation. The machine led to the development of the techniques of mass production; the corporation developed the means to finance mass production.

Big Government is the child of Big Business. The increasing concentration of industrial and financial power produced the need for instrumen-

talities by which society as a whole might protect itself against the tyranny of the machine and the great corporation. In this country we began with the concept that the best government was that which governed least. This was because our country was born in a time when the only tyranny which threatened individual freedom was the tyranny of an absolute monarch. When Jefferson wrote the Declaration of Independence, there were no machines and no great corporations to produce a dangerous concentration of economic power. Hence it was thought that, if political power could be sufficiently diffused in a federal structure, individual freedom and government by the people would be assured. Because of this heritage, we still look with suspicion upon any tendency to concentrate political power—that is, any tendency toward the development of Big Government. Yet, year after year, we now create a bigger and more powerful government, because we can find no other way to regulate in the public interest the constantly growing concentration of industrial and financial power.

The growth of Big Business has not been due to the selfish cupidity of anti-social individuals. It is in the nature of technological development to promote concentration, to make complex the originally simple processes of manufacturing goods for consumption, and to demand the use of ever greater accumulations of capital. It is in the nature of finance capitalism, based upon a profit incentive system, to destroy the free market, to eliminate competition, and to create monopolies.

Before the advent of the machine and the corporation, the businessman was an individual operating as an individual. Sometimes he hired help or worked with other individuals as partners; sometimes he worked alone or with his family. He either made something and sold it, like a shoemaker; or he performed a service, like a chimney-sweep; or he acted as an intermediary, like the country store-keeper. His relation to society was relatively simple. He offered his goods or services to the consumer in competition with others similarly engaged, and competition controlled the quality of his goods or services and the prices he could obtain for them.

Today's big businessman is a totally different creature. He does not own his business; he is a manager operating for absentee owners. Neither his costs nor his prices are determined by free competition in a free market. The cost of his raw materials is affected by monopolistic control, or by government tariffs, subsidies and price regulations. His transportation and power costs are determined by government regulation. His labor

costs are affected by social legislation and union contracts. Similarly the prices at which he sells are affected by laws, trade agreements and taxes. His is still competing, but competing in a market in which both costs and prices have become semi-rigid. His business has become a highly complex enterprise, requiring any number of raw materials, tools, machines and semi-manufactured goods, any number of services and skills, and a highly complicated accounting system.

The modern business has become so complex that only the management, which devotes full time to its problems, can really understand it. A few boards of directors actually work closely with the management and participate in decisions, but in the vast majority of business corporations the directors merely follow the recommendations of management. Moreover, in most corporations, the directors are only technically elected by the shareholders. Actually they are a more or less self-perpetuating body. In most big businesses whose ownership is widely distributed, there is very little participation in management by the owners. Generally speaking, both management and directors consider quite conscientiously what they conceive to be the interests of the shareholder, but rarely, if ever, seek to discover what the shareholders themselves consider to be their interest. In other words, Big Business management has developed a sort of a benevolent paternalism toward the people who own Big Business but who in no sense participate in the direction of its affairs.

The relation of Big Business to Labor is another matter. Here, too, the tendency of Big Business management was, on the whole, paternalistic, but not sufficiently benevolent to satisfy the majority of workers. The growth of the trade union movement, as an offset to the machine and the corporation, has created its own pyramid of power to protect that segment of society which lives directly on the wages paid by Big Business. But within the labor movement itself, the participation of the individual worker has been diminished by the advent of what we might call Big Labor. Union leadership has tended to become as self-perpetuating and as paternalistic as the management of Big Business. The individual coal miner has as little to say about the policies of John L. Lewis' United Mine Workers as has the individual shareholder about the policies of the United States Steel Corporation, which employs the miner. Union leadership is nowadays only in rare instances truly responsive to the will of the rank and file member.

In between Big Business and Big Labor, in our present-day society, stands the consumer—that is, the American family. This category embraces every American citizen, including the dirt farmer, the shareholders who provide the capital for Big Business, and the workers whose dues support Big Labor. The consumer has nothing to say in shaping the policies which determine the state of the nation's business. His only way of protecting himself is through using the instruments of public power, that is through government. Consumer protest has produced government regulation of transportation and public utilities, pure food and drug legislation, anti-trust laws, and similar intervention to prevent abuse. Citizen's protest against the recurring booms and depressions of a "free economy" has caused the gradual growth of what is now called the welfare state.

It is interesting to note that, at each step in the progressive intervention by government on behalf of the ordinary citizen, the ordinary citizen himself has had grave misgivings. We recognize the need for Big Government and yet we don't want Big Government. We do not want Big Government partly because of our tradition but also because, as government gets bigger, we feel that we have less contact with it, less power to participate in its decisions, less chance to keep it a government by the people. When we lose our sense of participation in government, we are even more disturbed than over our inability to participate in the conduct of the nation's business.

This might seem paradoxical to anyone who does not understand the nature of the American people. It might seem strange that we, a business-minded people, who worry far more about another depression than about another war, should accept exclusion from participation in shaping our nation's economic affairs and protest bitterly over our loss of participation in the shaping of our political policies. Yet the answer is fairly obvious. Our ideal has been, and still is, a society in which every citizen has *an equal voice in the management.* Some other societies strive for the ideal of *an equal share for each citizen in the material benefits of society.* We do not as yet really seek economic democracy. We seek political democracy, which we like to think gives every citizen equality of opportunity. The fact that we have not achieved this goal, especially with regard to Negro citizens, does not alter the fact that this is the ideal toward which we strive. This is why we are somewhat complacent about our exclusion from the affairs of Big Business, but healthily resentful of not being able to participate in the management of Big Government. We

are convinced that government belongs to all of us as free and equal citizens. We still like to think that business belongs to each of us as a rugged individual, at liberty to make out of it what he can.

Assuming that this is the nature of our society, and that a change in our basic attitude will come about only over a long period of years, if at all, let us concern ourselves with the practical question of how we might better achieve that which we want to achieve—namely, a greater participation by each of us in the management of Big Government.

Since the United States is now the sole great reservoir of economic and military power in the Western world—since we alone among the Western peoples may be in a position to exert a decisive influence upon the future course of events—the conduct of our nation's foreign affairs has become the single most important aspect of our Government's activity. Most of us realize instinctively that this is true. Most of us are also unhappily aware that, since the war ended, we have done much but accomplished little toward helping to get the world started on the road to lasting peace and reasonable prosperity. The people I have seen and talked to across the length and breadth of our land are not happy with our present foreign policy. They suspect that it is taking us toward war rather than toward peace. They are not satisfied with our Government's repeated insistence that it is only Russia which stands in the way of a peaceful and happy world. They are angry with Russia. They have not the slightest desire to appease her, and they are doubtful whether Russia would agree to any arrangement short of appeasement. Yet they feel, if I am any judge of their feelings, that there ought to be something better for the United States of America to do than merely to try to anticipate and frustrate the moves made by the fourteen men in the Kremlin.

As I see it, the people who express these sentiments are entirely right. There *are* better things for us to do. The way for us to stop Russia is to stop letting Russia make our foreign policy. The way for us to help build world peace and world prosperity is to develop a positive, constructive policy toward that end. The way to dispel the false promise of communism is to fulfill the true promise of democracy. That is why the Point Four Program presents a great opportunity. But, before we discuss this program, let us try to discover what has prevented our taking constructive action until now.

Chapter Two

OUR IMMATURITY IN WORLD AFFAIRS

Hardly a day passes without some official in Washington telling us how successfully our foreign policies have been operating. Yet we are all more or less aware that these assurances are to some extent whistling in the dark. We have spent a fabulous amount of money in trying to restore peace and security to the world. We have given up our past attitude of selfish isolationism. We have assumed responsibility. We have tried our level best to cooperate with other nations—even to the extent of offering to yield to a supra-national authority our recent post-war monopoly of atomic energy. And yet we are no nearer to the goal of lasting peace than we were on the day that war ended.

One reason why our efforts have borne so little fruit is that we have gone at the post-war problem in an immature way. To say this is not to minimize the fact that one nation—the Soviet Union—has made the post-war problem infinitely more difficult. There can be no doubt whatever that such has been the case. But, as I see it, we have been frustrated less by Soviet intransigence than by our own immature reaction to that intransigence. We have been frustrated less by the whole, highly complex post-war problem, including Russian obstructionism, than by our own inability to face that problem in an adult way.

When we say that an individual is immature, or behaves in an immature manner, we mean that the behavior of such an individual betrays a lack of judgment attributable in large measure to lack of experience. We mean that the individual's actions seem motivated by emotion rather than reason; that his behavior seems to consist of a series of improvizations, as opposed to the step-wise procedure of a thought-out plan; and that these improvizations, based upon acquisitiveness or fear, display a tendency to over-reach and attempt the impossible. We mean by immaturity also the tendency to become too quickly discouraged in the face of failure, to seek a scapegoat rather than the reason for failure, and to vacillate between over-aggressive self-assertion and an excessive display of passive helplessness. The immature individual lacks, above all things, a true sense of proportion—a perspective of himself in relation to the world around him. Egocentricity is at its peak in infancy and sometimes

again in extreme old age. The infant feels itself the centre of the universe, surrounded by beings of vastly superior power who are either "good" or "bad" according to whether or not they gratify its desires.

The analogy between individual and group behavior must not, of course, be driven too far. But it is true, I think, that we, as a nation, have displayed some of these symptoms of immaturity. We have been motivated by fear rather than reason. We have improvized to meet changing circumstances rather than acting in accordance with a thought-out plan. We have at times overestimated our power and tried to do the impossible. At other times we have behaved as if we had no power whatever. When we have failed, we have sought a scapegoat rather than the reason for our failure. The most striking evidence of immaturity in our post-war behavior has been the consistent pattern of self-delusion upon which most of our actions have been based. This applies both to the declared aims of our policy and to the means chosen to achieve these aims. Let me cite some examples.

The major aim of our post-war foreign policy has been to achieve an enduring peace. There are, I submit, three kinds of peace which might conceivably last for a long time.

First, there is the possibility of a *Pax Americana*—that is to say, a peace enforced by the benevolent military and economic power of the United States. The outright advocates of this type of peace usually speak in terms of what they call "the American Century". They have ample historical precedent for their position. They can point to the centuries of the *Pax Romana* and to the more recent period of the *Pax Brittanica.* It is true that neither the peace enforced by the Roman legions nor the peace enforced by British seapower wholly eliminated armed conflict; both periods were interrupted by occasional wars; but these conflicts were kept localized and more or less under the control of the paramount power. The open advocates of a *Pax Americana* now wish to see the United States assume the role of the paramount power, armed with supremacy in the air and atomic weapons. Whether or not they are wise, they are at least clear.

Second, there is the theoretical possibility of a *Pax Sovietica,* in which Russia would become the world's judge and the world's policeman. This idea does not appeal to many people outside the Soviet orbit. Nevertheless, it is as logical from the Russian point of view as is the *Pax Americana* from ours.

It is clear, I think, that neither the *Pax Americana* nor the *Pax Sovietica* could be achieved without a major war. We should certainly not submit to Russian domination, nor would the Russians peaceably accept the overlordship of the United States.

There remains, then, the third kind of peace—a peace arrived at by mutual consent rather than by conquest. Such a peace has never yet been achieved on this planet. There are many people who say that such a peace cannot be achieved now or at any time within the foreseeable future. You are familiar with their arguments, many of which you have heard from the official spokesmen of our Government. These arguments can be summed up in a sentence:

"Peace by agreement is impossible so long as one-half of the world desires justice, freedom and security for all men, while the other half is dominated by a power pursuing the contrary aim."

This sentence is a fair paraphrase of President Truman's Inaugural Address and of many other official utterances within the past two years. Whether or not this is sound, it is clear that the Russians have a different concept of justice, freedom and security—a concept repugnant to us and difficult for us to understand. But it does not follow that the Russians seek to impose upon the world something *which they conceive to be injustice, slavery and insecurity.*

Let us, however, assume that the Truman thesis is correct. The logical conclusion would then be that, since a peace by agreement is impossible, we must try to impose by force a *Pax Americana.* But that is not the conclusion drawn by our present policy-makers.

The conclusion drawn by our present policy-makers is the illogical one, that a *Pax Americana* can be achieved by peaceful means—that is to say, by establishing under American leadership a preponderance of military and economic power sufficient to make us the world's policeman, *without* our having to establish our supremacy by war.

There is only one thing wrong with this conclusion: it overlooks the fact that, in a world in which power has become concentrated in only two poles of superpower, such an attempt "peacefully" to establish supremacy necessarily leads to an arms race, in which the other half of the world pursues precisely the same aim. Each side sees in its own attainment of

preponderance of power the only sure guarantee of peace. Each side makes defensive preparations and alliances which necessarily appear as offensive preparations to the other. Armament leads to counter-armament —alliance to counter-alliance—until eventually the productive resources on both sides are so pre-empted by defensive preparation that the burden becomes intolerable and mass discontent sets in. To prevent discontent from causing an overthrow of leadership, leadership on each side throws the blame for restriction and privation wholly upon the evil machinations of the other. That is the sort of vicious circle of mutual distrust and provocation in which we now find ourselves with the Soviet Union.

Never mind who started it. Let us say that the Russians began the struggle for world domination and that we have merely been acting in self-defense. The fact remains that we have been proceeding upon a wholly illogical conclusion from our own premise. We have proceeded on the assumption that, whereas the Russians would *not* let us make a peace by agreement, the Russians *would* acquiesce in our achieving a *Pax Americana* by outarming them and creating a system of alliances more powerful than their own.

The absurdity of this conclusion has been obscured by the curious process of immature self-delusion in which we have been indulging. We have not admitted frankly to ourselves that we are aiming at a *Pax Americana.* We talk about a One World-United Nations peace. We talk about strengthening the United Nations and supporting it with every means at our command. But our policy-makers have frowned upon any suggestion to transform the United Nations into a world organization capable of enacting and enforcing world law. While talking about One World, they have operated on the concept of American judgment and American power applied to the strengthening of our half of a divided world.

The process of immature self-delusion applies not only to the determination of our policy aims but to our choice of means and to our appraisal of success or failure. At the present moment we are in a mood of self-congratulation. We arrived last summer at what appeared to be a major victory in the cold war, when the Berlin airlift and counter-blockade forced the Russians to back down. At the same time the Marshall Plan had all but locked the doors of Western Europe against further communist penetration. The Atlantic Pact then showed the Russians that they could not

resort to military aggression against Western Europe without becoming involved in a war with us; and our expanded military power, plus our sole possession of the atomic bomb, made it clear to the Russians that they could not hope to win a war with the United States. In spite of their recently shattered illusion about the atomic bomb, some of our policy-makers are still inclined to think that, in Europe at least, we must be on the right road and that, if we continue along this line, we shall eventually arrive at a peace enforced by American power subtly operating behind the facade of an almost wholly impotent world organization.

Let us leave aside altogether what has been happening in China and the Far East, where, admittedly, we have been unsuccessful, and let us try to examine the facts with regard to Europe, where we feel so sure that we are on the right road.

The first fact is that we have *not* won a great victory in the cold war. It is true that we have frustrated the Russian blockade of Berlin. This blockade was imposed by Moscow for the maximum objective of halting the creation of a West German state and, failing that, for the minimum objective of forcing the Western Allies out of Berlin. The airlift and the counter-blockade denied both aims to the Kremlin. But the blockade and counter-blockade also brought into the open the basic weakness of our own position. The strangulation of East-West trade accelerated the crisis in our whole West European Recovery Program. It became almost as urgently necessary for us to end the stalemate as it was for the Russians. The Russians were forced to recognize that their so-called Molotov Plan for the recovery of Eastern Europe was wholly incapable of satisfying the needs of their satellites. We were forced to recognize that our Marshall Plan could not succeed in making Western Europe self-supporting so long as the European trading community remained split into two parts, neither of which could live without the other. Thus both sides became anxious to find a face-saving device to end the stalemate.

In the resulting moves toward cooling off the overheated cold war, we can claim to have lost less face than the Russians. But that is the extent of our victory. It remains to be seen whether we actually gained or lost at Paris in beating off the Russian attempt to stop the creation of a West German state. Both sides came to Paris asserting their desire to end the partition of Germany. Each blamed the other for the existing

state of affairs, and each made proposals as to how partition might be ended and the Iron Curtain lifted between the two Germanys. But—the Russian proposals were clearly not intended to be acceptable to the West, and the Western proposals were clearly not intended to be acceptable to the Russians.

The Russians put forward nothing more than a proposal to return to the unworkable Potsdam Agreement, probably because they feared that a unification of Germany would alienate the Poles and the Czechs, at a time when considerable unrest among the Soviet satellites already existed.

The stated reason for our making a counter-proposal, which we obviously intended to be unacceptable to the Russians, was our concern for the preservation of democracy and political freedom in the Western zones. Anyone who suffers from the delusion that democracy exists in Western Germany should read Delbert Clark's "Again the Goose-step", or Drew Middleton's "Struggle for Germany". The real reason why we were unwilling to risk making a proposal for unification which might have been accepted was that Western Germany had become the keystone of our West European Recovery Program, and that we were unwilling to allow the Russians any voice in the control of West German industry.

The simple fact is that we are caught on the horns of a dilemma, created by the cold war. Economically, Western Europe cannot become self-supporting and thus immune to communist penetration, unless it includes a healthy and productive Germany. Militarily, Western Europe cannot become capable of self-defense, unless it includes a rearmed Germany. But, politically, Western Europe will fly apart altogether, if a strong, united and rearmed Germany is allowed to come into existence.

The Russians face a similar dilemma. Eastern Europe, and Russia itself, cannot achieve full recovery without trade with the West, and particularly without trade with Western Germany. But, if the barriers are let down and a united Germany grows strong, such a united Germany—even if it maintains a position of neutrality as between Russia and the West—will be a threat to Russian hegemony in Eastern Europe. Therefore Russia wants a united Germany only if she can completely control it.

Thus, neither the Russians nor we are at present sincere in saying that we want to unite Germany. Neither the Russians nor we have reached

the point of really wanting to end the cold war in Europe. Each of us would like to carry it a little further in the hope of gaining certain advantages; but each of us, in the meanwhile, would like to loosen a little the restrictions which now strangle recovery on both sides of the Iron Curtain. The Russians have not solved their problem of meeting the urgent needs of their satellites and thus keeping them in line. Nor have we solved our problem in Western Europe, which has assumed new and menacing aspects. Neither side has as yet realized that there can be no such thing as peaceful victory in the present power struggle.

Whatever may be said about the immaturity of our approach to Europe can be doubled with respect to our post-war policy in Asia.

Bargain-Basement Diplomacy

A foreign policy may fail because it rests upon a faulty analysis of world conditions and therefore aims at the wrong targets. It may also fail because it operates with ill-chosen or insufficient means toward the achievement of soundly conceived objectives.

Not everyone will agree that our foreign policy has rested upon an over-simple analysis of the world crisis and has been too predominantly negative and fear-inspired. But, even leaving to one side such errors as there may have been in our policy-makers' appraisal of world conditions, and assuming that their postwar decisions have been altogether sound, surely there are grounds for believing that something has been radically wrong *with the manner in which we have executed these decisions*—something so radically wrong that it would account for failure to achieve our ends, even if the ends had been chosen with the most profound wisdom.

Our postwar purpose, developed during the war, was to preserve the victorious anti-Axis coalition in order to make and maintain a peace based upon great power co-operation. This meant, in effect, that our objective was to preserve harmony and co-operation between the United States, Great Britain, and the Soviet Union. The assumption that such harmony could be preserved underlay the great concessions made to Russia at Yalta; it underlay the basic conception of the United Nations' structure as set up at San Francisco.

Our first postwar actions of great significance were three. We embarked upon a helter-skelter demobilization of our armed forces. We cut off wartime Lend-Lease without any prior notice or discussion. We removed rationing and price controls from our own economy.

To anyone who remembered our withdrawal from world affairs in 1919-20, these three acts taken together looked like another American retreat into isolationism. The hasty demobilization of our armed forces, which included the disorganization and demoralization of our army of occupation in Germany, frightened our Western Allies and must have made the Russians at least conscious of the fact that no force remotely comparable to their Red Army now stood between them and the Channel. The brusque termination of Lend-Lease embarrassed both our Western Allies and the Soviet Union, forcing them to make overnight the difficult transition from heavy dependence upon American aid to self-support. The removal of rationing and price controls, at a time when most of the world was underfed and in dire need of almost every conceivable kind of food, raw material, and consumer goods, must have made all our friends wonder what had become of the wartime spirit of loyal sacrifice and mutual co-operation.

As it turned out, we were not by any means returning to our former isolationist pattern. Later events showed that, in the elation of victory, our government had merely gone on a temporary binge of irresponsibility. But a certain amount of damage had been done. Suspicions had been aroused, resentments created, and the task of postwar reconstruction rendered infinitely more difficult.

Great Britain and the Soviet Union lost little time in applying to us for large loans to tide them over the period of transition. Russia applied for a loan of one billion dollars. Britain, which had to consider not merely her own needs but also her complicated obligations as the center of the sterling area, estimated her requirements at something like seven billion dollars.

So far as Russia was concerned, nothing was done. In March 1946, our government suddenly "discovered" that the Russian application of October 1945 had been "lost" in a transfer of files from the Foreign Economic Administration to the State Department. The Russian request

was formally acknowledged without explanation of the "loss" or delay. This was at a time when the stated aim of our foreign policy was still to make and preserve a peace by friendly co-operation with the Soviet Union.

Great Britain received a sympathetic hearing. But, after six months of negotiations, our government decided that three or four billion dollars would be about all that the American Congress and the American people could be expected to grant. The issue was not put up to the American people. The American people were not told that Britain estimated her needs at almost seven billion dollars. It was assumed, on the American people's behalf, that they would perhaps give Britain three or four billion dollars and no more. Our negotiators first deluded themselves into the belief that three and a half billions would actually do the job. Then they deluded Congress and the American people into thinking the same, fortifying their plea for granting the loan by painting the full picture of the disaster that would occur if Britain did not receive the required aid. The loan was approved by Congress on the utterly false assumption that a bridge had been built across the yawning British deficit. Quite apart from certain clearly unfulfillable conditions attached to the loan (which later very nearly wrecked the British economy altogether), the truth was that a bridge had been built just about half way across the gap—which, as everyone knows, is not a good way to reach the other side.

Later on, when the true facts came to light, it was inevitable that resentments should be aroused on both sides. A large segment of American opinion felt that the British had let us down—even though it was generally understood that the severe winter of 1946-47 had upset the calculation. A large segment of British opinion felt that it would have been better to accept no loan at all than to take the inadequate amount offered. Thus, the British problem remained unsolved, with each side tending to blame the other for the costly failure.

This is the pattern of method and procedure which our government has followed in almost all of its major policies since the beginning of 1946. This is the pattern of failure which dogs all our best-intentioned efforts. It has little or nothing to do with the basic aims of our policy. *It has to do with a process of self-deception which has become the habit of the bipartisan team which has made foreign policy under the Truman Administration.*

The formula runs like this. A dangerous situation is seen to be developing in some part of the world. Unless this situation is met by economic or military assistance from the United States, dire consequences will arise. Therefore the United States must act. How much will it take to meet the situation? Careful analysis shows that it will take a very large amount. To get that amount out of Congress requires a thorough frightening of both Congress and the American people. But, even if Congress is scared into granting this amount, where is the money to come from? We can't increase our huge national debt. We have promised to reduce it. Higher taxes? Don't be silly. Congress will never do that. We'd better cut down the amount.

And so the amount is cut down before the problem is ever placed before Congress—cut down to a point where we are no longer proposing to meet the dangerous situation but merely to "do something about it." And then Congress and the people are systematically frightened into building a bridge half-way across a river, under the impression that they are building a bridge all the way across.

That is what happened to the British loan. That is what happened to the Marshall Plan. That is what happened in China. That is what happened to the program to rearm Western Europe. That is what will go on happening again and again until the American people wake up to this dangerous business and put a stop to it.

The danger is not merely that we shall end up with a lot of half-bridges that get us nowhere. The danger is that each time we build a half-bridge we weaken or lose a friend. Our government is not merely frittering away our own material resources. It is also dissipating the good will which should be earned by the native generosity of the American people.

The Military Aid Program for Western Europe is the most recent example of this pattern of self-deception. We were told early in 1949 that a very dangerous condition existed because the military weakness of Western Europe invited Russian aggression. (This weakness had existed ever since the withdrawal of our own forces in 1945.) We were told that the danger had now become acute because the success of the Marshall Plan had denied to the Soviet Union the possibility of further expansion through communist penetration or subversion. (We were not told that

the Marshall Plan, in spite of its well-nigh miraculous success to date, was about to fall flat on its face, unless something were done quickly to solve the growing dollar famine. More of this in a moment.) We were told that we must do more than deter Russian aggression by openly declaring, as we have in the Atlantic Treaty, that we shall fight Russia if she invades Europe. We were told that, in addition, we must protect Western Europe against being overrun, in the event of war, because we could not afford to undertake another Normandy invasion and Europe could not afford another liberation. Therefore, we were told that we must proceed at once to build up a defense force in Western Europe which could hold off a Russian invasion at the Elbe or, at worst, at the Rhine, at least until "our own power could be brought to bear."

So what does our government propose to Congress and to the American people in order to meet this emergency? It proposes a grant of just over one billion dollars to be spent over the next two years in rebuilding the military strength of Western Europe.

What does one billion dollars mean in terms of the problem posed to us?

Western Europe has at present about ten divisions, most of them poorly equipped. In the air it has next to nothing beyond a small but efficient British Fighter Command. Russia—according to the *lowest* estimates—has over 150 fully equipped and mobilized divisions. Russia has considerable air power. Again, according to the *lowest* estimates, it would take at least forty fully equipped and mobilized divisions, supported by ample air power, to hold a Russian invasion at the Rhine "until our own power could be brought to bear." (Our own power on the ground consists, at present, of about ten combat divisions.)

It costs about one quarter of a billion dollars to equip one armored division. Where does this program of one billion dollars get us? How can it build even half the defense force so urgently needed? What good is a defense force that could *almost* hold off an invasion?

What about atomic bombs? (This was in the last halcyon days of our atomic monopoly.) Couldn't we stop the Russians with a much smaller ground force if we used atomic weapons on Russian troop concentrations and supply lines as well as upon the industrial centers of the Soviet Union? Perhaps so. But if we drop atomic bombs all over Ger-

many—which this would mean—good-by to any hope of Germany's being on our side as a bulwark against communism. As a matter of fact, the planners of this project defended it until September 23, 1949, on the now curious grounds that it was designed to create a defense force in Western Europe by 1952—*the earliest date at which the Russians could be expected to have atomic weapons.* Figure that one out for yourself.

It is obvious, of course, that our military men would like to see a much larger and faster program of rearming Western Europe, if its territory is to be made safe against invasion. But the State Department knows that it cannot afford to let rearmament in Western Europe interfere with recovery, and this limits severely the number of men who can be withdrawn for military service from the farms and factories of France, Britain, and the Low Countries. The State Department knows, too, that it cannot propose rearming the Germans without letting loose a storm of protest here and abroad. Nor can it rearm the Italians beyond the limitations of the Italian Peace Treaty. It could, of course, propose that we increase our own combat forces and station a large part of them in Western Europe now, before any war starts. But that would require a war-scare to make all previous war-scares look like amateur performances. Furthermore, it would require more billions added to our already swollen military budget.

So our government went to Congress with a program which implied an unfulfillable promise to our friends, and deluded the American people into thinking that this particular danger had been met by their willingness to fork over another billion dollars. Congress—by this time thoroughly accustomed to the pattern—went through the usual motions of anxious doubt and economy mindedness, chipping off a little here and a little there, fiddling with bookkeeping entries, striking out grants of power which were put in for the precise purpose of letting Congress strike them out, and passed the measure substantially as requested. No one who supported the program ever asked whether the appropriation was big enough for the enormous commitment undertaken. The only questions raised were whether the amount proposed might not be excessive.

This pattern of self-delusion reverses the well-known maxim of Theodore Roosevelt. We are not speaking softly and carrying a Big Stick. We shout our commitments from the housetops and equip ourselves with a fine collection of photographs of Big Sticks.

The Dollar-Sterling Crisis

Manifestly, the world is full of dangerous situations which could be met if some one put up the means of meeting them. Equally evident is the fact that the United States, rich as it is, cannot provide the means for meeting each and every emergency. What has just been said merely indicates that we should decide which emergencies we can and should meet, *and then meet them,* instead of taking half-measures all over the world. This would leave a number of doors unlocked against danger, but at least we should know that there were a few places in the world through which danger definitely could not come upon us.

Right now we are faced with the fact that the apparently successful Marshall Plan is likely to collapse in failure. The chickens are coming home to roost. The Marshall Plan was devised to meet a crisis of underproduction, shortage and inflation. It has done so with remarkable success. Western Europe as a whole is now producing half again as much as it was before the war. But Western Europe now faces rising unemployment and a curtailment of production because it cannot exchange its goods for the food and raw materials it needs to continue its production. Specifically, Western Europe cannot earn enough dollars to buy the food and raw materials which can be bought only with dollars. Consequently, instead of drawing closer together in a powerful economic union, the countries of Western Europe are competing with each other for dollars, restricting trade with each other, and desperately trying each to make itself as self-sufficient as possible in order to survive. The longer this goes on, the more the Marshall Plan will tend to go into reverse.

Many Americans, including some of our policy-makers, regard this dollar shortage as a disease of the European economy. They insist that, if the European countries would only remove all trade restrictions between each other and within their own economies, the dollar shortage would disappear. There is a widespread belief among Americans that the Europeans could do these things, if they—especially the British—were not so obstinately committed to socialistic experiments in planned economy. Governor Dewey has gone so far as to advocate that we force Western Europe to stop this nonsense by threatening to withhold further aid.

Here again we see the pattern of immature self-deception. The dollar shortage is not primarily a disease of the European economy, nor a

product of socialist experimentation. Nor does the cure lie primarily in anything the West Europeans could now do or fail to do.

In the last thirty years the United States has doubled and then redoubled its production, thereby likewise doubling and redoubling its purchasing power and its relative importance as a consumer as well as producer of the world supply of goods. During the same period, Europe, torn and partially devastated by two great wars, has suffered the obsolescence of its productive machinery, the exhaustion of its population, and the dissipation of its accumulated reserves. In the nineteenth century, Western Europe as a whole was the nerve and brain centre of a colonial world empire. In the twentieth century Western Europe has gradually become a nerve and brain centre without a body to nourish it and without arms and legs to direct and control. It is now in the position of a man who in middle-age retired to the management of an estate, acquired through hard work in early life, and who then loses the estate and is compelled to go back to the sort of work he did in his youth. Picture Western Europe not as one such man, but as nineteen such men, living close together, with each of them having suffered a similar misfortune —nineteen middle-aged men, forced to go back to manual work to support their families and competing with each other for the things their families need.

Meanwhile, we have become not only the major source of the food, raw materials and tools which the other peoples of the world need in order to work and earn a livelihood, but also the sole possible buyer of many of the goods produced by the other peoples of the world. Moreover, our development of mass production, as against the batch production of the rest of the world, has enabled us not only to produce more goods, but cheaper goods of relatively high quality.

The heart of the post-war economic crisis lies in the rise of American power, the decline of European power, and our failure to understand the full implications of our newly acquired position. We realize that we are rich while others are poor, well-fed while others are hungry, powerful where others are weak. We realize this emotionally and are ready to give, to feed, to share our good fortune. But we do not understand intellectually the kind of responsibility our preponderant strength and power place upon us. We do not understand, for example, that being the world's greatest producer and seller of goods places upon us the responsibility to

buy what other peoples produce. We are quite willing to recognize that our surplus production belongs to the world, but we are not willing to recognize that our surplus purchasing power also belongs to the world. Thus we persist in keeping our domestic industries protected by a tariff designed to protect the infant industries of a young and struggling debtor nation.

Even the Marshall Plan, by far the most adult and constructive feature of our post-war policy, was undertaken half in the spirit of charity and half out of fear-inspired anxiety to build a dam against communism; whereas, if we had fully understood the post-war problem, the primary purpose of the Marshall Plan would have been to harness our great surplus resources to the restoration of some sort of balance between the Old World and the New. Had we fully understood the nature of the post-war problem, we should have begun with the realization that we ourselves needed, in our own interest, to find a way to get rid of the huge surplus in our balance of payments with the rest of the world.

The same problem still faces us today in more acute form. The devaluation of currencies recently undertaken will not cure it. At best it will provide temporary relief. If we want Europe to stop permanently the mad scramble for dollars which is driving it toward weakness and fragmentation, we must, in one way or another, supply enough dollars so that the scramble can stop. We must not again chisel away at a generous undertaking to the point where an operation to induce lasting recovery becomes merely a never-ending subsidy to provide relief. *We must stop thinking of the money we spend abroad as expense, and think of it instead as investment.*

What is demanded of us at the present time is a far-reaching and continuing program of long-term investment abroad, in which Government must lead the way and private capital follow. Such a program must go beyond the present limited concept of the Point Four Program. It is true enough that the world needs the technical advice and know-how we are proposing to export. What it needs even more is the planned development of its natural resources. It needs such things as TVA developments on the Rhone River in France, on the Jordan River in the Middle East, and on the great rivers of India—and perhaps even of China. We cannot expect to carry out such a program effectively without channeling it through some sort of supra-national organization. If the funds for this type of imaginative reconstruction flow direct into the world from the

United States Treasury or from Wall Street, we shall make ourselves into the absentee landlord of a world which hates us, even while it thrives on the wealth we pour into its development.

Cost a lot of money? Of course it will cost a lot of money. When the Marshall Plan was under discussion, I frightened and infuriated a good friend of mine in the Department of State by publicly pleading for the Plan's adoption even though it might cost us sixty or seventy billion dollars over a period of ten years. What I am talking about now will cost us even more, because the Marshall Plan dealt with only a small part of the world, and the problem we face is a world problem. But "cost" is not the right word. If you offer a millionaire the chance to invest $50,000 a year for ten years in a sound development, he will not protest that you are asking for half of his fortune. He will consider whether the proposed annual investment of his income for ten years will or will not make him another million dollars of capital. Our annual income as a nation may soon reach three hundred billion dollars. What I am talking about is a program of foreign investment that will take something like three percent of that annual income and invest it in our own future peace and prosperity, by raising the living standards and the purchasing power of the other peoples of the world.

The immature approach is to think that peace can be built by shoring up crumbling walls and patching a leaky roof. The mature approach is to recognize that a new house needs to be built for the world to live in. That new house must be planned by many minds and built by many hands. We can neither design it alone, nor build it alone. We can help to do both, especially because at present we have what amounts to a monopoly on building materials, and because we alone have substantial surplus capital to invest. But the house, when built, must be the world's cooperative apartment, in which we—like everyone else—will be a tenant. That is the essential difference between a peace by mutual consent and a *Pax Americana.*

The mature nation thinks in terms of reasonable agreement between equals. The immature nation thinks in terms of power—power to rebuild the world's house *the way it wants,* and then to offer to others the facilities and arrangements *it thinks they should want* at terms *it thinks fair and generous.* The immature nation, like the immature individual, thinks in terms of the parent-child relationship. The mature nation, like the mature individual, thinks in terms of brotherhood.

Lest you think I have overdone the well-known parable of the moat and the beam and have treated our own foibles too harshly, let me make it clear that I have not been dealing in comparative terms. I have not been discussing the *relative* immaturity of our foreign policy, nor have I meant to imply that certain other nations are necessarily more mature or less mature than we. The thing which concerns me and in which I have tried to arouse your concern, is that, irrespective of other nations, we are up against a difficult problem arising within ourselves. This is nothing more nor less than the age-old problem of growing up to man's estate, which, as you well know, is rarely accomplished without pain.

A most encouraging sign of our advancing maturity was given in the communiqué issued on September 12, 1949, by the Foreign Ministers of the United States, Great Britain and Canada, after their preliminary conference on the Dollar-Sterling crisis. Here we have the American Government officially recognizing that our foreign trade policies have not been consistent with our position as the world's greatest creditor nation and coming boldly to the conclusion that these policies must be drastically altered. Unfortunately, it is one thing to recognize the twin requirements of tariff revision and long-range investment abroad, and quite another thing to meet these requirements. Secretary Acheson courageously took the bull by the horns, but his colleague in the Treasury Department still mumbled that whatever steps were to be taken must fall within the framework of existing policy. The important thing is that working parties have been created to study the problems in detail and to work out the necessary programs.

The great question now is whether these working parties will let the chips fall where they may, or whether they will recommend only such action as may be deemed "politically possible."

If the working parties make, or are forced to make, political compromises, it is safe to predict that our pattern of immature self-delusion will be continued and that no lasting cure will be effected. If the working parties report what needs to be done, irrespective of how many probable votes can be counted "for" or "against" in the House and Senate, then it will be up to the American people—up to you and me as citizens—to see that our representatives in Congress find the necessary public support for doing the "politically *im*possible."

When that day comes—if it comes—we shall have achieved maturity.

Chapter Three

OUR GREAT OPPORTUNITY

In the next few months we, the citizens of the United States, shall have our first real opportunity to throw ourselves behind a mature and constructive effort to build the peace . . . our first real opportunity, and perhaps our last.

After four years of continuous post-war crisis—four years in which we have gone from emergency to emergency, dealing chiefly with symptoms—we shall have our first real chance to come to grips with the basic causes of the world's malady.

There are two sets of basic causes of the present state of world affairs. One set is primarily economic; the other political. The two are inter-related and require separate, though inter-related cures.

The fundamental economic causes of anxiety, tension and unrest are hunger, privation, disease and ignorance. The fundamental political causes are oppression and exploitation of the many by the few anywhere on the face of the earth. Wherever people are oppressed and exploited—whether by alien domination or domestic tyranny—whether by dictatorship of the Right or the Left—there we find the seeds of internal violence or external aggression.

Just as the disease is compounded of economic and political factors, so the cure must be designed along the same lines. The fight for peace is, in effect, the fight for higher living standards combined with the fight for freedom.

Our great opportunity in the coming months lies in the development of a program which will aid both the fight for higher living standards and the fight for freedom. Although this program will operate primarily in

the field of economics, its political impact can be profound and far-reaching.

The basis of our great opportunity lies in the fact that ignorance, want and misery are actually technologically obsolete. That is to say, ignorance, want and misery need not exist much longer anywhere on this earth, if the human race can learn how to disseminate knowledge which already exists and how to cooperate in its application.

Realizing the importance of this fact, the United Nations, and especially the Food and Agriculture Organization, began some time ago to develop programs for providing technical assistance to agriculture and industry in the underdeveloped parts of the world. Similar exploratory work was undertaken by some of the other specialized agencies, as, for example, in health and education. This work has so far been on a small scale and has been hampered by insufficient funds. A report issued by the Secretary-General of the United Nations in June, 1949, summarizes the work done and the projects under consideration. A digest of this report may be found in Appendix I.

New impetus was given to this idea in January, 1949, when President Truman, in his Inaugural Address, enunciated his "Point Four Program" of American assistance to resource development in the world's underdeveloped areas.

This is what the President said:

> "We must embark on a bold new program for making the benefits of our scientific advances and industrial progress available for the improvement and growth of under-developed areas.
>
> "More than half the people of the world are living in conditions approaching misery. Their food is inadequate. They are victims of disease. Their economic life is primitive and stagnant. Their poverty is a handicap and a threat both to them and to more prosperous areas.
>
> "For the first time in history, humanity possesses the knowledge and the skill to relieve the suffering of these people.
>
> "The United States is preeminent among nations in the development of industrial and scientific techniques. The material resources

which we can afford to use for the assistance of other peoples are limited. But our imponderable resources in technical knowledge are constantly growing and are inexhaustible.

"I believe that we should make available to peace-loving peoples the benefits of our store of technical knowledge in order to help them realize their aspirations for a better life. And, in cooperation with other nations, we should foster capital investment in areas needing development.

"Our aim should be to help the free peoples of the world, through their own efforts, to produce more food, more clothing, more materials for housing, and more mechanical power to lighten their burdens.

"We invite other countries to pool their technological resources in this undertaking. Their contributions will be warmly welcomed. This should be a cooperative enterprise in which all nations work together through the United Nations and its specialized agencies wherever practicable. It must be a world-wide effort for the achievement of peace, plenty, and freedom.

"With the cooperation of business, private capital, agriculture, and labor in this country, this program can greatly increase the industrial activity in other nations and can raise substantially their standards of living.

"Such new economic developments must be devised and controlled to benefit the peoples of the areas in which they are established. Guarantees to the investor must be balanced by guarantees in the interest of the people whose resources and whose labor go into these developments.

"The old imperialism—exploitation for foreign profit—has no place in our plans. What we envisage is a program of development based on the concepts of democratic fair-dealing.

"All countries, including our own, will greatly benefit from a constructive program for the better use of the world's human and natural resources. Experience shows that our commerce with other countries expands as they progress industrially and economically.

"Greater productions is the key to prosperity and peace. And the key to greater production is a wider and more vigorous application of modern scientific and technical knowledge.

"Only by helping the least fortunate of its members to help themselves can the human family achieve the decent, satisfying life that is the right of all people.

"Democracy alone can supply the vitalizing force to stir the peoples of the world into triumphant action, not only against their human oppressors, but also against their ancient enemies—hunger, misery, and despair."

This promise of American aid aroused the interest and the hopes of mankind, and the President's ringing repudiation of old-fashioned imperialism and foreign exploitation—his clear affirmation that his purpose was to benefit the peoples of the areas concerned—gave substance to the belief that the program would indeed be both bold and new. The concrete proposals foreshadowed by the Inaugural Address were awaited here and abroad with keen interest, for it appeared that the long-awaited moment had come when the United States would give an affirmative and constructive turn to its post-war foreign policy.

Although the "bold new program" bore the label, "Point Four", the hope was kindled that it would become something more than the mere extension of a fear-inspired, negative policy. It was evident that the new program could succeed—and succeed brilliantly— if it were to become the means of shifting the emphasis in overall American policy from fear to hope—from the frantic shoring up of crumbling walls to the careful planning and building of a new dwelling place for mankind.

Similarly, it was apparent that, if the new program were to succeed, it must not be permitted to become another bargain-basement item to be squeezed out of an overburdened budget. It would have to be conceived—*not as an expense—but as a desirable investment in world peace and prosperity, and hence as a desirable investment of American capital in the future welfare of the American people.*

Ever since January, 1949, people all over the world have been asking each other: "Will the American promise come true?"

The Nature of the Need

What is required to relieve tensions and anxiety, to restore the hope of mankind in the future, and the faith of mankind in itself, is an act of faith—an act of faith which unequivocally demonstrates that somewhere on this earth there is a people ready to undertake great risks and sacrifices in order to back up its belief that man is capable of planning a better world and of achieving it.

We alone among the peoples of this earth have the resources to make such an act of faith effective.

The tensions and frustrations which are driving the world toward disaster do not originate in the so-called ideological combat between the two halves of a divided world. The ideological combat has its origins in the political, economic and social strains inherent in a world which has become physically one without learning how to govern itself as an entity—which has learned technologically how to produce abundance without learning sociologically how to apply its knowledge and distribute the fruits of production—which has learned how to prolong life without learning how to provide its increasing population with life's necessities. If hunger, disease, ignorance and poverty are basic causes of the world crisis, food, health, education and the development of the world's abundant resources for the benefit of the world's peoples are the basic cure.

To effect this cure the peoples of the world must embark upon a cooperative effort not merely to develop but also to conserve and wisely use the wealth which lies within themselves and in the Earth which they inhabit. Such an effort must apply first of all to the so-called underdeveloped areas, for here lie the greatest untapped sources of wealth as well as the greatest sources of explosive anxiety and tension. But the effort must not be confined solely to the underdeveloped areas. It is not possible to separate the development of the peoples and the natural resources of Asia, Africa or the Middle East from the pressing problem of redressing the balance of trade and the balance of payments between Europe and America. The sterling-dollar crisis arises as much in India and Malaya as it does in the British Isles. Nor can it be overlooked that the natural resources of the highly-developed countries must be included in such a program. It is true that the surplus resources of North America must supply the original impetus. But it is equally true that these resources are

not inexhaustible, unless they are conserved, put to intelligent use and further developed. The TVA is by no means a completed development project; its greatest benefits are perhaps still to come. The Missouri and Columbia Valley projects are still on paper. There are not even paper plans as yet for the effective conservation of our dwindling Western forests.

The nature of the needed program was ably defined before a recent United Nations Scientific Conference by Dr. Stephen Raushenbush, Consultant to the Public Affairs Institute and the United States Department of the Interior. He put it in these terms:

> "The task is not simply that of transferring population into industry to increase wealth, but to make that transfer under a grouping of conditions which can produce the most effective use of the resources. That combination must include at least 1) access to technology, education, and particularly understanding about productivity, 2) access to low-cost capital, 3) wide-spread use of low-cost energy, 4) low-unit-cost, large-scale production, without excessive claims for security at the start, 5) careful timing, programming and single-agency operation, 6) adequate agricultural development and conservation in partnership with industrial growth, and 7) a really adequate large-scale effort at the start of the conversion process."

Can We Afford It?

The ultimate demands of a program capable of realizing the ideal expressed by President Truman are obviously very great. In the beginning they will of necessity fall very largely, though by no means solely, upon the United States. The program is likely to grow like an inverted Christmas tree, with the smallest demand for investment in the first year and successively greater demands as resource development gets under way. Once the program gets into its stride, however, the dependence upon American capital is likely to become relatively less each year as the economic strength of other countries increases. A fair guess might be that the load upon our resources would rise from something less than half a billion dollars in the first year to several billions in the second and third year and perhaps to as much as five or six billions in the fourth and fifth years, declining thereafter, even though the program itself would continue to expand. What we need, of course, is not a guess but a concrete plan based upon careful study. The guess is submitted merely to give some

indication of the probable trends and some approximation to the amounts involved, in order that we may consider whether such a program lies within or without the realm of the possible.

One thing seems clear. We should not embark upon this much-needed program at all, unless we are able and willing to see it through. The American people must not be misled by the relatively small financial requirements of the first year. They must not be beguiled into a commitment they do not fully understand nor misguided into building another half-bridge that leads nowhere. As yet no effort whatsoever has been made to enable the American people to understand such a program and to make up their minds about it.

Assuming that the nature of the problem is something like what has been indicated above, can we afford it?

At present we are producing approximately twenty billion dollars a year more in goods and services than we consume. We have, in other words, about twenty billion dollars a year of excess productive capacity to use in the implementation of our foreign policy—whatever we decide that foreign policy should be. This twenty billions can be increased over a period of time by further development and conservation of our own great natural resources, even though we simultaneously increase our domestic consumption.

At the present time we are spending some fifteen billions a year on our own military establishment, one or two billions more on atomic energy development, and one billion and a half on military aid to potential allies in a possible war against the Soviet Union. In addition we are spending about four billions a year on the Marshall Plan. This makes a total of about twenty-three billion dollars a year, of which only a little more than one sixth is being spent in a constructive effort to build the peace. The rest is devoted to the negative purpose of preventing Russian military aggression—or Russian victory in the event of such aggression.

Of this total expenditure on foreign policy, all but the Marshall Plan funds and the Military Aid appropriations—together about five and a half billions—are being spent in this country. These five and a half billions, which we are giving away, serve for the moment to fill the gap in our balance of payments and thus enable us to keep our own economy going. But these five and a half billions do not suffice to enable other countries to buy enough of what they need in this country to keep their economies going on more than a hand-to-mouth basis. Moreover, the

Marshall Plan is now running into heavy weather and is likely to be drastically cut down by Congress as it becomes painfully evident that its goal of making Western Europe independent of American aid in 1952 will not be realized.

The answer seems clear. The Marshall Plan has served its purpose of restoring production in Western Europe. It cannot solve the crisis of trade and exchange which now blocks complete European recovery. But that crisis could be solved if the Marshall Plan were integrated in a new and broader plan of worldwide reconstruction and development—a plan which would take into consideration, as the Marshall Plan did not, that Europe, and particularly Western Europe alone, cannot be considered separately from Asia, Africa, the Middle East and Latin America.

My own conclusion, on the basis of these considerations is that we not only can afford to undertake our part in a worldwide development program, but that we actually cannot afford *not* to undertake *some* program which will gradually eliminate the dangerous gap in our balance of payments. Since only a small part of this gap can be closed by increased American imports, it seems evident that the only way to offset our continuing excess exports of goods is to embark upon a deliberate program of exporting capital. The alternative is to face a drastic shrinkage in our domestic economy.

What better program of capital export can there be than one which will build up the purchasing power of the other nations of the world to a point where, eventually, there will be no unbalance to correct?

The question, it seems to me, is not whether a truly "bold new program" is practical or within our means, but rather whether we have the imagination, the courage and the will to undertake it.

In the long run it is, of course, obvious that we cannot pile more billions on to the huge amounts we are already spending to implement our foreign policy. But if, at the same time that we begin a program of long-term investment abroad to build up the living standards and the purchasing power of the rest of the world, we also re-examine and revise our present expenditures on stop-gap solutions, then we can well afford a temporary increase of our overall expenditures.

It is true that the arms race cannot now be halted overnight. But it is also true that we can, overnight, redirect our policy toward halting the

arms race, by assuming the leadership in a determined effort to develop the United Nations into a kind of world organization that alone will make disarmament possible. An important move in this direction has already made considerable headway in Congress where a concurrent resolution to this effect has been sponsored by 104 Representatives and 22 Senators.

Moreover, some of the money we shall spend on the new program can be saved—by coordinating the Marshall Plan with the new worldwide development plan—by recognizing that the only way to protect Western Europe from military invasion is to prevent that invasion from being attempted—and by cleaning up the Augean stable which now apparently exists in our defense establishment. All this could be done without jeopardizing our national security and without over-straining our national resources.

What Is the Great Opportunity?

The opportunity we face in 1950 is to extricate ourselves from a dilemma which is becoming increasingly apparent. The Marshall Plan is not going to make Western Europe self-supporting by 1952, the year in which it is supposed to terminate. This places before us the choice of indefinitely protracting this particular effort, or abandoning it. Indefinite protraction is difficult to defend, precisely because it is indefinite. Abandonment of Western Europe is, on the other hand, unthinkable.

The opportunity we face now is to develop a new plan, which will avoid the basic error of the Marshall Plan—namely, that it attempted to deal with Western Europe as if it were, or could be made into, a self-contained entity. The opportunity we face is to save what has been accomplished by the Marshall Plan and to carry the work to a successful conclusion, by integrating our efforts in Western Europe with a simultaneous attack upon those aspects of the problem which lie in Asia, Africa, the Middle East and Latin America.

This, too, will be an undertaking of unknown duration and unknown magnitude. But, because it will be directed at the whole of the problem, it *can* succeed, whereas any attack upon an isolated part of the problem is necessarily foredoomed to failure. In trying to bring about recovery in Western Europe alone, we have tried to fill a relatively small bucket—but a bucket which leaked into every other part of the world. In undertaking a worldwide cooperative plan of reconstruction and development, we shall be attempting to fill a much larger bucket, but a bucket which is reasonably sure not to leak.

II.

Let us now try to reduce our ideas to a few basic principles and then see to what extent the concrete proposals, which have so far been submitted to Congress, conform to these principles.

The four big questions to answer are:

How big in scope should the program be—or how big must it be in order to succeed?

What should be the relation of the program to the free world's struggle against totalitarianism?

Through what agencies should the program be planned and carried out?

How should the program be financed?

Four Principles

1. *Scope of the Program.* Since the basic economic problem of our time is one of unbalance—especially unbalance between North America and the rest of the world—the problem of the underdeveloped areas cannot be separated from the problem of redressing the balance of payments between Europe and the United States. The contemplated program must therefore be worldwide, or at least as worldwide as is possible in view of the existing cleavages. Since the surplus resources of the North American Continent are essential to the carrying out of a worldwide program, but are, on the other hand, themselves not inexhaustible, the program must also concern itself very seriously with the further development, conservation and use of the resources of Canada and the United States.

2. *Relation of Program to Totalitarian Menace.* The program cannot ignore the existing threat of totalitarianism. On the other hand, it cannot succeed if it becomes merely another instrument in the existing negative power struggle. The work undertaken in the underdeveloped areas, especially in Asia, must not be controlled by considerations arising out of European cold war alliances. The success of the program as a whole will depend very largely upon its adoption being coincident with a conscious shift of emphasis in present United States foreign policy.

3. *The Channeling of the Program.* Since the impact of economic action under the program will carry the widest social, political and cultural implications, the cooperative program for the development, conservation and use of the world's resources must obviously be planned by governments cooperating through international agencies. The program obviously cannot be planned, or simply be permitted to develop through uncoordinated private initiative. The contemplated program should, therefore, be channeled through the United Nations, if possible; if not, through some other international organization—perhaps an ad hoc organization—and only in the last resort through bilateral arrangements between the United States and any beneficiary country. In the event of resort to such bilateral arrangements, they should be made only in such a way as to be consistent with the overall policies developed through the United Nations or other international organizations.

4. *Method of Financing the Program.* The nature of the long-term investments required will be such as to provide their primary return to the lending countries in the benefits of increased purchasing power on the part of the beneficiaries, rather than in conventional interest or dividends. On the other hand, the development of the under-developed areas will undoubtedly provide increasing orthodox investment opportunities.

It follows that the germinal funds for carrying out the proposed program must be public funds. Such public funds will be required especially for harbors, transportation facilities, public health and education. Some of these funds can be provided through loans from the International Bank for Reconstruction and Development. Others may flow from the Export-Import Bank, or from national treasuries through some central agency. Public investment should stimulate and create the necessary climate for private investment, but it is essential that such private investment must not be permitted to create social, economic, or political conditions which run counter to the overall cooperative plan or to the interests of the peoples concerned. The same safeguards must, of course, be applied to all investment of public funds in any given area.

The Current Proposals

Let us now consider to what extent the proposals before Congress conform to the four major principles just stated. The current proposals consist of the following Bills:

1. The Administration-sponsored Kee Bill (HR 5615) entitled "The International Technical Cooperation Act of 1949."

2. The Administration-sponsored proposal to provide Export-Import Bank guarantees for private American investment abroad (S. 2197).

3. The Republican-sponsored Herter Bill (HR 6026) entitled "The Foreign Economic Development Act of 1949."

The text of the Administration proposal will be found in Appendix II.

1. *As to Scope.* The Administration program for implementing "Point Four" is limited to the underdeveloped areas. It is therefore as yet too restricted to meet the needs, and requires broadening by amendment.

The Herter counter-proposal, while not confined to the underdeveloped areas, is even more limited by two other disturbing qualifications: (1) "willingness to cooperate with the United States"; and (2) willingness "to struggle against communism and other forms of statism."

"Willingness to cooperate with the United States" is quite explicitly defined in the Herter Bill. It involves willingness to sign a bilateral economic treaty with the United States (Section 11) which would grant to American business a number of inducements to investment. These inducements include greater rights, privileges and immunities than those enjoyed by the indigenous business enterprises in the participating country. They would, if granted, enable American capital to become the absentee owner of many of the participating country's productive resources, and to remain the absentee owner even after the original investment had been repaid. They would enjoin indigenous business from competing with American-owned enterprise, even where such American enterprise did not fully meet the needs of the country concerned. The treaty would in some cases call for repeal of existing laws against majority foreign ownership, and would provide for exemption from currency controls affecting indigenous enterprises. In return for all these rights and immunities the Herter proposal would not guarantee to the signatory of the proposed treaty that any American capital would actually be invested, that any American goods or technical processes would actually be made available, or that anything at all would happen other than the making of cooperative surveys and reports for which the foreign signatory would be expected to pay "its proportionate share". This qualification seems so one-sided as to make the whole program inoperative. Our experience with the Bell-Tydings Act in the Philippines should be a warning.

The second qualification, which stipulates a willingness to "struggle against communism and other forms of statism" is ambiguous in the extreme. It is clearly intended to make the development program into an instrument in the existing negative power struggle. In addition, the qualification seems to imply that the whole program is intended to become the instrument of a worldwide crusade to promote American free enterprise capitalism. This raises such questions as whether the Labor Government of Britain is "struggling against statism", whether the Scandinavian countries would be ineligible because of their Socialist Governments, and whether Western Germany would be eligible only so long as the free enterprise Christian Democrats remain in power.

2. *As to Channels of Operation.* The preceding comments serve to show that the Herter proposal relies entirely upon bilateral arrangements between the United States and each of the would-be beneficiaries. If carried out, such a proposal would result in making the United States the economic overlord of the world. There is nothing cooperative about this concept.

The Administration proposal emphasizes cooperation with the United Nations, the Inter-American Organization and other international agencies. It looks toward cooperative planning of technical assistance through the United Nations. It seems, however, to be based upon the tacit assumption that in the later financing of development projects, bilateral arrangements will have to play a very important part. This is an element of danger. The Administration has been at pains to make clear that it condemns old-fashioned imperialism or foreign exploitation and that its program is to be based upon "democratic fair dealing". In the President's own words, "New economic developments must be devised and controlled to benefit the peoples of the areas in which they are established." This intention is admirable, but it seems doubtful whether it can be realized unless a more conscious effort is made to restrict bilateralism.

3. *As to Methods of Financing.* The Administration proposal relies heavily, and the Herter proposal almost entirely, upon inducing a flow abroad of private American capital. The Administration hopes to stimulate the flow of private capital through indirect Government guarantee by means of the Export-Import Bank. The Republican Bill seeks to attract American private capital abroad by forcing the beneficiary countries to offer it special inducements. Both proposals seem in this sense unrealistic.

As already stated, the germinal funds for the program will have to be provided in large amounts by governments, although some private capital might simultaneously be invested and more might be expected to follow later, when the preconditions for private investment have been created.

A special word of caution seems appropriate with regard to the Administration proposal to provide indirect Government guarantees for private American investors in foreign countries. From the private investor's point of view, these guarantees are likely to prove unsatisfactory because they will probably cover only certain specific foreseeable contingencies. Even these guarantees are likely to be subject to more than one interpretation should the contingencies arise. From the Government's point of view—that is, from the taxpayer's point of view—contingent liabilities of unknown dimensions would seem equally unsatisfactory. Over and beyond these considerations, the principle of causing the Government to act in this capacity is far-reaching and wide open to abuse. It would seem wiser to let private investors assume whatever risks they wish, leaving other risks to be assumed or not assumed by Government in its discretion. Then each party will know where it stands.

4. *As to the amount of financing required.* Reliance upon the export of technical advice and "know-how", supported by loans from the International Bank and such private capital as might be induced to flow abroad, will be inadequate—even if the International Bank greatly liberalizes its present policy and speeds up its procedure. The Administration proposal has no doubt been conditioned by the present mood of Congress, which is clearly against any further expansion of foreign loans at this time. But the fact is that, if this program is to succeed, the Administration must undertake to change the mood of Congress and of the people. It must place this program before Congress and the people in its true light—as an enterprise of great magnitude requiring a truly bold and new approach to stable peace and prosperity.

In a speech on November 1, 1949, to the American Society of Civil Engineers, President Truman himself adopted a wise motto. "Make no little plans", he said. "You can always amend a big plan, but you can never expand a little one."

The present Administration-sponsored proposal for carrying out the "bold new program" is as yet a "little plan".

Our job is to make it a big one.

To accomplish this purpose we shall have to bring about constructive amendments to the present Administration proposals. These amendments would aim at three major purposes:

1. To broaden the *geographical* scope of the program so as to include not only the underdeveloped areas but also the partially developed areas and even the highly developed areas such as the United States.

2. To broaden the *functional* scope of the program so as to include, from the beginning, not only technical aid and possible private investment but also the use of public funds as seed-money for actual project development.

3. To commit the program more definitely to a multilateral co-operative approach through an international agency, in preference to bilateral bargains between the United States and each of the participating countries, which would throw the United States into the role of the "harsh banker" who imposes conditions.

We shall have to fight hard for such amendments and for the ultimate passage of the amended legislation. Not only do the facts need to be presented to the American people, but expert study is needed before the appropriate amendments can be drawn and the case built up for their adoption. I have reason to hope that at least some of this expert study will be undertaken promptly by a qualified research organization under foundation sponsorship.

When this introductory study has been published, I shall have gone about as far as a single citizen can go in a matter of this sort. Several thousand copies are being sent, with the message stated on the back cover, to a selected list of educators, writers, editors, public servants and public-spirited citizens, as well as to every member of the 81st Congress. I wish I had the ability to do more and thus to make this initial effort more effective.

From here on the job can be done only through cooperative action—such as was discussed in the first chapter—by citizens who see the need for such action and who are willing to pool their energies, their skills and their resources to see it through.

Would you like to help?

The back cover will tell you how.

APPENDIX I.

United Nations Report

Meeting a month after the President's Inaugural Address, the Economic and Social Council instructed the Secretary-General to consult with the directors of the specialized agencies and draw up a "comprehensive program," including "methods of financing" and "ways of coordinating the planning and execution of the program."

At the beginning of June, the report of the Secretary-General on technical assistance was released. It is the result of intensive study and cooperation among the secretariats of the U. N. and the specialized agencies. The report describes in considerable detail the many types of projects for technical assistance proposed by the U. N. itself and individually by five of its specialized agencies. The proposals are based on actual experience. They are an extension and enlargement of advisory work which the various agencies have already begun in a smaller way. They provide for expert help in every field that plays a part in determining the standard of living of a nation; in improving agriculture and thus increasing the supply of food and raw materials; in expanding industry and the production of goods; in building up transport systems so that men and materials can move to the places where they are most needed; in providing a basic education and technical training without which new machines would stand idle and social growth would be stunted; in health conditions to give people energy and ambition. The U. N. plan is truly a comprehensive one, bringing into focus many types of activities. It adds up to an impressive total.

The projects described in the report are so numerous that only a few samples can be given here of what each agency proposes to do.

Projects of the Food and Agriculture Organization (FAO)

Steel mills and other heavy industries often seem to the under-developed nations like a magic cure for all their ills, but economists point out that before they can succeed in feeding an industrial population, they must produce more food. Most of the people in the under-developed countries make their living by farming, yet their rate of production is less than one-tenth of that of farmers in the more advanced countries, and

hunger is a chronic condition. Agricultural changes must come before the building of the longed-for factories. The kind of technical aid which the Food and Agriculture Organization is equipped to give is of the utmost importance.

Irrigation and drainage

In a large part of the world there is either too much of too little water for the best growth of crops. Either irrigation or drainage is needed. FAO proposes to send out experts to show Member governments how to set up water control projects.

Soil Management

Improper use has damaged the soil in many areas especially where rainfall is scanty or the slopes are steep. Under proper management, however, even soils that have been in use for thousands of years can be made far more productive. It is a matter of choosing the right crops for the soil and for the slope, and of using good tillage methods plus fertilizers and chemicals, if necessary. FAO proposes to expand its present program on soil management with special emphasis on the training of local technicians so that under-developed countries may carry out soil use programs of their own.

Farm implements

One of the most fundamental means of increasing agricultural production is to make better implements available to farmers. Large-scale power machinery may theoretically be the ideal solution but its introduction is costly and its operation is far beyond the technical knowledge of farmers in many of the under-developed countries. Better hand tools, animal-drawn implements and simple machines must first be introduced. FAO proposes to give local demonstrations of how these should be used. It proposes also to help governments set up agricultural extension services through which agricultural information of the kind needed locally can be spread to farmers through the under-developed countries.

Better seeds

In many countries little or no attention has been given to the use of better seed, though this is one of the quickest and most effective means of improving food production. For example, it is estimated that if the best

variety of rice were sown, yields could be increased by 10%, which would mean more food for millions of people. FAO proposes to push further its program of supplying improved seeds and helping governments to teach farmers to use them.

Animal breeding

It is estimated that livestock production could be increased by 25% in 10 years if modern breeding methods were generally applied. FAO plans to send experts to under-developed countries to help work out livestock breeding programs.

Better use of forests

About 30% of the land of the world is covered with forests. Properly managed, these forests can provide at least twice the present world output of timber. They can also guard against erosion and reduced floods by protecting the head waters of rivers. At the present time, most countries are not using their forests properly either for production or protection. FAO proposes advisory work along these lines.

Among the other programs proposed by FAO are ones to combat *plant diseases,* to combat *insect pests,* to control *animal diseases,* to improve *poultry raising* and to promote better use of *fisheries.*

Projects of the World Health Organization (WHO)

Low productivity and poor health tend to form a vicious circle. People grow unhealthy if they have not enough to eat but if they are unhealthy it is hard for them to produce enough food or other goods exchangeable for food. As indicated above, the program of the FAO aims to break this vicious circle by spreading improved agricultural techniques. For its part, the WHO proposes to attack the circle by helping governments improve the health of their people. If the farmer has good health and improved agricultural techniques his productivity will rise rapidly and the vicious circle will be broken.

In the past international health work has emphasized quarantine measures to check the spread of epidemics. WHO suggests that this approach is wasteful, that money would be better spent on a more positive approach, that if certain reservoirs of disease were eliminated, fewer epidemics would break out and the need of quarantine measures would be cut down. WHO proposes a concerted attack on these areas or reservoirs.

Malaria

The weakening effect of malaria is now a major obstacle to productivity in many lands. Yet WHO believes that malaria can be controlled and in time can be eliminated. In Greece by spraying DDT from aeroplanes the incidence of malaria was reduced in some parts from 95% to 5%. As an important part of its work towards economic development, WHO proposes to advise governments on methods of control of malaria and to give demonstrations.

Tuberculosis, venereal disease, cholera, and *plague,* are among the other diseases which WHO proposes to combat as part of the development program.

Environmental sanitation

WHO points out that disease has the greatest chance of spreading when living conditions are unhealthy. It proposes a number of programs to educate governments on proper health measures and to show them how to teach people certain fundamentals about sewage disposal, safe water supplies, insect control, sanitary handling of food and milk and adequate housing.

Health demonstration areas

WHO plans to choose a limited number of areas in which to demonstrate all the forms of health activity which it believes important; for example, eliminating the diseases of the areas, improved public health administration, environmental sanitation, maternal and child health work. In these demonstration areas WHO hopes to show what can be accomplished by giving a broad health education to the people.

Projects of the United Nations Educational, Scientific and Cultural Organization (UNESCO)

Progress in agricultural productivity and also in public health depends in the last analysis on the education of the people. A number of projects suggested by UNESCO would thus dovetail closely into projects of the other specialized agencies.

Technical education

The under-developed countries need skilled personnel at every level. But they have few if any training courses and technical schools where their

people can learn the skills needed for economic development. UNESCO proposes to give countries which request it help and advice in setting up technical education systems.

Elementary education

Technical education, however, is impossible unless it is based on efficient and widespread elementary education. Many under-developed areas are in great need of assistance regarding methods of teaching, textbooks, curricula and a lot of other essential questions. UNESCO proposes to give advice in these fields upon request.

Fundamental adult education

Unless economic development is to wait for a new educated generation to grow up, adults must be given some fundamental education. Two-thirds of the human race are unable to read and write. This blocks progress since the printed word is one of the chief methods of spreading ideas and facts needed for development. UNESCO has been conducting experiments in literacy campaigns. It proposes to continue and expand its work along these lines, and it stresses that the teaching of reading and writing must be combined with the teaching of subjects which especially interest adults in the under-developed areas such as health, agriculture and rural industries.

Training of teachers

Through fellowships, scholarships, demonstration projects and training centers UNESCO proposes to help in the training of the teachers and scientific workers needed for economic development.

Protection of local cultures

"Every society is a living unity: all its institutions are interrelated. . . . To introduce new ways of living . . . without taking into account the problem of readapting the whole society does not lead to progress. . . . History furnishes dramatic examples of societies thrown into upheavel—sometimes with grave consequences to the whole world—by unbalanced programs of industrialization." These are UNESCO's words of caution. In order to safeguard against such disasters UNESCO proposes to send out sociologists and anthropologists to help plan development programs.

Projects of the International Labor Organization (ILO)

Much of the development program is a labor problem. How can workers be found to do the many new types of jobs that need to be done? How can the migration of people from country districts to new centers of industry be handled in orderly fashion? How can the hours and working conditions of the new laboring groups be protected?

On the basis of its twenty-nine years of work with labor problems, the International Labor Organization proposes to help show the under-developed countries how to solve problems such as these.

Employment service machinery

To place workers in the jobs best suited for them, well-run employment services are needed. The ILO proposes to give nations assistance and advice on organizing and operating such services. It proposes to help link up these services in different areas so that workers will not migrate aimlessly but go where they are needed.

It also proposes to set up centers to give professional training to staff members of the employment services.

Vocational training and apprenticeship

In certain under-developed areas ILO has recently been teaching governments new methods of training workers for particular occupations, methods which were worked out in England and the United States under the war-time need of speeding up all training processes. ILO proposes to increase this form of aid. It also proposes to set up training centers to teach instructors.

Wage policies

If wages are too low, workers do not have the incentive to good work. If they are too high, they place too heavy a burden on the industries. ILO points out that the under-developed countries need help in forming wage policies. For example, it proposes to advise them what kind of wage laws may be needed under particular conditions and how minimum wages rates can be decided.

Industrial safety

The workers in the under-developed areas know little about machines. Therefore, it will be particularly hard to prevent industrial accidents. The

ILO proposes to give governments advice on the safety laws and regulations which are needed and to show them how to teach workers simple safety rules.

Women and children in industry

Experience shows that when new industries are developing there is particular danger that women and children will be exploited. The ILO proposes to give advice on this subject.

Projects of the International Civil Aviation Organization (ICAO)

Under-developed countries lack means of transport. Roads and railroads take years to build. Meanwhile, air transport can help development. It can make it possible for the country to make use of men and materials in places otherwise difficult to reach. In several ways, ICAO proposes to help governments develop their air transport systems.

Air transport surveys

A first step is to study the geography of an area, take stock of what means of transport exist and estimate what new links are needed and what the cost would be. ICAO proposes to furnish experts to help make such surveys.

Airports and air facilities

ICAO proposes to furnish experts to design improvements in existing airports and in the radio stations which aid air traffic.

Projects of the United Nations

The United Nations itself proposes that its part in the program of technical assistance will be to give aid in fields not handled by the specialized agencies and to coordinate their work.

Industrial assistance

In developing new industries, the under-developed countries need to find out what kind of machines and what processes make the best use of local materials. The U.N. proposes to advise them on this problem and help set up small pilot plants to test out particular processes.

Road construction

Roads are essential to development. The U.N. proposes to send out experts to demonstrate how they may be built. They would also help decide what local materials can best be used and help plan where the new roads should go.

Surveys of natural resources

To develop its resources a country must know what resources it has. In many areas no surveys have ever been made. The U.N. proposes to send out experts to show local personnel how to collect the knowledge that is needed.

Housing

As workers collect in new centers of industry they must be housed. Bad slums may easily develop. The U.N. proposes to send housing experts to help plan model communities.

Over-all advice

The U.N. proposes to help governments make an over-all plan of action, decide what to undertake first and which services it most needs from the specialized agencies.

The U.N. itself would also give aid in connection with *mining industries, electric power development, railroads, inland water ways, government administration and social welfare services.*

Funds for Technical Assistance.

To make available the kind of aid described in the report, both the U.N. itself and the specialized agencies will require more funds than their ordinary budgets provide. The Secretary-General's report proposes that special budgets be set up for the purpose. It also proposes that a Technical Assistance Committee, composed of representatives of the U.N. and the specialized agencies, sift the requests for aid which governments submit, allocate these to the proper agencies and in general act as a coordinating body.

The estimated cost of the complete program for two years is $86,042,383, of which $35,862,576 would be spent in the first year and

$50,179,807 the second. However, the plan is still tentative. Since aid is to be given to particular countries only on their request, the projects actually undertaken will depend upon what governments ask for. Furthermore, the plan must be approved by the Assembly of the U.N. and the policy-making bodies of the other agencies involved. The necessary funds must also be raised.

As the wealthiest nation in the world, the United States pays a major part of the expenses of all inter-governmental agencies. Because of this other nations are watching to see what this government will do now that a detailed draft has been worked out in response to President Truman's request for a "bold new program." Within the United States government, an inter-departmental committee, headed by Assistant Secretary of State for Economic Affairs, Mr. Willard L. Thorp, has been studying both the U.N. proposals and other ways of aiding the under-developed countries. On June 24, President Truman asked Congress to approve his plan for the under-developed regions of the world. He asked for an appropriation of $45,000,000 for technical assistance in the coming year. Some of this would be spent through the U.N. and the specialized agencies. But it is apparently planned that some of it will be spent apart from the United Nations.

Capital for Development

The important questions of policy to be decided by Congress and the American people are these: How much aid will this country give to the under-developed areas? Will it give this aid singly, according to its own plan? Or will it give it through international channels and thus help build up not only the under-developed countries but also the machinery for international cooperation?

The giving of technical assistance is only one part of the problem of development. The other part is the securing of vast sums of capital to carry out the various projects which technical advice indicates are needed. It is not enough to plan out what irrigation and drainage projects a country needs. Money must be found actually to build dams and irrigation canals. It is not enough to advise a government that the cost of moving food on human backs or on wheelbarrows is many times what it would cost to move the same food by modern means of transportation. Railroads must be built, canals must be dug, boat docks and wharfs must be constructed. The advice which the countries obtain through technical assistance always tends to point to the need for large loans or grants.

How then is economic development to be financed? In June, the Secretary-General published a separate report on this subject. There are, he reminds us, only two ways of financing development. Money must either come from within the under-developed countries or from outside. The major share of the capital will have to be raised domestically, but foreign capital must play an important part especially at the beginning. As soon as exports have grown and the country is therefore earning foreign exchange, there will be less need for investment from abroad.

The chief obstacle to domestic financing is that very little money is saved in the under-developed countries because people live so near the subsistence level. Almost all they produce is acutely needed. As the Food and Agriculture Organization has pointed out, even very inexpensive equipment—a sythe, a wheel hoe, or a single donkey—is beyond the means of millions of farmers. Furthermore, in the under-developed areas, the wealthy few tend to keep their wealth in unproductive forms, to collect precious stones or hoard gold. If the under-developed countries are to find the money needed for development, more money must be saved and this must be directed into the productive enterprises which are needed.

The Secretary-General's report points out a whole series of steps that might be taken to influence this process. Better banking systems must be established, government administration must be improved, tax policies must be changed.

As for the other possible source of money,—capital from abroad,—the report points out that foreign financing can take a number of forms. Individuals or private concerns from the more advanced countries may themselves start up enterprises in under-developed countries. In this "direct investment," the outside concern retains control over the enterprise. Secondly, money may be loaned by private foreign investors, but without retaining this control. Thirdly, money may be loaned or granted by foreign governments. Finally, the loans may be made by some international agency, such as the International Bank for Reconstruction and Development.

Since the war, there has been very little private investment. Because of unsettled conditions and other factors, the incentives for private foreign investment seem to be lacking. Hence the increased emphasis on loans from governments and international agencies.

The report makes it clear that the chief problem is how to reconcile the aims of under-developed countries with the interests of individual busi-

ness enterprises or governments which would have money to lend. The under-developed countries, of course, wish to be as free as possible of foreign control. They dislike the outside interference which foreign investors have usually exerted in the past. The latter, on the other hand, are concerned with the security of their investments. Past experience has shown the possible dangers. Too often governments have nationalized foreign enterprises without giving the previous owners prompt and adequate compensation. In some cases, currency restrictions have prevented the transfer of income and capital back to the investor. Often the under-developed countries have proved unable to maintain enough law and order to safeguard the investment.

To help bridge the gap between the investor's need for security and the borrower's desire for freedom from outside control, the International Chamber of Commerce has suggested the adoption of an international code of fair treatment for foreign investments, setting forth the relative rights and duties of both the investor and the borrower. A draft of such a code is included in the Secretary-General's report. It will undoubtedly be considered by the Economic and Social Council.

But even if such a code were adopted many difficulties would remain. Many of the projects needed by the under-developed countries are not of a kind to earn money and repay the investment. This is true of such important items as school systems, roads and health services. For such purposes, the under-developed coutries have clearly hoped that they might secure from the United States outright grants similar to the aid received by the Marshall Plan countries of Western Europe.

The report also discusses the scale at which capital investments will be needed. According to estimates of the Food and Agriculture Organization, the under-developed coutries will need $17 billion a year for the next four years, of which $4 billion would have to be raised from outside.

Though primarily interested in agricultural problems, the Food and Agriculture Organization points out how much attention must be given to non-farm industry if the living standards in these countries are to be raised. In most of the countries the size of each farm is small and the number of people working on the land is greater than would be needed if even a few labor-saving implements were introduced. Some of the population should begin to manufacture simple products needed for a higher standard of living such as textiles, pots and pans, milk cans, beds, scythes and other simple farm equipment. "With millions of the people . . . dressed in

rags, literally sleeping on the ground, hauling their daily water in heavy clay pots, and tilling and harvesting their crops with only a hoe and a sickle, the potential demands for clothing, house furnishings and farm equipment are almost unlimited, as soon as their farm production and their buying power expand."

Besides simple industries the Food and Agriculture Organization recommends investment in water control projects, transport and communications, food processing, storage and marketing, houses, electricity, telephone and other improved communication so that business men can learn in time where goods are for sale, and where the demand for such goods exists.

The Secretary-General's report also contains a statement by the International Bank for Reconstruction and Development which has been frequently attacked by under-developed countries for not having loaned more money for development projects. The Bank points out that it is not empowered to make loans except for projects that are sound financially. It states that up to now there has been a great shortage of sound development projects in shape for financing.

This summary, by Beatrice Pitney Lamb, is reprinted from Vol. 4, No. 7, of the *United Nations News* by permission of the Woodrow Wilson Foundation.

APPENDIX II.

81st CONGRESS
1st Session

H. R. 5615

IN THE HOUSE OF REPRESENTATIVES

July 12, 1949

Mr. Kee introduced the following bill; which was referred to the Committee on Foreign Affairs

---

A BILL

To promote the foreign policy of the United States and to authorize participation in a cooperative endeavor for assisting in the development of economically underdeveloped areas of the world.

1 *Be it enacted by the Senate and House of Representa-*
2 *tives of the United States of America in Congress assembled,*
3 That this Act may be cited as the "International Technical
4 Cooperation Act of 1949".
5 Sec. 2. The Congress hereby finds that the United
6 States and other nations of the world have a common interest
7 in the material progress of all peoples, both as an end in
8 itself and because such progress will further the advance of
9 human freedom, the secure growth of democratic ways of

1 life, the expansion of mutually beneficial commerce, and the
2 development of international understanding and good will.
3 The Congress further finds that the efforts of the peoples
4 living in economically underdeveloped areas of the world
5 to realize their full capabilities and to develop the resources
6 of the lands in which they live, can be furthered through
7 the cooperative endeavor of all nations to assist in such
8 development. It is, therefore, declared to be the policy of
9 the United States, in the interest of its people, as well as
10 that of other peoples, to promote the development of econom-
11 ically underdeveloped areas of the world.

12 SEC. 3. It is the objective of this Act to effectuate the
13 policy set forth in section 2 by enabling the Government
14 of the United States to participate in programs, in coopera-
15 tion with other interested governments, for the interchange
16 of technical knowledge and skills which contribute to the
17 balanced and integrated development of the economic
18 resources and productive capacities of economically under-
19 developed areas.

20 SEC. 4. In carrying out the objective of this Act—

21 (a) the participation of the United Nations, the
22 Organization of American States, and their related
23 organizations and of other international organizations
24 shall be sought wherever practicable; and

1 (b) the participation of private agencies and per-
2 sons shall be encouraged.
3 SEC. 5. As used in this Act—
4 (a) the term "technical cooperation programs"
5 means activities serving as a means for the inter-
6 national interchange of technical knowledge and skills
7 which are designed primarily to contribute to the
8 balanced and integrated development of the economic
9 resources and productive capacities of economically
10 underdeveloped areas. Such activities may include,
11 but need not be limited to, economic, engineering, medi-
12 cal, educational, and fiscal surveys, demonstration,
13 training, and similar projects that serve the purpose
14 of promoting the development of economic resources
15 and productive capacities of underdeveloped areas.
16 The term "technical cooperation programs" does not
17 include such activities authorized by the United States
18 Information and Educational Exchange Act of 1948
19 (62 Stat. 6) as are not primarily related to economic
20 development, nor activities undertaken now or hereafter
21 pursuant to the International Aviation Facilities Act
22 (62 Stat. 450), nor pursuant to the Philippine Re-
23 habilitation Act of 1946 (60 Stat. 128), as amended,
24 nor pursuant to the Foreign Assistance Act of 1948

1 (62 Stat. 137), as amended, nor activities under-
2 taken now or hereafter in the administration of areas
3 occupied by the United States armed forces;
4 (b) the term "United States Government agency"
5 means any department, agency, board, wholly or partly
6 owned corporation or instrumentality, commission, or
7 independent establishment of the United States Govern-
8 ment; and
9 (c) the term "international organization" means
10 any intergovernmental organization and subordinate
11 bodies thereof, of which the United States is a member.
12 SEC. 6. In order to carry out the objective of this Act,
13 the President is authorized to plan, undertake, administer,
14 and execute technical cooperation programs and, in so
15 doing, to—
16 (a) prescribe such rules and regulations as may be
17 necessary and proper to carry out any of the provisions
18 of this Act and to prosecute technical cooperation pro-
19 grams to completion;
20 (b) coordinate and direct existing and new techni-
21 cal cooperation programs carried on by any United
22 States Government agency;
23 (c) utilize the services and facilities of private agen-
24 cies and persons;
25 (d) make advances and grants in aid of technical

1 cooperation programs to any person, corporation, or
2 other body of persons, or to any foreign government or
3 foreign government agency or to any international
4 organization;

5 (e) make and perform contracts of agreements in
6 respect of technical cooperation programs on behalf of
7 the United States Government with any person, corpora-
8 tion, or other body of persons however designated,
9 whether within or without the United States, or with
10 any foreign government or foreign government agency
11 or with any international organization;

12 (f) enter into contracts, within the limits of ap-
13 propriations or contract authorizations hereafter made
14 available, that, subject to the action of any succeeding
15 Congress, may run for not to exceed three years in any
16 one case;

17 (g) acquire or accept in the name of the United
18 States Government by purchase, devise, bequest, gift,
19 grant, or otherwise, any money, services, and property,
20 both real and personal, as he finds to be necessary, and
21 in any manner dispose of all property so acquired except
22 property declared to be surplus. Receipts arising from
23 the disposition of property not acquired with appro-
24 priated funds, except surplus property, shall be avail-

able for expenditure for the purposes of this Act in the country in which the property is located. Any money acquired hereunder shall be received and accounted for under such regulations as the Secretary of the Treasury may prescribe;

(h) provide for printing and binding outside the continental limits of the United States, without regard to section 11 of the Act of March 1, 1919 (44 U. S. C. 111); and

(i) appoint such advisory committees as he may determine to be necessary or desirable.

SEC. 7. The President shall terminate United States support for and participation in any technical cooperation program or programs whenever he determines that such support and participation no longer contribute effectively to the objective of this Act.

SEC. 8. The President may exercise any power or authority conferred on him by this Act through the Secretary of State or through any other officer or employee of the United States Government.

SEC. 9 To further the objective of this Act, the Secretary of State may establish an Institute of International Technical Cooperation within the Department of State.

SEC. 10. In order to carry out the objective of this Act—

(a) officers, employees, agents, and attorneys may

be employed for duty within the continental limits of the United States in accordance with the provisions of the civil-service laws and the Classification Act of 1923, as amended; except that the President may, by and with the advice and consent of the Senate, appoint one person who shall be compensated at a rate fixed by the President without regard to the Classification Act of 1923, as amended, but not in excess of $16,000 per annum;

(b) persons employed for duty outside the continental limits of the United States shall receive compensation at any of the rates provided for the Foreign Service Reserve and Staff by the Foreign Service Act of 1946 (60 Stat. 999), together with allowances and benefits established thereunder, and may be appointed to any class in the Foreign Service Reserve or Staff in accordance with the provisions of such Act. Alien clerks and employees may be employed in accordance with the provisions of such Act;

(c) officers and employees of the United States Government may be detailed to offices or positions to which no compensation is attached with any foreign government or foreign government agency or with any international organization: *Provided,* That while so detailed any such person shall be considered, for the pur-

1 pose of preserving his privileges, rights, seniority, or
2 other benefits, an officer or employee of the United
3 States Government and of the United States Govern-
4 ment agency from which detailed and shall continue to
5 receive therefrom his regular compensation, which shall
6 be reimbursed to such agency from funds available under
7 this Act: *Provided further,* That such acceptance of
8 office shall in no case involve the taking of an oath of
9 allegiance to another government;
10 (d) experts and consultants or organizations thereof
11 may be employed as authorized by section 15 of the
12 Act of August 2, 1946 (5 U. S. C. 55a), and individuals
13 so employed may be compensated at a rate not in excess
14 of $50 per diem; and
15 (e) such additional civilian personnel may be em-
16 ployed without regard to section 14 (a) of the Federal
17 Employees Pay Act of 1946 (60 Stat. 219), as
18 amended, as may be necessary to carry out the policies
19 and purposes of this Act.
20 SEC. 11. The President shall transmit to the Congress
21 an annual report of operations under this Act.
22 SEC. 12. (a) There are hereby authorized to be ap-
23 propriated such sums as may be necessary to carry out the
24 purposes of this Act. Activities provided for under this
25 Act may be prosecuted under such appropriations or under

1 authority granted in appropriation acts to enter into con-
2 tracts pending enactment of such appropriations. Unobli-
3 gated balances of such appropriations for any fiscal year
4 may, when so specified in the appropriation act concerned,
5 be carried over to any succeeding fiscal year or years. The
6 President may allocate to any United States Government
7 agency any part of any appropriation available for carrying
8 out the purposes of this Act. Such funds shall be available
9 for obligation and expenditure for the purposes of this Act
10 in accordance with authority granted hereunder or under
11 authority governing the activities of the Government agencies
12 to which such funds are allocated.

13 (b) Nothing in this Act is intended nor shall it be
14 construed as an expressed or implied commitment to pro-
15 vide any specific assistance, whether of funds, commodities,
16 or services, to any country or countries, or to any interna-
17 tional organization.

18 SEC. 13. If any provision of this Act or the application
19 of any provision to any circumstances or persons shall be
20 held invalid, the validity of the remainder of the Act and the
21 applicability of such provision to other circumstances or
22 persons shall not be affected thereby.

[SEE FOLLOWING PAGE]

This pamphlet is an experiment. It has been printed and published by the author because commercial facilities do not exist for making this type of material available quickly and inexpensively, at a time when both are of the essence.

A first edition of ten thousand copies is being sent out free to a selected list, of whom you are one. A second edition will be offered publicly at 25 cents per copy. This offer will be made by means of a display advertisement in the *New York Times* carrying the text of the letter printed on the front cover of this pamphlet. The cost of the operation up to this point comes to about 50 cents per copy of the first edition.

If, having read this pamphlet, you find yourself in sympathy with the effort to present the facts about this chance to achieve freedom from fear to the American people, here are some things you can do, if you feel so inclined:

1. You can pay for the cost of the copy you have received. (Fifty cents will cover it. A dollar will pay for some one else's free copy as well.)
2. You can order a number of copies and send them to your friends. (See enclosed order blank for second edition.)
3. You can contribute ideas or money to further promotion in whatever way you like. (For example, by organizing a group to pay for an advertisement in your local paper, or in some magazine whose readers you think would be interested. Coupons in such an advertisement should be addressed to me and identify the publication in which the advertisement appeared.)
4. Most important of all. WILL YOU WORK? Money is needed to do the job, but money alone won't get it done. If a Citizens Committee is formed, will you join it? Will you pool your ideas, energy, skill and resources with others working toward the same end?

The enclosed self-addressed envelope will carry back your answer on a form prepared for your convenience.

Will you mail it? *Today?*

And will you be kind enough not to be offended if you receive only a printed acknowledgment on a penny postcard? Orders will be filled promptly, but ideas contributed will take time to digest and correlate.

Thank you.

Rearming Germany

Dear Ed:

Although my recent effort to arouse support for affirmative action toward peace apparently did not ring a bell with you, maybe the enclosed rather intemperate blast against rearming Germany will.

Best to you.

As ever,

Jim

Dear Jim:

Many thanks for yours of the 30th; I'm glad you sent over a copy of your October 4th talk on "Our Immaturity in World Affairs". I found it stimulating reading.

Best regards.

As ever yours,

ROOM 2720

September 30, 1949

Dear Ed:

Enclosed herewith is an advance copy of an address to be delivered before the World Affairs Council at Buffalo, on the evening of October 4th.

The main theme is the pattern of immature self-delusion in our post-war foreign policy, which results in bargain-basement shopping for solutions and frustrates our best-intentioned efforts. On subsequent occasions this fall, I intend to develop further the outline of a more fundamental approach indicated in the last four pages.

With best regards and hoping that you have had a good summer, I am

Very sincerely,

Jim

OUR IMMATURITY IN WORLD AFFAIRS

Address before

WORLD AFFAIRS COUNCIL

Buffalo, New York

by

JAMES P. WARBURG

October 4, 1949.

OUR IMMATURITY IN WORLD AFFAIRS

Hardly a day passes without some official in Washington telling us how successfully our foreign policies have been operating. Yet we are all more or less aware that these assurances are to a large extent whistling in the dark. We have spent a fabulous amount of money in trying to restore peace and security to the world. We have given up our past attitude of selfish isolationism. We have assumed responsibility. We have tried our level best to cooperate with other nations—even to the extent of offering to yield to a supra-national authority our post-war monopoly of atomic energy. And yet we are no nearer to the goal of lasting peace than we were on the day that war ended.

One reason why we have done so much and achieved so little is that we have gone at the post-war problem in an immature way. To say this is not to minimize the fact that one nation—the Soviet Union—has made the post-war problem infinitely more difficult. There can be no doubt whatever that such has been the case. But, as I see it, we have been frustrated less by Soviet intransigence than by our own immature reaction to that intransigence. We have been frustrated less by the whole, highly complex post-war problem, including Russian obstructionism, than by our own inability to face that problem in an adult way.

When we say that an individual is immature, or behaves in an immature manner, we mean that the behavior of such an individual betrays a lack of judgment attributable in large measure to lack of experience. We mean that the individual's actions seem motivated by emotion rather than reason; that his behavior seems to consist of a series of improvizations, as opposed to the step-wise procedure of a thought-out plan; and that these improvizations, based upon acquisitiveness or fear, display a tendency to over-reach and attempt the impossible. We mean by immaturity also the tendency to become too quickly discouraged in the face of failure, to seek a scapegoat rather than the reason for failure, and to vacillate between over-aggressive self-assertion and an excessive display

of passive helplessness. The immature individual lacks, above all things, a true sense of proportion—a perspective of himself in relation to the world around him. Egocentricity is at its peak in infancy and sometimes again in extreme old age. The infant feels itself the centre of the universe, surrounded by beings of vastly superior power who are either "good" or "bad" according to whether or not they gratify its desires.

The analogy between individual and group behavior must not, of course, be driven too far. But it is true, I think, that we, as a nation, have displayed some of these symptoms of immaturity. We have been motivated by fear rather than reason. We have improvized to meet changing circumstances rather than acting in accordance with a thought-out plan. We have at times overestimated our power and tried to do the impossible. At other times we have behaved as if we had no power whatever. When we have failed, we have sought a scapegoat rather than the reason for our failure. The most striking evidence of immaturity in our post-war behavior has been the consistent pattern of self-delusion upon which most of our actions have been based. This applies both to the declared aims of our policy and to the means chosen to achieve these aims. Let me cite some examples.

The major aim of our post-war foreign policy has been to achieve an enduring peace. There are, I submit, three kinds of peace which might conceivably last for a long time.

First, there is the possibility of a *Pax Americana*—that is to say, a peace enforced by the benevolent military and economic power of the United States. The outright advocates of this type of peace usually speak in terms of what they call "the American Century". They have ample historical precedent for their position. They can point to the centuries of the *Pax Romana* and to the more recent period of the *Pax Brittanica*. It is true that neither the peace enforced by the Roman legions nor the peace enforced by British seapower wholly eliminated armed conflict; both periods were interrupted by occasional wars; but these conflicts were kept localized and more or less under the control of the paramount power. The open advocates of a *Pax Americana* now wish to see the United States assume the role of the paramount power, armed with supremacy in the air and atomic weapons. Whether or not they are wise, they are at least clear.

Second, there is the theoretical possibility of a *Pax Sovietica,* in which Russia would become the world's judge and the world's policeman. This idea does not appeal to many people outside the Soviet orbit. Nevertheless, it is as logical from the Russian point of view as is the *Pax Americana* from ours.

It is clear, I think, that neither the *Pax Americana* nor the *Pax Sovietica* could be achieved without a major war. We should certainly not submit to Russian domination, nor would the Russians peaceably accept the overlordship of the United States.

There remains, then, the third kind of peace—a peace arrived at by mutual consent rather than by conquest. Such a peace has never yet been achieved on this planet. There are many people who say that such a peace cannot be achieved now or at any time within the foreseeable future. You are familiar with their arguments, many of which you have heard from the official spokesmen of our Government. These arguments can be summed up in a sentence:

"Peace by agreement is impossible so long as one-half of the world desires justice, freedom and security for all men, while the other half is dominated by a power pursuing the contrary aim."

This sentence is a fair paraphrase of President Truman's Inaugural Address and of many other official utterances within the past two years. The thesis itself seems to me questionable. The Russians clearly have a different concept of justice, freedom and security—a concept repugnant to us and difficult for us to understand. But it does not follow that the Russians seek to impose upon the world something *which they conceive to be injustice, slavery and insecurity.*

Let us, however, assume that the Truman thesis is correct. The logical conclusion would then be that, since a peace by agreement is impossible, we must try to impose by force a *Pax Americana.* But that is not the conclusion drawn by our present policy-makers.

The conclusion drawn by our present policy-makers is the illogical one, that a *Pax Americana* can be achieved by peaceful means—that is to say, by establishing under American leadership a preponderance of mili-

tary and economic power sufficient to make us the world's policeman, *without* our having to establish our supremacy by war.

There is only one thing wrong with this conclusion: it overlooks the fact that, in a world in which power has become concentrated in only two poles of superpower, such an attempt "peacefully" to establish supremacy necessarily leads to an arms race, in which the other half of the world pursues precisely the same aim. Each side sees in its own attainment of preponderance of power the only sure guarantee of peace. Each side makes defensive preparations and alliances which necessarily appear as offensive preparations to the other. Armament leads to counter-armament —alliance to counter-alliance—until eventually the productive resources on both sides are so pre-empted by defensive preparation that the burden becomes intolerable and mass discontent sets in. To prevent discontent from causing an overthrow of leadership, leadership on each side throws the blame for restriction and privation wholly upon the evil machinations of the other. That is the sort of vicious circle of mutual distrust and provocation in which we now find ourselves with the Soviet Union.

Never mind who started it. Let us say that the Russians began the struggle for world domination and that we have merely been acting in self-defense. The fact remains that we have been proceeding upon a wholly illogical conclusion from our own premise. We have proceeded on the assumption that, whereas the Russians would *not* let us make a peace by agreement, the Russians *would* acquiesce in our achieving a *Pax Americana* by outarming them and creating a system of alliances more powerful than their own.

The absurdity of this conclusion has been obscured by the curious process of immature self-delusion in which we have been indulging. We have not admitted frankly to ourselves that we are aiming at a *Pax Americana*. We talk about a One World-United Nations peace. We talk about strengthening the United Nations and supporting it with every means at our command. But our policy-makers have frowned upon any suggestion to transform the United Nations into a world organization capable of enacting and enforcing world law. While talking about One World, they have operated on the concept of American judgment and American power applied to the strengthening of our half of a divided world.

The process of immature self-delusion applies not only to the determination of our policy aims but to our choice of means and to our appraisal of success or failure. At the present moment we are in a mood of self-congratulation. We arrived last summer at what appeared to be a major victory in the cold war, when the Berlin airlift and counter-blockade forced the Russians to back down. At the same time the Marshall Plan had all but locked the doors of Western Europe against further communist penetration. The Atlantic Pact then showed the Russians that they could not resort to military aggression against Western Europe without becoming involved in a war with us; and our expanded military power, plus the atomic bomb, made it clear to the Russians that they could not hope to win a war with the United States. Having obtained these results, our policy-makers are inclined to think that, in Europe at least, we must be on the right road and that, if we continue along this line, we shall eventually arrive at our objective—namely, a peace enforced by American power thinly disguised behind the smokescreen of an almost wholly impotent world organization.

Let us leave aside altogether what has been happening in China and the Far East, where, admittedly, we have been unsuccessful, and let us try to examine the facts with regard to Europe, where we feel so sure that we are on the right road.

The first fact is that we have *not* won a great victory in the cold war. It is true that we have frustrated the Russian blockade of Berlin. This blockade was imposed by Moscow for the maximum objective of halting the creation of a West German state and, failing that, for the minimum objective of forcing the Western Allies out of Berlin. The airlift and the counter-blockade denied both aims to the Kremlin. But the blockade and counter-blockade also brought into the open the basic weakness of our own position. The strangulation of East-West trade accelerated the crisis in our whole West European Recovery Program. It became almost as urgently necessary for us to end the stalemate as it was for the Russians. The Russians were forced to recognize that their so-called Molotov Plan for the recovery of Eastern Europe was wholly incapable of satisfying the needs of their satellites. We were forced to recognize that our Marshall Plan could not succeed in making Western Europe self-supporting so long as the European trading community remained split

into two parts, neither of which could live without the other. Thus both sides became anxious to find a face-saving device to end the stalemate.

In the resulting moves toward cooling off the overheated cold war, we can claim to have lost less face than the Russians. But that is the extent of our victory. It remains to be seen whether we actually gained or lost at Paris in beating off the Russian attempt to stop the creation of a West German state. Both sides came to Paris asserting their desire to end the partition of Germany. Each blamed the other for the existing state of affairs, and each made proposals as to how partition might be ended and the Iron Curtain lifted between the two Germanys. But—the Russian proposals were clearly not intended to be acceptable to the West, and the Western proposals were clearly not intended to be acceptable to the Russians.

The Russians put forward nothing more than a proposal to return to the unworkable Potsdam Agreement, probably because they feared that a unification of Germany would alienate the Poles and the Czechs, at a time when considerable unrest among the Soviet satellites already existed.

The stated reason for our making a counter-proposal, which we obviously intended to be unacceptable to the Russians, was our concern for the preservation of democracy and political freedom in the Western zones. Anyone who suffers from the delusion that democracy exists in Western Germany should read Delbert Clark's "Again the Goose-step", or Drew Middleton's new book on Germany. The real reason why we were unwilling to risk making a proposal for unification which might have been accepted was that Western Germany had become the keystone of our West European Recovery Program, and that we were unwilling to allow the Russians any voice in the control of West German industry.

The simple fact is that we are caught on the horns of a dilemma, created by the cold war. Economically, Western Europe cannot become self-supporting and thus immune to communist penetration, unless it includes a healthy and productive Germany. Militarily, Western Europe cannot become capable of self-defense, unless it includes a rearmed Germany. But, politically, Western Europe will fly apart altogether, if a strong, united and rearmed Germany is allowed to come into existence.

The Russians face a similar dilemma. Eastern Europe, and Russia itself, cannot achieve full recovery without trade with the West, and particularly without trade with Western Germany. But, if the barriers are let down and a united Germany grows strong, such a united Germany—even if it maintains a position of neutrality as between Russia and the West—will be a threat to Russian hegemony in Eastern Europe.

Thus, neither the Russians nor we are at present sincere in saying that we want to unite Germany. Neither the Russians nor we have reached the point of really wanting to end the cold war in Europe. Each of us would like to carry it a little further in the hope of gaining certain advantages; but each of us, in the meanwhile, would like to loosen a little the restrictions which now strangle recovery on both sides of the Iron Curtain. The Russians have not solved their problem of meeting the urgent needs of their satellites and thus keeping them in line. Nor have we solved our problem in Western Europe, which has assumed new and menacing aspects. Neither side has as yet realized that there can be no such thing as peaceful victory in the present power struggle.

The new problems facing us in Western Europe illustrate how our pattern of immature self-delusion frustrates our best-intentioned efforts. This pattern is one of making ourselves believe that we can buy an automobile for the price of a motorcycle.

We began this pattern in 1946 when we gave Britain a loan, which was just about half of what she needed. We continued it when we cut down the Marshall Plan bit by bit until it was quite obviously insufficient to accomplish its purpose. We have just recently carried the pattern to absurdity in a program to make Western Europe capable of defending itself against 150 Russian divisions by re-equipping less than ten divisions. The worst thing about this pattern of bargain basement shopping for peace, is that each time we embark upon these half-measures we not only fritter away our resources without accomplishing our purpose, but we also weaken the ties of friendship between ourselves and those whom we are sincerely trying to help. Because we fool ourselves into thinking that one dollar will do the work of two, we become disappointed and resentful when, after great expense, we find the problems of our friends still unsolved. And our friends become resentful because we continually

expect them to do the impossible with help for which they are grateful, but which they know to be inadequate.

Right now we are faced with the fact that the apparently successful Marshall Plan is about to collapse in failure. The chickens are coming home to roost. The Marshall Plan was devised to meet a crisis of underproduction, shortage and inflation. It has done so with remarkable success. Western Europe as a whole is now producing half again as much as it was before the war. But Western Europe now faces rising unemployment and a curtailment of production because it cannot exchange its goods for the food and raw materials it needs to continue its production. Specifically, Western Europe cannot earn enough dollars to buy the food and raw materials which can be bought only with dollars. Consequently, instead of drawing closer together in a powerful economic union, the countries of Western Europe are competing with each other for dollars, restricting trade with each other, and desperately trying each to make itself as self-sufficient as possible in order to survive. The longer this goes on, the more the Marshall Plan goes into reverse.

Many Americans, including some of our policy-makers, regard this dollar shortage as a disease of the European economy. They insist that, if the European countries would only remove all trade restrictions between each other and within their own economies, the dollar shortage would disappear. There is a widespread belief among Americans that the Europeans could do these things, if they—especially the British—were not so obstinately committed to socialistic experiments in planned economy. Governor Dewey has gone so far as to advocate that we force Western Europe to stop this nonsense by threatening to withhold further aid.

Here again we see the pattern of immature self-deception. The dollar shortage is not primarily a disease of the European economy, nor a product of socialist experimentation. Nor does the cure lie primarily in anything the West Europeans could now do or fail to do.

In the last thirty years the United States has doubled and then redoubled its production, thereby likewise doubling and redoubling its purchasing power and its relative importance as a consumer as well as producer of the world supply of goods. During the same period, Europe,

torn and partially devastated by two great wars, has suffered the obsolescence of its productive machinery, the exhaustion of its population, and the dissipation of its accumulated reserves. In the nineteenth century, Western Europe as a whole was the nerve and brain centre of a colonial world empire. In the twentieth century Western Europe has gradually become a nerve and brain centre without a body to nourish it and without arms and legs to direct and control. It is now in the position of a man who in middle-age retired to the management of an estate, acquired through hard work in early life, and who then loses the estate and is compelled to go back to the sort of work he did in his youth. Picture Western Europe not as one such man, but as nineteen such men, living close together, with each of them having suffered a similar misfortune —nineteen middle-aged men, forced to go back to manual work to support their families and competing with each other for the things their families need.

Meanwhile, we have become not only the major source of the food, raw materials and tools which the other peoples of the world need in order to work and earn a livelihood, but also the sole possible buyer of many of the goods produced by the other peoples of the world. Moreover, our development of mass production, as against the batch production of the rest of the world, has enabled us not only to produce more goods, but cheaper goods of relatively high quality.

The heart of the post-war economic crisis lies in the rise of American power, the decline of European power, and our failure to understand the full implications of our newly acquired position. We realize that we are rich while others are poor, well-fed while others are hungry, powerful where others are weak. We realize this emotionally and are ready to give, to feed, to share our good fortune. But we do not understand intellectually the kind of responsibility our preponderant strength and power place upon us. We do not understand, for example, that being the world's greatest producer and seller of goods places upon us the responsibility to buy what other peoples produce. We are quite willing to recognize that our surplus production belongs to the world, but we are not willing to recognize that our surplus purchasing power also belongs to the world. Thus we persist in keeping our domestic industries protected by a tariff designed to protect the infant industries of a young and struggling debtor nation.

Even the Marshall Plan, by far the most adult and constructive feature of our post-war policy, was undertaken half in the spirit of charity and half out of fear-inspired anxiety to build a dam against communism; whereas, if we had fully understood the post-war problem, the primary purpose of the Marshall Plan would have been to harness our great surplus resources to the restoration of some sort of balance between the Old World and the New. Had we fully understood the nature of the post-war problem, we should have begun with the realization that we ourselves needed, in our own interest, to find a way to get rid of the huge surplus in our balance of payments with the rest of the world.

The same problem still faces us today in more acute form. The devaluation of currencies recently undertaken will not cure it. At best it will provide temporary relief. If we want Europe to stop permanently the mad scramble for dollars which is driving it toward weakness and fragmentation, we must, in one way or another, supply enough dollars so that the scramble can stop. We must not again chisel away at a generous undertaking to the point where an operation to induce lasting recovery becomes merely a never-ending subsidy to provide relief. *We must stop thinking of the money we spend abroad as expense, and think of it instead as investment.*

What is demanded of us at the present time is a far-reaching and continuing program of long-term investment abroad, in which Government must lead the way and private capital follow. Such a program must be far bolder than President Truman's so-called "bold new program". It is true enough that the world needs the technical advice and know-how we are proposing to export. What it needs even more is the planned development of its natural resources. It needs such things as TVA developments on the Rhone River in France, on the Jordan River in the Middle East, and on the great rivers of India—and perhaps even of China. We cannot expect to carry out such a program effectively without channeling it through some sort of supra-national organization. If the funds for this type of imaginative reconstruction flow direct into the world from the United States Treasury or from Wall Street, we shall make ourselves into the absentee landlord of a world which hates us, even while it thrives on the wealth we pour into its development.

Cost a lot of money? Of course it will cost a lot of money. When the Marshall Plan was under discussion, I frightened and infuriated a good friend of mine in the Department of State by publicly pleading for the Plan's adoption even though it might cost us sixty or seventy billion dollars over a period of ten years. What I am talking about now will cost us even more, because the Marshall Plan dealt with only a small part of the world, and the problem we face is a world problem. But "cost" is not the right word. If you offer a millionaire the chance to invest $50,000 a year for ten years in a sound development, he will not protest that you are asking for half of his fortune. He will consider whether the proposed annual investment of his income for ten years will or will not make him another million dollars of capital. Our annual income as a nation is approaching three hundred billion dollars. What I am talking about is a program of foreign investment that will take something like three percent of that annual income and invest it in our own future peace and prosperity, by raising the living standards and the purchasing power of the other peoples of the world.

The immature approach is to think that peace can be built by shoring up crumbling walls and patching a leaky roof. The mature approach is to recognize that a new house needs to be built for the world to live in. That new house must be planned by many minds and built by many hands. We can neither design it alone, nor build it alone. We can help to do both, especially because at present we have what amounts to a monopoly on building materials, and because we alone have substantial surplus capital to invest. But the house, when built, must be the world's cooperative apartment, in which we—like everyone else—will be a tenant. That is the essential difference between a peace by mutual consent and a *Pax Americana.*

The mature nation thinks in terms of reasonable agreement between equals. The immature nation thinks in terms of power—power to rebuild the world's house *the way it wants,* and then to offer to others the facilities and arrangements *it thinks they should want* at terms *it thinks fair and generous.* The immature nation, like the immature individual, thinks in terms of the parent-child relationship. The mature nation, like the mature individual, thinks in terms of brotherhood.

Lest you think I have overdone the well-known parable of the moat and the beam and have treated our own foibles too harshly, let me make it clear that I have not been talking in comparative terms. I have not been discussing the *relative* immaturity of our foreign policy, nor have I meant to imply that certain other nations are necessarily more mature or less mature than we. The thing which concerns me and in which I have tried to enlist your interest, is that, irrespective of other nations, we are up against a difficult problem arising within ourselves. This is nothing more nor less than the age-old problem of growing up to man's estate, which, as you well know, is rarely accomplished without pain.

A most encouraging sign of our advancing maturity was given in the communiqué issued on September 12, by the Foreign Ministers of the United States, Great Britain and Canada, after their preliminary conference on the Dollar-Sterling crisis. Here we have the American Government officially recognizing that our foreign trade policies have not been consistent with our position as the world's greatest creditor nation and coming boldly to the conclusion that these policies must be drastically altered. Unfortunately, it is one thing to recognize the twin requirements of tariff revision and long-range investment abroad, and quite another thing to meet these requirements. Secretary Acheson has courageously taken the bull by the horns, but his colleague in the Treasury Department still mumbles that whatever steps are to be taken must fall within the framework of existing policy. The important thing is that working parties have been created to study the problems in detail and to work out the necessary programs.

The great question now is whether these working parties will let the chips fall where they may, or whether they will recommend only such action as may be deemed "politically possible."

If the working parties make, or are forced to make, political compromises, it is safe to predict that our pattern of immature self-delusion will be continued and that no lasting cure will be effected. If the working parties report what needs to be done, irrespective of how many probable votes can be counted "for" or "against" in the House and Senate, then it will be up to the American people—up to you and me as citizens—to see that our representatives in Congress find the necessary public support for doing the "politically *im*possible."

When that day comes—if it comes—we shall have achieved maturity.

Dear Mr. Murrow:

Mr. Warburg, who is at present on a speaking tour for the American Friends Service Committee and the Canadian Institute of International Affairs, has asked me to send you the enclosed advance copy of his final address on the West Coast. It is to be delivered on the evening of June 22, before the World Affairs Council at San Francisco. Mr. Warburg asked me to tell you that the address bears the same title as his new book because it contains much of the book's major substance.

Very truly yours,

Sylva Schlesinger

Secretary to Mr. Warburg

LAST CALL FOR COMMON SENSE*

Address

to the

WORLD AFFAIRS COUNCIL OF NORTHERN CALIFORNIA

by

JAMES P. WARBURG

San Francisco, California

June 22, 1949.

* The author's latest book bearing the same title has just been published by Harcourt, Brace & Company.

LAST CALL FOR COMMON SENSE

JAMES P. WARBURG

In recent years we have had our fill of headlines proclaiming that the ultimate crisis has arrived. We are tired of being told that "America Stands at the Crossroads", or that "The Hour of Decision Is at Hand". We have discovered that whichever road we choose at the crossroads leads merely to another parting of the ways, and that "hours of decision" have a way of stretching into weeks and months and years. Nevertheless, I have chosen the title, LAST CALL FOR COMMON SENSE, because I believe that the time has come, when we must begin to apply that native American commodity to our foreign policy, or else slip down the well-greased slide that leads to atomic war.

Consider, for a moment, the gyrations and contradictions of our post-war foreign policy.

Having established the basis for a just and lasting peace in the Atlantic Charter, which was solemnly signed by the entire anti-Axis coalition, we then agreed with Britain and Russia at Yalta to throw it overboard and to adopt instead the pattern of an old-fashioned victor's peace. Having pledged no annexations of territory, we agreed to let Russia, Poland and eventually France, Belgium, Holland and Luxembourg annex pieces of Germany; and, without consulting China, we agreed to let Russia annex or control important territory in the Far East. Having talked about One World, we proceeded to divide the world into old-fashioned spheres of influence.

When the end of the war came, we demobilized our armed forces and fell all over ourselves to "get the boys back home". Hardly had we done this than we began frantically to rebuild the military machine we had dismantled. Similarly, when the war ended, we brusquely cut off Lend-Lease aid to our recent Allies, without giving any consideration to building some

sort of a bridge over which they might pass from war-time dependence upon American aid to peace-time independence and self-support. No sooner had we taken this step than we found overselves compelled to reverse our course—making a belated and inadequate loan to Britain and eventually giving emergency aid and then Marshall Plan assistance to our European friends.

From 1945 to 1949 we have swung from complete trust of our dear friend, Uncle Joe, to distrust and fear. Having built the United Nations on the assumption of continuing unanimous agreement between ourselves, Britain, France and Russia, we have found ourselves disagreeing with Britain over Palestine, with France over Germany and with Russia over just about everything. Having embarked upon a cold war with Russia for the sake of trying to stop Soviet expansion and eventually to obtain a peace settlement, we have reached a point, in 1949, where the cold war threatens to become an end in itself and where a possible peace settlement is weighed against the possible advantages of continuing the cold war a little longer.

Granted that, in the four years since the war ended, we have had to face extraordinarily complex and difficult problems and that these problems were largely not of our own making, it must, I think, be admitted that it is time to re-examine some of the basic premises upon which we have been operating.

We are, as of now, spending about six billion dollars a year on a constructive program of building the peace. At the same time we are spending over three times that amount to insure ourselves against the failure of that program. We are up to our necks in an armament race with the Soviet Union and are now contemplating dragging the nations of Western Europe into that arms race as well.

In our fight to preserve human freedom in the world, by attempting to contain an idea within a physical frontier manned by physical force, we are in the process of destroying freedom here at home. We are beginning to equate dissent with disloyalty. Once we accept the totalitarian idea of strength through uniformity of opinion, in place of the democratic concept of strength through diversity of opinion, we shall have yielded the central bastion of our position.

That is why it is not crying wolf to insist that it is time for our native common sense to assert itself in the making of our nation's policy.

To insist upon a common sense audit at this time is not to assert that the ultimate moment of crisis has arisen. I do not believe it has. As I see it, we are living in a period of more or less chronic crisis, in which it is just as foolish to expect an immediate solution as it is to accept the inevitability of war. The challenge of our time is to convert this critical period from one of steadily mounting tensions to one in which tensions are gradually relaxed. Our problem, for the time being, is not to reach but to envisage clearly the ultimate goal of lasting peace, and to start moving toward it, instead of allowing a vicious circle of mutual provocation to lead us eventually to the abyss of atomic war.

In order to accomplish even this limited objective we must, I think, revise our thinking in at least four major respects.

I.

The Nature of the World Crisis.

We see the world crisis as being essentially caused by the existence in the world of the communist doctrine and by the ruthless propagation of that doctrine by the Russian state. We see the failure of the United Nations as being caused solely by the intransigence of the Kremlin. We see the present threat to world peace solely as a threat of Soviet conquest. Holding this view of the nature of the world crisis, which has been explicitly stated and expounded by our Government, we quite naturally have made the stopping of Soviet-communist expansion the major aim of our foreign policy.

The fact is, however, that we are living in a world crisis which, though ruthlessly exploited by the Kremlin, is not originally due either to the existence of the communist doctrine or to the nature and intentions of the Soviet state. The world crisis is, as I see it, primarily the product of the time in which we live. To say this is not to absolve the men in the Kremlin of their all-too-evident guilt but merely to place their sins of omission and commission in proper perspective.

The simple truth is that we are living in a period of far-reaching and fundamental change. The world has outgrown many of the devices by which man has sought to satisfy his needs and aspirations while at the same time living at peace with his fellow man. The human family has outgrown the house in which it was accustomed to live. Wherever we look in the world, we see people on the move, seeking change from one kind of social and economic structure to another, in the hope of thus attaining a greater degree of what they conceive to be justice, freedom and security. The destruction and dislocation caused by two great wars have accelerated the evolutionary process and, in many areas, have turned evolution into revolution. We see this most clearly in the two continents which were the battlegrounds of recent conflict.

In Europe, the traditional structure of society has been undermined or destroyed. The middle-class structure of the Western countries has been weakened by the expropriations incident to conquest and liberation, by the dispersal or dispossession of managerial power groups, and by the depreciation of currencies. The squirearchical structure of society in the predominantly agricultural countries of Eastern and Central Europe has been similarly undermined by the breaking up of the large landed estates. Throughout the continent the normal channels of trade have been disrupted. Germany, once the central gear-wheel of the European economy, can function neither as a market nor as a supplier of goods. Private capital and private initiative can no longer cope with the problem of providing food, clothing, shelter and employment for the peoples struggling to regain economic and political health. In varying degrees the inhabitants of the European countries have found it necessary to reach for the instruments of public power and to alter the traditional relationship between citizen and state. This alone would be enough to cause tensions, unrest and political instability. In addition, the war wrought certain permanent changes in Europe's economic base. Western Europe, which used to live to a large extent on income from foreign investments and the proceeds of colonial empire, has in great measure lost these two sources of economic strength. Eastern Europe, which, even before Hitler, had become almost a colonial empire of industrial Germany, has lost the German nerve-centre upon which it formerly depended.

All this would have happened to Europe, if there had been no Soviet Union in the post-war world and if Karl Marx had never written a book.

On the other hand, it is certainly true that these conditions and the resulting tensions have been aggravated and exploited by post-war Russian policy.

Finally, we must add, in seeking to gain a true perspective, that the unhappy state of Europe has been rendered infinitely worse and made dangerously explosive by the arbitrary division of the European trading community into two parts, neither of which can prosper without the other. Here, too, it is necessary to recognize—if we are in search of the truth—that it was not Russia alone which caused the division of Europe. It is undoubtedly true that, when the Big Three met at Yalta, Stalin wanted a divided Europe in order to expand the Soviet sphere of influence. But it is also true that Churchill wanted a dividing line at which to halt Soviet expansion, and that President Roosevelt reluctantly accepted a divided Europe as the price for Russian help in the war against Japan. To admit this does not condone the crimes committed later on by Russia behind the Iron Curtain.

In Asia we see a very similar picture. The defeat of Japan and the weakening of the European centres of Asiatic empire left a political and economic vacuum. The traditional semi-feudal and semi-colonial structure of Asian society had been undermined and in part destroyed by conquest and liberation. Restoration of the old order was impossible, even had it been desired by the peoples concerned. But, even more clearly than in Europe, restoration was not desired by the peoples of Asia. On the contrary, new aspirations for independence had been kindled and new problems had arisen. Most urgent among these post-war problems were rising population pressure against a diminishing food supply, and the absence of Japanese consumer goods.

In Asia, as in Europe, the post-war crisis was rendered more difficult and explosive by the breakdown of the victorious anti-Axis coalition and the resulting East-West power struggle. Here, again, it must be recognized that Moscow did not create the popular movements against foreign domination and domestic oppression. Moscow made hay at the expense of the West, but less because of its own initiative than because of the bankruptcy of Western policy in Asia. In China, our espousal of a government, foredoomed to fall by reason of its own weakness and corruption, left to the Soviet Union the eagerly seized opportunity of identifying the inevitable peasant revolt with the communist doctrine. In Southeast Asia,

stubborn European colonialism, tacitly backed by us for the sake of our European cold war alliances, left Russia in the position of being able falsely to identify herself with the aspirations of the Asian peoples emerging into freedom.

Instead of seeing these developments in their true context, we have obscured our own vision with the easy devil-theory of the world crisis. We have been so busy building up the belief that Moscow is wholly responsible for every aspect of the world's troubles that we have missed many of our greatest post-war opportunities. Our obsession with communism as the sole cause of the crisis has led us to ally ourselves with any government or group that was anti-communist, irrespective of other considerations. Thus we have stultified our position and alienated that vast mass of middle-of-the-road people throughout the world, who are not attracted to communism but who are likewise unwilling to accept the status quo as a solution for their problems. Thus, in our preoccupation with a purely negative aim, we have lost much of the traditional American power of attraction, which derived from our natural affiliation with all men everywhere seeking change for the better.

II.

War Is No Longer an Instrument of Policy.

The second factor we must consider, in applying common sense to the conduct of our foreign relations, is that science and technology have brought us to a point where war is no longer an acceptable instrument of foreign policy.

Clausewitz, the first of the German geopoliticians, stated the axiom that "war is the extension of policy by other means." This is the principle upon which practically all foreign policy between great nation-states has operated throughout modern history. The corollary to this axiom has been that the maintenance of military force—present or potential—is essential in order that policy may at all times be fortified by the presence of the ultimate instrument of persuasion. Thus the pursuit of policy "by peaceful means" has traditionally included the ever-present threat of force.

Both the axiom and its corollary have now been invalidated. War is no longer the ultimate instrument of persuasion. It has become the final

negation of policy. A resort to arms is no longer an effective, though immoral, method of gaining an objective. Victory has become indistinguishable from defeat. Nations can no longer commit murder—even in self-defense—without simultaneously committing suicide. This throws a new light upon the value of maintaining military establishments.

If we examine our present policy, it is apparent that we have not yet fully grasped the change which has taken place. We have been sincerely trying to avoid war, but we still hold in the back of our minds the belief that, if worst comes to worst, we can defeat Russia by force of arms and thus save ourselves and Western civilization.

The fact is that we very likely can defeat Russia—though probably not as quickly or easily as many of us like to think. But the unpalatable truth we must recognize is that we cannot defeat Russia without likewise defeating ourselves. Nothing is more certain to destroy the free world, which we seek to preserve, than a third world war.

The corollary to this reversed axiom is that the maintenance of military power is of no value whatsoever, unless it serves to prevent the outbreak of hostilities. This means that, in so far as we risk provocation of conflict in order to increase our chances of victory in the event of conflict, we are not only wasting our substance but actually endangering rather than protecting our own vital interests.

The new Atlantic Security Program serves as an apt illustration. So long as we merely undertake to deter Russian aggression against Western Europe, by making it clear that a military attack upon our friends means war with us, well and good. Obviously, to make such a deterrent effective, we must maintain sufficient military power to make it clear to Moscow that war with the United States means ultimate Russian defeat. But, the moment we go one step further—the moment we enter into any sort of commitment to defend the Oder, or the Elbe, or the Rhine, in the event that war should break out—we should be undertaking to build up military power in an area where it must necessarily provoke counter-preparations and perhaps the very attack we seek to deter. An army capable of defending the Oder is also capable of invading the Soviet Union. We and our European friends may be quite certain that we have no intentions of invading Russia, but we can no more expect the Russians to take

this for granted than we should take for granted that, let us say, an Argentinian army, stationed in Mexico to implement a defensive alliance, might not some day cross the Rio Grande.

The Atlantic Security Program, as proposed to the Senate, was ambiguous on this crucial point. It was not clear whether our undertaking would be merely to deter aggression or whether it also involved a commitment to defend Western Europe's frontiers in the event that the deterrent provided by the Treaty should fail. In testifying before the Foreign Relations Committee, I have urged that the Treaty should not be ratified without making it clear that we are not entering upon a commitment which we could fulfill only at the risk of provoking the very conflict we are seeking to prevent.

III.

Balance of Power Mechanism Destroyed.

The third factor we must consider is that the march of history has destroyed the device by means of which a world composed of sovereign nation-states has, in the past, managed temporarily to preserve the peace. This device was the so-called balance of power mechanism.

By constant maneuvering in ever-shifting alignments, the nation-states were accustomed to preserve, if they could, a state of affairs in which no nation, or group of nations, might reasonably think it could safely resort to a trial of physical force. This was possible so long as there were at least five or six major powers among which the maneuvering could take place. It is no longer possible, since the world's military and economic power has become concentrated in only two poles of superpower—the U. S. and the U. S. S. R.

This, again, has little to do with the nature or intentions of the two surviving giants. The mere fact that power is concentrated in two superpowers means that there are no other comparable forces to maneuver in order to preserve a balance. In the absence of complete solidarity between the two survivors, it means that there must be a struggle for preponderance of power, in which each side believes quite sincerely that its own attainment of preponderance constitutes the only sure guarantee of peace.

So long as there is no world organization endowed with the exclusive right to maintain armed force, such a bipolar struggle for preponderance of power necessarily takes the form of an armament race.

IV.

There Can Be No Peace While an Arms Race Continues.

This brings me to the fourth, and last, major factor which I think we must take into consideration; namely, that there can be no reasonable hope of lasting peace so long as the world's two most powerful nations are engaged in an arms race.

A struggle for preponderance of power through competitive armaments is a vicious circle of mutual provocation, which, sooner or later, may be expected to lead to a war that neither side desires. Increasingly, each side sees itself compelled to take measures of defense which appear as offensive preparation to the other. Furthermore, competitive armament devours more and more of the energies and resources of the competitors, and thus stands in the way of that degree of world economic recovery which is a precondition of peace. Finally, because an arms race imposes on each side the necessity of working for guns instead of butter, it leads the government on each side to throw the blame for reduced living standards upon the evil machinations of the other.

The vicious circle begins when mutual distrust leads to fear of attack. Fear of attack leads to armament, which provokes counter-armament. Armament and counter-armament lead to reduced living standards and potential mass discontent. To overcome discontent, official propaganda is used on both sides to fan the original distrust and fear. Thus the vicious circle is completed, with each side more and more believing the lies it has created about the other.

That is the point at which the United States and the Soviet Union had arrived by March 1947, less than two years after the first American patrols had met their Russian comrades in arms in the heart of a defeated Germany.

Let me make it quite clear that I am not saying that we are more to blame, or equally to blame with the Russians. It is true that I think we have made mistakes, but our intentions have, on the whole, been good intentions, whereas the Russians have not only made mistakes but have pursued a policy which can hardly be described as anything other than selfish and cynical. The point I wish to make is that the dangerous state of world affairs which now exists arises very largely from factors which have little to do with our intentions or Russian intentions—factors which we should understand and have so far failed to understand, because we have become the prisoners of our own past misconceptions.

V.

What is the Answer?

It seems to me that five broad conclusions may be drawn from the foregoing analysis:

1. We shall never find the path to peace so long as we contemplate the possibility of a last resort solution of our difficulties through war.

2. We must recognize that there will be an increasing danger of war so long as the arms race continues.

3. We must be clear in our minds that, until disarmament can be brought about, the sole purpose of maintaining military power is to prevent any other nation, or group of nations, from risking war, either in the expectation that we shall not intervene against aggression, or in the hope that our intervention will not be decisive in denying success to the aggressor.

4. We must face the fact that there can be no disarmament, or even effective limitation or control of armaments, until there is established a supra-national authority capable of enacting and enforcing world law. This does not mean abandoning the United Nations. It does mean recognizing that the United Nations must be developed into a World Government of defined and limited powers, endowed with the exclusive right to maintain and, if necessary, to use armed force. Obviously, this cannot be done overnight. But we can, overnight, make up our minds that this is the goal toward which our policy is directed. At present our Government

takes the view that the existing structure of the United Nations would be adequate to preserve the peace, if only the Russians would permit a peace to be made. Our failure to realize that the present structure is nothing more than a multilateral treaty between fully sovereign nation-states, good only so long as there is unanimous agreement among the major nation-states, prevents us from steering a straight course toward a clearly envisaged goal. Were we to set World Government as our avowed objective, we should, of course, encounter Soviet opposition. But, in a constructive and imaginative program of peacefully uniting a divided world, we should enjoy far greater and more effective support from the peoples of the world than we can ever hope to muster in the present sterile and highly dangerous power struggle.

5. We must try to shift the emphasis in our foreign policy from fear-inspired negative action to confidence-inspired positive procedure. In other words, we must try to shift our major effort from the Churchill policy—misnamed the Truman Doctrine—to our native-born, Marshall Plan approach to reconstruction and rehabilitation. We must rid ourselves of our obsession with Russia and see clearly that our primary job is not to anticipate and frustrate the intentions of the fourteen men in the Kremlin, but to infuse with new life and vigor the hopes and aspirations we share with the masses of mankind.

Our mission has never been, and is not now, to defend an existing order, but to lead forward through peaceful change toward a future fit for man.

If we fulfill that mission, we can let Russia do the worrying about how to reconcile her differences with a free world on the march toward the goal of lasting peace.

The way to stop Russia is to stop letting Russia make our foreign policy.

The way to stop communism is to realize that it is not a physcial force to be contained or eradicated by physical means, but merely an idea which—whatever its original merit—has already lost much of its power through becoming the tool of Soviet totalitarianism. The way to stop communism is not to oppose a rigid doctrine, which falsely promises free-

dom, with an equally rigid doctrine, but to oppose it with a dynamic, imaginative pursuit of justice, freedom and security for all of mankind.

There have been some recent indications that our new Secretary of State understands these things and that a common sense revision of our policy is actually under way.

What we need to do, as citizens, to help such a revision, is to forget the recent past, in which we have become fat, smug and afraid of change, and revert to the native characteristics which once made this nation great, when as yet it had neither wealth nor military power. All we have to do is to re-read the words which Thomas Jefferson wrote in the Declaration of Independence, and rededicate ourselves to their fulfillment.

NORTH ATLANTIC SECURITY PROGRAM

STATEMENT TO UNITED STATES SENATE COMMITTEE
ON FOREIGN RELATIONS

By
JAMES P. WARBURG

May 10, 1949

STATEMENT TO UNITED STATES SENATE COMMITTEE ON FOREIGN RELATIONS

On the

NORTH ATLANTIC SECURITY PROGRAM

May 10, 1949. JAMES P. WARBURG.

Permit me, Mr. Chairman, to express my grateful appreciation to you and to the members of this Committee for the opportunity to testify on the important and far-reaching proposal now before you. I speak for no group or organization, but merely as one citizen anxious for the safety and welfare of our country. I am neither a lawyer nor a military expert. Such competence as I may possess derives merely from practical experience in international affairs—as a banker, as a public servant and as a free-lance observer and reporter. I can say that I have for many years diligently studied the problems of American foreign policy, and that I have given particular attention to the twofold proposal now under consideration, ever since its outlines first emerged into public view. Your own far greater knowledge and experience will enable you to detect any fallacies which may underlie the opinions I shall venture to express.

The Atlantic Security Pact and the program to rearm Western Europe must, I think, be considered together. The forthright testimony of the Secretary of State has made it clear that the Treaty is the consequence rather than the cause of the rearmament program launched by the Brussels Treaty Powers on March 14, 1948 and endorsed on the same day by President Truman.

I should like first to say a word about the context of this twofold proposal. It springs from a policy which should, in my opinion, go down in history as the Churchill Doctrine, instead of being associated with the

name of our President. This policy rests upon the theory, advanced by Mr. Churchill at Fulton, Missouri, in March 1946, that the Soviet Union alone is responsible for the world crisis and that the Soviet threat to peace is essentially a threat of physical conquest. From this theory derives the policy of seeking to contain the Soviet threat within a physical frontier manned by physical force. This essentially negative approach to peace has become one of the two major trends in our present foreign policy. The other, positive trend is the plan developed by President Truman and Secretary Marshall to attack the causes of mass discontent which invite communist exploitation.

My own belief has been that the present world crisis derives from a number of factors, some of which are the products of the time in which we live and have nothing whatever to do with the nature or intentions of the Soviet Union; that, in addition to these non-Russian factors, there has been, and is, a very definite Soviet threat to peace; but that this Soviet threat has been, and still is, primarily a threat of communist penetration or subversion and only secondarily a threat of military conquest. Holding this belief, I have been an enthusiastic supporter of the Marshall Plan and a persistent critic of the doctrine of physical containment. For the past two years, I have viewed with increasing misgivings the ever greater preemption of our energies and resources by the negative and not very successful policy of strategic containment and the consequent slow strangulation of our positive program.

In terms of dollars the ratio now stands at about three and a half to one. We are now spending less than six billion dollars a year on our constructive program for peace. At the same time we are insuring ourselves against the failure of that program to the tune of more than eighteen billion dollars.

This anomaly results, I think, from two basic misconceptions: first, the oversimplified scapegoat analysis of the world crisis; and, second, the widespread acceptance of a very dubious analogy to the Nazi design of military conquest. Our obsession with these two misconceptions blinds us to those aspects of the world crisis which have nothing to do with Russia or communism, and, at the same time, prevents us from seeing the true nature of the Russian or communist menace.

If we could shake off this obsession, I believe that two things might happen.

First, we might recognize that the way to stop Russia is to stop letting Russia make our foreign policy; in other words, we might see that Soviet expansionism can best be halted as the by-product of a constructive American policy for peace.

Second, we might change our attitude about the United Nations. Instead of sadly shaking our heads over an impotent "debating society" and consoling ourselves with the easy notion that the United Nations would work, if only the Russians would let it work, we might set out to make the United Nations into an organization capable of enacting and enforcing world law. Were we to set out to do this, we should, of course, encounter Soviet opposition. But it would be Soviet opposition to a constructive program of peacefully uniting a divided world, in which we should enjoy far greater and more effective support from the peoples of the world than we can ever hope to muster in the present sterile and highly dangerous power struggle.

So much for the context of the Atlantic Security Program. I am prepared to amplify these few remarks, if time permits and the Committee so desires. Given this context, which cannot be changed overnight, it seems to me that the twofold North Atlantic Security Program must be examined from the point of view of its efficacy as an instrument in our present policy. I shall now state my position from this narrower point of view as quickly and as precisely as I can.

So long as we live in a world of international anarchy dominated by a power struggle between the two halves of a divided world, I am in favor of any declaration which makes it clear to ourselves and to others that a physical attack upon Western Europe is an attack upon us, and will be so regarded by us. I have spent most of my adult life fighting the isolationist illusion. I supported our entrance into the League of Nations and opposed the Neutrality Acts. When Western Europe was faced by the threat of Nazi conquest, I was horrified by our connivance in the so-called Peace of Munich and, shortly thereafter, publicly advocated an open military alliance with Britain, France and the Low Countries as the only hope

of preventing the outbreak of World War II. I do not object to such an alliance now, provided that it does not take our eyes off the real danger—*which is now not military but political*—and provided that we do not fool either ourselves or our friends about what we are doing.

We are fooling ourselves, I think, when we try to clothe this Treaty in moral garments. To say that all the signatories are united by a common heritage of ethical belief and democratic conviction seems to me a dubious statement about large segments of the French, Dutch, Belgian and Italian populations which willingly collaborated with and lived quite contentedly under fascism. It seems a dubious statement about any country in which 25% the people are today communists, or about any country whose government seeks to deny democratic freedom to colonial peoples. This moral pretense becomes a complete mockery when Portugal is one of the signatories and when flirtatious eyes are cast at Franco Spain.

Likewise I think we are fooling ourselves when we maintain that we are undertaking this program in order to strengthen the United Nations, when it is clear that we are trying to find a means of filling the gap left by the failure of the United Nations.

These two polite hypocrisies seem to me to weaken our undertaking. I do not think they are vitally important because I do not believe that the American people take either pretense very seriously. There is, however, one respect in which I am afraid that some one is being seriously and dangerously led astray. In what is perhaps the most important aspect of the twofold proposal, I believe that either the American people do not realize what is afoot, or else our friends abroad are under a most regrettable misapprehension.

From what I myself heard in Europe recently and from the published utterances of foreign officials, it seems clear that our friends abroad expect the new program to secure the frontiers of Western Europe against invasion by the Soviet Union. They are not interested in the promise of another liberation from enemy occupation. "Next time", said Premier Queuille of France, "you would be liberating a corpse."

To secure the frontiers of Western Europe means to hold an invading Russian army at the Oder, or the Elbe, or—at the very worst—at the

Rhine. Being no military expert, I have tried to find out what military experts think this undertaking would require. The impression I have gathered, here and abroad, is that there would have to be created in Western Europe a ground force of at least forty fully equipped and highly mobile divisions and that such a ground army would have to be supported by great tactical and strategic airpower, fully functioning services of supply and adequately protected sea communications with the Western hemisphere. To say that it would take at least ten billion dollars and a million men under arms to secure the frontiers of Western Europe against invasion is probably a gross understatement.

Assuming that we were to supply all the money and equipment—assuming that, in the event of war, we undertook to provide much of the needed airpower and the protection of the sea-lanes—there would still remain the question of trained and mobilized manpower to secure the West European frontier. So far as I know, there are only three sources from which this manpower can be drawn: Western Europe itself, Western Germany, or the United States.

Western Europe as a whole is suffering from a shortage of manpower, which at present is one of the chief obstacles to recovery. Italy is the only country which has a manpower surplus, but Italy cannot be rearmed without violating the Italian Peace Treaty. If a million men are withdrawn for military service from the farms and factories of France and the other European signatories, the recovery effort will come to a standstill and the door will be opened wide to communist subversion or penetration.

If military manpower were to be recruited in Western Germany, it is clear, I think, that two things would happen: Russian retaliation would be provoked, and the already dubious morale of any potential French army would be destroyed. I say "the already dubious morale" because we cannot ignore the fact that, with 25% of France voting communist, the Russians have a far more dangerous fifth column in France today than the Nazis had in 1940.

That leaves the United States, and perhaps Canada, as a source of the necessary manpower. A former French Prime Minister has been making speeches in this country urging that we send a large American force to Europe now to stand guard over its frontier. However, even if

we were prepared to do that, it is necessary to bear in mind that, in spite of our huge military budget of fifteen billion dollars a year, we have at present a combat force of only about ten divisions.

It would seem clear, then, that if the Atlantic Security Program means what our European friends think it means, either Western European recovery will have to be halted in its tracks, or else the United States will have to undertake a vastly greater commitment than the American people realize today. Halting the European Recovery Program means that we shall have to face the necessity of increased and indefinitely prolonged Marshall Plan assistance, or else throw open the door to communist penetration at the very moment when it has been almost locked by patient and costly effort.

If the Atlantic Security Program is intended to mean that we are to secure the frontiers of Western Europe against invasion, then the presently proposed $1,130,000,000 is merely the first bite at a very much larger commitment. It costs something like $250,000,000 to equip one armored division. I do not know what it would cost to create a force of forty divisions—either European or American—in Europe. But, whatever it costs, this would again be only the beginning, because we could hardly assume that the Russians would sit still on their side of the Iron Curtain while we proceeded in a leisurely manner to build up a defense capable of holding their presently available striking force. Actually, all the Russians would have to do to double their present immediate striking power would be to bring up another fifty existing divisions from wherever they are at present stationed in the Soviet Union. If they did that, our defense force would again have to be proportionately strengthened. And even this sort of calculation would only work out satisfactorily, if the Russians did not hit upon the bright idea that maybe they had better get the whole thing over with before we had built up any defense at all.

These seem to me the facts to be faced, if we are talking about securing the West European frontier against invasion.

If, on the other hand, we are not undertaking to do what our friends think we are doing, what is the point of diverting European manpower and resources from recovery to rearmament? What good will it do to build

half a defense force? Twenty divisions are no better than the ten or twelve which exist in Western Europe today, if it takes forty to do the job. Surely, it is folly to think that the French, or the Dutch, or the Belgians would fight a delaying action for the benefit of Britain and the United States, if they knew in advance that their countries would be overrun and occupied. Surely, it is folly to weaken our own military strength by putting some of our stock of weapons in the hands of troops who—in the event of war—would be forced to surrender them to the invader.

Before the Treaty is ratified, Mr. Chairman, I think the American people have a right to know what it means. I think our friends abroad have a right to know what it means. Either we are, or we are not, undertaking to defend Western Europe against invasion. If we are, let us not deceive ourselves about the costs or the risks involved. If we are not—if we are merely undertaking to deter invasion—let us not permit our friends to be deceived. Let us make clear to them what it is that we are promising to do.

Shortly after the Treaty was signed, our Chief of Staff, General Bradley, made a speech, which I understand was cleared with the State Department, and in which I thought he clearly implied that our European friends were right in assuming that the frontiers of Western Europe are now to be secured against invasion in the event of war. On April 27th, the Secretary of State himself said to this Committee:

> "It is understandable that the free nations of Western Europe cannot look forward with equanimity to invasion and occupation in the event of war, even if we guarantee subsequently to liberate them. Nor it is to our own interest to permit them to be occupied with the consequent necessity of the costly liberation of these areas."

On the same day, according to the New York Times, the Secretary of State told this Committee in response to a question that "there was absolutely no intention to send substantial numbers of American troops to Europe in any eventuality short of war." In response to another question he is reported to have said that "there was no thought of bringing Western Germany into the alliance." And finally, speaking of the proposed American subsidy of $1,130,000,000 to West European rearmament, Mr.

Acheson is reported to have stated that "the countries to be aided would themselves put up from six to seven times what the United States provided."

I submit, Mr. Chairman, that these statements add up to the conclusion that the Western European signatories are to provide *all* the manpower and roughly 85% of the material resources required to secure the frontiers of Western Europe against invasion. I am unable to reconcile this conclusion with the repeated assurance given by the State Department that rearmament is not to take precedence over or interfere with West European recovery. I fear that the Secretary of State, for whose integrity, wisdom, skill and courage I have the greatest respect and admiration, has fallen heir to an unclear position not of his own making and is, to a certain extent, its prisoner.

In these circumstances it seems to me that precisely the sort of occasion has arisen when the Senate, in the fulfilment of its Constitutional duties and prerogatives, is in a position to help the President and the Secretary of State in their patient pursuit of peace, by bringing about a clarification of the proposal.

Two kinds of clarification are possible.

The first would establish that the twofold program means our participation in a determined effort to defend Western Europe's frontiers in the event of war.

The second would establish that we are undertaking to make our utmost effort to deter a would-be aggressor from attacking Western Europe, but that, if this effort should fail, we are committed to avenge and liberate, but not necessarily to prevent invasion.

In the event of the first alternative, I would feel compelled—if I had a vote—to cast it against the ratification of the Treaty. I would do so most reluctantly, knowing that, in the present circumstances, our failure to ratify would involve grave risks. Yet I would feel that these risks were not as serious as those involved in the attempt to erect a dubious defense against what I conceive to be the secondary danger of military attack, at the price of weakening Western Europe's defenses against what I conceive

to be the primary danger—namely, the threat of communist penetration through exploitation of economic distress and political instability.

I hope, Mr. Chairman, that the wisdom of the Senate will lead to a clarification of the twofold program in the opposite sense. *Such a clarification would rest upon the recognition that the only effective way to protect Western Europe against military invasion is to prevent the outbreak of war.* Were this premise accepted, a clarifying statement might take approximately the following form:

> "1. The Treaty means that the United States recognizes that it has a vital interest in the security of Western Europe and that it will fight, if necessary, to maintain that security.
>
> "2. The Treaty means that the United States serves notice upon any potential aggressor that military attack upon Western Europe means war with the United States.
>
> "3. The Treaty implies that, so long as no effective, supranational peace-enforcement machinery is established, the United States will do its utmost to maintain sufficient military power to make it apparent to a potential aggressor that any attempt at military conquest of Western Europe is foredoomed to failure.
>
> "4. If, in spite of the foregoing deterrents to aggression provided by the United States, an aggressor should nevertheless embark upon military adventure, the United States preserves full freedom of action to fight the aggressor in whatever manner, by whatever means, and in whatever theatre or theatres of action it may deem expedient, in order to restore as rapidly as possible the security and freedom of the North Atlantic Area."

If the Treaty were thus clarified, I should be in favor of its ratification. I should even be in favor of a limited amount of military aid, designed primarily to enable the *freely elected* governments in Western Europe to deal effectively with possible internal threats of violence, and to promote a greater feeling of self-respect and security. But I should stipulate that such military aid must not be given to governments which are not freely elected, and that it must not assume dimensions which would

divert any of the nations of Western Europe from their primary task for achieving economic health and political stability.

In voting for a program thus clarified, I should be well aware of certain defects in the Treaty which, I am afraid, it is now too late to remedy. By including Norway, the Treaty pushes the declared area of our vital interest right up against the Soviet frontier at its northern extremity. At the same time, the Treaty limits our commitment to certain countries of Western Europe, leaving others—notably Finland, Sweden, Turkey and Iran—unprotected. This seems to me inconsistent and unwise. In spite of these now probably irremediable defects, I would consider that the Treaty has two offsetting virtues, provided that the whole program is clarified as suggested. These virtues are: first, that the Treaty makes explicit to every American citizen a commitment which has long been implicit in our whole foreign policy; and, second, that it makes this commitment unequivocally clear as a warning to any would-be aggressor and as an encouragement to our friends.

I hope, Mr. Chairman, that my recommendation is at least precise and clear. I am grateful for the opportunity to present it for the consideration of your Committee.

Should you find merit in the suggestion I have ventured to place before you, you will, I believe, have cured the Atlantic Security Program of its most dangerous defect. This program may then well become a most useful stopgap device to buy the time in which a positive, constructive American program for peace may be developed. Its ultimate effectiveness as such a device will then be determined by what we do with the time gained, in Europe and in Asia—more specifically, in Germany and in the southeastern rim of the Asiatic continent.

SUPPLEMENTARY DOCUMENTATION.

In order to document the ambiguity which I have stressed, the following quotations have been extracted for the convenience of the members of the Committee. The two quotations from General Bradley are from the New York Times texts of his speech of April 5 in New York and his testimony before this Committee on May 3. The quotations from the testimony of the Secretary of State before this Committee are taken from the official transcript of April 27. In order to facilitate reference to the context of the statements quoted from this transcript, I have noted in each case the page or pages on which the quoted statements are to be found.

I.

The Atlantic Security Program means securing the frontiers of Western Europe against invasion.

A. General Bradley—April 5, 1949. New York.

1. "It must be perfectly apparent to the people of the United States that we cannot count on friends in Western Europe, if our strategy in the event of war dictates that we shall first abandon them to the enemy with a promise of later liberation . . . It is a strategy that would produce nothing better than impotent and disillusioned Allies . . . "

General Bradley—May 3, 1949—to this Committee.

2. "Geographically many of these member nations are already in a position where any aggression into Western Europe would be a conquest of their homelands. I assure you that our frontiers of collective defense lie, in common with theirs, in the heart of Europe.

Speaking of the Normandy landings in World War II,

"I hope that the occasion shall never arise when I might be called upon to participate in such a hazardous and costly operation."

B. Secretary Acheson.

1. Page 19: "It is understandable that the free nations of Western Europe cannot look forward with equanimity to invasion and occupation in the event of war, even if we guarantee subsequently to liberate them. Nor is it in our interest to permit them to be occupied with the consequent necessity of the costly liberation of these areas."

2. Page 89, in response to a question from Senator Wiley:

"They" (the European signatories) "say, if there were a really serious all-out attack we know that in the long run, probably, the great strength of the United States would, in the end, defeat the aggressor. But, in the meantime, they say, we would be overrun. Most of us, they say, would be dead, our countries would be destroyed, our civilization would be pretty well destroyed. The final outcome would be that the United States would be liberating a corpse."

(This is almost an exact paraphrase of a statement made by Prime Minister Queuille of France, while the Treaty was still under negotiation.)

II.

The Atlantic Security Program does not mean securing the frontiers of Western Europe against invasion.

Secretary Acheson (April 27 testimony):

1. Senator Connally: (page 40) "The proposed arms agreement does not necessarily envisage the increase in the armed forces of the signatories, but rather the furnishing of supplies and equipment to bring up to date their armed forces?"

Secretary Acheson: "Correct."

2. In response to a question from Senator Hickenlooper as to whether the program could be considered aggressive (page 72), Secretary Acheson said in part:

"The nations of Western Europe have small military forces. The action which is contemplated and outlined in what I have told you about the President's proposed recommendation on a military assistance plan could not, by any stretch of the imagination be regarded as aggressive. There is nothing to aggress with under that program. What would be done is to take the existing small forces and make their equipment more modern and better rounded, so that, to the best of their ability, they can defend themselves if they are attacked."

3. Senator Donnell (page 181), speaking of the meaning of the word "effective":

"Does it contain the idea of sufficiency? That is to say, by means of continuous and sufficient self-help as to accomplish the maintenance and development of individual and collective capacity to resist armed attack?"

Secretary Acheson: "No. It cannot mean that because probably the provision of sufficient forces at the present time is impossible for everybody. Otherwise, if you were trying to get sufficient forces, you would have to maintain military establishments which would be quite impossible both for Europe and for us."

III.

Recovery Has Priority.
Manpower will not be drawn from Western Europe.

Secretary Acheson, on April 27:

1. To Senator Wiley (page 47):

"The size of the forces is limited by the primary necessity for recovery."

2. To Senator Smith of New Jersey (page 66):

"ECA has complete priority."

3. To Senator Hickenlooper (page 75):

"The first primary necessity is the economic recovery of Western Europe. That means that there are very definite limitations on the size

of the military forces which Western Europe can maintain, because, if you withdraw greatly increased numbers of men from production and put them into military service, you would impair recovery and you would impair the very ability of those nations to resist and to remain free nations. Therefore, recovery comes first. . . . Nothing which is proposed under our military assistance program will interfere with the recovery program."

Later, on page 81:

"The size of the forces will not, as many people erroneously assume, mushroom into vast numbers of troops."

IV.

Rearmament will require six or seven billion dollars per annum from Western Europe.

1. In answer to a question from Senator Vandenberg (page 45) Secretary Acheson said:

"United States assistance" ($1,130,000,000) "will be somewhere between one sixth and one seventh of the total effort which will go into military efforts in Europe."

2. Substantially the same answer was given to Senator Hickenlooper (page 74).

V.

Manpower for defense of Western Europe's frontiers will not come from Germany. Nor will arms.

1. Senator Lodge: (page 119) "Is it planned to bring back the Ruhr as a source of arms production?"

Secretary Acheson: "No, sir, it is not. We are very clear that the disarmament and demilitarization of Germany must be complete and absolute."

2. In answer to Senator Fulbright (page 129), Secretary Acheson said: "A discussion of including West Germany in the Pact is not possible . . . At the present stage of affairs in Germany we could not contemplate a military program in Germany."

VI.

Manpower for the defense of Western Europe's frontiers will not come from the U. S.

Senator Hickenlooper (page 98): "Are we going to be expected to send substantial numbers of troops over there as a more or less permanent contribution to the development of these countries' capacity to resist?"

Secretary Acheson: "The answer to that question, Senator, is a clear and absolute no."

DANGER AND OPPORTUNITY

CONVOCATION ADDRESS

to the

FACULTY AND STUDENTS OF THE
UNIVERSITY OF COLORADO

by

JAMES P. WARBURG

Boulder, Colorado
April 10, 1949

It is good to be here again. I wonder how many of you, who live and work in Boulder, know what an extraordinary place this is—a place to which a man may come as a total stranger, as I did just a year ago, and then leave after a week's visit with a feeling of sadness like that which one feels at parting from lifelong friends. I came out here last year not knowing a single member of the faculty or student body. I came because a friendly voice on the long-distance telephone conveyed a sense of casual urgency—a sense that something important was about to happen out here in which I might help—something which I would in any case be sorry to have missed. I had no idea what I was supposed to do. I just came—bringing with me what little material I could hastily throw together.

After two days of lecturing and participating in discussions I felt like a man who has brought two little buckets of water to quench the thirst of an army on the march. My buckets were empty—I had no idea how or where to refill them—yet here were you, thirsty as ever. And then the miracle happened. The rubbing together of eager minds began to draw water from the clouds. It literally rained ideas and I soon discovered that instead of coming out here to help slake your thirst, I had slaked my own.

One does not revisit the scene of such an experience without some degree of anxiety lest repetition dull the lustre of a shining memory. Yet—so strong is the nature of whatever it is that gives Boulder its peculiar magic—anxiety vanished within the first hour of my return and left me feeling only the warm pleasure that a man feels upon coming home to his native village.

Tomorrow we start again upon a week of intensive study of the problems presented to us by the continuing world crisis. We shall, I think, find this crisis sharpened and more clearly defined than it was last year, though not essentially changed. We shall find ourselves faced with a far more difficult problem than that which we confronted last year, when we considered the possible means of bringing about a change in our Government's negative, fear-inspired foreign policy.

Tonight, before we embark upon the week's work, it is perhaps appropriate to take a more leisurely and contemplative view of the context of the crisis in world affairs. In its more obvious and immediately urgent

manifestations, the present crisis is economic and political. But, in its deepest sense, it is essentially a crisis of the human spirit—a crisis in which mankind stands before the alternatives of war and peace precisely because man's spirit has now come face to face with the ultimate challenge of man's material progress.

The long quest for knowledge, the centuries of striving after necessity, comfort and pleasure—the long chain of human invention piled upon invention—have brought man at last to the point where, in his search for the ultimate security, he has discovered the means of his own total destruction. The crisis is one of the human spirit, because it is only man's spirit which can turn the human race from self-destruction to progress—which can metamorphose the new and terrible tools of fratricide into instruments of enduring fraternal cooperation.

The dictionary defines crisis as "a turning point at which a decisive change for better or worse is likely to take place". But a more accurate description of the emotional content of the word can be gained from the way in which it is translated into Chinese. There being no such word in the Chinese language, a substitute is compounded of the characters for two other words—the ideographs for danger and opportunity. That is how the word is written: "danger-opportunity". That is what the world faces today—the greatest danger of extinction in the history of the human race, as well as the greatest opportunity in the long life of man to free himself once and for all from the threat of self-destruction.

At the present moment the danger tends to obscure the opportunity. Most of us know or feel instinctively that we are drifting towards war—the kind of war which will leave the victor indistinguishable from the vanquished. The sense of impending disaster seems to freeze us in our tracks, as a rabbit is frozen helplessly in the presence of a snake. Our anxiety beclouds our reason and induces a state of confusion which undermines our faith and paralyzes our will. Yet it is only through a combination of faith and the will to live that we can convert the danger into an opportunity—an opportunity to achieve at last that peace on earth for which countless generations have vainly striven.

There has never been an inevitable war. There has never been a war which could not have been averted, if reason had prevailed over greed and envy, if faith had conquered fear, if man had learned to live according to his beliefs. Nor is the ultimate catastrophe which now threatens inevi-

table. But the greatest danger of its coming to pass lurks in the widespread acceptance of its inevitability.

When I say the widespread acceptance of war's inevitability I do not mean only that all too many people are **convinced** that there is no way to escape the catastrophe. I mean also that an even greater number of people—and especially men in government—are today **doubtful** whether war can be averted and are trying to insure themselves against the failure of their own efforts to preserve the peace. These doubting Thomases are in a way more dangerous than the straight-out pessimists. The complete defeatist is an evil influence because he tends to produce total inaction in the face of danger—which is bad enough. But the doubting Thomas tends to cause hasty and ill-advised action motivated by frantic fear rather than by reason—and this is likely to precipitate disaster.

We are not threatened by the Russians—nor they by us. We are each threatened primarily by our own fears. We are together threatened by the hypnotic influence exerted by our fear, which makes us freeze to the world's steering gear as a frightened novice bicycle rider freezes to the handlebars and cannot avoid hitting the one pebble in the middle of a broad road.

There is very little that is really new about our problem. Since the earliest beginnings of human history, men have resorted to violence when their sense of justice has been sufficiently outraged and when they could find no peaceful means of remedying what seemed to them injustice. Montesquieu truly stated long ago that "Man's sense of justice is older than his reason". He might have added that man's sense of injustice, or his fear of injustice, retains the capacity to supplant reason as the prime mover to human action. This being true, it follows that the precondition of peace is the presence of justice in the minds of the majority of men. But the concept of justice is neither universal nor static; what seems just to one man seems unjust to another; what seems just to the majority today may seem unjust tomorrow.

The problem of achieving enduring peace has always been and still is the problem of achieving an organization of society so permeated with justice as to permit constant compromise and change without violence. It must permit constant compromise between the various concepts of what is just, so as to produce a composite picture of justice. It must permit accommodation to change in this composite picture, in order that all men

may feel that if justice is not present today, it is at least attainable through the peaceful processes of the established order.

What we face today is essentially a crisis of confidence in our own ability to establish such an order. What we face today is a failure of faith.

There are, I think, two kinds of faith which have broken down. There is the faith of man in Divine Providence; and the faith of man in himself. Faith in Divine Providence leads man to accept injustice on this earth in reliance upon ultimate justice in the Hereafter. The faith of man in himself leads him to believe in the essential goodness of his fellow-man, and to rely upon that ultimate goodness to react justly to the dictates of reason.

The faith in Divine Justice—the willingness to accept injustice on earth in the hope of reward in Heaven—has become enfeebled as man's material progress has widened the horizons of physical well-being attainable here on earth. The faith of man in his fellow-man has become attentuated in the face of the widening gap between progress in discovering how to attain material satisfaction and the lack of corresponding progress in the just distribution of attainable satisfaction among all men. In other words, I suspect that one of the chief causes of the failure of faith in our age is the lag between the development of man's acquisitive techniques, which are fratricidal, and the development of man's social conscience, which is fraternal.

Different peoples have sought to meet this problem in different ways. No people has solved it. Least of all have the peoples of the earth solved it together. Within those curious compartments of human society, which we call nation-states, various habits, customs and laws have grown up which attempt to express the composite sense of justice of the people concerned. We think we are confronted today with a new challenge. We think that we are faced with the new and terrible threat of what we call communist totalitarianism, springing out of an enigmatic doctrine called Marxism. Let me read you a description of this "new" antithesis:

> "The Anglo-American relies upon personal interest to accomplish his ends and gives free scope to the unguided exertions and common sense of the citizens. The Russian centres all the authority of society in a single arm. The principal instrument of the former is freedom; of the latter, servitude. Their starting point is different

and their courses are not the same; yet each of them seems to be marked out by the will of Heaven to sway the destinies of half the globe."

I think you will agree that this is a fairly accurate statement of the now familiar problem. It was written over a century ago. Does not this illustrate the futility of seeking a solution to the Russian enigma solely in the behavior of men now living, or in books as yet unwritten when de Tocqueville composed the paragraph just quoted? Let me cite an example of the sort of contemporary thinking I have in mind.

In his Inaugural Address of January 20, 1949, President Truman restated the American objectives of "universal freedom, justice and peace." He proclaimed the righteousness of the American cause and then said: "In pursuit of these aims we and other like-minded nations find ourselves directly opposed by a regime with contrary aims and a totally different concept of life."

To say that we seek "freedom, justice and peace" and that "we are directly opposed by a regime with contrary aims" is to say that the Soviet regime wants slavery, injustice and war. I, for one, do not think the President believes this. I think he believes that we are opposed by a regime with a totally different concept of justice and freedom. I would agree with such a belief. I would agree further that the manner in which that regime pursues its aims constitutes a threat to world peace and to our own security. But this is quite different from saying that the Soviet regime wants war or wants something which it conceives as slavery and injustice.

The President then proceeded to state the antithesis between "communism" and "democracy" in greatly oversimplified terms. His eight paragraphs on this subject could have been condensed into six words: "Communism is bad. Democracy is good."

Even if one accepts this simple ethical antithesis as a point of departure, one cannot accept such broad supporting generalities as: "Communism maintains that social wrongs can be corrected only by violence. Democracy has proved that social justice can be achieved by peaceful change."

If, by communism, we mean the Soviet regime, it must be recognized that communism has achieved quite a number of things without

violence—such as the establishment of racial equality in the Soviet Union. It has accomplished a number of other social changes by deceit and chicanery. It is true that the Soviet regime has not hesitated to use violence nor bothered to justify its use. But that does not warrant our concluding that "Communism maintains that social wrongs can be corrected **only** by violence."

Much more important, however, is the other half of the statement. It is bad enough to misunderstand the nature of the opposing regime and to underestimate its capabilities. It is even worse to overestimate our own capabilities and to lull ourselves into happy complacency with the assertion that "Democracy has proved that social justice can be achieved through peaceful change." Where has "democracy" achieved social justice? Has social justice ever been achieved anywhere on the face of this earth? And, if it has not been achieved, how has "democracy" proved that it can be achieved through peaceful change?

Much of Mr. Truman's condemnation of "communism" would have applied to the Russia of de Tocqueville's day, before the Communist Manifesto was ever written. Much of his praise of "democracy" has little application to some of the so-called "democracies" of our own Western Hemisphere.

It is all very well to believe in the righteousness of what one is **trying** to do. But righteousness becomes merely self-defeating complacency when one begins to believe that one has already accomplished it.

What we need most is to recapture a sense of humor and a sense of proportion about ourselves. Then—and then only—shall we be able to see others with some degree of objectivity. Once we recognize that, in our peculiarly fortunate community, we have not yet wholly solved the age-old problems of building a just and therefore peaceful human society, we shall view the attempts of others to solve the same problems with greater sympathy and understanding. It is then even conceivable that we may derive useful lessons from social systems quite different from our own.

At the present time we are allowing smugness to blind us not only to the good in other forms of society but to the imperfections in our own. This leads us into the fatal error of seeing in black and white a world picture composed of an infinite variety of grays. It leads us to become intolerant and doctrinaire, insisting upon the American way of life as the

only road to salvation with much the same fanaticism as that displayed by the communists. It leads us to distrust self-criticism as "deviation" and even treason. It leads us to deny that two plus two equals four, if that obvious truth happens to be stated by a member of the Politburo. This is the process by which a free society ceases to be free and becomes more and more like the very evil against which it is seeking to defend itself.

I do not propose tonight to discuss the newly-signed Atlantic Pact or any other specific aspect of our contemporary foreign policy. We shall have ample time for this in the week to come. But I would like to cite, as an example of our present self-blinding complacency, the aura of righteousness with which we tend to surround a relatively simple act of practical power politics.

The Preamble to the North Atlantic Security Pact begins as follows:

> "The parties to this treaty reaffirm their faith in the purposes and principles of the Charter of the United Nations and their desire to live in peace with all peoples and all governments.
>
> "They are determined to safeguard the freedom, common heritage and civilization of their peoples, founded on the principles of democracy, individual liberty and the rule of law."

Article 10 of the treaty provides that:

> "The parties may, by unanimous agreement, invite any other European state in a position to further the principles of this treaty and to contribute to the security of the North Atlantic area to accede to this treaty . . ."

Under this article the original parties have already invited Norway, Denmark, Iceland, Italy and Portugal to join. Portugal has asked that Spain be included. Secretary Acheson, replying to a question in a recent press conference as to the possible inclusion of Spain, is reported to have said that he could foresee arguments on both sides of the matter. At the same conference the Secretary of State was asked whether Portugal had been asked to join more on the ground for securing the North Atlantic area than because Portugal could be expected to further the democratic principles in that area. His reply, as paraphrased by the New York Times, was that he "could not probe into the operations of the minds of others" but that "his own vote was cast on both counts."

In a broadcast to the American people, Mr. Acheson developed more fully the idea that common beliefs and principles unite the signatories to the treaty. The relevant passage read as follows:

> "There developed on our Atlantic Coast a community, which has spread across the continent, connected with Western Europe by common institutions and moral and ethical beliefs. Similarities of this kind are not superficial but fundamental. They are the strongest kind of ties, because they are based on moral conviction, on acceptance of the same values in life.
>
> "The very basis of Western civilization, which we share with other nations bordering on the North Atlantic, and which all of us share with many other nations, is the ingrained spirit of restraint and tolerance. This is the opposite of the communist belief that coercion by force is a proper method of hastening the inevitable. Western civilization has lived by mutual restraint and tolerance. This civilization permits and stimulates free inquiry and bold experimentation. It creates the environment of freedom, from which flows the greatest amount of ingenuity, enterprise and accomplishment . . ."

Mr. Acheson's statement of common institutions, common standards of value and common ethical and moral beliefs is, broadly speaking, true as to the United States, Canada, Great Britain, Scandinavia, the Low Countries, France and Italy. Even within this area, however, we must not overlook that most of the Italian people dwelt quite happily under Fascism for a number of years, that a large part of France and other occupied countries was collaborationist, and that today about one quarter of the French and Italian populations are, as members of the Communist Party, actively opposed to "our common heritage". This does not, perhaps, invalidate the generality. But when we come to the Iberian Peninsula, we are forced to see how flimsy is this moral rationalization.

By no stretch of the imagination can the dictatorship of Salazar be considered a "democracy". By no stretch of the imagination can it be maintained that this regime is based upon "individual liberty and the rule of law." The inclusion of Portugal—and the mere consideration of the inclusion of Franco's Spain—make a mockery of the moral antithesis upon which the Atlantic treaty is allegedly based.

The North Atlantic Security Pact is a pragmatic move in a power struggle between the Soviet Union and the anti-communist West. As

such it may be a wise move or a foolish move. As I shall attempt to show, later in the week, the wisdom or foolishness of the enterprise will depend less upon the wording of the treaty than upon the manner in which we try to carry out the obligations we recognize in the treaty. That is not what concerns us here. What concerns us here is the fact that we are undertaking a far-reaching step in the development of our foreign policy in a haze of self-induced illusion. We think we need the Iberian Peninsula —or at least a part of it—for purely military reasons. Instead of facing that fact and admitting it, we pretend to ourselves that we have common ideals and beliefs with a Fascist dictator. That is precisely the point of absurdity to which we were bound to be driven by a policy of negative anti-communism. That is precisely the danger we discussed last year.

Mr. Acheson has not created this illusion. He has fallen heir to it. It is part and parcel of the Churchill-Truman Doctrine.

To avoid misunderstanding, let me make it quite clear that I consider even more absurd the allegation by the communists throughout the world that the Atlantic Pact is proof of our aggressive intention. In the same broadcast from which I have quoted, Secretary Acheson said:

> "This country is not planning to make war against anyone. It is not seeking war. It abhors war. It does not hold war to be inevitable. Its policies are devised with the specific aim of bridging by peaceful means the tremendous differences which beset international society at this time."

Personally, I believe every word of that paragraph, even though I question the wisdom of some of the policies chosen. As a matter of fact, I do not differ with the most fundamental element in the Atlantic treaty. I have believed, ever since I was old enough to think, that the vital interest and security of this nation were bound up with the vital interest and security of Western Europe. I believed this—and acted upon the belief—in two wars. I believe it now. In fact, I have now come to realize that our vital interest and security are bound up with more than Western Europe and that, by our belated preoccupation with Western Europe, we are driven to neglect our equally vital interests in other parts of the world. I believe also that we misunderstand the nature of the Soviet threat to Western Europe and are locking the wrong door. All that is for later discussion.

The point I wanted to make tonight is simply that we need to arouse ourselves from the hypnotic trance in which we are at present moving. We need to recapture the inquiring spirit that seeks truth rather than justification. We need to draw more clearly—both as to ourselves and others—the distinction between belief and behavior. We need to learn that, if we wish to compare ourselves to others, we must compare belief with belief, and behavior with behavior. At present we tend to make the comparison between our own ethical beliefs, as if we fully lived up to them, and the behavior of the other fellow, as if this corresponded in all respects to his beliefs.

There are fundamental differences of belief to be reconciled. The reconciliation is no easy task. But the reconciliation becomes utterly impossible if it becomes confused with the equally difficult task of reconciling the existing differences of behavior.

The first step, it seems to me, must be an honest re-examination of our own aims and aspirations as well as of our present policies. We have already reached a point in the progressive malady where the mere suggestion of such a self-examination is likely to be interpreted as disloyalty. We have already become infected with the germs of totalitarianism to the point where we begin to suspect dissent and equate it with sympathy for an alien cause. Once we allow the totalitarian concept of strength through uniformity to supplant our native concept of strength through diversity, we shall have abandoned the central bastion of our position.

When we have accomplished this self-examination, we shall for the first time be able to assess the extent and limits of our own power—we shall for the first time obtain a clear view of the nature and strength of the forces arrayed against us—we shall for the first time be able to recognize the faces of our friends.

We can—I firmly believe—succeed in building a world order so permeated with justice that men will no longer be moved to violence. We can—I am sure—re-kindle faith and hope in a world obsessed with fear. But the place to begin is here at home. The first faith to re-kindle is faith in ourselves. The first fear to overcome is the fear of recognizing our own errors.

In the conduct of our post-war foreign policy we have made mistakes. So has every other nation. Our trouble is not that our mistakes

have been particularly serious or numerous. Our trouble is that, instead of learning from our mistakes, we have rationalized them and thus become increasingly the prisoner of each succcessive error.

If, in this crisis of the human spirit, we are to convert danger into opportunity—if, at this decisive moment in human history, we are to develop a capacity for constructive leadership commensurate with our power—we shall have to discard the comfortable moral platitudes, the glib generalities and the complacent self-righteousness which now obscure our vision. We shall have to cast out fear, and be willing to walk serenely into a more or less unknown and unknowable future.

There is all the difference in the world between serenity and smugness. Serenity is the product of faith, wisdom and calm confidence in the slow progress of a changing world. Complacency is compounded of pride in possession and fear lest change diminish privilege or power. The one moves forward willingly; the other is dragged along on slow, reluctant feet.

Our choice as a nation is the choice between emerging out of youth into serene maturity—or slipping imperceptibly from youth into senile decay.

That, as I see it, is the deeper meaning for us, as a people, of the present crisis in world affairs.

A BASIS FOR REVISION

of

U. S. FOREIGN POLICY

By

JAMES P. WARBURG

University of Colorado

April 11, 1949.

The one thing we need most in our foreign policy is a positive aim in the attainability of which we believe.

A growing number of American citizens is beginning to realize that our present policy rests upon the assumption that we are living in a permanently divided world. Our Government conveys the impression that it does not want a divided world but that it is powerless to alter a fact created by Russian intransigeance. Hence, we find ourselves repeatedly protesting our devotion to the "principles of the United Nations", yet repeatedly demonstrating in action that we really do not expect any universal organization to work. Our practice is increasingly one of by-passing or ignoring the United Nations when we think that by so doing we can gain an advantage in the all-absorbing power struggle with the Soviet Union, and of appealing to the United Nations only when we run into a dead-end street in that power struggle. The result is that the United Nations is rarely given a chance to solve a soluble problem and is constantly requested to find a solution to the insoluble.

We excuse this procedure on the grounds that Russian obstructionism makes it impossible to channel constructive action through the United Nations. To a very large extent this contention is justified. There could, for example, have been no badly needed Marshall Plan, if we had been unwilling to proceed unless a recovery program could be channeled through Lake Success. Nevertheless, the fact remains that, if Russia continues to obstruct the United Nations, and if we continue to accept Russian obstructionism as insuperable and to act outside the United Nations, the UN will soon cease to be anything more than a debating society.

Faced with this unhappy prospect, a growing number of Americans, and an even greater number of people in other parts of the world, have begun to realize that one of two things has got to happen soon:

Either the United Nations will sink gradually into impotence and oblivion, or it will be strengthened into an organization capable of enacting and enforcing world law.

Even as recently as a year ago, most people in this country were inclined to believe that the United Nations structure could work, if only it were given a chance to work. Today, people are beginning to realize

that the structure itself is inadequate and that it must be amended. Many of the outstanding members of the United Nations Association, who originally believed that the ultimate machinery for the maintenance of world peace had been created at San Francisco in 1945, have now come to realize that what was done at San Francisco was little more than the taking of a first important step. These people are now quite willing to admit that the United Nations will eventually have to be transformed into a Federal World Government, if it is to be effective. They no longer differ from the advocates of World Government in principle. They differ only in the matter of timing. They say that the time is not ripe to undertake the necessary transformation.

When asked for what event or development they are waiting, they usually reply that we must wait "until the existing tensions are relaxed". If pushed to state what, in their judgment, will relax the existing tensions, the more optimistic seem to hold a vague belief that our present cold war policy will eventually lead to a point where the Soviet leadership will mellow and become more reasonable. The more pessimistic seem to accept war as inevitable and to hope for World Government only after the Soviet Union has been defeated in war.

In my judgment, the optimists are hoping for a development which is most unlikely, while the pessimists are accepting the ancient fallacy that peace can be achieved through war.

My effort this evening will be to try to remove the World Government idea from the realm of idealistic hope and fantasy and to bring it into the realm of the practically possible. I should like to demonstrate, if I can, not only that the United Nations must be transformed into an organization capable of enacting and enforcing world law, but to show as well how this can actually be done, in spite of all the difficulties which stand in the way. To do this, we must first of all recognize what the obstacles are and then see whether a way can be found to overcome them.

THE TWO ROAD-BLOCKS.

The real obstacle is, of course, that not enough of the world's peoples and governments have as yet realized the imperative need for a supranational government. If we analyze this general statement, we find that the trouble is more specific. We find that quite a number of national governments now in power have placed themselves on record as favoring the establishment of World Government. The British Government and the governments of all the British Dominions are so recorded. The French and Italian Constitutions, adopted since the War, actually contain provisions to enable these two countries to join a World Government. Nehru's Indian Administration favors World Government, and many of the Latin American Republics have declared themselves in its favor. So far as I know, there are only two major nations of the world whose leadership is on record *against* World Government; these are the United States and the Soviet Union.

The real obstacles to the establishment of World Government may, therefore, be more closely defined as the unwillingness of the world's two most powerful nations to permit such a government to be created. Since American reluctance and Russian reluctance are based upon somewhat different factors, we shall have to consider the two problems separately.

THE AMERICAN OBSTACLE.

The attitude of our Government toward any basic Charter revision was indicated by Secretary of State Marshall, when he testified before the House Foreign Affairs Committee last May. At that time various proposals for amending the Charter were being considered by the Committee. These proposals ranged all the way from minor amendments to basic transformation of the UN into a World Government. In opposing any change in the Charter, Secretary Marshall said: "The problems presented to those who desire peace are not questions of structure."

The present attitude of our Government appears to be that it believes the existing United Nations structure would be adequate to preserve the peace *if* a peace settlement could be made—in other words, if the Russians would permit a just peace settlement to be made.

In my opinion, two basic misconceptions underlie this attitude. The first is the belief that the peace can be made without disarmament. The second is the belief that Russia alone is responsible for the failure to make a peace settlement.

OVERCOMING THE AMERICAN OBSTACLE.

1.

Half of the job of overcoming American reluctance to accept the idea of world government would be accomplished, if the American people came to see clearly—and forced their Government to see clearly—**that the peace can neither be made nor preserved so long as the armament race continues; and that there is no way to stop the armament race without transforming the United Nations into an effective World Government.** Both halves of this statement require proof. Let me take them up in order.

There are three reasons why a peace settlement cannot be made so long as the armament race continues:

First, because an armament race constantly increases tensions. The search for national security means a vicious circle of mutual provocation, in which each side is driven by fear of the other to take measures of defense which appear as measures of offense to the other.

Second, because, so long as the armament race continues, each side is compelled to devote the major part of its substance and effort to non-productive work. This means depriving the world of the surplus production of its two greatest surplus producers and thereby impeding and delaying that degree of economic recovery which is a prerequisite for the establishment of peace. We today, for example, are spending only about $6,000,000,000 a year to promote recovery as against about $17,000,000,000 a year on re-armament. We have already reached the point where the contemplated lend-lease re-armament of Western Europe threatens to cut down our future recovery program.

Third, because, so long as the armament race continues, the participants will increasingly impair the living standards of their own people. This almost inevitably leads to scapegoatism on both sides, because each

government will increasingly tell its people that their sufferings are due to the evil nature of the other. The utterances of the Kremlin and the scapegoat analysis of the world crisis submitted by our own President to Congress show how far we have already drifted in that direction.

That is why there can be no reasonable hope for a peace settlement so long as the armament race continues.

Now for the second half of my assertion—**why can the armament race not be halted so long as a state of international anarchy is permitted to exist?**

First of all, I think you will agree that we are today living in a state of anarchy *among* nations, as opposed to the varying degrees of law and order which exist *within* nations. We have, it is true, some rudimentary elements of international law. We have had, and still have, a certain number of important international agreements. But we have never had a fundamental body of world law; we have never had a world constitution; we have never had a supra-national authority endowed with the power to make world law and enforce it. This is roughly analogous to a state of society in which the individuals agree among each other to respect each other's property, to help each other to catch thieves or put out fires, and so forth, so long as it suits them to do so.

This sort of anarchic society could perhaps work reasonably well so long as all the individuals in it were approximately equal in physical strength, in resources and in needs. It breaks down as soon as inequality develops, as it must in any human society. *Within* nations we have long ago learned that to protect the weak against the strong, a society needs a government of law enforced by an authority superior to all individuals. *Among* nations we have failed so far to face this necessity.

In spite of this condition of international anarchy, the world has managed to get along—not too well, but at least without wholly destroying itself—until now. But **there are two reasons why the world can now no longer expect to get along without wholly destroying itself, unless a supra-national authority is created.**

First. The mechanism of getting along in the past has been destroyed. A balance of power peace is no longer possible because power has become

polarized in only two poles of superpower. There is no longer any room for maneuver among the sovereign nation-states to prevent any nation, or group of nations, from attaining a preponderance of strength sufficient to let it believe that a resort to naked force might be successful. With power polarized in only two superpowers there must inevitably be a struggle for preponderance of power, in which each of the two superpowers believes quite sincerely that the only guarantee of peace lies in its own attainment of preponderance over the other. That is the point in history at which we have now arrived.

Second. The development of atomic and bacteriological weapons has removed the resort to armed force from its historical status as the ultimate instrument of foreign policy. Given these new weapons, a resort to force has now become not merely an immoral and uncivilized method of settling disputes—which it always was—but an utterly futile form of murder and suicide combined, which can settle nothing.

The argument so far adduced would probably suffice to prove to any reasonable person that the armament race is both dangerous and futile and that it must be stopped. It will not, however, convince many reasonable people that the armament race cannot be stopped without the establishment of World Government, so long as the illusion exists that there can be a limitation of armaments, or international control of armaments, without World Government. This illusion, unfortunately, persists among our own policy-makers and in the minds of the statesmen of other nations, including the present Soviet leadership. Our own proposal for the international control of atomic energy and the Russian proposal for a general disarmament agreement among the sovereign nation-states illustrate the point. The disappointing part of our otherwise remarkable proposal was that we recognized the need for establishing world law and a supra-national authority to enforce it in order to bring about atomic disarmament, but failed to apply the same reasoning to national disarmament as a whole.

The persistence of this illusion in the minds of otherwise realistic statesmen is perhaps largely due to one of the occupational diseases of statesmanship; namely, their jealous fear of any curtailment of the sovereign rights of their respective governments. That, however, is no reason why the ordinary citizen should fall prey to the same illusion.

So much for the assertion that the peace can neither be made nor preserved so long as the arms race continues, and that there is no way to end the arms race without creating an effective World Government.

2.

The other half of the job of overcoming American reluctance consists in destroying the second misconception which underlies our present attitude—namely, that the Soviet Union alone is responsible for the failure to make a just and honorable peace settlement. If the American people came to see clearly—and forced their Government to see clearly—that this is a far too simple and one-sided analysis of the complex world problem, then we should be ready to tackle the job in hand.

To show how we can overcome American opposition to World Government, I must therefore take a little time to deal with this second part of our Government's present attitude. There is no need to speculate about what that attitude is. President Truman expressed it very clearly to Congress on March 14, 1948. Maintaining that the world crisis and the threat to peace were not due to the after-effects of the War, he made this important statement:

> "The agreements reached, though imperfect, could have provided the basis for a just and honorable peace, if they had been kept. But they were not kept. They were ignored and violated by one nation. . . . One nation, and one nation alone, has failed to cooperate in the making of a just and honorable peace, and—worse—has actively sought to prevent it."

Our current foreign policy rests upon this belief, and upon the further assertion, made by the President on the same occasion, that Russia, "having destroyed the independence and the democratic character of a whole series of nations in Eastern and Central Europe," harbors the clear design "to impose this ruthless course upon the remaining free nations of Europe."

I have no wish to defend the Soviet Union's policies, much less its tactics. Nor is such a defense in the least necessary in order to lay bare the dangerous errors in Mr. Truman's analysis.

In the first place, I submit that it is wholly untrue to maintain that "the agreements reached, though imperfect, could have provided the basis for a just and honorable peace, if they had been kept." The agreements referred to were those made at Teheran, Yalta, San Francisco and Potsdam.

What happened at Teheran and Yalta? What happened was that Russia, Britain and the United States agreed, *by common consent,* to throw overboard the principles of a just and honorable peace which they had solemnly pledged in the Atlantic Charter, and to adopt instead the pattern of an old-fashioned victor's peace involving a division of the world into spheres of influence. At Teheran and Yalta, the United States and Britain agreed—as the price for Russian participation in the war against Japan—to allow Russian annexation of territory in Europe and Asia, to allow Russian domination of Eastern and Central Europe and to draw across Europe that very line which has since become an Iron Curtain.

At Potsdam, we carried out, with respect to Germany, what had been agreed at Yalta. We went even further. We acquiesced in the explusion of 13,000,000 Germans from their homes and the annexation of German territory—not only by Poland, as compensation for its eastern territory ceded to Russia—but by Russia itself. Having agreed to this eastern land-grab, having deprived Germany of its breadbasket and crowded 13,000,000 Germans into an already overcrowded rump, we then committed the fatal error of leaving Germany's western frontier undetermined. And—having thus aroused every possible French apprehension of a renewed German push westward—we gilded the lily by putting the French into a position where they could veto the carrying out of the whole Potsdam Agreement without being a party to it.

I need not go into the details of the San Francisco Agreement which produced the present United Nations structure. Its imperfections are clear to you.

I submit, then, that Mr. Truman's statement to Congress concerning the agreements reached must be re-examined. Not only did these agreements fail to provide the basis for a just and honorable peace; they actually destroyed what basis had previously existed in the pledges and principles of the Atlantic Charter.

In the light of the foregoing, it becomes less important to determine who violated these agreements. Nevertheless, it is necessary to recognize —if we are in search of the truth—that it was not Russia alone which ignored and violated these covenants. France, for example, was the first of the four occupying powers to obstruct the Potsdam Agreement. She did not violate it, because she had never been asked to sign it. But she refused to let it be carried out, hoping thus to force a settlement of the Ruhr question. Russia did not seriously violate the Potsdam Agreement until after it had been prevented from going into effect for several months by French obstructionism.

Nor was it Russia alone which obstructed the work of the United Nations. This was another item in the Truman indictment. Russia has certainly been guilty of obstruction. But have all others been innocent? We ourselves, for example, have not abused the veto, but we have certainly undermined the strength and authority of the United Nations—by acting unilaterally in Turkey, Greece and China, and by our incredible vacillations over Palestine.

As to Russia's ruthless course of action toward her neighbors in Europe and her intention to extend this design westward, I submit that we shall never successfully deal with this threat—and it *is* a threat—until we understand it. We shall never understand it, so long as we spend our time angrily looking for a scapegoat instead of patiently looking for the truth.

At present, in our state of truly hysterical suspicion and fear, we are acting on two conflicting theories as to the nature of the Soviet threat to peace.

One theory—represented by the original Marshall Plan approach—is that the Soviet threat to peace arises primarily from the danger of communist penetration through Soviet exploitation of mass discontent. This theory led Secretary Marshall to say, on June 5, 1947, that our policy should not be "directed against any country or doctrine, but against hunger, poverty, desperation and chaos." We are currently betting about $6,000,000,000 a year that this theory is correct.

The second theory holds that the Soviet threat to peace is primarily military and must be met by physical containment through physical force.

This theory demands that our policy *should* be directed against a country and against a doctrine. In hedging on the first theory, we are currently betting at least $17,000,000,000 a year that the second is correct.

I submit that we have got our bet and the hedge against it upside down.

I submit that—unless Russia becomes convinced that we intend war—there is now very little danger of Soviet military attack, and that there can be no such danger, unless and until Russia integrates into her orbit the productive capacity of Western Europe. Were this to happen—and were Russia thus to obtain a far greater war-making capacity—then there would probably be a very serious military danger. I submit further that there is no evidence of Russian preparation for military adventure; that there is no tradition of aggresive Russian militarism; and that there is, on the contrary, considerable evidence that the Kremlin is afraid of war and would greatly prefer to continue fishing in the troubled waters of an uneasy armistice. Why else, do you suppose, has the Red Army refrained from over-running a defenseless Europe?

On the other hand, there doubtless exists a very serious threat of further communist penetration, which might later provide the solid basis for military aggression. There are strong, highly disciplined communist parties in most of the countries of Western Europe, especially in France and Italy. Communism is gaining in Asia. It is clear that the communist parties seek to gain control of their respective governments and that, if they succeed, they will bring their countries into the Soviet orbit.

If the way to stop communist penetration is not to build a Maginot Line around it, but to attack "hunger, poverty, desperation and chaos," then we ought to be spending greater sums than we are on the Marshall approach, and much less than we are on armament and physical containment.

We cannot do both. We have about $20,000,000,000 to play with. That is all our country can produce over and above our own needs—unless we convert to a rigidly controlled war economy. Right now we are spending more than three quarters of our available resources on the Truman Doctrine of military containment. If we add a program of re-

arming Western Europe, we shall add several billions more—which means that there will be, in effect, no Marshall Plan, because the Marshall Plan will quietly starve to death.

These are the facts as I see them. They cause me to view with considerable alarm our Government's latest proposal to superimpose upon our own rearmament a program for rearming Western Europe. Since early in the year I have been engaged upon an effort to bring about a modification of this program, which seems to me more likely to provoke military attack by Russia than to deter it. Moreover, by diverting Western Europe from recovery to rearmament, we shall weaken its defenses against the primary danger of political penetration, without being able to erect any real barrier against the secondary danger of military conquest. The simple fact is that we cannot defend Western Europe against invasion without either rearming the Germans or stationing a very large American army in Europe before any war starts. Either would almost certainly provoke the very war we are seeking to prevent.

In a proposal for modification of the Atlantic Pact program submitted to the Secretary of State on February 26, and subsequently presented to every member of Congress, I have suggested what seems to me a better way of deterring Soviet military aggression without weakening Europe's political defenses and without letting ourselves in for the cost of European rearmament, the cost of an indefinitely protracted ERP, and the implied assumption of a commitment we are unable to fulfill. The essence of this proposal, which does not lend itself to quick summarization, is that it lays upon Western Europe the duty to lock the door against political penetration, and upon Great Britain, Canada and ourselves the duty to maintain the military power to deter aggression—or, in the last analysis, to be applied where it would hurt most if an aggressor should use force to break through the door.

Let me now summarize what I have said about overcoming the American obstacle to World Government. The job in hand is to convince our fellow citizens and our Government:

1. That the peace cannot be made or preserved without ending the arms race.

2. That the arms race cannot be halted except by a policy which clearly envisages the establishment of World Government.

3. That the simple, scapegoat analysis of the world crisis does not hold water; and that, because of our belief in this erroneous analysis, we are at present frittering away our strength in a preponderantly negative effort to stop a political threat with military weapons.

4. That our long-run objective should be to end the vicious circle of mutual provocation, and to end the all-devouring arms race, through the establishment of world law and world law enforcement.

5. That our immediate objective should be to relax existing tensions by maintaining our own military strength as a deterrent to aggression, without seeking to draw others into the armament race; and to use all our remaining available resources to cut the ground of mass discontent from under the feet of those who seek to exploit it for subversive purposes.

THE RUSSIAN OBSTACLE.

And now what about the Russian obstacle to World Government? What is the use of trying to bring about American initiative in the transformation of the United Nations, when it is almost certain that the Russians would veto any attempt to amend the Charter?

It would take a greater optimist than I to believe that, in the present state of mutual distrust and fear, one could reasonably hope for Russian consent and cooperation. So long as the Soviet Union finds itself, in the United Nations, constantly opposed to a majority apparently hostile to Soviet interests, the Soviet leadership will hang on to and use its veto to block any strengthening of that organization. If we ourselves, therefore, become convinced of the need for basic amendment, we should do everything in our power to make clear that we are proposing World Government—not as a device of furthering our present anti-Soviet crusade, but as a means of abandoning it.

Even if we frankly recognized the error of our present ways—even if we did everything in our power to make Russia believe that we were proposing a World Government amendment in order to abandon the cold war and work for peace—I must admit that I doubt if we should be believed in Moscow.

This, however, should not deter us from making the effort. We need to recognize the error of our present ways—not to conciliate Russia—but to save ourselves from disaster. We need to take the initiative toward World Government and disarmament—not to allay the suspicions of the men in the Kremlin—but because the whole non-communist world is waiting for us to take that initiative.

If we make the effort and it fails because of Soviet opposition, we shall have made it clear to the peoples of the world that we, at least, are no longer a road-block on the path to peace. And remember—at present we are as bad a road-block on the path to World Government as the Soviet Union.

All this, you may say, is very fine; but it gets us nowhere. Suppose we make the effort and Russia blocks it—where are we then? How can we stop the arms race then any better than we can now?

There are two things we can do.

1. Pilot Plant Federation.

If Russia blocks amendment of the UN Charter—if patient and sincere effort fails to convince the Soviet leaders that World Government is not a sinister device of Western imperialism—we could proceed to organize—**within** the United Nations, under Article 52 of the Charter—a federal government of all those nations which are willing to proceed. I am not talking about a Federal Union of the "democracies"—nor of a Federal Union of the English-speaking peoples, nor of the "Atlantic Community." I am not talking about any sort of **exclusive** federation. I am talking about a federation that would include **any and all** nations ready to join in transforming the United Nations into a World Government—a federation that would in no way slam the door on a later reconsideration of Charter amendment by the Soviet Union. Such a pilot plant federation would leave the existing authority of the United Nations unimpaired. It would not alter the existing power relationships within the United Nations.

But what effect—you are doubtless thinking—would the establishment of such a federation have on the arms race? We could still not disarm, so long as Russia remained armed and outside the federation.

True enough. And yet, one very important step would have been taken. If the federation were formed, **the member nations would disarm as individual states**; they would jointly maintain a federal military establishment, instead of each maintaining its own army, navy and air-force. So long as Russia remained outside—and kept its satellites outside the federation—the federal military establishment would have to be kept at sufficient strength to deal with any threat of non-member aggression. This would mean a large and costly establishment. But it should not be anything like as costly as the combined defense budgets now carried by the individual nations.

Furthermore, were such a federation organized within the United Nations, it would become increasingly difficult for the men in the Kremlin to make the Russian people believe that they must remain armed to the teeth in order to protect their nation against attack. **If the federation pursued a wise policy,** it would soon become evident—in spite of all propaganda to the contrary—that its military establishment existed solely for the purpose of preserving the peace. Once that were believed in Russia, the day would not be far off when any Soviet regime would have to consider entering the ever-open door to World Government and to the abolition of all national armaments.

2. Treaty of Europe.

The other way in which we could proceed is the way which I have recently suggested as an alternative to the Atlantic Pact and the rearmament of Western Europe. That is, in essence, **to abandon the idea of guaranteeing Western Europe against attack on condition that Western Europe rearms; and to substitute, instead, a series of proposals which would bring about the disarmament of the entire European Continent —except for such forces as are necessary to preserve internal security.** The modification of the Atlantic Pact and the negotiation with Great Britain and the Soviet Union of a tripartite Treaty of Europe, a specific outline of which I have put forward would, I think, be the most effective approach we could make at the present time to the problem of what to do about Russia. I regret that time does not permit a full discussion of this proposal.

Whichever way we proceed, there must be a re-examination of the basic premises upon which our present foreign policy rests. **We shall never get to World Government, unless we do two things:**

1. Recognize that we want to get to World Government.

2. Develop a policy that will relax rather than exacerbate the existing tensions in order that an approach to World Government may become possible.

Revised Policy.

In speaking about a possible approach through pilot plant federation of those nations willing to proceed I said, a moment ago, that this approach could only work **if the federation pursued a wise policy. What would such a wise policy be?**

The answer is similar to that which I should give if the question applied only to United States policy at the present time. **A wise policy would, in my judgment, rest upon the following assumptions:**

1. That a real peace settlement cannot be reached with the Soviet Union until the arms race is halted; and that the arms race cannot be stopped until the Soviet Union can be induced to see that World Government is in the interest of the Russian people.

2. That, until that day is reached, there will continue to be a serious Soviet threat to peace; but that the nature of that threat is primarily political rather than military. In other words, that, unless the Soviet Union can first greatly expand its present sphere of influence through subversion and penetration, there is no great likelihood that it will risk war.

3. That the way to block communist subversion and penetration is to eliminate the causes of mass discontent within the borders of the non-communist world. This would be killing two birds with one stone, because:

To create the foundations for lasting peace it is, in any case, necessary to promote that degree of economic recovery and social change required in order to relieve the existing sense of injustice and dissatisfaction.

At the same time, the elimination of the sense of injustice and dissatisfaction within our own non-communist world will strike the most effective weapon from the hands of those who seek to subvert or penetrate it.

Given the recognition of these basic factors, a wise policy would demand that we:

1. Pursue a patient and persistent effort to bring about Soviet acceptance of the invitation to expand the federation into a World Government, thus making final disarmament possible;

2. Maintain a military establishment sufficiently strong to make military challenge by the Soviet Union unlikely;

3. Avoid provocative programs of "defense," such as the Atlantic Security Pact with its accompanying program of rearming Western Europe, or the acquisition of forward bases, unless the most careful consideration of the actual military commitments and their political implications clearly demonstrates that the risk of provocation is justified.

4. Steadfastly endeavor to employ the maximum proportion of available resources consistent with security to a constructive program of rehabilitation and reform.

5. Pursue a firm non-communist—but not anti-communist—policy. That is to say, make it clear that no external attempt at penetration or subversion will be tolerated, making it equally clear that, on the other hand, no attempt will be made to undermine communism within the communist orbit.

The sum total of such a policy would be both a challenge and an invitation. It would be a challenge, not to the physical strength of the Soviet Union, but to the strength of its belief in its own system—a challenge, if you like, to engage in peaceful rivalry, with each half of the divided world concentrating its efforts upon making its own system work within its own area, abandoning the present hostile effort to place stumbling blocks in the path of the other. It would be an invitation eventually to unify the divided world in such a way that this peaceful rivalry could continue, with both sides relieved of the burden of maintaining armaments.

Much would depend upon the tone in which both challenge and invitation were issued. Nothing but harm would be accomplished, if they were issued merely for the record, in the hope that their refusal would place the Soviet Union in an invidious position before the world.

On the other hand, if the Soviet Union did persistently refuse such an offer made in obvious sincerity and patiently maintained, it would without doubt alienate from itself and from its cause much of the sympathy and prestige which it now enjoys.

The policy just outlined is that which I would recommend as a wise policy for a partial, non-exclusive world federation to pursue. I would recommend it with equal conviction as a wise policy for the United States to adopt right now, in place of our present fear-befuddled fumbling.

Little as we may like it, communist totalitarianism is here to stay—for quite a time at least—in a large part of the earth which we inhabit. Little as the Kremlin may like it, a society based upon belief in the dignity and freedom of the individual is here to stay on a large part of the earth —we hope forever. In our own country we have eliminated the crudest form of human slavery, but we have not yet achieved full freedom for every citizen. Much as we detest every form of enslavement and oppression, it does not follow that "the world cannot exist part slave and part free." It has so existed for a long time. It will continue so to exist until, eventually, the slow march of civilization eliminates all forms of oppression from the farthest and darkest corners of our planet.

Meanwhile, the challenge is not so much to find a basis for agreement—that is, way of getting along with the totalitarian half of the world—as to find a way of not getting along together, without letting our basic disagreements lead to armed conflict and the destruction of all hope for a decent future.

SOME ECONOMIC PREDICATES FOR PEACE

Address to the

WORLD CONFERENCE OF THE CHURCH PEACE UNION

by

JAMES P. WARBURG

June 16, 1948.

You have asked me to discuss the world economic scene, with special reference to our responsibilities in Germany. In attempting to deal with this assignment I shall necessarily be discussing matters which are somewhat remote from the central theme of a conference "for the moral and spiritual support of the United Nations." Unhappily, due to the present state of world affairs, the relationship of the United States to the world economic scene lies mostly outside of the United Nations. Our relation to the crucial problem of Germany lies altogether in another channel, because, as you know, the United Nations was created—not to make the peace—but to preserve it once it is made.

Nevertheless, it is true that **a solution of the world economic crisis is fundamental to the making of a peace for the United Nations to preserve; and a solution of the German problem is basic to a cure of the economic crisis.**

Furthermore, economic recovery is a condition precedent to the development of the United Nations into that type of world organization which could reasonably be expected to maintain the peace once it is made. By this I mean that **unless and until the world is clearly back on the road to economic health, there will be little chance to unite the peoples of the world in a world community effectively governed by world law.** I must not, on this occasion, yield to the temptation to develop further the urgent need for building the United Nations into a World Government, since this would be an unwarranted digression from the matters you have asked me to discuss. But I do venture to express the hope that other speakers will treat this subject before your conference adjourns.

In dealing with my particular assignment, let me try first to give you a quick overall appraisal of the world economic crisis and then use what time remains to focus more sharply upon the immediate problem which confronts us in Germany.

As I see it, **the world economic picture of 1948 is essentially one of unbalanced production and consumption. This state of disequilibrium has two broad aspects.**

The first is a lack of balance between the production and consumption of food—more accurately a growing discrepancy between the amount of work spent by the human race in producing food and the satisfaction of the race's minimum requirements to sustain normal health and even life.

The second aspect of economic disequilibrium might be described in broad terms as a crisis of underproduction in the Eastern hemisphere and a potential crisis of overproduction in the Western half of the world —in other words, a disequilibrium in production between the Old World and the New.

Neither of these aspects are entirely due to the war, but both have been rendered more acute by the destruction and dislocation incident to worldwide conflict.

In 1939—before war broke out—roughly three-quarters of the world's two billion inhabitants were engaged in the production, processing and distribution of food. Yet, even then, more than half of the world's inhabitants were consuming less than 2,200 calories per day, which is generally considered the minimum to maintain normal health. Two-thirds of the world's population were living on less than 2,700 calories, compared to an average consumption in the United States of about 3,200.

Think what this means. **Three out of every four people in the world were struggling to raise food, only one in three was getting a reasonable amount to eat, and more than half of the world's population was seriously undernourished.**

In this country, when it was young, we too had about three-quarters of our people raising food. Gradually, because of our fertile soil, natural resources and great industrial and technological development, we have reached a point where less than a quarter of our population is engaged in producing food. Better than that, with less than one out of four Americans working to produce food, we are able to export a very substantial surplus of certain foodstuffs.

This happy state of affairs exists to some extent in a few other countries of the Western hemisphere—notably in Argentina and Canada. But in most of the world—especially in Eastern Europe and in Asia—the bulk of human effort still goes into a backbreaking struggle to wrest bread

from the soil, a struggle which still leaves the majority of the human race undernourished and hundreds of millions constantly threatened by famine.

All this was bad enough before the war. Since the war, it has been infinitely worse, for not only was food production interfered with, but the manufacture of machinery, tools and fertilizers was impeded and the delicately balanced system of distribution thrown out of kilter. As a result, some areas which used to be producers of surplus food can now barely produce enough for their own populations, and other still productive areas are unable to market their surplus of food through the normal channels of trade.

In addition to the ravages of war and the artificial impediments to trade arising out of post-war political disputes and tensions, the advance of medical science has considerably prolonged human life. It has reduced the overall death rate faster than slowly rising living standards have as yet been able to reduce the birth rate.

These seem to me the outstanding facts concerning the first of the two major aspects of worldwide economic disequilibrium. They may be summarized by the simple statement that, **in spite of man's greatest effort on this planet being devoted to producing food, the majority of the earth's inhabitants are still unable to obtain adequate nourishment.** Let me stress again that this is not a new problem, but rather an old problem recently rendered vastly more difficult.

The answer lies, of course, in the worldwide application of modern science and technology to the production, processing and distribution of food. This is more easily said than done, but the direction in which human efforts must be channeled is clearly indicated. The worldwide modernization of agriculture—that is, the reclamation and conservation of land, the use of new seeds and fertilizers, and the application of modern farm machinery—will not only increase the world's dwindling food supply; it will also free a large part of the world's population for other productive work. It follows that, if newly freed agricultural labor is to find productive employment along other lines, **modernization of agriculture must go hand in hand with the gradual industrialization of those areas which are now predominantly agricultural.**

It will have occurred to you, I am sure, that both the **modernization of agriculture and the industralization of the so-called backward areas require not only economic planning on a worldwide scale but also an educational effort of worldwide dimensions, accompanied by far-reaching changes in the social structure of a large part of human society.** To guide and promote this effort will be the long-range task of UNESCO and of the Social and Economic Council of the United Nations. It would seem to me—although your judgment is better than mine—that this is also a field in which the churches have a great part to play, reaching as they do across all physical boundaries and language barriers.

So much for the great problem of food and population pressures.

Let me now touch briefly upon the second major aspect of world economic disequilibrium; namely, the present state of underproduction in the Eastern hemisphere as against potential overproduction in the Western half of the globe.

We have already noted that the ravages of war greatly reduced the agricultural productivity of large parts of Europe and Asia and stimulated increased production in those parts of the world which were happily remote from the scene of conflict. Similarly and even more spectacularly, **the war reduced the industrial productivity of Europe and Asia while greatly stimulating the output of the Western hemisphere—especially of the United States.** At the conclusion of the conflict, it was estimated that the **United States alone was producing something like two-thirds of the entire world's industrial output.**

The result of this unbalanced productivity was, of course, the now familiar post-war phenomenon of **shortage** and **inflation** throughout the Eastern hemisphere from the British Isles to Japan, accompanied by a corresponding **demand for American dollars** with which to buy goods from the only available sources of supply.

The machinery of industrial production in the Eastern hemisphere had been largely worn out or destroyed. Stocks of raw materials were exhausted. Transport was disorganized. Managerial power-groups were dispersed or dispossessed.

The most pressing needs were for **food, fuel, fertilizers and fibres** out of which to make clothing. But, even with these immediate necessities taken care of, the industrial machine of the Old World required all sorts of **raw materials, machines** and **machine parts** in order to get itself re-started. **It was in a vicious circle.** It needed coal to make steel and all manner of machines and machine-made products. But, in order to get coal it had to repair the mines and the transportation system. To repair the coal mines and the railroads in turn required steel and machinery. **There was no way out of the circle except to obtain the pump-priming necessities from the New World.**

The New World had plenty of goods to sell. While the productive capacity of the Old World had diminished, the New World's capacity had enormously increased. It had increased to a point where its power to produce far exceeded its own capacity to consume. The New World was anxious to sell to the Old, but **the Old World was in no position to buy because it had no dollars, and no way of earning dollars until its economy could be pushed off dead centre.**

It was primarily in order to meet this disequilibrium between the two hemispheres that the United States developed the idea of the **European Recovery Program.** The details of this program are familiar to you. You know that it is based upon the idea of helping the Old World once more to become self-supporting. You know also that the original plan contemplated the application of this idea to **all** of Europe, whereas, due to US-USSR tensions, it now **applies only to the Western part of the Continent.**

At this point the question inevitably arises: **"Will the European Recovery Program work?"**

I wish I could give an unqualified affirmative answer to this question. The best I can do is to state the conditions under which I think the ERP can work and the conditions under which I think it cannot.

Two of the most important conditions for success are stated in the plan itself. These are:

1. That there will be a substantial revival of trade between Eastern and Western Europe; and

2. That there will be a more or less stable price level in the United States.

Both of these conditions carry far-reaching implications.

A substantial revival of trade between Eastern and Western Europe is essential because **all of Europe is one natural trading community.** The West depends upon the East for food and raw materials; the East depends upon the West for manufactured goods. **The line from Stettin to Trieste, which now divides the Continent, is an arbitrary and unnatural division imposed by the dismal failure of the victors in World War II to make an adequate peace settlement.** It lies beyond the scope of my today's assignment to speculate upon the likelihood of a solution. I can only state as my opinion that, unless the Continent is united as one economic trading community—which does not necessarily involve political unification—there is little hope that the present Foreign Assistance Act will bring about the re-establishment of a self-supporting Western Europe. This is not to say that the much-discussed Western Union cannot be rehabilitated without East-West trade. Perhaps it can—but only at a far greater cost and over a much longer period than is at present contemplated.

As to the **second** condition, it stands to reason that **any plan based upon a given number of dollars providing certain minimal assistance will fail, if the purchasing power of the dollars diminishes substantially before they are spent.** In 1946 we made a large loan to Britain. It was very closely calculated to meet British needs. Due to the uncontrolled rapid rise of prices in this country, the dollars we agreed to lend Britain in the Spring had lost 27 per cent of their purchasing power by the time they became available in the summer. The same thing could easily happen to the entire European program. **The question here at issue involves the whole spectrum of future domestic economic policy in the United States.** Again, it is not within my province to speculate upon the outcome. I can only state the belief that, **unless we do adopt measures of overall economic planning and control** by Government, business, labor and farmers working together—much as we did in wartime—the chances are that **our present plan to rehabilitate Western Europe will require drastic revision.**

These two major conditions were clearly foreseen and stated in the plan submitted to Washington by the sixteen nations of Western Europe. If they are to be met, **there will have to be a major change in the political climate here at home**—with regard to both our foreign policy and our domestic policy.

In the field of foreign affairs it is clearly implied that, if the Marshall Plan is to succeed, it must be freed from the panic-inspired context of the Truman Doctrine.

In domestic affairs it is clearly necessary to substitute a positive policy for aimless drifting and waiting around for the so-called natural forces to eliminate the necessity for courageous decision.

There are a number of other conditions which seem to me necessary to the success of our Recovery Program. There is time to mention only a few of them here.

In the first place, if we are to promote world recovery—which we must do in our own self-interest—we shall have to give increasing consideration to some **crucial sectors of the world economy other than Western Europe.** As an example, let me mention the surplus **food-producing countries of Southeast Asia.** The fact that Burma, Indonesia and parts of Indo-China—the great rice producers—are slowly emerging into independence represents an important change in the problem of world food supply and distribution. A small amount of aid applied at the right places in this area might well produce great return. Similarly, our present rather negative attitude toward the social and economic problems of **Latin America** might well benefit from re-examination. Were we thus to expand our Recovery Program, it would of course involve additional expenditure.

You are doubtless thinking, as I say this, that, after all, **our resources are not unlimited.** I agree. I agree that **we can succeed only if we carefully husband our strength and apply it purposefully at those points in the world economy where it will produce the maximum results. But this is precisely what we shall be unable to do so long as we continue our present preoccupation with a fear-inspired negative anti-Soviet crusade. I say this for three reasons:**

1. **We are today spending about three times as much in carrying out the purely negative Truman Doctrine as we are spending on the positive approach to recovery and peace represented by the Marshall Program.**

2. **We are building up a vested interest in a re-armament prosperity which will become increasingly difficult to abandon.**

3. **We are foreclosing the possibility of promoting recovery at some of the most obvious points of maximum leverage on the world's economy because these points lie within what is now considered a hostile orbit.** To state just one concrete example: for purely political reasons we are pouring large sums into **China** and refusing to consider a relatively small amount of aid to **Poland.** Without considering the merits or defects of our present Chinese policy, it is clear that $500,000,000 given to the Nanking Government for political reasons is at best a mere drop in the bucket in terms of solving China's economic problem. It is equally clear that a tenth of that amount given to Poland in the form of coal-mining machinery would greatly increase the production of Polish coal and thereby could correspondingly relieve Western Europe of the necessity to obtain coal in the United States and pay ocean freight as well with borrowed dollars.

I am not saying that these things can be changed so long as we are engaged in a negative anti-Soviet crusade. I am merely pointing out that, so long as we are engaged in this negative crusade, the chances of success in our affirmative approach to economic recovery and peace will be seriously jeopardized.

And now, in the few moments that remain, let me turn to **the more specific aspect of the world economic scene, which you have asked me to discuss.**

One of the greatest contributing causes to the disequilibrium between the two hemispheres, which I have not mentioned up to this point, is that **the two great workshops of Europe and Asia—to wit, Germany and Japan—are out of business.** In the Far East, Japan used to fulfill a function somewhat similar to that of Great Britain in Europe. Japan was the great trading and carrying nation of the Far Eastern economy. It

was also, though less than Britain, the centre of manufacture, especially of low-priced consumer goods. The post-war absence of these goods has removed one of the chief incentives to work in much of the Far East.

The elimination of Germany from the European economy is even more serious. **Before the war Germany fulfilled a quadruple function in the European trading community.**

1. **It supplied raw material.** Germany was the chief source of surplus coal on the Continent, upon which depended the whole industrial structure of most of the other European countries. Germany's other chief raw material export was potash, which had an important bearing upon European agriculture.

2. **Germany contained the greatest industrial concentration and the largest and most compact force of skilled labor on the Continent.** It supplied much of the steel, machines, machine parts and chemicals for the Continent as well as a considerable proportion of consumer goods.

3. **Germany provided a market** for the production of other European countries, especially for the raw materials and agricultural produce of Eastern Europe, for the dairy products of the Netherlands and Denmark, and for the specialty manufactures of Czechoslovakia. And finally,

4. **Germany was an important factor in the transport system** of Europe. The German merchant fleet carried much of the Continent's overseas trade. German rivers, canals and railroads were the heart of intra-Continental traffic. German trans-shipment trade constituted the bulk of the business done by the Dutch and Belgian seaports.

Today, after three years of Allied occupation, Europe's great workshop and market-place is an economic desert. To all intents and purposes there are neither German exports nor imports. There is no German merchant marine. An artificially erected barrier separates Eastern and Western Germany, blocking the core of the intra-Continental transport system. On one side of the barrier lies the industrial heart of Germany. On the other side lies the breadbasket.

All of Europe is suffering from lack of German coal, German steel, German machines and machine-parts. Rotterdam and Antwerp lie

idle. The recovery of the whole Continent is impeded because the former central gear wheel of its economy lies broken and rusting in the rubble of inter-Allied disagreement.

Germany itself is a fairly accurate miniature of a disrupted Europe. Its Western half, cut off from its normal source of foodstuffs in the East, depends upon the charity of the Western hemisphere for sustenance. Its Eastern half, cut off from normal intercourse with the West, suffers from lack of manufactured goods and is enslaved and exploited by the Soviet Union. The same thing is true, in the broad sense, of the entire Continent.

There is not time, on this occasion, to trace the **origins** of this disaster. It is a long and tragic story which I have endeavored to set forth in detail in a recent book and in several shorter pamphlets and magazine articles. Let me summarize it here by the simple statement that **the present condition of Germany is not the result of a deliberate plan. It is in part due to the short-sighted and vengeful nonsense introduced into Allied planning by the Morgenthau proposal and in part to the equally short-sighted and ruthless preoccupation of Russia with reparations; but most of all it is due to the failure of the victorious anti-Axis coalition to reach a workable post-war understanding.** This failure first became apparent at Yalta and was later crystallized in the Potsdam Agreement of August 1945.

Even this wretched compromise might perhaps have been developed into a workable plan, had it not been for **two great blunders—the excessive Russo-Polish land-grab in Eastern Germany and the failure to make France a party to the Agreement.** Taken in combination, these two blunders gave France a reason for fearing the revival of a United German nation, as well as the means of sabotaging the Potsdam Plan for treating Germany as an economic whole. For, while France was given a zone and an equal voice on the Allied Control Council, which operates on the principle of unanimity, France was not bound by the terms of the Agreement. **Contrary to widespread belief, it was not Russia but France which—as the result of these two blunders—vetoed the carrying out of the Potsdam Plan during the first period of its existence.**

Unfortunately, it was precisely during this early period that an understanding with Russia might still have been possible. From 1946 onward,

the failure in Germany has increasingly become merely a function of the worldwide breakdown of US-USSR relations.

The position in which we find ourselves today is a very ticklish one. For the time being, there seems to be no hope of treating Germany as an economic unit—any more than there seems to be any immediate hope of restoring the economic unity of Europe. We are faced with the urgent necessity of reviving the industries of Western Germany to the extent necessary to make possible the recovery of Western Europe under our Recovery Plan. We are faced with the fact that such revival necessitates the economic unification of the British, American and French zones under some kind of central authority. At the same time, we are faced with continued French fears lest the creation of a strong Western Germany once more threaten French security and the consequent demand that the Ruhr be in some way taken out from under any possible West German sovereignty. Finally, we are faced with the danger that—if we create any sort of West German sovereignty—we shall be held responsible by the Germans for the final partition of the German nation. This last point requires a word of explanation.

For the past year there has been a **growing trend of opinion in this country in favor of accepting as final the division of Germany and of making a separate peace with a new West German nation.** Even before the war ended, Mr. Morgenthau and Mr. Sumner Welles—whose plans for Germany were in other respects quite dissimilar—agreed on one thing: that Germany should be partitioned. More recently, some leaders who opposed partition but who have lost patience with the effort to reach an understanding with Russia—such as Mr. Hoover, Mr. Byrnes and Senator Vandenberg—have spoken out in favor of a separate peace.

In my judgment, such a step would be a very serious mistake. In my judgment, such a step would in effect hand over all of Germany to the Soviet Union. Once we recognize West German sovereignty—and we cannot make a peace treaty unless we do recognize sovereignty—we shall have nothing more to say about the relations of the new West German state with Eastern Germany. Yet the economic life of West Germany will depend to a great extent upon its relations with Eastern Germany, and these relations will then lie exclusively in the hands of the Soviet Union and the West German Government. Thus, **while we should be**

committed to making a huge effort to rehabilitate West Germany, the success or failure of that effort would be determined in Moscow and Frankfurt—or, perhaps Berlin.

More important still, once we create and recognize a West German state, only the Soviet Union can hold out the promise of restoring German unity. This promise is without doubt the most powerful magnet of political attraction in Germany today. From my own observation, I would say that **the one live spirit in Germany at the present time is the spirit of resurgent nationalism. A separate peace would leave only Russia in a position to exploit it.**

There is no easy answer to this complicated problem, any more than there can be an easy answer to the overall problem of finding a way of getting along with Russia without either open conflict or appeasement. Nevertheless, **the broad outlines of a sensible course can be perceived.**

The first thing to do is obviously to reach **an understanding with France,** which would make possible the economic unification of Western Germany and its effective incorporation into the European Recovery Plan. **This requires a solution to the problem of the Ruhr.** My own solution, which I have advocated for some years, is the creation of an international authority which would have the power to allocate Ruhr coal and coke to Germany and to the other countries of Europe. Such a plan would avoid the pitfalls inherent in any scheme for internationalizing the Ruhr area. It would avoid separating more millions of Germans from German sovereignty and thus sowing the seeds of future trouble. At the same time, it would effectively remove the threat of a German-controlled Ruhr arsenal, because **the power to control the allocation of Ruhr coal likewise means the power to control German heavy industry and the German war potential.** Something of this sort seems to be emerging from the recent conference at London, although the scheme there proposed involves allocating Ruhr steel, as well as coal and coke. This seems an unnecessary complication.

The next thing to do is to **establish as much of an economic and political entity in Western Germany as can be done short of recognizing sovereignty**—that is, short of slamming the door on the eventual unification of the Eastern and Western parts. This precludes making a separate

peace. It permits, on the other hand, a sincere maintenance of the Allied purpose to create a unified Germany and a unified Europe. **It denies to the Soviet Union the sole opportunity to exploit resurgent German nationalism. It gives the Western Allies a justifiable reason for remaining in Berlin.**

Here, too, the recent London conference of the six Western powers has been moving in the right direction, but it remains to be seen **whether the six governments—especially the French Government—will finally ratify the London recommendations.** As has so often been the case in the past, any settlement with Germany always becomes, so far as France is concerned, the football of **internal** politics. In this case, the precariously ensconced Schuman Government is subject to attack from both the Communists on the Left and the de Gaullists on the Right. The Communists are shouting the Moscow line that the London proposal makes the Western Allies responsible for the division of Germany, while the followers of de Gaulle denounce the London proposal as threatening French security by creating too strong a Germany. **The Schuman Government's position is all the more difficult, because it is defensible only upon the assumption of consistent American support—an assumption rendered dubious by the unpredictable irresponsibility of our present Congress.**

Even if a reasonably sensible agreement with regard to Western Germany is finally ratified by the Western powers, and even if that agreement does not provoke further Russian moves toward ousting the Western powers from Berlin, **much will still depend upon what kind of Western Germany comes into being.** At present we are following the dangerous direction of trying to rebuild in Western Germany a free enterprise economy on the American model. This leads to **a restorationist policy which may well return to power the very elements which have in the past made Germany a warrior nation.** So long as we resist the socialization of the monopolies—so long as we resist the breaking up of the big landed estates—we shall be creating for the German people **a forced choice between a return to the discredited past and the acceptance of a distorted version of the future.**

What is happening in **Eastern Germany** today under Soviet influence **is** a distorted version of the future—a version of **socialism without political freedom, and of land-reform without emancipation from exploitation.**

What is happening in **Western Germany** under our influence is the same thing that happened under Allied influence after World War I. **We are again so frightened of communism that we fear any sort of change from the old order.** Rather than foster the emergence of democratic socialism, we are frantically trying to find and restore to power reasonably uncompromised successors to the Krupps and Thyssens of the past.

Given this choice between the discredited past and the distorted future, there is no telling which way the German mind will go, for it is still a sick mind in a sick body.

Only if we can make Western Germany into a land where the German people can work out their own salvation in their own way can we be reasonably sure that the German mind will, in the end, solidly identify itself with the West. And only if the German mind does identify itself with the West can there be any hope of the eventual emergence of a peaceful, democratic German nation.

We are at present making the mistake of meeting Soviet dogma with a no less uncompromising dogma of our own. **We are making the mistake of trying to create a Western Germany in our own image.**

What we need to learn with regard to Germany—and, for that matter, in all our dealings with the world beyond our borders—is that our road toward justice and freedom is not the only road. We need to rid ourselves of the notion that it is up to us to invent solutions—especially so long as our native genius for invention is beclouded by an over-riding fear of Russia and an over-riding anxiety to block whatever we conceive the Russian purpose to be.

What we need most is to rid ourselves of fear.

What we need is a positive policy for peace—a policy based upon humility as well as strength—a policy which seeks to guide rather than to lead—to help rather than to dominate.

Perhaps, in speaking of matters which concern the mind of man and the spirit of man rather than the state of man's physical well-being,

I have wandered from my assigned theme. But the economic crisis and the spiritual crisis of our time are, I think, inseparable. **There can be no freedom from want unless there is also freedom from fear.** It is fear which turns fraternal cooperation into fratricidal conflict. It is fear which erects barriers, both physical and spiritual, to the free exchange of all the manifold products of human society.

We, as a nation, have less cause to fear than any other people on this earth. We, more than any other people, have it in our power to break out of the vicious circle of fear-inspired negativism which now drives the world inexorably toward disaster.

It is true that a physically sick world needs the support of our great material resources. But, even more, a spiritually sick world needs the restoration of its hope, the reaffirmation of its faith, and the revival of its belief in the brotherhood of mankind.

Our greatest strength as a nation—the strength upon which the world depends for recovery—rests neither in our wealth nor in our stockpile of atomic weapons, but in the great untapped reservoir of native faith and **courage** and **kindliness** which lies in the hearts of the American people.

HOW TO ACHIEVE ONE WORLD

Address to the

CONFERENCE OF THE SOCIETY
OF FRIENDS

by

JAMES P. WARBURG

Cape May, N. J.
June 29, 1948.

There is probably no single group of human beings in this world as steadfastly dedicated to the cause of peace as the Society of Friends. No one can fail to acknowledge the consistency with which your Society has opposed the use of force in settling disputes among nations. No one can fail to recognize the great humanitarian work you have done in helping to repair the spiritual and physical ravages of recurring conflict.

I must confess that I have not always fully agreed with your position. I have never been a pacifist in the sense that my conscience would forbid me to participate in armed conflict, nor even to the extent of feeling that a resort to arms could in no circumstances be justified. I have felt, in the past, that a nation must resort to arms when its vital interests were threatened and all peacable means of defending them had been exhausted. In 1917, a group of us at Harvard, feeling that such circumstances had arisen, enrolled as cadet flyers before President Wilson finally reached his decision to declare war. Again, in 1938, after the betrayal of Munich, I was one of those to whom it seemed that a war, which would once more threaten our vital interests, had become inevitable, unless we ourselves prevented it. This, it seemed to me, we could do by a clear affirmation that the outbreak of hostilities would at once find us on the side of the nations resisting Axis aggression.

I advocated such a declaration in a foreign policy discussion before the Economic Club of New York in March 1939. My colleagues on that occasion were **Senator Wheeler** of Montana and Mr. **John Foster Dulles.** Senator Wheeler took his well-known isolationist position. Mr. Dulles, who was then more of a pacifist than I, somewhat surprisingly aligned himself with the Senator and made a statement which seems worth recalling in view of his present influence upon our foreign policy.

"There is no reason to believe," Mr. Dulles said, "that any totalitarian states, separately or collectively, would attempt to attack the United States or could do so successfully . . . . Only hysteria entertains the idea that Germany, Italy or Japan contemplates war upon us."

Times change. **Today it is Mr. Dulles who is one of the major architects of a foreign policy which I consider to be inspired by hysterical**

fear, although—in fairness to Mr. Dulles—I suspect that he too feels that hysteria has now gone too far.

Be that as it may, the point is that I cannot come before the Society of Friends in good conscience without stating that my **moral** position with regard to war has not substantially changed. I still believe that a nation must fight when there remains no other way to defend its vital interests. I still believe that a citizen must take up arms once the die has been cast, so long as we live in a world in which there is no temporal authority over and above that of the sovereign nation-states.

As a practical matter, however, it is my belief that **the time has passed when even the strongest nation-state can effectively defend the vital interest of its people by force of arms,** and also that the **time has passed when the world can do without a supra-national authority.** The recent inventions of modern science have made war between nations into a suicide pact. They impose a new duty upon the citizens of all nations—the duty to recognize that **armed conflict is no longer an acceptable instrument of foreign policy.**

Thus, to all intents and purposes, the moral position against war has become merged with the pragmatic concept of patriotism. Even today I would hold that a nation which is physically attacked must offer resistance, on the primitive basis that "it is better to die on one's feet than live on one's knees." But this, I think, is only a temporary and rather meaningless concept, since the first duty of any citizen of any nation-state today must be to prevent, by every means in his power, the outbreak of armed conflict anywhere on this suddenly shrunken planet.

You have asked me to discuss: "How to Achieve One World." To this I must reply that, in the physical sense, the world has already become irrevocably one. **The great challenge of our time is not how to achieve political unity, but how to prevent unification by conquest and bring about, instead, the unification of the world through peacable means.**

We are at present slipping down the well-greased slide that leads to a political unification of the world by conquest. If a trial of strength between the two potential conquerors—the United States and Russia—takes place soon, the chances are that the world will become one under

American domination. If the trial of strength is postponed, there is no telling what the outcome will be.

The knowledge that this is true obscures the vision of our policy-makers with respect to the outstanding new fact of our time. **The realization that we could win a war with Russia, if it comes soon, is what blinds our policy-makers to the fact that victory in atomic war has become almost indistinguishable from defeat.**

It is sometimes useful, when one is engaged as a participant in a squabble, to try to see the affair through the eyes of a bystander. It is, of course, even more useful to see it through the eyes of one's adversary; but this becomes difficult once the facts are obscured by charge and counter charge. Let me attempt to give you a bystander's view of our present squabble with the Soviet Union by quoting some observations recently made by an outstanding European observer. **Louis Martin-Chauffier** is a well-known liberal Catholic. He was a key figure in the French resistance movement and emerged from a Nazi concentration camp to write a scholarly work on Chateaubriand. Before the war he had been the editor of a leading French magazine. The quotations I am about to cite are derived from a recent essay entitled, "The Walls of Jericho," a translation of which appeared in the June issue of the magazine, "Tomorrow".

"The world scene," writes this French observer, **"is dominated by two hostile blocs which appear to be mustering all their forces in an attempt to seize as much strategic territory throughout the world as is possible without resort to war. Neither will admit to imperialist aims. Each, instead, defines its acts as precautionary measures taken as a protection against the imperialist aspirations of the other. Everywhere the preparations for war are described as purely defensive."**

"The noise of weapons," he gloomily prognosticates, **"eventually brings about the clash. War is finally declared to stop the threat of it and to put an end to a disastrous competition. War is declared, allegedly, to stop the fear of war and to achieve peace."**

That seems to me an extraordinarily clear statement of the present position. Martin-Chauffier goes on to analyze the false concept upon which the US-USSR antagonism is based. He rejects universal control

by either Russia or the United States on the ground that neither is the sole possessor of all the elements of civilization which the world needs in its present state of development. Each, he says, possesses some of these elements. But the tragedy, he shrewdly observes—and here I quote him verbatim—"is that **both are staking their claim to supremacy not on the elements they possess, but on those which they condemn in the other."**

Does not this statement possess the ring of truth? Does it not precisely describe the war of words now being carried on between Washington and Moscow?

What does this French bystander mean when he says that neither the United States nor the Soviet Union possesses all the elements of civilization which the world needs? He explains that neither the Soviet system nor the American system can be accepted as a world system, because the one enslaves the individual whereas the other rests upon a false identification of Western civilization with one form of economic organization—to wit, free enterprise capitalism.

"Western man," he says, "will not attain a proper perspective until religion and culture denounce this imposture instead of remaining both its accomplices and its victims." In other words, in the eyes of this French bystander, **the achievement of One World by Soviet conquest would mean the enslavement of the human spirit; the achievement of One World by Western conquest would mean the suffocation of the human spirit, because religion and culture have become subservient to the profit motive, or—to use his own words—"because Christianity, in its submission to capitalism, has lost sight of its goal."**

Without necessarily accepting Martin-Chauffier's absolutes with regard to capitalism and the socialist alternative, one cannot, it seems to me, escape from the basic soundness of his contention that unification by conquest is unacceptable. Nor can one escape from the conviction that the world cannot long continue divided into two hostile camps. This leads to **two conclusions:**

1. **A way must be found to arrest the present drift toward unification through conquest; and**

2. **A way must be found to create One World through peaceful means—One World which will be neither wholly that of Moscow nor wholly that of Washington—One World which will neither enslave nor suffocate the human spirit.**

Let me attempt to deal briefly with the first and somewhat more fully with the second of these two problems.

The present drift toward unification by conquest is less the product of any clash of rival interests than of mutual fear. There is actually no real clash of vital interest between the Soviet Union and the United States. We do not covet each other's possessions. We do not compete for markets, and only to a very small extent for raw materials. Both our economies are to a high degree self-sufficient. Russia needs certain imports, most of which we could readily and profitably supply; we need certain export markets in which Russia is not now interested nor likely to become interested. The mere fact that Russia has one kind of economic system while we have another constitutes no threat to the existence of either.

Yet Russia is desperately afraid of us and we are desperately afraid of Russia. Why?

We are afraid of Russia because we think she harbors a design of world conquest. And Russia is afraid of us for precisely the same reason. Neither fear is entirely groundless.

Our fear is not groundless because Russia has openly avowed in the past the purpose of promoting a worldwide communist revolution, and is pursuing at present a ruthless course of incorporating her neighbors into a Soviet-dominated bloc, while, outside of her orbit, she is operating fifth columns in the shape of Moscow-controlled communist parties. This leads us to support any sort of anti-communist elements wherever we can find them, to suppress communists wherever we can suppress them and to fortify the countries outside the Soviet orbit with military and economic aid.

Russia's fear of us is not groundless because we have been hostile to the Soviet Union since its birth. We originally used our military force to try to overthrow the Bolshevik Revolution. Then we refused to recognize the Soviet Government during the first fifteen years of its existence.

From the Russian point of view, the United States shared to a large extent in Anglo-French appeasement of Franco, Mussolini and Hitler, as well as in the exclusion of Russia from the Munich meeting at which Czechoslovakia was betrayed. This led to the Molotov-Ribbentrop Pact, which in turn reinforced Western distrust and hostility. At the present time, Russian fears are rationalized by the Marxist doctrine that capitalism leads to aggression, and fortified by the fact that we are sitting around the Soviet periphery with bases from which our bombers could launch atomic and bacteriological attacks upon the vital centres of the Soviet Union.

Fear feeds upon fear. As our French bystander observed, "The noise of weapons brings about the clash of war."

The immediate challenge is how to eliminate, or at least weaken the prime mover in the present state of world tension. This is a long and arduous process, because we have so thoroughly inoculated ourselves with the poison. Until we conquer our own fear of Russia, we shall not be able to alleviate Russia's fear of us; for, so long as we are driven by fear, we shall be compelled to take actions which we believe to be solely for our defense but which will necessarily appear to the Kremlin as additional threats to Russian security.

It is bad enough for a great and powerful nation to permit its action to be dictated by fear. But **our chief trouble is not so much that we are afraid, but that we are afraid of the wrong thing. War—even a victorious war—represents a far greater threat to us than the by no means certain aggressive intention of the relatively weak Soviet Union.** If we thought more about what war means, since Hiroshima, we should at least re-channel our fear and thus cause it to supply the motive power for a positive policy for peace.

The same thing is, of course, true of Russia. **But the re-channeling of fear cannot begin in Russia so long as we hold the preponderance of military strength and strategic position, as we do today.**

Once both the United States and the Soviet Union recognize that war itself represents to each of them a greater danger than the possible aggressive intent of the other, then we shall find ourselves in a position in which common interest supersedes the existing points of difference.

If we succeed in re-channeling our own fear, the immediate consequence would be a shift in emphasis between the two contradictory elements which now make up our foreign policy. We are now spending $6,000,000,000 a year on a constructive program for peace and $15,000,000,000 on preparation for war. The reverse ratio would result if we were able to see the existing dangers in their true perspective.

So much for the prevention of the unification of the world by conquest. Let me now take up the other half of the problem—namely, **how to achieve One World by peaceful means.**

The first prerequisite for this great undertaking is the realization that Russia and the United States—while they are the two most powerful nations on the earth—contain, even if taken together, only a minority of the world's inhabitants. It is true that of the 1,500,000,000 people, who are neither Russians nor Americans, many are still living in primitive conditions of backwardness and illiteracy. But it is also true that by no means all Americans, and certainly not all Russians, have attained a state of civilization equal to that of the average West European.

This brings me to a brief statement of what seem to me **three major predicates of effective world organization.**

The first predicate of a world united by peaceful means must be that it shall be united in a form which is representative of all the nations of the world, expressive of all the various cultures and religions, and responsive to the variegated aspirations of all the world's peoples. Such a world organization must be developed out of a process of distillation far more complicated than the mere attempt to find some sort of meeting ground between Russia and the United States. The nature of the world community—if it is to be a peaceful world community—cannot be determined merely by compromise between infra-red and ultra-violet. It must reflect all the colors of the spectrum.

The second predicate, closely allied to the first, is that the relative possession of military power by the various nation-states must not be the determinant of their relative importance. This is the great shortcoming of the present concept of the United Nations. The idea that peace can be enforced only if those nations, who possess the power to enforce

it, are also determined to enforce it, is fatal to any structure of world organization. If the world is to become unified by peaceful means, its unification must rest upon precisely the **absence** of military power in the hands of **any** nation-state.

The third predicate is that an effective world organization must be founded upon the delegation of certain powers to a World Government according to the federal principle. The first and most obvious of these powers is the maintenance and use, when necessary, of force to preserve peace.

What are the other powers which must be delegated? Let me first attempt to state the principle which should, in my judgment, govern their selection. It is this:

Broadly speaking, the powers which should be delegated to a World Government are those which—when exercised—affect the people of more than one nation-state.

Besides the sole right to use force to maintain peace, these powers obviously include **the power to regulate the exchange of goods and services across national frontiers.** This involves the supra-national control of any form of restrictive device, such as tariffs, quotas, export subsidies and currency controls. A start in this direction has been made in the formulation of an International Trade Charter at the recent Geneva and Havana conferences. The present effort, however, is merely to shape a multilateral treaty between sovereign nation-states; whereas the real goal can be attained only by an actual delegation of power to a World Government which stands over and above the nation-states. (It is perhaps necessary to observe at this point that the proposed delegation of these powers does not in itself mean that all tariffs, quotas, subsidies and currency controls would be abolished. It does mean that such restrictions could be imposed only by the World Government acting upon the carefully considered request of one or more nation-states.)

The regulation of emigration and immigration is clearly another power which, when exercised, affects the peoples of more than one nation-state. This power, too, would have to be delegated to an effective World Government. But, again, it does not follow that all restrictions upon the migration of peoples would be abolished. It follows only that population

movements would be regulated by supra-national, instead of national, authority.

At this point **the objection doubtless occurs to some of you that for the United States to delegate these powers to a World Government would mean placing in non-American hands the control over the American standard of living. My answer is simple. The control over our living standards has already escaped from our own hands. It is today at the mercy of a state of international anarchy which may at any moment result in disaster. The American living standard is today just about as well protected by our sovereign right to erect tariff and immigration walls as French security was protected in 1940 by the Maginot Line.**

We come now to a problem which is less easily answered. **What about the power to enact, or fail to enact, a Bill of Rights?**

Should the World Government be given the power to insist upon worldwide protection of the individual against the state? Should there be a worldwide habeas corpus, trial by jury, freedom of worship, freedom of thought, speech and press and the right of free assembly?

Obviously, the inclination of any American is to answer: "Yes." And, in the long run, it is doubtless true that peace will never be really secure so long as vast multitudes of human beings lack protection against the arbitrary use of power by dictatorial governments. But I am a firm believer in the maxim that politics is the art of the possible. I cannot escape from what seem to me **two facts of contemporary life, which indicate that it is impossible to impose the Western concept of freedom upon the entire world at the present moment.**

The first fact is that the Soviet system, which now embraces a considerable part of the world, is based upon the opposite of the Western concept of the desirable relationship between the individual and the state; and that we cannot reasonably hope to see the Soviet system change its fundamental nature in the immediate future.

The second fact is that the Bill of Rights concept is not only foreign to most of the peoples in the Soviet orbit, where it is consciously

denied, but foreign to hundreds of millions of people in Asia and Africa, where it has never been heard of.

To insist upon the immediate inclusion of the power to **enforce** a worldwide Bill of Rights would, to my mind, kill all hope of arriving at a worldwide agreement. **This does not, however, preclude immediate agreement to include in the World Constitution a declaration of human rights, which would guarantee individuals in all countries against the infringement of those rights by the World Government.** There is no reason to suppose that such a provision would be unacceptable to the Soviet Union, since most of the rights in question are guaranteed in principle by the Soviet Constitution, even though they are denied by present Soviet practice. **The thing which cannot immediately be done, in my judgment, is to give World Government the power to enforce the carrying out of such Constitutional guarantees by a member state within its own frontiers.** We have an apt analogy in our own country where the Federal Government is only now, after 150 years, slowly moving to enforce the carrying out of our Constitutional Bill of Rights by the State governments.

Lest this seem a cynical concession to the facts of life, let me remind you that, if World Government controls the movements of peoples and the exchange of goods and services, a first great step will have been taken toward the free exchange of ideas. Once there is an exchange of ideas throughout all parts of the world, is it not reasonable to suppose that there will gradually develop more of a common ideal concerning the relationship of the individual to the state? Similarly, with a freer exchange of people, goods and services, there will be a gradual approach toward equalization of living standards—not by dragging down the high-standard peoples but by bringing up the living standards of the backward areas. This gradual equalization will likewise promote the development of common ideas and attitudes. Finally, once the fear of war is removed, the Soviet regime will be deprived of the single most cogent reason for secrecy.

It is obvious that this brief sketch of the broad outlines of a World Government leaves many important questions unanswered. I do not pretend that I could go very much further, even were there time to do so on this occasion. I do not pretend, for instance, that I know the perfect formula by which proper representation may be given to the widely differ-

ing parts of the world's population—nor the perfect formula for an equitable system of taxation. Nor can I tell you the precise method by which the composition of the World Government's police force should be determined. A Chicago group, which publishes the magazine, **Common Cause,** has recently put forward a provocative draft of a World Constitution, which does not answer all these questions of form and structure, but which goes a long way toward showing how they could be answered.

For our purposes at this moment, it seems to me that **the important thing is to hold fast to two major objectives:**

The first objective is: to arrest the present trend toward the unification of the world by conquest. Our part in doing this consists primarily in learning to see in proper perspective the incalculable danger which lurks in an atomic struggle for world supremacy—even if we win it—as against the real but presently exaggerated threat to our security through Soviet expansionism. Once we see these dangers in their true proportions, we shall be able to throw the major emphasis in our foreign policy upon affirmative action for peace, instead of upon negative action in blocking the Soviet Union and preparing for armed conflict.

The second objective is: to prepare the way for the unification of the world by peaceful means. Our part in doing this consists in making an immediate clear declaration of our intention: 1) to help build the United Nations into a World Government upon the federal principle; 2) to join the other peoples of the world in delegating to that Government those sovereign powers which we now hold but cannot exercise without affecting the peoples of other nations; and 3) to contribute our fair share to the maintenance of World Government, to the staffing of its organizations and to supplying the manpower for its military forces.

In closing this brief statement, let me say a word more concerning some of the **current proposals** for what is commonly called strengthening the United Nations. Broadly speaking, these proposals fall **into three categories.**

First: **those which seek to avoid any basic amendment** to the Charter of the United Nations, on the ground that an attempt to amend would cause the Soviet Union to withdraw from the United Nations altogether.

Second: **those which seek immediate amendment** of the Charter and involve as a probable consequence the withdrawal of the Soviet Union. And,

Third: **those which seek to alter the basic concept of the United Nations** from a multilateral treaty between sovereign nation-states to a supra-national authority governing all or part of the world.

In the first category belong a number of proposals toward which our Government has indicated a sympathetic attitude. Secretary **Marshall's creation of the so-called Little Assembly** was one such proposal. **Hamilton Fish Armstrong's proposal** for agreement to act against aggression outside the United Nations under Article 51 of the Charter is another. **Senator Vandenberg's recent resolution,** embodying a mild reinterpretation of the veto power, is a third.

In the **second** category, we find various proposals to abolish the veto altogether; the **Acheson-Lilienthal-Baruch proposal** for the control of atomic energy (which is, in effect, a basic Charter amendment so far as its limited reach is concerned); and the **Culbertson Quota Force Plan,** recently sponsored by a group of United States Senators and opposed by Secretary Marshall.

This last-mentioned plan is essentially the Baruch Plan amplified to include all heavy weapons or other means of mass destruction. Its scope is limited to the purpose of making a successful war impossible, although its avowed ultimate aim is World Government. It proposes, however, merely a world organization limited to partial disarmament by the great powers, inspection to see that agreed quotas are not exceeded, and a world police force recruited exclusively from the smaller nations. A careful reading of the testimony before Congress of the plan's sponsors suggests that none of them seriously expect the Soviet Union to agree to such a proposal. Secretary Marshall rejected the plan chiefly on these grounds, stating that it would disrupt the world community and divide the world into rival military alliances and isolated groups of nations.

In the **third** category, we likewise find some proposals which tacitly or overtly propose the acceptance of a divided world, although they are ostensibly plans for World Government. **Clarence Streit's Federal Union,** for example, is merely a union of the Atlantic Community, dominated by

the English-speaking peoples and projected as a scheme which **might** later attract to membership the Soviet Union and the so-called backward nations. This and other similar proposals are rejected by the **United World Federalists** for much the same reasons which caused Secretary Marshall to reject the Culbertson Plan. The United World Federalists insist upon a world Government which **is** a World Government and therefore must include the Soviet Union. Their projected world organization is, however, one of more narrowly restricted powers than that advocated here.

The purpose of this brief summary of the current proposals is to point up what seems to me **the necessity for making two basic decisions:**

1. **We must either accept or reject the present position of our Government, as expressed on May 5 to Congress by Secretary Marshall, that an effective plan for peace does not involve the necessity for any change in the basic structure of the United Nations.**

Mr. Marshall's words on this occasion were: "The problems today presented to those who desire peace are not questions of structure."

2. **We must either accept or reject our Government's position that there can be no effective plan for peace which assumes as more or less permanent the division of the world into two rival camps.**

My own answer is that we must reject our Government's position on the first of these two basic questions and support our Government's position on the second.

As to the question of structure, it is true enough that the problems presented to those who desire peace are not **solely** questions of structure. The peace has to be made before it can be preserved, and making the peace is not, I agree, a question of structure. **But preserving a peace once made becomes very largely a question of structure.** Moreover, unless and until we know clearly the ultimate goal toward which we are striving, every step along the way toward making the peace will be doubly difficult. Unless and until we know the harbor toward which we are steering, our helmsman—no matter who he is—will fail to keep our Ship of State upon a steady course.

It is, I think, of the utmost urgency that our Government should at long last recognize that the United Nations in its present form is incapable of preserving the world's peace, and that it must be built as rapidly as possible into a Federal Government of the World, commanding the direct allegiance of all the citizens of the world and responsive to their will.

In reaching this conclusion, our Government would not be making any startling departure from contemporary thought. It would merely be catching up to the procession. Most of the nations of Western Europe, Latin America and the British Commonwealth already have officially declared their acceptance of the idea. Here at home nearly half of our state legislatures have passed resolutions in favor of World Government. There is widespread support for it in public opinion.

On the **second** major question, **I believe that our Government's insistence that peace cannot long be maintained in a divided world deserves the unqualified support of every thinking citizen.** I need not repeat what I have said concerning the present dangerous drift toward unification by conquest. In closing, I would only reaffirm the hope that our Government will soon come to recognize the need for reversing the present emphasis as between the two contradictory trends in its own current policy. For, **unless the United States does shift its emphasis from the fear-inspired building of armaments and defense positions to affirmative action for peace, the world will remain a divided world—until the day when it is finally unified in the dust and rubble of atomic war.**

OUR ROLE IN WORLD AFFAIRS— PRESENT AND POTENTIAL

Address to

FACULTY AND STUDENTS OF COLUMBIA UNIVERSITY, N. Y.

by

JAMES P. WARBURG

July 20, 1948.

You have asked me to discuss the role of the United States in world affairs. My effort to meet this challenging assignment will be divided into two parts: first, an attempt to picture the role we are playing at present; and, second, a brief discussion of the part we could play if we realized our potential.

I. Our Present Role.

Seen through the eyes of the non-communist world, the present role of the United States in world affairs is that of a well-meaning but dangerously clumsy and wholly unpredictable giant.

To put this statement in proper context, let me say that the same non-communist world sees the Soviet Union as a ruthlessly purposeful monolithic power, whose intentions are variously regarded as enigmatic or definitely evil. However, the role of the Soviet Union in world affairs lies outside of the scope of my assignment, except insofar as it is necessary to remember two things: that Soviet behavior affects the behavior of the United States; and that Soviet propaganda exaggerates our failings and arouses or magnifies doubt and distrust of our intentions. (The same two factors operate to some extent in reverse.)

In spite of Soviet propaganda, few people in the non-communistic world today question the good intentions of the American people, but a growing number question the intentions of our Government and of the power groups which are, rightly or wrongly, thought to exercise their influence upon its policies. Strange as it may seem to us, a European is quite likely to draw a distinction between the American people and its Government, rather like the distinction which we are in the habit of making between the Kremlin and the Russian people. The distinction may or may not be valid, but it is drawn just the same.

Similarly, few people of the non-communist world doubt the vast resources which are at the disposal of the American people to carry out its good intentions. Yet an increasing number question whether, in the end, these resources will be so employed or diverted to other purposes.

The most puzzling thing about us in the eyes of our friends appears to be that we seem planless in spite of our power, frightened in spite of our relative security and bungling in spite of our recognized efficiency.

Even if there were no justification for this impression, it would still be wise for us to try to find out why it exists, because the fact that we are so regarded—whether justly or unjustly—profoundly affects our whole future and that of the entire world.

Let us try, then, to examine as objectively as we can whether there is any justification for the belief that, in spite of our great power, we have no clear plan of action; that, in spite of our relative security, we are unreasonably motivated by fear; and that, in spite of our pragmatic efficiency as a people, we seem to lack skill and know-how in our behavior as a nation among other nations. Let us, in other words, try to make up our minds whether the job in hand is one of substance or public relations—whether it is one of remedying actual shortcomings or merely one of correcting an erroneous impression.

There is, among some Americans, a growing tendency toward self-righteousness—a tendency to assume that any self-criticism is a defense of the Soviet Union or of communism. As we proceed with this self-examination, I must ask you to bear in mind that our purpose is to find facts rather than to assess responsibility or to make comparisons. Specifically, we are not inquiring into how the blame for the present unhappy state of world affairs should be apportioned as between ourselves and Russia. We are concerned here solely with finding out, if we can, what our present role is, how it is regarded and what we can do to make our contribution more effective.

1. Are We Without A Plan?

First, then, is it true that we are planless in spite of our power?

Certainly we were not planless so long as the war lasted. No one knows this better than the man who is now President of this great University. Until victory was achieved we had an aim, a series of objectives leading to the achievement of that aim, and a planned procedure leading to the attainment of each objective. The aim was the unconditional sur-

render of the Axis Powers. The objectives were the step-by-step liberation of the conquered territories and the ultimate invasion of Italy, Germany and Japan. To accomplish these objectives almost all other considerations were put aside. Until our single aim of victory was achieved, we had and consistently pursued a definite plan.

Whether or not our plan of action during the war was a wise plan is another matter. From the military point of view it would be hard to find fault with it. If, however, one accepts the Clausewitz axiom that "war is the extension of policy by other means"—that a war must be fought not merely to deny victory to the enemy but to gain a positive end—then our plan of action during the war can be criticized as being a plan shaped too exclusively by military expediency. The consequences of the pursuit of military expediency are evident today in Europe, in Asia and in practically every part of the world.

Our war plan was a plan to prevent world conquest by the Axis Powers and to subdue them by the quickest and cheapest means. In carrying out this plan we achieved victory, but not peace. Actually, **we bought quick victory at the expense of peace.**

For each military step along the road to victory we paid a political price. We paid for North Africa with Darlan and the survival of fascism in Spain. We paid for Italy in similar coin. We paid for Russian help in the war against Japan by agreeing to an old-fashioned victor's peace instead of the just peace pledged in the Atlantic Charter. We agreed to annexation of territory and the division of the world into spheres of influence. To get the Red Army moving against Japan in Manchuria, we paid the price of letting it conquer Berlin and liberate Czechoslovakia.

No one can say that the genius of great leadership in war might not have been transformed into equally great leadership toward peace—in spite of the price paid for victory—had that leadership and the war-time spirit of the American people continued. But the sad fact of the matter is that with the death of Franklin D. Roosevelt the spark of genius, which might have wrested peace out of the shambles of victory, sputtered out; and—once victory was achieved—the spirit of the American people changed.

In spite of all the compromises of expediency, people throughout the world somehow still had faith in the ultimate purposes of the United

States—even after the death of President Roosevelt—**until the events of August and September 1945.** But their faith was shaken by the Potsdam Agreement, by the bomb that fell on Hiroshima and by the summary cutting off of Lend-Lease. These events, plus the helter-skelter demobilization of our armed forces and the irresponsible termination of rationing and price controls, presented the world with a new picture of the United States. **A faithful and effective war-time ally had suddenly turned into a nation disinterested in the world, concerned primarily with its own comforts and possessed of a secret weapon which revolutionized all previous concepts of warfare and security.**

A Wendell Willkie might have resisted the turning tide of public opinion, at least enough to preserve the faith of the world in the United States —and, with it, the opportunity to recapture the spirit, if not the letter, of the great principles laid down in the Atlantic Charter—the principles of a just and honorable peace, which had gone overboard at Teheran and Yalta. Given the preservation of that faith in our purposes, which President Roosevelt had inspired, we might have been able to work out the plan for peace which was unhappily not a part of his legacy. But the men who succeeded to the unfinished task were unequal to the challenge. They were men of good will, but they lacked vision. They were sincere executors of the contemporary desires of the American people, but they lacked the wisdom, the conviction and the courage to see that the contemporary mood of the people was dangerously irresponsible, and that the task of leadership was to change rather than cater to it.

Ever since the autumn of 1945, we have been drifting. We have lost the inspiration of a high purpose. We have had no clearly seen goal, no planned stepping-stones along the road to an ultimate destination, and no consistently calculated procedure. Faced with a world weakened and disorganized by war, a world order compromised by war-time concessions to Soviet ambition, and a Soviet regime fully conscious of its purposes and ruthlessly determined to accomplish them, we have vacillated between accepting a divided world and pursuing a steadfast course toward healing the division. We have had plans, but no plan. We have had ideas, but no vision.

At present, we are caught between two conflicting foreign policies. We are impaled on the horns of a dilemma created by two contradictory theories of what the world crisis is about.

One theory—put forward by Secretary Marshall—is that the world crisis arises primarily from the widespread distress caused by economic maladjustment and dislocation. This theory recognized that we have emerged from the war in possession of the sole surplus production out of which the rest of the world can be helped to get back upon its own feet. It recognizes that, in our own self-interest, we must aid the world to regain its health. It sees "hunger, poverty, desperation and chaos" as the causes of communism and as the causes of the present threat to world peace. This theory has produced the European Recovery Program.

The other theory—put forward by President Truman and his bipartisan advisors—is that the world crisis arises solely from the unwillingness of the Soviet Union to cooperate in the making of a just peace and from the Soviet Union's ruthless pursuit of its own selfish ends. This theory has produced the so-called Truman Doctrine—a purely negative policy with the sole aim of stopping Soviet or communist expansion. The original version of the Truman Doctrine rested upon the belief that we could contain Soviet expansion by arming and otherwise financially assisting any nations, or groups within nations, hostile to Russia or to communist ideas. The later version, announced on March 17 of this year, envisages the use of our own armed force, if dollars and bluff fail to accomplish the objective.

At the present time, we are betting about $6,000,000,000 a year on the constructive approach to peace embodied in the first theory, and almost three times that amount upon the negative approach embodied in the second. Stated in other terms, we are spending about 15 cents out of each taxpayer's dollar on an effort to build the peace, and then betting against our own effort by taking out war-risk insurance to the tune of something like 45 cents out of each taxpayer's dollar.

This in itself is fairly conclusive proof that we are planless in spite of our power. But that is not all.

We are also planless in dealing with the various individual problems which combine into the major problem of the peace settlement. For example:

We have no plan for Germany, which is the central problem of Europe. For three years we have been vacillating between the desire to destroy Germany's industrial capacity in order to eliminate its war poten-

tial, and the desire to build up German industrial capacity in order to promote European recovery. For the past twelve months, we have not known whether we were more afraid of a unified Germany in which Russia would have a voice, or a divided Germany in which Russia would completely control one half and we the other.

We have no plan for Palestine, which is the central problem of the Middle East. We are for partition at one moment and against it the next. We favor trusteeship today and oppose it tomorrow. Our zig-zag course in the Middle East is dictated by a strange mixture of outworn strategic concepts, commercial interests, varying emotional tides and partisan politics.

We have no plan for China, which is the central problem of Asia. Our Secretary of State, after a careful study on the spot, declared that we should discontinue our subsidies to the Central Government of Chiang Kai-shek and maintain a hands-off policy in the struggle between it and the Chinese Communists. Yet our Congress decided to vote an additional subsidy to Chiang amounting this year to $500,000,000, and the Republican candidate for the Presidency favors still greater subsidies.

Our planlessness goes still further. **Not only are we without a plan for making the peace; we are also without a plan for preserving the peace once it is made.** Our Government takes the position that the United Nations, as at present constituted, is an instrument capable of preserving the peace. It opposes any change in its structure. Yet our Government's own proposal for the control of atomic energy clearly implies that the present United Nations structure is wholly inadequate and will remain inadequate until the United Nations is built into some sort of World Government capable of enforcing world law.

The conclusion from the foregoing seems to me inescapable. The world is correct in thinking of the United States as a nation which, in spite of its great power and its desire to help make and maintain the world's peace, is nevertheless without a plan for peace.

2. Are We Unreasonably Motivated by Fear?

The second point for us to examine is whether the world's impression is correct that, in spite of our relatively secure position, we are unreasonably motivated by fear.

There can be no doubt that we are motivated by fear—fear of Russia, fear of communism and fear of war. The question is whether we are **unreasonably** afraid, or whether our fears are well-grounded.

The answer is, I think, that our fears are partly exaggerated, partly misdirected, and wholly out of proper proportion. Let me briefly develop each part of this threefold assertion.

Our fear of Russia, as a nation—that is, our fear of Russian attack—is, I think, exaggerated. We have no common frontier with the Soviet Union. We can reach each other only by air or by sea. Our Navy controls the world's seas; Russian submarines could interfere with our seaborne movements; but Russia lacks the means, which we possess, of transporting a striking force across either ocean. As for air-power, we hold a lead in long-range bombers; we have bases around the periphery of the Soviet Union; we have atomic bombs. Even assuming that Russia, too, has atomic bombs, there are no Soviet bases in Mexico or Canada or Greenland which correspond to our bases in Japan, Britain, North Africa and the Middle East. Furthermore, there is no evidence whatsoever that Russia's interests would be served by war. There is no evidence that the Soviet regime—which might conceivably act contrary to Russia's interests—is at present thinking in terms of military attack either upon us or upon any other nation. Yet—oddly enough—we seem to be more afraid of Russia's attacking Western Europe than the Western Europeans themselves.

What about our fear of communism? This, I think, is not exaggerated but misdirected. What we fear most are the revolutionary or subversive techniques of communism—"the imposition from within or without of totalitarian dictatorships". What we should fear are the social and economic conditions anywhere in the world which make the application of these techniques possible.

Because we emphasize the purposeful Soviet exploitation of these conditions, and often lose sight of the conditions themselves, our fear of communism becomes indistinguishably merged with our fear of Russia as an aggressive nation. This confuses our thinking and leads us to play into the hands of both communism and Soviet imperalism. It leads us in China to back a regime of corrupt and oppressive landlords against the

peasant masses, thereby handing the Chinese Communists a monopoly in exploiting the most powerful magnet of political attraction. It leads us, in Germany, to oppose socialism and to restore to power the remnants of the old monopolistic clique. It leads us to coddle Franco in Spain, and to deal delicately with the petty potentates of the Middle East. Here at home it leads us into anti-communist witch-hunts and increases internal tensions of all sorts. All this is made to order for those who seek to persuade the oppressed and unhappy peoples of the world that communism offers the only road to a better future while, at the same time, they seek to convince the ruling cliques that an alliance with the Soviet Union provides the only guarantee of "national independence." The latter myth is now beginning to be exploded in Yugoslavia.

Apart from being in some respects exaggerated and in others misdirected, the most important thing about our fears is that they are altogether out of true proportion to the actual dangers. At present, we seem to fear Russia most, communism second and war third. The order should, I think, be reversed.

By far the greatest danger we face is war. Even a victorious war would destroy more of the things we rightly value than could possibly be destroyed without war by Russia and Soviet-inspired communism.

This is the outstanding new fact of our time, to which we are partially blinded by the thought—attractive to some of our present leaders—that, if all else fails, we could almost certainly win a physical struggle with the Soviet Union.

This is what terrifies not only the Russians but our friends throughout the world. This is what makes us—even to those who do not question our good intentions—a dangerous element in world society—an irresponsible, good-natured drunk wandering about in a crowded market-place with a loaded tommy-gun in his hands.

To be sure, it would be much more terrifying to most of the world if Brother Ivan, rather than Uncle Sam, were wandering around in this condition. Brother Ivan is less likely to be good-natured when drunk, and more likely to loose off his weapon just to see what would happen. Nevertheless, it is Uncle Sam who holds the weapon today and who, every now and then, seems not too careful about how he handles it.

The conclusion seems indicated that we are unreasonably motivated by fear—partly because our fear of Russia is exaggerated, partly because our fear of communism is misdirected, but most of all because we fear too little the danger we should fear most.

3. Are We Bunglers?

This brings us to the question of bungling. Are we, as the world seems to think, lacking in skill and know-how in our behavior as a nation among nations?

It would not be difficult to present a damning indictment against our present leadership in recent months. Palestine—the Bedell Smith fiasco—many of the impromptu utterances of our President are sitting ducks if one is looking for targets. So are the actions of our Lower House in passing a resolution inviting Franco into the ERP, in sabotaging the Reciprocal Trade Agreements Act and in slashing the ERP funds. All these things add up to a far from pleasant picture. The blame falls upon the White House, the State Department, the various and sundry Presidential advisors and upon both Parties in Congress. It falls upon the Third Party candidate. It falls upon the press. It falls upon all groups and individuals who have contributed to the confusion by losing sight of the world woods for seeing only their particular parochial trees. In the last analysis, the blame falls upon all of us as citizens, because the picture we present to the world as a nation is a fairly accurate picture of the confusion which exists in our own minds.

In this respect, however, I venture to doubt whether any of our friends abroad have the right to criticize us. What nation has not bungled? What Government has pursued a consistent course? What people is less confused than the American people?

The fact is that the whole world is living in the same glass house. The fact is that mankind has come to a point in its history at which the old techniques of adjustment within and among nations have become wholly inadequate, so that new techniques must be developed or invented.

The price of man's continued existence upon this planet is the universal recognition that the brotherhood of man is no longer merely

an ethical or religious concept but a pragmatic fact. This recognition cannot be accomplished by governments unless it is first accomplished by peoples. The techniques of adjustment in a world community, which recognizes itself as being a world community, can be developed. There can be no effective techniques of adjustment for a world which is one, but refuses to recognizes its existing unity.

We are, I think, no worse and no better—so far as bungling is concerned—than the world we live in. Others may be more skilled in that official chicanery which goes by the polite title of diplomatic intercourse. Others may have structural forms of government which lend themselves to faster and more consistent action. But all this is beside the point. What hampers us most is not our lack of skill and know-how, nor yet the structural form of our Government. Both could be improved without doubt. **But what really hampers us is the fact that we have not yet fully comprehended the changed nature of the world in which we live—that we are afraid and resentful of the change to which our own discoveries have so largely contributed.**

Thus, our effect upon the world is that of a man who has bought a new car and takes his family for a ride in it before he has learned how to drive. He starts off proudly, enjoying new respect and admiration. As he begins to realize that he does not know how to control the bright new contraption, he becomes afraid. His fear transmits itself to the passengers. When he meets a road-hog and, partly through his own lack of skill, narrowly misses a collision, he curses the other driver. Eventually, the entire family joins him in screaming abuse at other vehicles and even at pedestrians. The whole street is gripped by panic.

In the eyes of the world, Russia is a selfish road-hog driving an ancient jalopy—or perhaps even a team of horses—stolidly and ruthlessly down the middle of the road. The United States is the man in the new streamlined roadster who doesn't quite know how it works.

II. What Can We Do About It?

So much for our present role in world affairs. What can we do about it? How can we make ourselves more effective in helping to make the peace? How can we make ourselves more effective in helping to build the structure to preserve it?

Fully aware that there is no easy, quick answer to the world problem, let me nevertheless suggest to you **three major lines of endeavor which, combined, might lead toward a solution. The first has to do with domestic policy, the second with making the peace, and the third with preserving it.**

1. Domestic.

A nation's foreign policy inevitably reflects that nation's domestic state of mind and health. We cannot be an element of strength if we are weak, an element of order if we are disorderly, an element of stability if we are unstable.

The true measure of a nation's strength is not to be found in the number of its planes, atomic bombs, battleships and infantry divisions. The measure of a nation's strength is to be found in the health, the education, the housing and the full employment at fair wages of its people. Put in other terms, the ultimate strength of a nation depends upon the solidarity of its people, which in turn depends upon the degree to which all its citizens feel themselves justly treated.

The true measure of orderliness is not the absence of change, but the degree to which change is permitted constantly to occur without violence.

The true measure of stability is not the maintenance of one particular state of equilibrium, but the maintenance of **an** equilibrium in spite of a constant shifting of the conflicting forces.

In order to permit our foreign policy to reflect a healthy, strong, orderly and stable society, we have many things to attend to here at home.

We are now spending $15,000,000,000 a year on rebuilding that miltary strength which we so irresponsibly dissipated three years ago. We need to re-examine this figure in the light of what military strength we really need, in the light of what we can afford to spend altogether, and also in the light of what we are investing in the health, education and housing of the American people. Three billion dollars—one-fifth of the amount we are spending on preparing for war—would assure every American citizen of adequate medical and dental care and send every American child through high school, plus one-half of them through two

years of college. A fraction of our expenditures for planes and ships and guns would overcome the disgraceful shortage of adequate low-cost housing.

We need to take a look at our runaway price level and to recognize that a continuation of our present dearly-beloved do-nothing policy will not only make hash of all our plans for promoting world recovery but will also drive us into another one of our so-called cyclical depressions.

Finally, we need to find **some** way—whether through state or federal action—to remove from our national prestige the blot of **racial discrimination.**

These are all things which are generally considered remote from foreign policy but which nevertheless have a direct bearing upon it.

2. Making the Peace.

The second line of endeavor has to do with helping to **make** the peace. Here we need to re-examine our present fears, to range them in proper perspective, and to develop a positive program of action in place of panic-inspired negative and often self-defeating counter-action. Next, we must fit into our overall plan a specific policy for each of the many individual problems of the peace settlement.

Once we see war, rather than Russia, as the predominant danger, we shall begin to change the present relationship between the money and effort we are putting into the two contradictory elements in our foreign policy. Instead of spending $6,000,000,000 a year to promote world recovery and peace, we shall probably spend considerably more. Instead of spending $15,000,000,000 a year on getting ready for war, we shall probably spend considerably less.

This is the most important change we need to make in our overall policy. I should like, however, to put forward one other tentative suggestion.

I can think of no better way to arrest the present drift toward war than to eliminate Europe as a bone of contention. At present, Europe

is divided into an Eastern half, completely under Soviet domination, and a Western half increasingly afraid of communist penetration or Russian attack, and increasingly dependent upon American protection. The major attention of the United States is directed toward blocking Soviet penetration through soundly conceived economic aid and, more recently, through unsoundly conceived military assistance. I say "unsoundly conceived military assistance, first, because no amount of feasible rearmament by Western Europe could stop the Red Army from marching to the Atlantic seaboard; second, because United States aid could not reach Europe in time to stop the Red Army's invasion; third, because the rearmament of Western Europe will place an intolerable burden upon its already over-strained economy; and, finally, because rearmament, especially if it includes Western Germany, is likely to provoke the very attack against which it is intended to insure. **Whatever their present intentions, the Russians are not likely to sit still on the East bank of the Elbe while we assemble a great army on the opposite shore.**

We have recently made an abortive approach to Moscow. When the Kremlin seized upon our somewhat ambiguous invitations to sit down and talk things over, we backed away—probably because our Government was convinced that the only thing Moscow wanted to talk about was another Yalta deal—another agreement to stay out of each other's back yards.

Certainly our Government is right in rejecting any further crystallization of the unfortunate spheres of influence created at Yalta.

But why should we not propose a different and more constructive approach? Why should we not propose that Russia, Britain and the United States withdraw all armed forces from Europe west of the Soviet frontier, and sign a treaty guaranteeing the neutrality of the entire European Continent?* This, combined with an agreement to promote rather than obstruct East-West trade, would relieve the present tensions and free the European nations from the burden of supporting essentially useless military establishments.

---

*The idea of neutralizing the Continent of Europe was put forward by Mr. F. Van Rossen Hoogendyk in a letter to the New York Times dated May 26, 1948. In this proposal the idea of a three-power guaranty of European neutrality was, however, combined with a plan for the federalization of the Continent. Federalization, if it is possible at all, will require a long time, but the idea of neutralization by three-power treaty does not require federalization and could be made effective by itself in a much shorter period.

I realize that there are some Americans who will say—and not without reason—that it is dangerous to assume that the Soviet Union would stick to any agreement to keep its troops out of Europe. They might also point out that the evacuated Russian forces could far more easily return than British and American contingents, once they were withdrawn across the Channel or across the Atlantic.

To this I would reply:

First, that, **sooner or later, we shall in any case have to believe in the possibility of reaching an agreement that will be kept—or else accept the inevitability of war.**

Second, that, **by withdrawing our forces from the Continent we should not be giving up an effective physical barrier to a Russian advance, but merely a psychological barrier, which exists because the presence of our handful of soldiers makes it clear that a Red Army advance would start a shooting war. Much the same sort of psychological barrier would be erected by the proposed treaty.** Neither with or without their present contingents on the Continent would Britain and the United States be able to prevent the Red Army from over-running Western Europe; they would, in either case, have to embark upon a war to subjugate Russia and once again liberate Europe from occupation.

It is obvious that this proposal involves a radical change of direction in Germany. But the time for such a change seems to me to have come. On June 24, at the meeting of the Foreign Ministers of the Soviet orbit, Russia, for the first time, proclaimed her readiness to end the military occupation of Germany. Prior to that date, the Kremlin had favored an indefinite occupation. Almost two years ago, I put forward a suggestion for a revised American policy with regard to Germany, which involved, among other things, ending the period of full occupation, establishing instead a period of observation and control, and substituting for the four armies of occupation an international police force of highly mobile contingents, strategically located and subject to the call of the Allied Control authorities. At that time, such a proposal seemed utopian because no one believed that the Russians would agree to withdraw their army. Now, however, the Russians themselves have put forward the suggestion. I cannot see that we have anything to lose by being willing to discuss it. On the contrary, it seems to me that the opportunity now exists to break the

existing stalemate, to end the idiotic competition for the favor of the Germans by their conquerors, and to establish the beginnings of an all-German Government with which we can eventually sign a peace treaty.

If such an agreement with regard to Germany is reached as part of an overall agreement to withdraw armed forces from Europe and guarantee its neutrality, the key log in the log-jam of world affairs will have been lifted.

3. Preserving the Peace.

Having had the temerity to advance a few thoughts on the making of the peace, let me now conclude with some brief comments on the question of **preserving the peace,** once a satisfactory settlement is made.

At the present time, our Government takes the position that the existing structure of the United Nations is basically satisfactory and does not require drastic amendment. On May 5, Secretary Marshall said in his testimony to the House Foreign Affairs Committee:

"The problems today presented to those who desire peace are not questions of structure."

With all due respect, I submit that this is a shortsighted view of the challenge which confronts the world. It is true that the problems of making the peace are not questions of structure. But the problems of maintaining a peace once made most assuredly involve questions of structure.

I submit that the United Nations, as it exists today, is not a structure capable of preserving the peace—even if the present East-West tensions were eliminated. The United Nations, as it exists today, is nothing more than a multilateral treaty between sovereign nation-states. It can function only when and if there is unanimous agreement on the part of the great powers. In the absence of such unanimity, it is helpless.

This defect is not due to the veto; nor is it curable by eliminating the veto. The veto merely makes explicit the basic defect implicit in any international structure which fails to establish an authority over and above the sovereign nation-states.

The only kind of peace which can reasonably be hoped for under the present UN Charter is an uneasy armistice, resting upon a precarious balance of power. In the world of today—in a world of atomic energy—a world in which power has become polarized in only two poles of superpower—the search for a balance of power inevitably becomes a struggle for preponderance of power. Such a struggle necessarily becomes an armament race.

An armament race is dangerous not only because it is likely to lead to armed conflict. The danger of an armament race is also that it tends to make the participants into garrison states, spending more and more of their substance on unproductive effort and increasingly restricting the freedoms of their peoples.

These considerations have for a long time led me to the belief that **there is no way to preserve the peace short of building the United Nations into a World Government.** I began to explore the idea of World Government in a book written in 1939, when the war was still in its early stages. The post-war creation of a United Nations structure based upon great power agreement, seemed to me disappointing, except if viewed as a first necessary step on the road to World Government. Unfortunately, our Government seems more and more to consider that what was accomplished in 1945 is not a first step but a finality. In taking this view, it lags behind the Governments of most of the Western European nations, of many of the countries of Latin America and of all of the nations of the British Commonwealth.

In order to develop a policy to preserve the peace, I suggest that what we need most is to make up our minds that the present UN structure is unsatisfactory and to align ourselves with those who have already declared themselves in favor of converting it into an effective World Government.

This brief statement of a point of view necessarily leaves many questions unanswered. What powers should be delegated to a World Government? How should it be constituted? There is not time to deal with these matters here, but to the limited extent that I am able to supply the answers, I did so in an address entitled "How To Achieve One World", delivered before the Conference of the Society of Friends three weeks ago. Copies of this paper are available to those of you who may be interested.

What I have said today is not likely to make you feel any too happy with the role at present played by the United States in world affairs. I hope, however, that I have not left you with a feeling of discouragement or despair. I have tried not merely to point out what seem to me the defects of our present policy but also to indicate the lines along which we might proceed to cure them. Yet, even if you should think well of the tentative suggestions put forward, I fear that you may go away wondering by what means the average citizen can possibly do anything to bring about their adoption.

The only answer I can give is that, in the long run, our Government is responsive to the will of the people. Every one of us has it in his or her power to learn the facts of contemporary life, to discuss them, to form an opinion and to test that opinion as against the opinions of others. Every one of us has a right to ask questions and demand answers from any of the candidates who will this year present themselves for election to office. **One of the things we ordinary citizens might consider doing this summer is to institute a national "Quiz Your Congressman" Week,** during which each incumbent or candidate would have to stand up and be counted on whatever issues seem important to each constituency.

This much is certain:

If this nation is to become the effective champion of political freedom, its citizens must find a way to educate themselves and each other. They must assume personal responsibility. "Eternal vigilance"—the traditional price of freedom—means more today than mere alertness to danger. It means the conscious effort to understand what is going on in the world, the conscious effort to see the various existing dangers in true perspective, and the concentration of planned endeavor upon the attainment of a clearly seen goal.

In the world of yesterday, it may or may not have been true that God was on the side of the big battalions. In the world of today and in the world of tomorrow—if there is to be a world of tomorrow—God will be found on the side of those peoples who are determined that never again shall this world's streets echo to the tramp of armed men marching into conflict.

Once upon a time, physical strength was the guarantee of survival. Today, the price of life itself is the moral strength to believe in peace,

the will to work for peace and the readiness to sacrifice for peace the outworn relics and fetishes of the past.

Geography, geology and technology have combined to make the United States the physical giant among those nations which carry the common heritage of the Judaeo-Christian civilization. But as yet the very newness of our position of preponderant power robs us of clear vision and the ability to take decisive action. What is more, the corrupting influence of great wealth tends to make us materialistic and unduly conservative. Fear of losing even a little of what we possess blinds us not only to the danger of losing all, but to our greatest opportunity.

The present role of the United States in world affairs is unworthy of a great people. Our potential role staggers the imagination. Whether or not we fulfill the mission which history has entrusted to us depends upon citizenship more than upon leadership—upon us as a people more than upon those individuals whom we elect to office.

The President of this University recently said that he preferred to devote himself to teaching and preaching in the cause of peace rather than to accept nomination to the highest political office in the land. In making this decision, he has, it seems to me, set us all an example of responsible citizenship.

LET'S TAKE THE TOUGH ONES

Address to the

SECOND NATIONAL ASSEMBLY OF THE UNITED WORLD FEDERALISTS
Minneapolis, Minn.

by

JAMES P. WARBURG

November 13, 1948.

LET'S TAKE THE TOUGH ONES

Mr. Chairman and fellow-members of the United World Federalists.

It is a pleasant and unusual experience to address an audience which needs no convincing on the outstanding foreign policy issues of our time. If each and every one of you were not convinced of the necessity for establishing a world government, you would not be here tonight. I need not, therefore, waste time in analyzing the problem which confronts the world nor in pointing out to you the shortcomings of our present foreign policy.

You know as well or better than I what needs to be done to change our present myopic and fear-befuddled fumbling into a constructive policy for peace.

This enables me to devote my time tonight to a discussion of how to attain our goal, rather than to the usual attempt to define what our goal should be.

Let me state at the outset that I am not going to talk about the relative merits of the various current approaches to the attainment of world government. Our chief immediate objective at this time must still be to bring as many people as possible in all parts of the world to the realization that a start toward world government **now**—not at some indeterminate time in the dim future—is a cardinal necessity. Nothing could be more foolish or more futile than for those who believe in this necessity to dissipate their energy in a debate as to whether the so-called Parliamentary approach, or the People's Convention approach, or the United Nations approach is the most effective. Any approach is good, if its propagation helps to bring about a widespread understanding of the need for world government now. No approach is of any use whatsoever if it becomes a fetish with its protagonists and serves to split the world movement. Moreover, one approach may suit the particular requirements of one group or nation while quite another approach fits more easily into a different social or political context.

I am not, then, going to talk about methodology. What I shall try to do is to answer as best I can some of the really tough questions with which we Federalists are frequently confronted by the doubting Thomases, because—unless we can answer those questions—we shall find it difficult to make many converts.

The two major questions I should like to try to answer are ones which I am sure you have all encountered.

The first one reads: "Why talk about a method of preserving the peace until you have a peace to preserve?"

The second question, closely related to the first, is usually phrased something like this: "What is the use in talking about world government now, when you know that there isn't the slightest chance that Russia will join, or permit her satellites to join?"

Such questions are legitimate. They must be raised and answered before any reasonably intelligent person can be expected to take off his coat and go to work for world government. I propose, therefore, that you let me try as best I can to answer them, and that you deal as roughly as you like with my answers, if you find them unsatisfactory. In that way we shall all be sharpening our tools for the job in hand.

I.

Let us, then, without further preliminaries, tackle the first of these two questions—**why talk about a method of preserving the peace before you have a peace to preserve?**

I submit that a positive American policy for peace must follow two separate but inseparable broad aims: to help make a just peace; and to help devise a means of preserving the peace once it is made.

These two aims can**not** be pursued in chronological sequence. They must be pursued simultaneously by coordinated parallel efforts. It is obvious that the peace cannot be preserved until it has been made. It is much less obvious, but equally true, that the peace cannot be made until there is in sight a means of preserving it.

Why?

Because **the peace cannot be made while an armament race continues between the United States and the Soviet Union;** and because **the armament race cannot be halted so long as a state of international anarchy is permitted to exist.** Both halves of this statement require proof. Let me take them up in order.

There are three reasons why a peace settlement cannot be made so long as the armament race continues:

First, because an armament race constantly increases tensions. The search for national security means a vicious circle of mutual provocation, in which each side is driven by fear of the other to take measures of defense which appear as measures of offense to the other.

Second, because, so long as the armament race continues, each side is compelled to devote the major part of its substance and effort to non-productive work. This means depriving the world of the surplus production of its two greatest surplus producers and thereby impeding and delaying that degree of economic recovery which is a prerequisite for the establishment of peace. We today, for example, are spending only about $6,000,000,000 a year to promote recovery as against about $15,000,000,000 a year on re-armament. We have already reached the point where the contemplated lend-lease re-armament of Western Europe threatens to cut down our future recovery program.

Third, because, so long as the armament race continues, the participants will increasingly impair the living standards of their own people. This almost inevitably leads to scapegoatism on both sides, because each government will increasingly tell its people that their sufferings are due to the evil nature of the other. The utterances of the Kremlin and the scapegoat analysis of the world crisis submitted by our own President to Congress last March show how far we have already drifted in that direction.

That is why there can be no reasonable hope for a peace settlement so long as the armament race continues.

Now for the second half of my assertion—**why can the armament race not be halted so long as a state of international anarchy is permitted to exist?**

First of all, I think you will agree that we are today living in a state of anarchy **among** nations, as opposed to the varying degrees of law and order which exist **within** nations. We have, it is true, some rudimentary elements of international law. We have had, and still have, a certain number of important international agreements. But we have never had a fundamental body of world law; we have never had a world constitution; we have never had a supra-national authority endowed with the power to make world law and enforce it. Consequently, the maintenance of existing international agreements and the observance of existing international law are dependent upon the willingness of the various sovereign nation-states to stick to agreements, to obey law and to act collectively to enforce obedience by others. The United Nations, like the League of Nations before it, is nothing more than a multilateral treaty among sovereign nation-states. It is valid only so long as it suits the governments of the major sovereign nation-states to maintain it. This is roughly analogous to a state of society in which the individuals agree among each other to respect each other's property, to help each other to catch thieves or put out fires, and so forth, so long as it suits them to do so.

This sort of anarchic society could perhaps work reasonably well so long as all the individuals in it were approximately equal in physical strength, in resources and in needs. It breaks down as soon as inequality develops, as it must in any human society. **Within** nations we have long ago learned that to protect the weak against the strong, a society needs a government of law enforced by an authority superior to all individuals. **Among** nations we have failed so far to face this necessity.

In spite of this condition of international anarchy, the world has managed to get along—not too well, but at least without wholly destroying itself—until now. But **there are two reasons why the world can now no longer expect to get along without wholly destroying itself, unless a supra-national authority is created.**

First. The mechanism of getting along in the past has been destroyed. A balance of power peace is no longer possible because power has become polarized in only two poles of superpower. There is no longer any room for maneuver among the sovereign nation-states to prevent any nation, or group of nations, from attaining a preponderance of strength sufficient to let it believe that a resort to naked force might be successful. With

power polarized in only two superpowers there must inevitably be a struggle for preponderance of power, in which each of the two superpowers believes quite sincerely that the only guarantee of peace lies in its own attainment of preponderance over the other. That is the point in history at which we have now arrived.

Second. The development of atomic and bacteriological weapons has removed the resort to armed force from its historical status as the ultimate instrument of foreign policy. Given these new weapons, a resort to force has now become not merely an immoral and uncivilized method of settling disputes—which it always was—but an utterly futile form of murder and suicide combined, which can settle nothing.

The argument so far adduced would probably suffice to prove to any reasonable person that the armament race is both dangerous and futile and that it must be stopped. It will not, however, convince many reasonable people that the armament race cannot be stopped without the establishment of world government, so long as the illusion exists that there can be a limitation of armaments, or international control of armaments, without world government. This illusion, unfortunately, persists among our own policy-makers and in the minds of the statesmen of other nations, including the present Soviet leadership. Our own proposal for the international control of atomic energy and the Russian proposal for a general disarmament agreement among the sovereign nation-states illustrate the point.

Our proposal for the international control of atomic energy is interestingly realistic and unrealistic. It is realistic in that it faces—so far as atomic energy is concerned—the necessity for establishing a definitely supra-national authority, with ownership or control over the sources of raw material, the right of inspection and the power to enforce sanctions against the violation of supra-national law. It is unrealistic in that it rests upon the belief that a supra-national authority can be created for this limited purpose alone, in a world in which national sovereignty remains supreme in all other respects. It is, in a sense, like proposing that government should be established in a lawless community for the sole purpose of preventing murder by the use of firearms—leaving such matters as murder by the use of poisoned arrows, or rape, theft and arson, to voluntary agreement among the individuals in the community.

The Soviet proposal for outlawing atomic weapons and achieving limited disarmament by international agreement is totally unrealistic. It

rests upon the belief that there can be effective disarmament without a supra-national authority capable of independently enforcing it. This is about as reasonable as the expectation that a group of wild-cat oil prospectors will, in the absence of law and a law enforcement agency, voluntarily agree not to jump each other's claims or carry weapons. The Soviet proposal rests upon the further assumption that there can be a half-way station between total national armament for total war and total national disarmament for total peace. This assumption is invalidated by recent history, which has clearly shown that the attempt to limit armaments by international treaty merely serves to give the initial advantage to an aggressor. We and the British should have learned this lesson from our experience with Japan under the Naval Disarmament Treaties. The Russians should have learned it from their experience with Hitler.

The persistence of this illusion in the minds of otherwise realistic statesmen is perhaps largely due to one of the occupational diseases of statesmanship; namely, their jealous fear of any curtailment of the sovereign rights of their respective governments. That, however, is no reason why the ordinary citizen should fall prey to the same illusion.

In summary, I submit that the answer to our first question—"What good does it do to talk about a method of preserving the peace until you have a peace to preserve?"—is: We must talk about a method of preserving the peace before the peace is made, 1) because the peace cannot be made unless the armament race is halted; and 2) because the armament race cannot be halted without the creation of a supra-national authority to enforce disarmament.

II.

We come now to the second of the two major questions posed at the outset; namely, **"What is the use of talking about world government now, when you know that there isn't the slightest chance that Russia will join or permit her satellites to join?"**

This is, I think, the key question in any discussion of world government. Let me say at once that I can give you no wholly satisfactory answer. There can be no magic formula which will dissipate the distrust and hostility which exists between the Soviet Union and the West. But

neither is there any valid reason to assume that this distrust and hostility can never be dissipated and must therefore lead eventually to war.

The premise upon which I shall base my answer to the key question we are now discussing is this:

We are not going to have a war during the next five years, but neither are we going to reach complete agreement with the Soviet Union during that period. In other words, we may look forward to a period of more or less continuous crisis, during which we shall either see a gradual relaxation of tensions leading eventually to agreement, or a gradual exacerbation of tensions leading eventually to open conflict.

If you accept this premise as a point of departure, it follows that the challenge which confronts our new leadership here at home—and the challenge which confronts all the world's statesmen—is how to act in such a way as to render the maximum assistance to the relaxation of tensions without jeopardizing the national interest. A few days ago, I attempted to spell out this challenge, so far as United States foreign policy is concerned, in an address to the Foreign Policy Association at Baltimore. I pointed out that the analysis upon which our present contradictory foreign policy is based is in part incorrect and, beyond that, absurdly over-simplified. In its place I submitted a radically different analysis of the causes of the world crisis and of the present threat to world peace. It would take far too long to repeat this discussion here, but I can provide those of you who may be interested with reprints, and I shall repeat in brief form some of the major conclusions to which I came as the result of this analysis.

It is my belief that **the greatest contribution which could be made by the United States to the relaxation of tensions and the ultimate making of a just peace during the period of the immediate future, would be to reverse the present emphasis upon the two conflicting trends in its current foreign policy.**

We are spending today at the rate of about $6,000,000,000 a year on an attack upon social and economic conditions which cause unrest and provide the breeding-ground for communism. This, if you like, is a bet that the way to stop communism is as the by-product of a constructive policy for recovery and peace.

Simultaneously, we are spending about $15,000,000,000 a year on re-armament plus substantial amounts on military aid to China, Greece and Turkey, and we are contemplating more billions to re-arm Western Europe. This, if you like, is a bet that the way to stop communism is by the wholly negative procedure of encircling the Soviet Union and its doctrine within a physical frontier defended by military force.

The first and smaller bet was made on Secretary Marshall's then held belief that our policy should not be "directed against any country or doctrine, but against hunger, poverty, desperation and chaos." The second and much larger bet was made on President Truman's expressed conviction that the sole cause of the world crisis was to be sought in the failure of the Soviet Union to cooperate in the making of a just peace, in its violation of agreements, its obstruction of the United Nations and its aggressive designs upon all the countries of Europe.

Being convinced that Mr. Marshall's analysis, though very incomplete, was right and that Mr. Truman's analysis was not only incomplete but badly distorted, I believe that the best thing we could do for ourselves and for the world would be to reverse the amounts we are betting on each.

This can obviously not be done if those of our bipartisan policy-makers are right, whose primary fear is of a Russian military attack upon her neighbors and eventually upon the United States. It can be done only, if those are right who believe that there is relatively little danger of Russian military action, but considerable danger of further communist penetration; and that the way to stop communism is not by attempting to erect a fortified barrier against its encroachment but by cutting the ground of mass discontent from under its feet.

I belong to the second school of thought, which is obviously in a small minority in Washington. However, even though I believe that the emphasis is badly misplaced in our present efforts, I also recognize that we cannot now simply reverse it and thereby, through a show of weakness, invite military aggression. Furthermore, things have gone so far in the panic-inspired vicious circle of mutual provocation between Washington and Moscow, that we cannot altogether omit from consideration the possibility of sudden irrational action on the part of the hitherto cantankerous but cynically realistic Soviet leadership. Such irrational action might take a

military form, even though all the evidence indicates that the Soviet leadership knows it has far more to gain from continuing to exploit an uneasy armistice than from an adventure in military conquest.

But how can we risk reversing our bets and reducing our expenditures for military preparedness? How can we make what would be our greatest contribution toward the relaxation of tensions without inviting Soviet military aggression?

This is where we come home to the question under discussion. **We can deliver our greatest contribution to the making of the peace only if we simultaneously move toward creating the fundamental prerequisite for stopping the armament race. That is why we must move now toward world government.**

But—you will say—"That still only answers the first question—not the second. You have not yet told us what good it will do to talk about world government now if it is certain that Russia will refuse to join."

I think I have indicated the answer. But let me put it in more direct terms.

To say that there is no use in talking about world government, when there isn't a chance that Russia will join, is like saying that there is no use in stopping small-pox in Western Europe and the Western Hemisphere so long as the people of Asia refuse to be vaccinated. In the first place, the fact that Russia would refuse to join today or tomorrow does not mean that she would necessarily refuse to join the day after tomorrow. The fact that a superstitious and suspicious Chinese coolie refuses to be vaccinated, because he thinks that vaccination is some dangerous form of white man's magic, does not mean that he will forever cling to this belief. In the second place, if you were in Mr. Stalin's shoes, I doubt if you would fall all over yourself to join a world organization in which you would relinquish important power to a majority openly hostile to what you conceived to be your country's interests.

Russia cannot possibly be expected to join a world government until it becomes evident that to do so is in her own interest.

This can never become evident until there **is** a world government, until it is clear that the peoples who have joined it are better off than those who have not, and until it is clear that this world government truly stands over and above **all** the component nation-states and is not merely an instrument of domination by the most powerful.

This argument no doubt raises in your minds a third question—namely:

"How can the initial establishment of a world government, without the Soviet Union, bring about that end of the armament race which is essential to the making of a peace?"

My answer is that it cannot entirely stop the armament race, but it can completely change its nature; and it can make possible a long first step toward stopping the armament race altogether.

The establishment of a federation without the original participation of the Soviet Union and the nations in the Soviet orbit would have two consequences relating to armament. It would mean the national disarmament of all the member nations and the creation of a federal military establishment. This federal military establishment would have to be maintained at sufficient strength to stop aggression by one member nation against another, **and also** to protect any and all member nations against non-member aggression.

The Soviet Union would thus be faced with the fact that the only superior military force in the world belonged—not to any one nation or group of nations—but to a supra-national government created by the majority of the peoples of the world. Unless the United States—or the United States and Great Britain together—made the fatal mistake of using their superior resources and industrial development to dominate this federation, the Soviet leaders would have a hard time making the Russian people believe that the superior military force of the federation was being maintained for any other purpose than to preserve the peace. They would have a hard time attributing to such a federation a design of "capitalist imperialism"—unless, I say again, the United States were foolish enough to use its great power to dominate the federation, and to lead it into a continuation of the Truman Doctrine and the cold war.

If the United States pursued a wise and restrained policy within the federation, the day would eventually come when the Russian people would tire of guns instead of butter, when any Russian leadership would be forced to recognize that world government was not a sinister device of Western imperialism and that the Russian people would be better off if the Soviet Union were to become a member nation.

"But," you may say, "How can any Russian leadership, unless it abandons Marxism and the dream of worldwide communist revolution, ever come to think that the Russian people would be better off in an anti-communist world federation?"

The answer, it seems to me, is that the world federation should not be anti-communist in the sense that it would seek to destroy communism. It should be pledged against the imposition of totalitarian regimes by minorities within any of its component states. It should be pledged to protect any member nation against having a totalitarian regime imposed upon it from without—or, for that matter, to protect all members against any external interference in their internal affairs. But this would not mean that Yugoslavia, or the Soviet Union itself, could not join the world federation unless it abandoned its own totalitarian communist government. It **would** mean that neither Yugoslavia nor the Soviet Union could foster a communist revolution in Greece.

In other words, in order to join the world federation, Soviet leadership would not have to abandon Marxism or the belief in communist totalitarianism **within.** It **would** have to abandon the attempt to foster a worldwide communist revolution by any means other than by making communism work so successfully **within** the communist orbit that other peoples would voluntarily wish to follow the Soviet example.

Over a reasonable period of time, I submit that acceptance of this proposition is not too much to expect without undue optimism, provided that the vitally important corollary to the proposition is likewise posited. That corollary would be that the members of the non-communist federation would on their part abandon the idea of creating a non-communist world, except by making their system, or systems, work so well within their own countries as to bring about a voluntary change within the communist orbit.

And now, one last question, which I can see hovering in your minds:

"Would not the creation of a supra-national federation without the initial adherence of the Soviet Union in effect destroy the United Nations, and thereby increase tensions and the likelihood of war?"

I think not, if we go about it the right way. Our effort should be to convert the United Nations into a world federation. If the Russians oppose this, as they probably would, we should then proceed, under Article 51 of the United Nations Charter, to organize as much of a world federation as we could. This would leave the United Nations unimpaired as a forum for discussion with the Soviet Union and its friends and as an instrument of such limited action as is possible under the present charter. It is true that the Russians would then be dealing, in the United Nations, with an even more solidified majority. But whether this would increase or decrease tensions would depend upon the behavior of the majority under these changed conditions.

If the federation—comprising the majority of UN members—behaved according to the pattern of present American policy, its creation would increase the tensions. If the federation pursued a constructive policy for recovery and peace—a policy designed to stop communist penetration by eliminating the causes of mass discontent and not by subsidizing any and all anti-communist governments, parties or groups, irrespective of their nature—if the federation abandoned the idea of the cold war and constantly worked for disarmament by constantly urging Russian participation—then, I believe that its creation would reduce tensions and lead to peace.

This presupposes, I admit, a drastic change in the present attitude of our bipartisan team of policy-makers. But, unless there is such a change, the tensions will inevitably be increased, with or without a supra-national federation.

That is the challenge which confronts us, as citizens.

That is the challenge which you are here to meet.

CAN THE MARSHALL PLAN PRODUCE PEACE?

Address to the

FACULTY AND STUDENTS OF
VANDERBILT UNIVERSITY

Nashville, Tennessee.

by

JAMES P. WARBURG

November 18, 1948.

Can the Marshall Plan Produce Peace?

Your program committee has asked me to state whether or not I believe that the Marshall Plan can produce peace. My answer falls into two parts:

In the present context of United States foreign policy, I do not believe that the Marshall Plan can produce peace.

In a different context of United States foreign policy, I believe that the Marshall Plan could make a great contribution towards peace.

Before developing the argument to sustain each half of this answer, let us agree upon what we mean by the term, "Marshall Plan". I take it that the framers of this question had in mind the program of American aid to the economic recovery of Europe originally proposed by Secretary Marshall on June 5, 1947, and not merely the program for aiding the sixteen nations of Western Europe, which has since gone into effect. If this assumption is incorrect—if the question relates only to the current ECA program—my answer would be that this program could not, in my opinion, produce peace, even in a different context of American foreign policy. It could at best—given a different context—make an important but not decisive contribution.

One other preliminary clarification seems desirable. When we ask whether any plan could produce peace, I think we mean two things: Can it bring about the making of the long-deferred peace settlement? And—can it provide the means for preserving the peace after a settlement has been made? That is why I found it necessary to qualify the affirmative part of my answer by saying that, in a different context of American foreign policy, the Marshall Plan could make a great contribution towards peace—instead of expressing the opinion that it could *produce* peace. A Marshall Plan, in its broadest sense, is, I think, essential to the making of a peace settlement. But, even in its broadest sense, A Marshall Plan could not alone provide all the ingredients necessary to make a peace—much less provide the means of preserving it.

The reasoning behind this conviction will become evident from the elaboration of the two parts of my answer, with which I shall now proceed.

I.

THE NEGATIVE ANSWER.

There are four reasons for my belief that, in the present context of American foreign policy, the Marshall Plan cannot produce peace:

1. The Marshall Plan attacks only one of the four fundamental causes of the world crisis and the present threat to peace, the other three causes being ignored by the analysis upon which our present bipartisan policy is based.

2. The Marshall Plan is submerged in the surrounding atmosphere of the Truman Doctrine and diverted from its original purpose by the cold war against the Soviet Union.

3. The Marshall Plan is undernourished, because the arms race is depriving it of necessary sustenance and will in future demand an even greater share of our national resources.

4. The original scope of the Marshall Plan was too narrow; its present field of action is altogether inadequate; and its future field is likely to be even more closely restricted.

Each of these four assertions requires proof. Let me take them up in order.

FIRST. The Marshall Plan, as defined by its author, is a policy "not directed against any country or doctrine, but against hunger, poverty, desperation and chaos". It is—or was intended to be—a planned attack upon the basic causes of mass discontent, arising during a period of rapid and far-reaching social and economic change. It recognized that we are living in what amounts to a social and economic revolution, accelerated by the impact of two great wars. This is one of the four fundamental causes of the world crisis.

On the other hand, *the Marshall Plan fails to take cognizance of three other basic factors in the world crisis. To make matters worse, these three other factors are not only ignored but in part distorted by the overall context of present American foreign policy.*

The first unrecognized basic factor is that science and technology have made the world physically one, whether or not it is politically unified; and further, that the invention of atomic and bacteriological weapons has ended that period of human history in which war could be considered an effective, though immoral, instrument of foreign policy.

The second ignored factor is that the polarization of power in only two poles of superpower—Russia and the United States—has destroyed the only device by which a world composed of sovereign nation-states has in the past been able to preserve the peace—namely, the device of maintaining a balance of power by ever-shifting alignments. There can be no shifting alignments to preserve a balance of power when power is concentrated at two points of superpower. There can then be only a struggle for preponderance of power between the two surviving giants, in which each believes that its own predominance is essential to the maintenance of peace. This polarization of power and the resulting struggle for preponderance must necessarily lead to an arms race, unless and until disarmament is achieved through the establishment of world law and world government.

The final factor consists of certain events in recent history, which are not only ignored but distorted by a Truman Doctrine based upon the contention that Russia—and Russia alone—has destroyed the basis for a just and lasting peace. The fact is that not Russia alone, but Russia, Great Britain and the United States acting together, divided the world into spheres of influence. The war-time agreements of the Big Three at Teheran and Yalta drew the line which has since become an Iron Curtain. The war-time agreements destroyed the basis for a just and lasting peace by throwing overboard the pledges and principles of the Atlantic Charter. The war-time agreements laid the foundation for a post-war power struggle between Russia and the West—a power struggle in which future historians may well decide that the first overt move was not made by Russia, but by us at Hiroshima.

Some of you may wish to question the validity of these assertions. I shall be glad to submit them to cross-examination. It is important that we make up our minds whether President Truman was right or wrong, when he said to Congress, on March 14, 1948: "The agreements reached, though imperfect, could have provided the basis for a just and honorable peace, if they had been kept. But they were not kept. They were ignored and violated by one nation." I consider this statement a dangerous distortion of history, which has led us to accept an all-too simple scapegoat analysis of the world crisis.

Subject to later discussion, I now rest my case for the contention that the Marshall Plan cannot produce peace because it deals with only one of the four major causes of the present threat to peace.

SECOND. *I maintain that the Marshall Plan cannot produce peace so long as it operates in the surrounding atmosphere of the Truman Doctrine and is diverted from its original purpose by the cold war against the Soviet Union.*

This contention rests upon the belief that no policy can succeed which straddles two conflicting analyses of what the world crisis is about and goes galloping off on two horses in opposite directions. In pursuit of the Truman Doctrine, which holds that Russia alone is the cause of our present trouble, we are making huge efforts to contain Russia and its communist doctrine within a physical wall defended by physical force. In pursuit of the Marshall Plan, we are making substantial efforts to promote economic recovery, on the theory that our policy should not be directed against the Soviet Union or against communism, but against the social and economic causes of mass discontent.

In such a context of contradiction and confusion, it was inevitable that the Marshall Plan should become infected with the bacilli of the Truman Doctrine. It is not surprising that, in passing the European Recovery Program, Congress should, in the same breath, have insisted upon $500,000,000 of additional subsidy to Chiang Kai-shek in order to help him fight the Chinese Communists. The whole Marshall Plan for Western Europe was, in fact, pushed through Congress by a de-

liberate campaign of fear based upon the devil-theory of the Truman Doctrine.

In part, the infection of the Marshall Plan was, no doubt, due to the Russian refusal to cooperate in the original project. But the Russian refusal must itself have been largely influenced by the fact that the Marshall Plan was launched three months after the Truman Doctrine and without any explicit repudiation of the anti-Soviet crusade. Furthermore, once the officially inspired panic was on, it is extremely doubtful whether Congress would have passed any Foreign Assistance Act whatsoever, if Russia had joined instead of refusing, and thus become eligible for a share in American aid.

Be that as it may—and be the fault where it may—the march of events has made the Marshall Plan into an instrument of the cold war. It is no longer a policy "not directed against any country or doctrine". It has been diverted from its original concept and purpose.

My third statement was that the Marshall Plan cannot produce peace because it is undernourished—because the arms race is now depriving it of necessary sustenance and will in future demand an even greater share of our national resources.

The figures tell the story.

We are currently spending at least $15,000,000,000 a year on armament, large additional sums on military aid to China, Greece and Turkey, and are now contemplating an entirely new program of re-arming Western Europe. No one knows exactly how much this new program will involve.

We are spending nearly $6,000,000,000 a year on the Marshall Plan.

The American economy is today producing about $20,000,000,000 in goods and services over and above what the American people are consuming. In producing that much surplus, it is turning out about all that the supply of labor and materials permit without re-imposing war-time controls.

We are, in other words, already living beyond our means, if we intend to preserve a peace-time economy. The same thing is true from a budgetary point of view; at the present rates of taxation, we shall probably run into a deficit this fiscal year, even without the added expenditure involved in re-arming Western Europe.

These facts add up to a very simple conclusion. Unless we are prepared to convert to a war economy, involving stringent controls and higher taxation in order to stretch both our productive capacity and our budget, the increasing demands of re-armament at home and abroad will come out of the hide of the recovery program. That is to say, the Marshall Plan will become even more subservient to the Truman Doctrine.

The fourth statement in support of the negative half of my answer was that the Marshall Plan's original scope was not wide enough, that its present field of activity is altogether inadequate, and that its future field is likely to be even more narrowly circumscribed.

The scope of the original plan was not wide enough because it neglected Asia and Latin America. It is true that Europe provided the point of maximum leverage for an attack upon the worldwide post-war economic crisis. But there were also other points of great leverage in certain non-European areas—notably in the great food and raw material producing areas of Southwest Asia and Latin America. I am not saying that our resources would necessarily have permitted launching the attack along a broader front—they would certainly not have sufficed if we were simultaneously going to carry out the Truman Doctrine. I am merely stating that even the original Marshall Plan could not have produced peace, because, among other things, its scope was too limited.

If this was true of the original plan for all of Europe, it is even more true of the current program, which involves only the Western half of Europe. Moreover, the success of the current program is admittedly predicated upon the assumption that trade between Eastern and Western Europe will flow freely—an assumption which is now largely invalidated by the context of the cold war.

As to the future, I have already indicated how the growing demands of the arms race are eating into the funds available for even the present limited effort to bring about a healthy recovery.

This concludes the argument in support of my contention that, in the present context of American foreign policy, the Marshall Plan cannot produce peace. To avoid any misunderstanding, let me state as clearly as I can that I was in favor of the original Marshall Plan; that I am in sympathy with the current program in so far as it seeks to carry out the original intent of the Marshall Plan; that I do not think this program should be abandoned; but that, on the other hand, it cannot succeed without a much higher priority, a much wider target and a basic change in American policy.

II.

THE AFFIRMATIVE ANSWER

In the affirmative half of my twofold answer to your question, I stated the belief that the Marshall Plan could make a great contribution toward peace, if it were permitted to operate in a different context of American foreign policy. Let me now attempt to sketch briefly what that different context would have to be.

The first requirement is a revised analysis of the nature of the present threat to world peace, an analysis which would abandon the search for a scapegoat and take up, instead, an honest search for truth. Such an analysis would have to take into consideration all of the four basic factors which I have mentioned, and very likely others which I may have overlooked.

The second requirement is a policy, derived from the new analysis, which could reasonably be expected to arrive at two separate but interrelated goals: the making of a just and honorable peace settlement; and the development of the means to preserve the peace, once the settlement is made.

The makers of the new policy would have to recognize that these two broad aims must be pursued simultaneously—and not in chronological sequence. They would have to recognize that both aims require the same two preconditions—namely, the halting of the arms race and sustained worldwide economic recovery.

No peace settlement can be made so long as the arms race produces a vicious circle of mutual provocation and preempts the resources needed for recovery.

No peace settlement will stick, unless a way is found to bring about disarmament and establish lasting economic cooperation.

It follows that disarmament and worldwide economic recovery must become the twin inseparable objectives of a new policy.

Under our present bipartisan policy, we are in theory seeking disarmament, while in practice spending more than three-quarters of our available resources on armament. This is not because our purpose is insincere, but because our policy-makers have failed to grasp the outstanding fact of our time—that the hope of disarmament by treaty between sovereign nation-states is an illusion—that any form of partial disarmament is another illusion—and that, in the long run, there is no possible middle ground between a total armament race and total national disarmament under world law and world government.

I do not expect you to accept this statement without supporting argument. But the argument can, I believe, be quite brief.

Let me ask you whether you believe that the individuals in a community could reasonably be expected to forego violence and respect each others' rights, without codifying their mutual agreement to that effect in some sort of law, and without establishing some sort of agency effectively to enforce that law? Let me ask you whether you believe that an agreement, without law and law enforcement, would protect the weak against the strong? And, if not, whether a mutual covenant among the individuals to act collectively in defense of the weak against the strong would bring about the desired result?

If you answer these questions in the negative—and our society has for generations so answered them—then why would you expect a different result in a community of nations, which seeks to avoid violence without law and without law enforcement? Why is it any more reasonable to expect nations to renounce force, in the absence of an authority superior to all nations, than to expect individuals to renounce force in the absence of an authority superior to all individuals?

Our present policy-makers have not yet faced the fact that polarization of power has destroyed the balance of power makeshift. Our present policy-makers have not yet fully understood that a nation cannot today commit murder without also committing suicide—that a nation cannot today even commit manslaughter in self-defense without likewise destroying itself.

"But"—you may say—"Does not our proposal for the international control of atomic energy prove precisely the contrary?"

The Baruch proposal does prove that our policy-makers have recognized that there can be no atomic disarmament without the establishment of what amounts to world law and world government in the field of atomic energy. But our policy-makers seem to hold the curious belief that world law and world government can be established in this one narrow sector alone, while in all other respects there continues to be a state of international anarchy. This is as if a community of individuals were to adopt a single law prohibiting the use of fire-arms and were carefully to establish an agency to enforce this solitary prohibition—depending upon voluntary agreement among individuals not to kill each other with bows and arrows, or knives, or poisoned highballs.

If we want disarmament, there is only one way to attain it. That way is to establish world law and world government.

During recent months I have noticed a significant development in the attitude of those who are reluctant to make any basic change in the present United Nations structure. A year ago, I used to encounter all sorts of arguments to the effect that world government was neither necessary nor desirable. Recently, I took part in a debate on whether our Government

should or should not now take the initiative toward transforming the United Nations into a world government based upon the federal principle. The proponents of the negative were staunch and able defenders of the present United Nations structure; yet every one of them admitted under cross-examination: that the United Nations, in its present form, could not preserve the peace; that world government would ultimately be essential to the preservation of the peace; and that the whole question was only a matter of timing. When asked for what event or development they were waiting, these gentlemen could only express a vague feeling that we should wait until the present tensions were somewhat relaxed.

This sounds reasonable enough. *But what is going to relax the present tensions?* What is gong to stop the arms race, short of the establishment of world law and world government? What is going to give the effort to promote recovery a chance, so long as the arms race continues?

I think you see now what I mean, when I say that the Marshall Plan needs a new context of overall policy. Undoubtedly, however, you are thinking:

"It is all very well to say that the United States should take the initiative now toward transforming the United Nations into a world government. But where will that get us, if Russia vetoes the proposal, as Russia surely will?"

A few days ago I was privileged to address the United World Federalist Convention at Minneapolis. I took this opportunity to spell out the best answer I could give to the question just stated, because it is one which federalists must be prepared to answer, if they expect reasonable people to join their cause. Time does not permit me to repeat this discussion in full, but I shall indicate the high-spots and leave the rest to the question period.

There are some nations in the world today which do not yet realize that it is to their advantage to eliminate rabies and the hoof-and-mouth disease. Is that any reason why other nations cannot do anything about such pestilences? And is there any sound reason for believing that all nations will not eventually see that it is in their own interest to protect their populations against mad dogs and infected cattle?

Given the present distrust and tension, Russia is certainly not going to make the first move toward transforming the United Nations into a world government. Nor is Russia ever going to join a world government which exists only on paper, because no mere blueprint will allay Russian suspicions. But Russia might some day join a world government which actually existed in embryonic form, *if* the operations of the pilot-plant allayed her suspicions, and *if* her observations of its results convinced her that it would be in her own self-interest to become a member.

Our first effort should be to try to persuade the Russians that it is in their interest to transform the United Nations into a world government, in order that all nations may disarm and peace be assured. If that effort fails, as it probably will in the present circumstances, then we should take the initiative in organizing the pilot-plant to make a practical demonstration. This pilot-plant would take the form of a federation of all the peoples of the world, who are now prepared to subordinate their national sovereignty to a supra-national authority. This can be done under Article 51 of the United Nations Charter, without in any way undermining the existng limited authority of the United Nations.

There is all the difference in the world between this proposal and the current project of proceeding under Article 51 to organize—not an embryonic world government—but a defensive military alliance. The latter project would merely accelerate the arms race and further crystallize the existing cleavage. But the formation of a federation could be the first step toward disarmament.

The first result of the formation of such a federation would be that its member states could disarm, as individual nations, combining their military strength in a federal military establishment. Thus at least the first move toward international disarmament would have been taken. It is true that the federation itself would have to remain strongly armed, so long as the Soviet Union declined to join and continued its present policies. It would have to remain strong enough to protect its member states and itself against non-member military aggression. But—if the federation pursued a wise policy—if it de-emphasized strategic containment and concentrated its energies upon halting communist penetration through promoting recovery and through curing existing evils within its own house—the day

might come quite soon when Russia would find it in her own interest to join, and thus finally to make full national disarmament possible.

That, in essence, is my answer to this vexing problem. You will doubtless wish to debate many angles of this suggestion.

Let me, therefore, conclude this brief development of the affirmative half of my answer by saying:

The Marshall Plan, in its originally conceived form, could lead to peace, if it could become the major policy of the majority of the peoples of the world, united in a supra-national federation dedicated to disarmament and peace. In other words, the Marshall Plan could lead to peace if—instead of being the secondary policy of the United States—it were to become the primary policy of the non-communist world—a non-communist world which recognized that a real Soviet threat to peace would exist only so long as masses of people *outside the Soviet orbit* remained unhappy and dissatisfied.

Is it too much to hope that we shall wake up in time to shake off the shackles of fear which now distort and encumber a program of action originally conceived with courage and clear vision? Is it too much to hope that sanity will return to the minds of men now sick with blind passion?

I think not. For the past year I have travelled up and down this country of ours and found people everywhere weary to death of this war of words, frightened to death—not of Russia or of communism—but of the armament race, which they instinctively recognize as the greatest danger. I have found the same thing among the peoples of other countries. But the peoples of other countries are powerless to stop the armament race, unless we lead the way.

The way is clear. For what are we waiting?

Cabinet —

Troops —

Budget —

Western Defense Plant. —

A

A Challenge to New Leadership

I.

OUR PRESENT POLICY.

It is just over a year since I had the privilege of addressing you on the subject of "The United States and the World Crisis." Since then, much has happened. Last year at this time we had no clearly discernible foreign policy. Now we have two contradictory foreign policies.

This state of affairs has not derived from any conflict between President Truman's Democratic Administration and the Republican-dominated Congress. The strange concoction was brewed by the leadership of both major political parties. It is as much the brainchild of Mr. John Foster Dulles and Senator Vandenberg—the Republican foreign policy experts—as it is the creation of Mr. Truman, Secretary Marshall and the other policy-making members of the President's cabinet. The election—whichever way it went—could not alone bring about any basic change. This makes it all the more important to understand what our present policy is and where it is taking us.

The Contradiction.

Let us begin by stating the two conflicting elements which make up our present bipartisan and bifurcated foreign policy.

The first of these two elements is represented by the so-called Truman Doctrine, vaguely enunciated by the President on March 12, 1947, and reaffirmed in much more precise language a year later. When last we met, it was difficult to define this doctrine. It has now quite clearly emerged as a purely negative policy of "containing" Soviet expansion. It rests upon the President's unequivocally stated conviction that "one nation, and one nation alone, has not only failed to cooperate in the making of a just and honorable peace, but—worse—has actively sought to prevent it." In addressing Congress last March, after a year of none too happy experience with his experiment, the President reaffirmed his belief that

the world crisis and the threat to peace were not due to the natural after-effects of war but to the fact that the Soviet Union, having "destroyed the independence and democratic character of a whole series of nations in Eastern and Central Europe," harbored "the clear design to impose this ruthless course upon the remaining free nations of Europe." Holding these views, Mr. Truman has promulgated a policy based upon the single negative aim of blocking Soviet, or communist, expansion by economic aid and, if necessary, by military assistance to any nations, or groups within nations, hostile to communism and the Soviet Union.

The second element in the bipartisan foreign policy is represented by the original Marshall Plan for European Recovery. This policy, first announced in June 1947, began as a positive plan of action to strike at the sources of unrest throughout the world. In Secretary Marshall's own words, it was "not directed against any country or doctrine, but against hunger, poverty, desperation and chaos." It rested upon an implied analysis of the world crisis and of the threat to peace quite different from that which underlay the Truman Doctrine.

To what extent the Marshall approach would have superseded the Truman Doctrine, had Russia joined in the proposed overall European Recovery Plan, is a matter of conjecture. With public opinion deliberately inflamed by the President's repeated utterances and with isolationism far from dead in the 80th Congress, it is, to say the least, doubtful whether any foreign aid plan would have been enacted, if such a plan had included assistance to the Soviet Union or to nations in the Soviet orbit. The chances are that Mr. Molotov would have left our Secretary of State in an extremely embarrassing position and wrecked the Marshall Plan altogether, had he joined it or even permitted some of his friends to join. The fact is, however, that the Russian walk-out—while assuring the passage through Congress of *a* Foreign Assistance Act—made the contemplated plan for European recovery merely a plan to aid the recovery of the sixteen nations of Western Europe. Thus, the Marshall approach never had a chance to supersede the Truman approach, and an American foreign policy developed which straddled two basically contradictory conceptions of the nature of the world crisis.

We are today spending about $6,000,000,000 a year on a bet that the way to insure peace is to attack "hunger, poverty, desperation and chaos." At the same time, we are spending $15,000,000,000 a year on

armaments and more billions on aid to Greece, Turkey and China, on a bet that the way to insure peace is to contain the Soviet Union and its doctrine within a physical wall of armed resistance.

Its Effect Abroad.

This basic contradiction in United States policy expresses itself in many ways and in many parts of the world.

In Europe, the recovery program for the Western Nations is based upon the assumption of a revival of trade between Eastern and Western Europe. Yet the shadow of the Truman Doctrine looms over the Marshall Plan to such an extent that any suggestion of action to promote such trade is at once attacked on the grounds that it might help Russia. Moreover, the economic recovery of Western Europe is becoming more and more linked to the notion that Western Europe must be re-armed, which introduces an entirely new factor likely to upset all previous calculations of cost—as well as all the political implications of an outright military alliance between Western Europe and the United States.

American policy in Germany—confused though it has been from the start—has nevertheless consistently aimed at a unified Germany rendered militarily impotent by some degree of "de-industrialization" and democratization. Yet, under the impact of the cold war and the Truman Doctrine, our policy has veered toward a divided Germany and the building up of its western part as a bulwark against the Soviet Union. Western European recovery under the Marshall Plan demands the extensive exploitation of German industry. This, in turn, means the rebuilding of a German military potential; and the idea of a re-armed Western Europe—if it is to be anything more than a total illusion—means the actual re-creation of a German military establishment.

Similarly, in the Far East, our policy has become more and more the mere adjunct of the overall anti-Soviet crusade and less and less of a constructive policy for recovery and peace. Our original purpose—to strengthen the emerging democratic forces and aid the economic recovery of Asia—has been all but submerged in strategic thinking. In China we are—for cold war reasons—subsidizing the wholly anti-democratic regime of Chiang Kai-shek. In Japan we are more concerned with building

a strategic base against the Soviet Union than with rebuilding a peaceful, democratic nation integrated into the economy of a prosperous Far East.

In the Near East, too, constructive projects, such as building a TVA on the Jordan River and restoring the food-producing capacity of erosion-ravaged lands, have been put aside in a cold war scramble for control of strategic oil. Our own painfully developed plan for establishing peace in Palestine was jettisoned, for fear lest its enforcement by the United Nations might permit the participation of Russian contingents.

Finally, in our own hemisphere, the Good Neighbor Policy of economic cooperation with Latin America has become a policy of strategic hemisphere defense, ignoring almost entirely the post-war economic needs and problems of our sister republics.

These examples suffice to illustrate the extent to which the two parallel but conflicting analyses of the world crisis and the two parallel but conflicting trends of our foreign policy affect our action in every part of the world. They affect with no less importance our own state of mind here at home.

Its Effect at Home.

The conflict of native common-sense humanitarianism with unreasoning officially-inspired fear has produced a state of frustration, in which anxiety and paralyzed inaction alternate with sudden outbursts of angry aggression. We see daily evidence of this state of mind in our domestic as well as in our foreign affairs. Where common sense and confidence would welcome the ventilation of conflicting ideas—where faith in our beliefs demands respect for the diversity of human nature—fear breeds the demand for uniformity and the desire to suppress the non-conformist.

Our state of anxiety and frustration is without doubt aggravated by our possession of the atomic bomb. We suffer from a sense of guilt—not so much because we invented and used this terrible weapon against Japan—as because we are now sorely tempted to use it against Russia. If one believes that Russia is the sole cause of the present world crisis, and if one possesses what one conceives to be a weapon capable of eliminating the

Soviet menace, the temptation to use that weapon must obviously exist. The mere existence of the desire to "drop a few things on Moscow"—even though it be resisted—places a burden of guilt upon our conscience. It creates the desire to believe that Russia is in fact so utterly evil as to justify the use of the most inhuman weapons against her. This is perhaps the greatest danger of a scapegoat analysis of the world crisis.

The problem of American foreign policy is, in other words, very largely a problem of understanding our own psychology. Its solution would be easier if our present state of mind were due to a clearly perceived clash between two contradictory points of view, each striving to gain control over public opinion and public policy. Unfortunately, there is no such clash. It is true that President Truman and his Secretary of State have enunciated conflicting analyses and doctrines. But the march of events has made the Marshall Plan more and more of a mere method of carrying out the Truman Doctrine; and Mr. Marshall himself seems in recent months to have become the prisoner of a belief closely akin to that of the President. Instead of two rival schools of thought struggling for ascendancy in the open forum of debate, there is merely a tired and anxious group of men pursuing a policy which attempts to reconcile the irreconcilable.

The Vicious Circle.

Mr. Truman's panic-inspired pronouncement produced its dangerous counterpart in Moscow. Whatever one may think of Russian post-war objectives and tactics, it is a fact that Russian policy up to March 1947 followed a clear and positive purpose—namely, to extract the utmost advantage from the shrewdly driven war-time agreements. But a careful examination of Russian policy after March 1947 clearly shows the increasing influence of fear and, at the present time, it is no exaggeration to say that Russian foreign policy—like our own—has become less the product of purpose than of panic.

Thus, we have now reached a stage in which the entire world is being driven nearer and nearer to destruction by the fact that the two centres of superpower are locked in a panic-driven vicious circle of mutual provocation. Each side defines its policy as a policy for peace. Each side describes its actions as precautionary measures taken against the possible

aggressive designs of the other. On both sides fear of attack leads to defensive preparations which provoke attack.

Just as it takes two to make a quarrel, it also takes two to end a quarrel without violence, once it has begun. A change in our foreign policy cannot alone arrest the present trend toward war. But neither can the present trend be arrested *without* a change in American policy.

II.

BASIS FOR REVISION.

If it is true that our present foreign policy inspires little hope that it can lead to a peaceful solution of the world crisis, what changes are required to convert it into a policy for peace?

Revised Analysis.

The first requirement must be a re-examination of the conflicting analyses upon which the two major trends in our present split-minded policy are based.

The Truman Doctrine rests upon its author's clearly stated belief that the world crisis and the present threat to world peace exist solely because the Soviet Union alone:

(1) has refused to cooperate in making a just peace;

(2) has violated agreements which, if kept, could have provided the basis for a just peace;

(3) has obstructed the work of the United Nations; and

(4) because the Soviet Union harbors the clear intention to destroy the independence and democratic character of all the nations of Europe.

This analysis leads to the obvious conclusion that the way to cure the world crisis and eliminate the threat to world peace is to stop the one disturber of the peace—by diplomatic effort and economic aid, if possible —by armed force, if necessary.

The Marshall approach originally recognized that the crisis and the threat to peace arose in large measure from "hunger, poverty, desperation and chaos." This implied at least a partial recognition of the first of *four major factors, which were ignored by Mr. Truman and which have nothing whatsoever to do with the nature or intentions of the Soviet Union.* These are:

Four Major Causes.

CAUSE ONE. We are living in a worldwide socio-economic revolution, greatly accelerated by the destruction and dislocation wrought by two great wars. The whole Eastern Hemisphere is suffering from shortages. The Western Hemisphere is threatened by potential over-production resulting from lost markets. The masses of Europe and Asia are struggling not only to dig themselves out of the ruins but to emancipate themselves from old forms and structures and to develop new forms and structures promising a greater degree of justice, security and freedom. The essentially middle-class structure of European society has been undermined by a series of expropriations, the depreciation of currencies, and the almost total inhibition of the formation of new private capital. Its managerial power-groups have been largely dispersed or dispossessed. Similarly, the colonial and feudal structure of society in the so-called backward areas is tottering—especially the traditional structure of Asia. Colonial empires are in the process of liquidation, giving rise to new problems for both the peoples emerging into freedom and the peoples whose living standards were in the past supported by colonial exploitation. In other words, we are living in a period of far-reaching social and economic change, resulting from mass suffering and mass discontent. Any such period is bound to produce tensions within nations and among nations; it is certain to arouse antagonisms between those who desire change and those who wish to preserve the old order.

This primary factor in the present world crisis was ignored by Mr. Truman's analysis and recognized—though probably without its full implications—by Mr. Marshall.

CAUSE TWO. We are living in a technological revolution, more far-reaching than the Industrial Revolution of the late 18th Century. Airpower and electronics have made a world formerly divided by oceans,

mountains and deserts into one world—one little world in which both peace and prosperity have become indivisible. Medical progress, while bringing great benefits to humanity and prolonging human life, has also, for the time being, vastly magnified the problem of feeding the world's rapidly growing population. And finally, atomic science has opened a door which leads either to the world's greatest era of progress or to the suicide of the human race.

Neither the Truman nor the Marshall analysis recognizes that something has happened which totally invalidates the old Clausewitz dictum that "war is the extension of policy by other means." Neither analysis takes into account that even a victorious war has now become the negation of policy.

CAUSE THREE. For the first time in the history of the modern world, military, political and economic power have become polarized at only two poles of superpower—Washington and Moscow. This has destroyed the only device by which a world composed of sovereign nation-states has, in the past, been able, even temporarily, to maintain peace. There can be no careful maneuvering to preserve a balance of power peace, when power is concentrated in only two poles of power. There can then be only a struggle for preponderance of power, in which each of the two participants is convinced that its own predominance is essential for the preservation of peace. To recognize that this is the point at which we have arrived is to recognize the futility of striving for disarmament or for "international control" of armaments in a world lacking a supranational authority.

There is no evidence that the makers of our bipartisan foreign policy have achieved any such recognition.

CAUSE FOUR. A world which has become physically one is at present politically divided into two hostile camps because Russia, Britain and the United States decided, by mutual consent, to abandon the principles of the Atlantic Charter and to adopt instead the pattern of an old-fashioned victor's peace. The solemn pledges against territorial annexation, against any change of sovereignty without the freely expressed wishes of the peoples concerned, and the guarantees to all peoples of freedom to choose their own forms of government and to enjoy equal access to raw materials—all these went overboard at Teheran and Yalta.

The "basis for a just and honorable peace" was not destroyed, as President Truman asserts, because the agreements reached between the Allies were violated by the Soviet Union, but because the agreements themselves violated the principles of a just and honorable peace.

Distorted Facts.

At Teheran and Yalta, Russia promised to enter the war against Japan soon after German surrender in exchange for territorial and political concessions in Europe and Asia. These concessions in effect divided the world into Russian and Western spheres of influence. It has remained divided ever since. Because of Yalta, General Patton's victorious Third Army stopped dead at Pilsen, leaving the liberation of Czechoslovakia to Russian forces. Because of Yalta, the American First Army withdrew from Thuringia and Saxony, which it had conquered, leaving these territories to Russian occupation. From Yalta flowed the ill-fated Potsdam Agreement, the annexation of Eastern Germany by Russia and Poland, and the expulsion of some 13,000,000 Germans from their homes. The line which divides Europe from Stettin to Trieste was drawn by Roosevelt, Churchill and Stalin in February 1945 by mutual agreement. What Russia has done *behind* that line since the war ended is another matter, but this does not alter the fact that one of the basic causes of the present crisis is that the line was drawn at all.

The fact is that President Roosevelt came to Yalta with the conviction—based upon the advice of the American Chiefs of Staff—that Japanese surrender could not be achieved without an extremely costly invasion of the Japanese Home Islands. He had been told that the invasion of Honshu alone would take a toll of 500,000 American casualties. The atomic bomb was as yet unproved. Mr. Roosevelt's primary concern was to achieve quick victory. To save casualties he wished above all to obtain the promise of effective Russian aid against Japan as soon as possible after German surrender.

Less concerned with Japan and by this time certain of victory over Germany, Mr. Churchill and Mr. Stalin came to Yalta with their eyes fixed primarily upon the shape of the post-war world. Mr. Churchill's objective was to restore as nearly as possible the pre-war balance of power. Mr. Stalin's objective was to alter it as much as possible in Russia's favor.

Mr. Stalin wanted a divided world because he considered this the most effective way to protect Russian national interests and to expand the Soviet revolution. Mr. Churchill wanted a divided world because he deemed this the best way to contain Soviet expansion. Mr. Roosevelt accepted a divided world as the price for quick victory and with the undoubted hope that he could later on glue it together again.

By the time the Big Three met again, at Potsdam five months later, Mr. Roosevelt was dead, Germany had surrendered, the atomic bomb had been proved at Los Alamos, and a Socialist Government had come to power in the United Kingdom. Both the British and American ships of state had lost their steerageway. Britain had dismissed the Captain and taken aboard a new pilot, who had not yet worked out the compass bearings of the course he intended to steer. The American ship of state, suddenly equipped with new and terrifyingly powerful armament, was in the hands of an untried and inexperienced navigator. But the Russian ship of state, with the same pilot at the wheel who had steered through to victory, was still ploughing along on a steady course under a full head of steam.
